CS507 Quiz 3 File

_____ refer to the sudden increase in power supply.	**Spikes**
Which of the following is an expression of an intention to inflict pain, injury, evil or punishment, and an indication of impending danger or harm?	**Threat**
If a flow chart is becoming complex then which symbol you will use to reduce the number of flow lines?	**Connector**
Traversing of a record of every keystroke, often called	**Keystroke Monitoring**
Which of the following is a private enterprise owned communication network that uses internet protocols.	**Intranet**
Checking the validity of flowchart is	**A good practice**
Which of the following focuses on detecting potentially abnormal behavior in function of operating system or request made by application software?	**Behavior blockers**
The protection of information from unauthorized disclosure explains the concept of system and data _____.	**Confidentiality**
Inheritance can be defined in terms of _____	**Is kind of**
Which of the following software performs concurrent monitoring as the system is being used?	**Active Monitors**
In case of _____, the intruder might try to have unauthorized access to the system.	**Logical**

_____ helps user to establish identity	**Access control**
Which symbol in flow chart indicates the starting & ending of a process?	**Terminator**
Which statement describes the security program correctly?	**Periodic reviews to check safety**
A language mechanism for restricting access to some of the object's components is known as:	**Object Encapsulation**
Which of the following carry characteristics of specialization?	**Sub classes**
PIN is a secret shared between a user and a system that can be used to authenticate the user to the system. In this context, what does PIN stands for?	**Personal Identification Number**
_____ is a data model or diagram for high-level descriptions of conceptual data model.	**Entity Relationship Diagram**
Which of the following is not a name used for an intruder?	**Knacker**
A schematic representation of a sequence of operations as in a manufacturing process or computer program is called _____.	**Flowchart**
_____ means information hiding.	**Encapsulation**
Which of the following is a logical record of computer activities, usage, processing pertaining to an operating or application system or user activities?	**Audit Trial**
_____ is an example of Trojan horse.	**Logic Bomb**
Which one of the following is not classified as biometrics?	**Digital Password**

Which statement is INCORRECT about a BUG?	**It can never create a virus in the system.**
Which of the following is considered during OO Analysis?	**System behavior**
When voltage that is received does not stay stable is referred as:	**power fluctuation**
_____are the key people who will have to ensure that security is effective and smoothly operated	**IS security professionals**
Which of the following is an incorrect statement about Good Practices of Flowchart?	**Every flowchart must have a connector.**
Characteristics of object are called _____	**Attributes**
Qualification is an example of _____ attribute.	**Multi-valued**
Rectangle shape in the flow charts represents_____	**Process**
In ERD, each attribute has a _____ i.e. defined parameters or the range in which value of the attribute may fall.	**Value Set (domain)**
In Flowchart, one segment is connected with another segment using _____ symbol.	**Connector**
Which of the following is the science and art of transforming data into secret code for transmission over a public network?	**Cryptography**
The ability for different classes of objects to respond to identical messages is	**Polymorphism**
Damage caused to the software without physical presence is the outcome of _____ threat.	**Logical**

In drawing a proper flowchart, all necessary steps that are a part of process should be listed out in _____ order.	**Logical**
Temporal CSFs results from _____	**Internal organization needs and changes**
Determining classification levels along with maintaining accuracy and integrity of the data in the information system is the responsibility of _____.	**Data owners**
Different levels and types of ---------- may be required to address the risks to information	**Security**
A data flow diagram is _____representation of the data through an information system.	**Graphical**
Providing independent assurance to management regarding the appropriateness of the security objectives is the responsibility of _____.	**Information systems auditors**
According to "Booch", object has following three components	**State, Behavior, Identity**
Which of the following is an object that exists and is distinguishable from other objects?	**Entity**
In DFD, an entity represents _____.	**Sources of data received by the system or destinations of the**

	data produced by the system.
In Flowchart, Arrow is also called _____	**Flow line**
Which of the following controls over the transfer of data over networks?	**Communication Controls**
If data & information is protected against unauthorized modification then which property will hold true?	**Integrity**
A bad sector on the hard drive is an example of _____ threat.	**Logical**
Which of the following view gives a quick understanding of the business processes and flows?	**Diagrammatic**
Confidentiality of information system means	**data and information are disclosed only to those who have a right to know it**
In flow chart diagram circle represents:	**Connector**
What type of skills will be needed for logical intrusion?	**Complex & technical**
Which of the following refers to damage caused to the software and data without any physical damage to the computers?	**Logical Threat**
Rounded shaped symbol in the flow chart is called	**Connector**
Object orientation helps in increasing abstraction level to build _____	**Reusable software**
ERD shows a _____ relation between entities.	**Primary**

Which of the following is the study of automated methods for uniquely recognizing humans based upon one or more intrinsic physical or behavioral traits?	**Biometrics**
In DFD, Process represents_____.	**Activity**
Polymorphism can be defined in terms of _____	**Having many forms**
Which of the following is the process of converting data into codes (cryptograms)?	**Encryption**
While developing software object oriented analysis focuses on ____	**Modular approach**
_____ is usually identified by the phrase "is a kind of."	**Inheritance**
Which of the following is responsible for ensuring that appropriate security, consistent with the organization's security policy that is embedded in their information systems?	**Process Owners**
The purpose of data flow diagrams is to provide a --------- between users and systems developers	**Linking bridge**
Which of the following is not a security objective?	**Regularity**
Which of the following refers to the process of identifying attempts to penetrate a system and gain unauthorized access	**Intrusion Detection**
In structured analysis & design _____ is made according to some standard rules	**Documentation**
Which of the following is the primary method for keeping a computer secure from intruders and allows or blocks traffic into and out of a private network or the user's computer?	**Firewall**

A/an_____ is a set of entities of the same type that share the same properties.	**Entity Set**
The mechanism by which the more specific class in a generalization includes the attributes and operations of general class is called ___	**Inheritance**
The study of business problem domain used to recommend improvements and specify the business Requirements for the solution is called:	**System Analysis**
Incremental model combines the elements of _____ model with the philosophy of _____.	**Waterfall, Prototyping**
In _____, existing and new both systems run and output of both systems is used since functions performed are different.	**Phased change over**
Which of the following model can lead to scope creep due to user feedback after each phase?	**Iterative**
Early detection of problems in critical areas is only possible if system is	**Well Designed**
Apart from the value to cost ratio, modules are also selected on the basis of _____ requirements and needs.	**Customer**
In Incremental Model approach, _____ is the core product which usually addresses the basic requirements of the system.	**First increment**
Which of the following statement is INCORRECT about DFD?	**It should not have black holes.**

In which of the following model, working functionality (basic module) is produced earlier.	**Incremental Model**
Increments made at different intervals of time refer to the _____ development model.	**Incremental**
Which of the following is a problem solving technique that re-assembles a system's components back into a complete system?	**System design**
Which of the following is used to test the function of the new design before starting production of a product?	**Prototype**
Which of the following allows manufacturers to rapidly and inexpensively test the parts of the design which are most likely to have problems?	**Prototype**
Which of the following statement is correct about system analysis & design?	**We use ERD in Structured approach**
_____ phase involves converting design specifications into executable programs.	**Development**
Which of the following is an iterative approach to system development?	**Spiral Model**
Which of the following is the process of quickly putting together a working model in order to test various aspects of the design for gathering early user feedback?	**Prototyping**
Which of the following lifecycle models deals with the aspects of risk analysis and is a combination of iterative approach and classic waterfall model?	**Spiral Model**

Change over can be undertaken in following ways except _____.	**Pointed change over**
An association between entities is called _____	**Relationship**
In _____ model, the system is designed, implemented and tested in increments until the product is finished.	**Incremental**
