BT301 - Introduction to Biotechnology
QUIZ NO. 2

1. **Phasmid** vectors are combination of plasmid and ʎ phage sequences .
2. A great advantage of hybridization for library screening is that it is extremely **versatile .**
3. (YACs) are the **Yeast artificial chromosomes** used for large DNA fragments insertions.
4. Vectors that can replicate & are stably maintained in two or more unrelated host organisms are called **shuttle** vectors.
5. For **cDNA expression** libraries the correct orientation achieved by self-priming method by adding linker molecule to double stranded cDNA .
6. **Cosmid** are the Plasmids containing a fragment of ʎ DNA including '*cos*' site .
7. Which statement is correct: Bacterial artificial chromosomes **for they are simply plasmids designed for the cloning of very long segments of DNA** .
8. cDNA library is representative of the **RNA** population from which it was derived host.
9. In Genomic DNA libraries in appropriately sized random fragments be produced **restriction endonucleases.**
10. **PCR** with specific primers could be used to isolate genes directly from genomic DNA.
11. Major screening strategies involve **all of these.**
12. *Bam*H1 enzyme used in a Creation of **genomic DNA library** using the phage-ʎ vector EMBL3A
13. Benton and Davis (1977) devised a method called **plaque lift**.
14. **Bacterial artificial chromosomes** are simply plasmids designed for the cloning of very long segments of DNA .
15. Synthesis od cDNA from RNA is done by using **RT-PCR.**
16. Vectors that can replicate & are stably maintained in two or more unrelated host organisms are called **shuttle vectors.**
17. Genomic DNA libraries constructed using **high-capacity** vectors .
18. cDNA is sequence that lack **introns** sequence.
19. M13 is a filamentous **bacteriophage** with single stranded DNA that replicates without killing its host .
20.
