

Solved Grand Quiz

Gsc-201 by Dimple Khan

- 1) Color, shape and texture all are examples of **properties**.
- 2) Which one of the following cannot see but we can feel them? **Gas**
- 3) In which approach students are involved in activities and directions are given by teachers?
Traditional
- 4) Teachers use interactive material in class that stimulate children's: **Curiosity**
- 5) Pencil box and cart board are the examples of ____ objects. **Opaque**
- 6) First phase of learning sequence template is consists of understanding the **Properties** of object.
- 7) Question and answer session is the example of ____ Assessment. **Formative**
- 8) Second phase of learning sequence template is about the developing of _____. **Background**
- 9) When teacher help the students to find the right answer, then he/she is giving: **Scaffolds**
- 10) Third phase of learning sequence include _____. **Changes**
- 11) In which inquiry approach activity leads to content? **Guided inquiry**
- 12) Choice of material is depend on the ____ of material. **Property**
- 13) ____ must be based on what children already know. **Instructions**
- 14) Which of the following did not change when placed in different containers? **Solids**
- 15) Scientists have to be aware of _____, associated with the investigator, instruments and methods. **Bias**
- 16) Object through which we can easily see are ____ objects. **Transparent**
- 17) Students develop an attitude of ____ for exploring the properties. **Enthusiasm**
- 18) Melting and dissolving are two different _____. **Phenomena**
- 19) Conceptual change is a process of ____ from ordinary ways of perceiving. **Transition**
- 20) Conducting fair test is necessary for ____ of data.
- 21) Teachers need to learn about the _____ that students have. **Conceptual ideas**
- 22) ____ was one of the first who tackle the problem of measuring the temperature. **Thomson**
- 23) ____ Objects are often made from a variety of materials. **Manufactured**
- 24) Which skill can be used when giving a comment or remark after looking? **Observations**
- 25) Which one focuses on concept building when it becomes difficult in higher grades? **Learning**
- 26) We modify the scientific knowledge in the light of _____. **Reliable data/evedience**

- 27) _____ must be based on what children already know. **Instructions**
- 28) _____ effects how the learner perceives new information. **Prior knowledge**
- 29) Which skills are the combinations or blend of several skills? **Process**
- 30) Teachers interpret _____ of student thinking. **Evidence**
- 31) Which one is conserved during physical and chemical changes? **Mass**
- 32) Students develop the skill to make connections with their immediate _____. **Environment**
- 33) For _____ we need to mix the solids with liquids. **Dissolving**
- 34) The first thing to remember about writing a case study is that _____. **That case must have a problem**
- 35) Second category of learning objectives in teaching of general science is _____. **Skills**
- 36) Through which kind of material we can see things clearly? **Transparent**
- 37) There are _____ types of solids. **3**
- 38) Students develop _____ in representing observations. **Honesty**
- 39) Which kind of learners transforms prior knowledge to accommodate new scientific ideas? **Slow**
- 40) _____ change its shape according to the shape and size of the object in which it is poured. **Liquids**
- 41) Instructor self-evaluation belongs to which kind of assessment: **Summative**
- 42) Which one is the explanation for the behavior of natural objects and phenomena? **Scientific theory**
- 43) Student's evaluation of the course is an example of which kind of assessment? **Summative**
- 44) Students develop the skill of _____ by using their senses. **Observation**
- 45) Which process help to gather information about what students know, understand and do with their knowledge? **Assessment**
- 46) Considering evidence, evaluating and drawing conclusions by assessing the data is the example of _____. **Interpreting**
- 47) Students do classification on the basis of some _____. **Property**
- 48) There are _____ main features of fair test template. **4**
- 49) When learners identifying patterns or trends in their observations or measurements and noticing related changes. Then they are involved in: **Interpreting**
- 50) Through which kind of changes the material can be changed from solid to liquid to gas by heating or cooling but the kind of material stays the same? **Physical**
- 51) In sequence of learning template phase C represents: **Main content**

- 52) Recognizing and asking investigable questions is the example of _____. **Sub skills**
- 53) Children develop ideas, based on their everyday _____. **Experiences**
- 54) Which kind of material changed the color of things when viewed? **Translucent**
- 55) Which one of the following dissolves faster in water? **Sugar powder**
- 56) Developing tentative explanations or hypotheses of observed phenomena is one of the step of? **Scientific inquiry/knowledge**
- 57) For _____ we need to mix solids with liquids. **Dissolving**
- 58) Second phase of learning sequence template is about the developing of _____:
- 59) Final examination is example of: **Summative Assessment**
- 60) Children deepen their experience of _____ in a science classroom. **collective discussions**
- 61) In inquiry based curricula, _____ leads to the content or to the discovery of content. **Activity**
- 62) Using patterns in information or observation in forecasting outcomes of specific events that go beyond the data. **Predicting**
- 63) Thermo scope was used to measure the temperature. One of the characteristic that was described by the teacher is _____. **It was without the scales.**
- 64) Which of the following teaching provides continuous opportunities for formative assessment? **Inquiry based**
- 65) _____ assessment provides feedback and information during the instructional process. **Formative**
- 66) Conceptual change is a process of _____ from ordinary ways of perceiving. **Transition**
- 67) We want children to learn not only the content but _____ also. **scientific skills**
- 68) In which approach content is taught before doing any activity. **Traditional**
- 69) Which activity helps students engage in the construction of scientific evidence, explanations; advance their abilities to argue scientifically? **Participation in scientific practice and discourse**
- 70) Which one of the following is important in scientific practices? **Keeping record of findings**
- 71) Which one of the following can be done at any time during instructions: **assessment**
- 72) Using the senses and extending the senses by using tools or instrument as necessary is _____: **Observing**
- 73) Teachers must not give _____ comments to the students in their assessment. **Judgmental**
- 74) In scientific inquiry we communicate findings to larger peer group for _____. **Critical review**
- 75) A reflective component to learning not only speeds up the time it takes to learn, but also makes it possible to learn things that one might never figure out through _____. **trial and error.**

76) In the _____ approach content is taught before doing any activity. Traditional

77) _____ use process skills to build a conceptual understanding of science content. Students

78)
