CS411

Midterm important questions 2024

VU360

Lecture 1-5:

1. What is the definition of computer networks and their importance?
2. What are the different types of computer networks (LAN, WAN, MAN, etc.)?
3. What is the OSI reference model and its layers?
4. What is the difference between connection-oriented and connectionless protocols?
5. What is the concept of IP addressing and subnetting?

Lecture 6-10:

6. What is the difference between TCP and UDP protocols?
7. How do you calculate subnet masks and subnet addresses?
8. What is the concept of routing and routing tables?
9. How do you configure and manage network devices (switches, routers, etc.)?
10. What is the concept of network security and its importance?

Lecture 11-15:

11. What are the different types of network attacks (hacking, malware, etc.)?
12. How do you secure network devices and protocols?
13. What is the concept of encryption and decryption?
14. How do you use firewalls and access control lists (ACLs)?
15. What is the concept of virtual private networks (VPNs)?

Lecture 16-20:

16. How do you configure and manage network protocols (HTTP, FTP, etc.)?
17. What is the concept of network architecture and design?
18. How do you use network simulation tools (NS2, NS3, etc.)?

https://chat.whatsapp.com/F5zhJtf5yL4RjDODz1fL

19. What is the concept of network performance analysis and optimization?
20. How do you use network management protocols (SNMP, etc.)?

Lecture 21-22:

21. How do you use network virtualization and software-defined networking (SDN)?
22. What is the concept of network scalability and reliability?
