

Q.1 Which of the following terms best describes the compound that serves as a precursor for the synthesis of steroid hormones?

- A. Building block for steroid hormones
- B. Initiator of steroid synthesis
- C. Catalyst for steroid production
- D. Inhibitor of steroid formation

Q.2 Enzyme activity is a measure of

- A. Quantity of enzymes present
- B. Quantity of inactive enzymes present
- C. Quantity of active enzymes present
- D. Quality of enzymes present

Q.3 The composition of the chromatography solvent used in the procedure?

- A. Butan-1-ol: Acetic acid: Water in 1:1:1 ratio.
- B. Butan-1-ol: Acetic acid: Water in 60:15:25 ratio.
- C. Butan-1-ol: Acetic acid: Water in 75:10:15 ratio.
- D. Butan-1-ol: Acetic acid: Water in 40:30:30 ratio.

Q.4 By what specific feature are lipids characterized, leading to their insolubility in water and solubility in nonpolar solvents

- A. Acidic nature
- B. Presence of hydrocarbons
- C. High molecular weight
- D. Formation of bubbles

Q.5 The role of drying the chromatography paper in a drying oven after spraying with Ninhydrin solution?

- A. To develop the color reaction of amino acids.
- B. To prevent the solvent from evaporating.
- C. To reduce the size of the amino acid spots.
- D. To accelerate the solvent migration

Q.6 The saponification number is the number of milligrams of potassium hydroxide required to neutralize the fatty acids resulting from the complete hydrolysis of _____.

- A. 1g of fat
- B. 1g of glucose
- C. 1g of protein
- D. 1g of carbohydrate

Q.7 What serves as the fundamental principle behind the Saponification test?

- A. Hydrolysis of alkali
 - B. Oxidation of fatty acids
 - C. Precipitation of glycerol
 - D. Formation of soap from fats
-

Q.8 Rf is simply the distance that a biomolecule travelled through the filter paper divided by the distance that the _____ travelled through the paper.

- A. Biomolecule
 - B. Solvent
 - C. Solute
 - D. Sample
-

Q.9 In saponification, oil or fat is hydrolyzed with alkali that results in the formation of

- A. Glycerol and salt of fatty acids
 - B. Glycerol and carboxylic acid
 - C. Acid and ester
 - D. Alcohol
-

Q.10 Saponification literally means

- A. Soap Production
 - B. Soap Making
 - C. Soap Extraction
 - D. Soap Formation
-
