Bio301 Quiz#3

Solved by VU Expert Zoologists

1) In human how many genotypes of blood type AB and O exist?? One

2) Which of the following phenomenon will result in linkage if it were to fail? Law of segregation

3) Which type of mutation that has effect on DNA sequence but no effect on the proteins? Silent 😶 mutation 🔕

4) Which is the major source of genetic variation in a population increasing biodiversity?? Mutation

5) In normal pairing 2 amino acids purines pairs with thymine while in abnormal pairing pairs with. Cytosine

6) Which of the following is not a point mutation?? Transposition

7) Which of the statements below is correct?? Carrier female mates with normal male 50% Chance that each daughter will be a carrier 50% chance has a disorder

8) Organisms with a..... Is a double mutant but exhibit the phenotype of un_mutant wild type. Suppressor mutation

9) The process of transfer of human blood is known as? Transfusion

10) The type of gene mutation that results in alteration in a single nucleotide in the

DNA sequence is called?? Base substitution

11) Which are the chances that son of the colorblind mother and non colorblind father will be colorblind?? 2/2

12) Addition mutation is addition of?

Nucleotides

13) How many alleles influence the color of rabbits fur?? 4

14) Which type of mutation is involved in significantly reduced the longevity of an individual?? Lethal mutation
