SOC101 Final Term Current Subjective File (March, 2023)
Answer by ᴍʀ ϸhäñƖƷäz

*Polygamy with example

Polygamy refers to the practice of having multiple spouses at the same time. For example, in some cultures, a man may have multiple wives simultaneously. Polygamy can be either legal or illegal, depending on the laws and customs of the country.

*5 Inappropriate behavior of mens

Five inappropriate behaviors of men can include sexual harassment, domestic violence, rape, discrimination based on gender, and objectification of women.

*Culture poverty

Culture poverty refers to the lack of access to cultural resources, such as education, literature, and art, which can result in social and economic disadvantage.

*Population growth

Population growth refers to the increase in the number of people in a given area over time. It can be caused by factors such as immigration, birth rates, and life expectancy.

*Role of family briefly describe

The family plays a significant role in society, as it is responsible for the socialization of children, emotional support, and financial stability. Families can be of different types, such as nuclear, extended, and single-parent families.

Solved by Shehzad77

Birth crude rate formula and explanation

The crude birth rate is the number of live births per 1,000 people in a given population over a specified period. The formula to calculate the crude birth rate is:

Crude birth rate = (Number of live births / Total population) x 1,000

Migration

Migration refers to the movement of people from one place to another for various reasons, such as economic opportunities, political instability, or social factors.

Environmental issues

Environmental issues refer to problems caused by human activities that result in environmental degradation, such as pollution, deforestation, and climate change.

Population policy

Population policy refers to the measures taken by governments to manage population growth and distribution, including family planning programs and immigration policies.

Role of religious institution in social change

.

The role of religious institutions in social change can vary depending on the religion and the context. In some cases, religious institutions may support social change and promote equality, while in others, they may reinforce traditional social hierarchies and gender roles.

Invention, discovery, diffusion which is significant and why /3

Invention is the creation of a new product, process, or device that has never existed before, whereas discovery is the identification or recognition of

Solved by Sneb717

something that already exists but was not previously known. Diffusion is the spread of ideas, practices, or technologies from one culture or society to another.

In my opinion, discovery is the most significant of the three because it allows us to expand our knowledge and understanding of the world around us. Discoveries such as the laws of gravity, the structure of DNA, and the existence of black holes have had a profound impact on our understanding of the universe and have led to countless technological advances.

2) Family concept /3

The family is a fundamental social institution that serves as the primary unit of socialization and provides emotional and material support to its members. The concept of family varies across cultures and can include nuclear families, extended families, and non-traditional family structures.

3) Meritocracy by Davis /5

Meritocracy is a system of social organization in which individuals are selected and rewarded based on their abilities and achievements rather than their social status or background. According to Davis, meritocracy is a way to ensure that the most talented individuals are able to contribute to society and advance to positions of power and influence.

5. Gender discrimination

Gender Discrimination: Gender discrimination refers to treating someone unfairly or differently because of their gender. This can take many forms, such as unequal pay, limited opportunities for career advancement, and stereotyping based on gender roles. Gender discrimination is a pervasive

problem that affects people of all genders, but women are often the most affected.

Mobility

Mobility: In many societies, males are considered superior to females, and this belief is reflected in the way people are treated. One manifestation of this is in the realm of mobility, where men are given more freedom to move around and pursue their interests, while women are expected to stay closer to home and focus on domestic duties.

Why male superior.

The belief that males are superior to females is a result of gender discrimination and patriarchal values that have been entrenched in many societies. This belief has led to the marginalization and oppression of women, limiting their opportunities and access to resources. It is a form of inequality that needs to be addressed through education and social change.

Marriage benefits for Woman.

Marriage Benefits for Women: In some societies, marriage can confer certain benefits on women that are not available to unmarried women. These benefits can include financial security, social status, and access to resources. However, in some cases, these benefits can also come at a cost, such as loss of autonomy and freedom.

Overpopulation effect on environment.

Overpopulation refers to a situation where there are too many people in a given area or on the planet as a whole. This can have a number of negative effects on the environment, including depletion of natural resources, increased pollution, and damage to ecosystems. To address this problem, many experts advocate for policies that promote sustainable development and population control.

Solved by Sheb Kz

Davis-Moore theory in long and short.

The Davis-Moore theory is a sociological perspective that argues that social stratification serves a functional purpose in society. According to this theory, social inequality is necessary and beneficial because it motivates people to work hard and perform important roles. The theory suggests that the more important and difficult a job is, the higher the reward should be in terms of status, income, and power. In this way, social stratification ensures that the most talented and skilled individuals are appropriately rewarded for their contributions to society. However, the theory has been criticized for ignoring the role of structural factors such as discrimination and inequality of opportunities in perpetuating social inequality.

.

residentional pattern

Residential Pattern: Residential pattern refers to the ways in which people are distributed across different areas within a society. There are several types of residential patterns, including rural-urban, suburban, and urban. Different factors, such as economic opportunity, social status, and cultural preferences, can influence where people choose to live.

2) Weber White and blue collar explain

Weber White and Blue Collar: Weber's theory of social stratification distinguishes between white-collar and blue-collar workers. White-collar workers are typically involved in managerial, administrative, and professional roles, while blue-collar workers are involved in manual labor and trades. This distinction is based on the type of work performed and the level of skill and education required.

3) environment change explain

Environmental change refers to changes in the natural environment, such as climate change, deforestation, and pollution. These changes can have significant social, economic, and political consequences, including displacement of people, economic hardship, and conflict over resources.

Solved by sheraz 77

Addressing environmental change requires global cooperation and collective action.

4) Functionalist structure

The functionalist perspective sees society as a complex system made up of different parts that work together to maintain social stability and order. According to this perspective, social institutions such as the family, education system, and government play important roles in maintaining social cohesion and addressing social problems.

5) social change in term of size, distribution and composition

Social change refers to the ways in which society changes over time. This can involve changes in the size of the population, its distribution across different regions, and the composition of the population in terms of age, gender, and ethnicity. Social change can be caused by a range of factors, including technological advancements, social movements, and changes in government policies.

Population growth

Population growth refers to the increase in the number of people in a given area or on the planet as a whole. This can have significant social and environmental consequences, including increased competition for resources, reduced access to healthcare and education, and environmental degradation. Addressing population growth requires a holistic approach that takes into account social, economic, and environmental factors.

2) Masculinity and femininity brief explanation

Masculinity and femininity refer to culturally constructed notions of what it means to be male or female. These notions are influenced by a range of social, cultural, and historical factors, and they can vary across different societies and time periods. Masculinity is often associated with traits such as strength, dominance, and independence, while femininity is associated with traits such as nurturing, empathy, and emotional expression.

3) Demographic transition brief explanation

Demographic transition refers to the shift from high birth and death rates to low rates, associated with modernization and development.

4) conflict,interactionist and bio determination explanation

. Conflict theory suggests society is divided by power struggles between dominant and subordinate groups

Interactionist theory focuses on how individuals interact and interpret meanings;

Bio-determinism argues that biological factors determine human behavior.

Malthus ki population theory wala tha

Malthus's population theory argued that population growth will eventually outpace resources, leading to famine, poverty, and social unrest. To improve education, some suggestions may include increasing access to quality education for all, reducing educational inequalities, investing in teacher training and resources, and emphasizing the value of education in society. Additionally, promoting lifelong learning and providing opportunities for non-formal education can also contribute to improving education.

Education ko better krny k lye suggestions

Increasing access to quality education for all
Reducing educational inequalities
Investing in teacher training and resources
Emphasizing the value of education in society
Promoting lifelong learning
Providing opportunities for non-formal education
Encouraging parental involvement in education
Encouraging critical thinking and creativity in the classroom
Increasing the use of technology in education
Providing safe and supportive learning environments.

Solved by Shaw 77

5) socail change in term of size,distribution and composition

Social change can be observed in terms of size, distribution, and composition of populations. Changes in size can occur due to factors such as fertility rates, mortality rates, and migration patterns. Changes in distribution refer to the geographic movement of populations, such as urbanization or suburbanization. Changes in composition refer to alterations in the demographic characteristics of a population, such as age, gender, ethnicity, and social class. These changes can have significant impacts on social, economic, and political structures, leading to new opportunities and challenges for individuals and communities.

Family refers to a group of individuals who are related by kinship ties, either through blood, marriage, or adoption. Families can take various forms and serve different functions in different cultures and societies.

Are male are more mobile or female.

In general, males have been found to be more mobile than females, particularly in terms of occupational mobility and geographic mobility. This can be influenced by various factors, such as social norms and expectations, gender roles and stereotypes, and economic opportunities. However, this varies across cultures and contexts.

invention, discovery, and diffusion.. Which one of these is significant in cultural change,? why?

Diffusion is significant in cultural change as it involves the spread of cultural elements, such as beliefs, practices, and innovations, from one society to another. Diffusion can occur through various channels, such as migration, trade, media, and technology, and can have significant impacts on cultural diversity, identity, and globalization

Q Explain acid rain.

Acid rain is a form of precipitation that contains high levels of acidic pollutants, such as sulfur dioxide and nitrogen oxide, which can result from human activities, such as burning fossil fuels, and natural processes, such

Solved by Shaz

as volcanic eruptions. Acid rain can have significant environmental impacts, such as damaging soil, water, and vegetation, and causing respiratory and other health problems.

Q Explain economic role of family

The family plays an important economic role in providing for the needs and well-being of its members, such as food, shelter, and healthcare, and in transmitting values, skills, and resources across generations. Families can also contribute to the broader economy through paid and unpaid labor, entrepreneurship, and consumption.

Solved by Shehzad

Q Why families effort for strengthening their Capitalist's view..

Families may hold capitalist views in order to achieve economic success and upward mobility within a capitalist system. This may involve valuing individual achievement, competition, and accumulation of wealth and resources, and prioritizing economic interests over social and environmental concerns. However, this perspective can also lead to social inequalities and ecological degradation.

Q Five inequalities in education department..

Five inequalities in the education department include access to quality education, based on factors such as race, class, gender, and geographic location; unequal distribution of resources and funding for schools; disparities in academic achievement and outcomes, based on factors such as social background and ability; unequal access to higher education and career opportunities; and perpetuation of social and cultural biases and stereotypes within the education system.
