Quiz 1 - CS206 (Q1/10)

Question:

How does the switch handle multiple frames to prevent collisions?

Options:

A. It broadcasts all frames simultaneously.

B. It discards two of the frames and sends only one.

C. It uses buffers to temporarily store frames and sends them one by one.

D. It sends all frames at once and relies on error correction.

Copied: 5/12/2026, 12:15:45 PM

Quiz 2 - CS206 (Q2/10)

Question:

Router is basically a _____ device.

Options:

A. LAN device

B. WAN device

C. Broadcast

D. None of given

Copied: 5/12/2026, 12:16:05 PM

Quiz 3 - CS206 (Q3/10)

Question:

NIC stands for _____.

Options:

A. Node Interface Card

B. Network Interface Card

C. Network Internal Card

D. Node Internal Card

Copied: 5/12/2026, 12:16:25 PM

Quiz 4 - CS206 (Q4/10)

Question:

_____ does allow the sender to overflow receiver's buffer by transmitting too much, too fast.

Options:

A. Flow Control

B. Error Control

C. Collision Control

D. Congestion Control

Copied: 5/12/2026, 12:16:46 PM

Quiz 5 - CS206 (Q5/10)

Question:

Basically, LAN follows the rules/standards developed by _____.

Options:

A. IETF

B. IEEE

C. RFC

D. ITU

Copied: 5/12/2026, 12:17:03 PM

Quiz 6 - CS206 (Q6/10)

Question:

OSI model was developed by _____.

Options:

A. IBM

B. ITU

C. IEEE

D. ISO

Copied: 5/12/2026, 12:17:21 PM

Quiz 7 - CS206 (Q7/10)

Question:

A device which receives an electrical signal and repeats it on all the ports is _____ .

Options:

A. None of the Given

B. Hub

C. Switch

D. Router

Copied: 5/12/2026, 12:17:36 PM

Quiz 8 - CS206 (Q8/10)

Question:

Devices in a network send bits in groups, generally called _____.

Options:

A. Bundles

B. Groups

C. Packets

D. Containers

Copied: 5/12/2026, 12:18:04 PM

Quiz 9 - CS206 (Q9/10)

Question:

Physical address (MAC) that uniquely identifies a machine for communication is of _____ bits.

Options:

A. 16

B. 64

C. 48

D. 32

Copied: 5/12/2026, 12:18:21 PM

Quiz 10 - CS206 (Q10/10)

Question:

How does a switch avoid collisions when the output port is busy in a LAN using CSMA/CD?

Options:

A. It drops the frame to prevent collisions.

B. It buffers the frame until the output port is free.

C. It sends the frame regardless of collisions.

D. It redirects the frame to another port.
