| Which of the following component of language studies the meanings in a language?                                                       | <b>Semantics</b>    |
| Which of the following learning disability is most commonly associated with trouble learning to read?                                  | <b>Dyslexia</b>     |
| Which of the following type of test illuminates the student's thought process in more detail?                                          | <b>Essay</b>        |

|                                                                                                                                                    |                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------|
| Which of the following area of individual differences refer to the variations in the way people think, feel, and behave?                           | <b>Psychological</b>                                      |
| Which of the following can be characterized as the capacity to think about the utilization of language?                                            | <b>Meta-linguistic awareness</b>                          |
| In which of the following defense mechanism, a person invents acceptable excuses for an unacceptable behavior?                                     | <b>Rationalization</b>                                    |
| According to Freud, which of the following stage of psychosexual development takes place approximately between the ages of 12 months and 03 years? | <b>Anal</b>                                               |
| What does cognition refer to?                                                                                                                      | <b>Thought processes and activities of the human mind</b> |
| According to Freud, which of the following component of personality operates based on the reality principle?                                       | <b>Ego</b>                                                |
| What is the information processing approach?                                                                                                       | <b>A cognitive approach to</b>                            |

|                                                                                                                                                        |                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
|                                                                                                                                                        | <b>understanding<br/>how people<br/>acquire, store,<br/>and recall new<br/>information</b> |
| <b>What is cognition?</b>                                                                                                                              | <b>Refers to<br/>thinking and<br/>mind</b>                                                 |
| <b>What is metacognition?</b>                                                                                                                          | <b>Thinking<br/>about knowing</b>                                                          |
| <b>Who developed the concept of mental age to measure intelligence?</b>                                                                                | <b>Alfred Binet</b>                                                                        |
| <b>What specific criticism has been raised against multiple choice tests?</b>                                                                          | <b>Reward rote<br/>memorization</b>                                                        |
| <b>Among the following terms, which one specifically involves the<br/>assignment of a numerical value to an object or event according to<br/>rule?</b> | <b>Measurement</b>                                                                         |
| <b>Which of the following refers to a personality dimension describing<br/>someone who is sociable, gregarious and assertive?</b>                      | <b>Extroversion</b>                                                                        |

|                                                                                                                              |                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| What is a quick and cost-effective way of measuring students' intelligence?                                                  | <b>Group intelligence tests</b>                                                    |
| According to Piaget's cognitive theory, what are the four stages of cognitive development?                                   | <b>Sensorimotor, Pre-operational, concrete operational, and formal operational</b> |
| Which of the following is defined as the extent to which a test accurately measures what it is intended to measure?          | <b>Validity</b>                                                                    |
| According to Freud, which of the following level of mind involves everything of which a person is aware at any given moment? | <b>Conscious</b>                                                                   |
| What are the three basic components of intelligence in Sternberg triarchic theory?                                           | <b>Analytical, creative, and practical components</b>                              |
| What does IQ stand for?                                                                                                      | <b>Intelligence quotient</b>                                                       |

|                                                                                                          |                                                                                                                     |
|----------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| What is the formal operational stage?                                                                    | <p>The ability to engage in logical and systematic thinking about abstract and hypothetical situations</p>          |
| What is the controversy in the area of educational and developmental psychology related to intelligence? | <p>Whether intelligence is an inherited ability or can be developed through personal and contextual experiences</p> |
| What is the benefit of using group intelligence tests?                                                   | <p>They are quick and cost-effective</p>                                                                            |

|                                                                                                                                                             |                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| According to Freud, which of the following level of mind holds memories, feelings, thoughts and other information that are hidden from conscious awareness? | <b>Unconscious</b>                                                                         |
| What is a useful strategy for younger students or visual learners to develop their observation and categorization skills?                                   | <b>Asking them to make comparisons, classify and categorize objects, things, or events</b> |
| According to Freud, which of the following is the primitive and instinctual component of personality?                                                       | <b>Id</b>                                                                                  |
| Which of the following term is derived from the Latin word 'persona'?                                                                                       | <b>Personality</b>                                                                         |
| What is an important cognitive skill that preschool children develop by the age of 2-3 years?                                                               | <b>Eye-hand coordination</b>                                                               |
| What does intellectual development refer to?                                                                                                                | <b>Cognitive abilities and capacities related to</b>                                       |

|                                                                                                                                                          |                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
|                                                                                                                                                          | <b>mental processes</b>                        |
| <b>What are the two most commonly used individual tests to measure intelligence?</b>                                                                     | <b>Stanford-Binet test and Wechsler scales</b> |
| <b>Which of the following approach can be defined as experiences that are above and beyond the regular curriculum?</b>                                   | <b>Enrichment</b>                              |
| <b>Which of the following may refer as a motivating force that impels us to attend to a person, a thing, or an activity?</b>                             | <b>Interest</b>                                |
| <b>What makes a good intelligence test?</b>                                                                                                              | <b>Reliability and validity</b>                |
| <b>According to Freud, which of the following component of personality is guided by the moral principle?</b>                                             | <b>Superego</b>                                |
| <b>‘Shortness or tallness of stature, darkness or fairness of complexion’ are the examples of which of the following area of individual differences?</b> | <b>Physical</b>                                |

|                                                                                                                                            |                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
|                                                                                                                                            |                                                            |
| Who propounded the psychoanalytic theory in the early 1900s?                                                                               | <b>Sigmund<br/>Freud</b>                                   |
| Which of the following is NOT one of the personality traits suggested by Gordon Allport?                                                   | <b>Surface</b>                                             |
| How many types of intelligence did Gardner categorize intelligence into?                                                                   | <b>8</b>                                                   |
| Which of the following area of individual differences can be described as variations in weight, height and size of the body?               | <b>Physical</b>                                            |
| Which of the following consists of physical, intellectual, social, moral, political, economic and cultural forces?                         | <b>Environment</b>                                         |
| Which of the following is a neurodevelopmental disorder that is characterized by inattention and impulsivity in the behaviour of children? | <b>ADHD</b>                                                |
| What is the concrete operational stage characterized by?                                                                                   | <b>Children's<br/>ability to think<br/>logically about</b> |

|                                                                                                                                                                        |                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
|                                                                                                                                                                        | <b>concrete<br/>objects</b>      |
| <b>Which of the following defense mechanism involves transferring the blame of one's own shortcomings, mistakes and misdeeds to others?</b>                            | <b>Projection</b>                |
| <b>The Formal operational stage in Jean Piaget's cognitive development theory starts from:</b>                                                                         | <b>11 years to<br/>own word</b>  |
| <b>Which of the following refers to a purposeful collection of evidences of student's academic work in a given period of time?</b>                                     | <b>Portfolio</b>                 |
| <b>Which of the following coordination abilities involves using visual information to guide hand movements?</b>                                                        | <b>Eye-hand<br/>coordination</b> |
| <b>Which of the following factors can influence the transfer of learning?</b>                                                                                          | <b>Culture</b>                   |
| <b>Lev Vygotsky's socio-cultural approach builds upon the role of language and:</b>                                                                                    | <b>Cultural tools</b>            |
| <b>According to the Trace Decay Theory, what is the duration of short-term memory?</b>                                                                                 | <b>30 seconds</b>                |
| <b>When learners can solve different but similar problems of equal complexity, which type of transfer does it belong to?</b>                                           | <b>Lateral</b>                   |
| <b>Which of the following options best describes the process by which a teacher provides support and guidance to help learners develop their skills and knowledge?</b> | <b>Scaffolding</b>               |
| <b>Which of the following is a common characteristic of preschool-aged children?</b>                                                                                   | <b>Distractibility</b>           |
| <b>Which of the following developments is related to cognitive abilities and capacities?</b>                                                                           | <b>Intellectual</b>              |
| <b>The pre-operational stage in Jean Piaget's cognitive development theory starts from:</b>                                                                            | <b>2-7 years</b>                 |
| <b>Cognition refers to thinking and:</b>                                                                                                                               | <b>Mental<br/>processes</b>      |

|                                                                                                                                        |                                |
|----------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| What is the fourth stage of Jean Piaget's cognitive development theory?                                                                | <b>Formal operational</b>      |
| Which of the following are examples of learning difficulties?                                                                          | <b>Dysgraphia</b>              |
| Which of the following area is the greatest controversy of Intelligence as an inherited ability (nature) or nurture?                   | <b>Psychology</b>              |
| Which of the following terms refers to the ability to think about one's own thinking?                                                  | <b>Reflection</b>              |
| Which of the following is a dynamic process?                                                                                           | <b>Learning</b>                |
| Which of the following tests have been used to measure intelligence?                                                                   | <b>Standardized</b>            |
| Lev Vygotsky's socio-cultural approach builds upon the role of language and:                                                           | <b>Cultural tools</b>          |
| Which of the following views of intelligence suggests that intelligence can be improved with practice and a supportive environment?    | <b>Incremental</b>             |
| In which Piaget's cognitive development stage, children use their intuition and perception to understand the world and solve problems? | <b>Pre-operational</b>         |
| Early psychologists viewed intelligence as primarily:                                                                                  | <b>Inherited</b>               |
| The sensory-motor stage in Jean Piaget's cognitive development theory starts from:                                                     | <b>Birth to 2 years</b>        |
| Who introduced the concept of Zone of Proximal Development (ZPD)?                                                                      | <b>Lev Vygotsky</b>            |
| In which of the following years of schooling do children's cognitive development undergo rapid changes?                                | <b>Elementary school years</b> |
| Which of the following can impair mental abilities and cause memory problems?                                                          | <b>Chronic alcoholism</b>      |
| How many main types of transfer of learning are there?                                                                                 | <b>3</b>                       |
| Which of the following theory, depicts analytical, creative, and practical components of intelligence?                                 | <b>Sternberg's triarchic</b>   |
| What is the third stage of Jean Piaget's cognitive development theory?                                                                 | <b>Concrete operational</b>    |

|                                                                                                                                         |                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| What are the four aspects of human personality?                                                                                         | <b>Physical, emotional, mental and social</b> |
| Long-term memory refers to the storage of information in the brain for an extended period, ranging from:                                | <b>Hours to years</b>                         |
| In which approach is the human brain analogous to a computer machine?                                                                   | <b>Information processing</b>                 |
| In which Piaget's cognitive development stage, children are unable to understand conservation?                                          | <b>Pre-operational</b>                        |
| Who proposed the socio-cultural theory?                                                                                                 | <b>Lev Vygotsky</b>                           |
| Children gain cognitive maturity by:                                                                                                    | <b>Age</b>                                    |
| During which age range do most children typically start to develop their meta-linguistic awareness?                                     | <b>6 to 8</b>                                 |
| Which of the following is NOT one of the Big Five personality factors?                                                                  | <b>Aggression</b>                             |
| Which of the following is a learning disability that affects reading and language processing?                                           | <b>Dyslexia</b>                               |
| Cognition is the study of:                                                                                                              | <b>Thought Processes</b>                      |
| In which Piaget's cognitive development stage, children are unable to understand conservation?                                          | <b>Pre-operational</b>                        |
| Which of the following terms refers to the modification of behavior?                                                                    | <b>Learning</b>                               |
| Which of the following is a useful technique for improving memory?                                                                      | <b>Creating memory triggers</b>               |
| Which of the following processes is utilized when explaining one's strengths in academic writing?                                       | <b>Metacognition</b>                          |
| Which of the following terms refers to the apparent loss of information already encoded and stored in an individual's long-term memory? | <b>Forgetting</b>                             |
| The Concrete operational stage in Jean Piaget's cognitive development theory starts from:                                               | <b>7-11 years</b>                             |

|                                                                                                                                                                        |                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| What is the first stage of Jean Piaget's cognitive development theory?                                                                                                 | <b>Sensory motor</b>                            |
| In which Piaget's cognitive development stage, do children gain the ability to get engaged in logical and systematic thinking in abstract and hypothetical situations? | <b>Formal operational</b>                       |
| What is the second stage of Jean Piaget's cognitive development theory?                                                                                                | <b>Pre-operational</b>                          |
| Which of the following is a key role of the teacher in supporting learners' intellectual development?                                                                  | <b>Engaging Learning Environment</b>            |
| According to Spearman, what is responsible for an individual's overall success in different tasks?                                                                     | <b>General ability</b>                          |
| Generally, intelligence tests have been divided into:                                                                                                                  | <b>Individual and Group</b>                     |
| What is the benefit of using group intelligence tests?                                                                                                                 | <b>Determine the student's level of anxiety</b> |
| Which of the following refers to a process for establishing the relationships between two or more variables?                                                           | <b>Correlation</b>                              |
| How many stages did Jean Piaget's present in his cognitive development theory?                                                                                         | <b>Four</b>                                     |
| Who is credited with introducing the concepts of zone of proximal development and scaffolding?                                                                         | <b>Lev Vygotsky</b>                             |
| At which stage of Kohlberg's moral reasoning, a child gives importance to self-interest and likes to perform activities that are beneficial for him?                   | <b>Individualism and purpose</b>                |
| Which of the following level of Maslow's hierarchy of needs outlines the need for family, trust, friendship and affection?                                             | <b>Love and belonging</b>                       |
