Q.1 Hybrid Clouds are often possible when the phenomenon of _____ is applied, whereby a consumer uses a private cloud in routine but may use the services of other types of clouds for load balancing at peak times.

A. Cloud publication

B. Cloud Bursting

C. Cloud idling

D. Cloud privatization

Q.2 _____ is used to increase the reliability and availability of IT resources by using redundant implementations (for example of Cloud services).

A. Failover System

B. Resource cluster

C. Object orientation

D. RESTful API

Q.3 Google App Engine (GAE) is the example of ---------- that allows the users to create and host web based applications running over the infrastructure and services provided by Google.

A. PaaS

B. SaaS

C. IaaS

D. XaaS

Q.4 Service oriented architecture (SOA) is usually a collection of_____.

A. Web services

B. Service Level Agreements

C. VoIP servers

D. VoIP calls

Q.5 _____ is the state of accepting a vulnerability on the base of positive expectations.

A. Integrity

B. Privacy

C. Trust

D. Security

Q.6 In context of Web Services, REST stands for _____

A. Recreate Storage Transition

B. Remote State Transition

C. Representational State Transfer

D. Recreate State Trust

Q.7 In Context of Virtual Server, a consumer can instantiate a virtual server through administrative portal which works with the help of _____module.

A. Physical Infrastructure Manager (PIM)

B. Logical Interaction Module (LIM)

C. Real Instantiation Manager (RIM)

D. Virtual Infrastructure Manager (VIM)

Q.8 In _____the messages are illegally intercepted and then the contents are updated. The updated message is then relayed towards the cloud.

A. Traffic Eavesdropping

B. Malicious Intermediary

C. Denial of Service

D. Insufficient Authorization based attack

Q.9 Inter-Module Connection Networking requires _____ over modular containers to allow dynamic scaling and interconnection.

A. an extra layer

B. object orientation

C. an administrator

D. resource replication

Q.10 Cloud architecture can be considered, as consisting of layers and sub-layers of _____ with each layer supporting the upper layer.

A. Protocols

B. Services

C. Monitors

D. Polling agents
