

GROWTH

The term growth denotes a net increase in the size, or mass of the tissue. It is largely attributed to multiplication of cells and increase in the intracellular substance.

ACCORDING TO HURLOCK

GROWTH is change in size, in proportion, disappearance of old features and acquisition of new ones

According to Crow and Crow (1962)

Growth refers to structural and physiological changes

Development

Development specify maturation of functions. It is related to the maturation and myelination of the nervous system and indicates acquisition of a variety of skills for optimal functioning of the individual

According to Hurlock (1959)

Development means a progressive series of changes that occur in an orderly predictable pattern as a result of maturation and experience.

Development

- ***According to J.E. Anderson(1950)***

Development is concerned with growth as well as those changes in behavior which results from environmental situations.

- ***According to Liebert, Poulos and Marmor (1979)***

Development refers to a process of change in growth and capability over time, as function of both maturation and interaction with the environment

Aspects of Human Development

1. Physical Development

- It deals with changes in body structure and functions mainly due to growth or maturation.
- Therefore, physical development can properly be called as physical growth rather than physical development.
- Learning plays little role in physical development.

2. Social Development

- It refers to changes in the way an individual relates to others. A large part of these changes are due to learning.

3. Emotional Development

- It means changes in the way individual becomes capable of understanding, expressing and controlling personal feelings, understanding feelings of others and responding to them.
- In emotional development maturation and learning both play important role.

- It is yet debatable that which plays a greater role.

4. Intellectual Development

- It refers to changes by which mental processes becomes more complex and sophisticated.
- Intellectual development is also considered to be under the influence of both heredity (maturation) and environment (learning).
- **Defining Intelligence**
- In a study in which laypeople and experts completed a similar exercise, both groups viewed intelligence as made up of at least three broad attributes: **verbal ability, practical problem solving, and social competence** (Sternberg & Detterman, 1986).
- The abilities and capacities to **acquire** and **apply knowledge**, to **reason logically**, to **plan effectively**, to **conclude wisely**, to exhibit **sound judgment** and **problem-solving** ability, to grasp and **visualize concepts**, to be **mentally alert**, to be able to find the **right words and thoughts** with facility, and to be able to **cope, adjust**, and make the most of new situations— but please do not interpret these words as the last word on what intelligence is" (Cohen & Swerdlik, 2002, p. 224).
- Problem-solving skills and the ability to adapt to and learn from life's everyday experiences.

David Wechsler

- "Intelligence, operationally defined, is the aggregate or global capacity of the individual to act purposefully, to think rationally and to deal effectively with his environment" (1958, p.7).

Jean Piaget

- Cognitive structure develop through the interaction between child and environment.
- This interaction is at first physical and later involves mental operations.
- **Alfred Binet: A Holistic View**
- The social and educational climate of the late **nineteenth** and early **twentieth** centuries led to the development of the first intelligence tests.

Gardner's Theory of Intelligence

- When you think of intelligence you normally think of the one intelligence that must be preferred to and that is intellectual intelligence. Howard Gardner says there are actually multiple types of intelligences. Lets go through all these one by one

1. Logical mathematical intelligence

- Solving math and logic problems
- Taking tests in which high logical intelligence is required

- Ability to make and read graphs
- Organization of things

2. Verbal linguistic

- People with high verbal linguistic intelligence probably they are good at:
- Poems
- Rhyming words
- Reading and writing
- Story teller

3. Interpersonal intelligence

- Understanding other people's emotions
- Understanding social etiquettes and norms are of the different situations
- Good leader or manager and have to coordinate with employees then you might have good interpersonal intelligence

4. Body Kinesthetic Intelligence

- Ability to use the body purposefully
- People excellent in their bodily kinesthetic field are
- Dancers
- Actors
- Solders
- Sports athletes

5. Musical Intelligence

- This is associated with rhythmic and harmonic music
- Being able to interpret sounds, rhythms and tones and pitches
- Probably compose or at least play an instrument

6. Visual Spatial

- Its basically is how well you visualize something in your mind's eye
- How well you can think about something in your mind

Example

- How well you get through a maze
- How you read a map?

7. Intrapersonal intelligence

- Different from interpersonal intelligence
- This is more about how you understand your self
- Are you self aware or not?
- How well you can control your emotions and moods?
- You know your strengths and weaknesses?

8. Naturalistic intelligence

- You can recognize and classify all types of animals, plants and minerals in the real world

- Hunters and fisherman are pretty intelligent in naturalistic field
- Sheff's and botanists

Definition of Personality

☞ Shaffer defines personality as a ***broad collection of attributes*** and distinctive patterns of behavior or habits that seem to characterize an individual on temperament, traits, interests, attitudes and values

☞ Personality Assessment Techniques

- ☞ I. Subjective Methods.
- ☞ II. Objective Methods.
- ☞ III. Projective Methods.
- ☞ IV. Psycho-Analytical Methods.
- ☞ V. Physical Test Methods or Physiological Methods.

Developmental stages

- **Infancy - Early Childhood (birth to 5 years)**
- **Middle Childhood (6 to 12 years)**
- **Adolescence (13 to 18 years)**
- **Early adulthood (19 to 29 years)**
- **Middle Adulthood (30-60 years)**
- **Later Maturity (60>)**

Erikson's Stages of Psychosocial Development

Approximate Age	Psycho Social Crisis
Infant - 18 months	Trust vs. Mistrust
18 months - 3 years	Autonomy vs. Shame & Doubt
3 - 5 years	Initiative vs. Guilt
5 -13 years	Industry vs. Inferiority
13 -21 years	Identity vs. Role Confusion
21- 39 years	Intimacy vs. Isolation
40 - 65 years	Generativity vs. Stagnation
65 and older	Ego Integrity vs. Despair

(C) The Psychology Notes Headquarter - <http://www.PsychologyNotesHQ.com>

What is Learning?

“ A persisting *change* in human performance or performance potential . . . (brought) about as a result of the learner’s interaction with the environment” (Driscoll, 1994, pp. 8-9).

“The relatively permanent *change* in a person’s knowledge or behavior due to experience” (Mayer, 1982, p. 1040).

LEARNING THEORY

Q: How do people learn?

A: Nobody really knows.

But there are 3 main theories:

- ✓ Behaviorism
- ✓ Social Learning Theory
- ✓ Cognitivism

The 4 Stages of Cognitive Development

Lev Semonovich Vygotsky Background

Vygotsky was called "**The Mozart of Psychology**". He was born in 1896- same year as Piaget - in the small Russian town of Orsha.

Lev Semonovich Vygotsky Background

Vygotsky completed 270 scientific articles, numerous lectures, and ten books based on a wide range of Marxist-based psychological and teaching theories. He died on June 10, 1934, at the young age of thirty-seven after long battle with TB. Vygotsky’s work did not become known in the West until 1958, and was not published there until 1962.

■ Zone of Proximal Development (ZPD).

The difference between what a child can do independently and what the child needs help from a more knowledgeable person to do.

Kohlberg’s Six Stages

Pre-Conventional Moral Development

- Stage 1
- Stage 2

Conventional Moral Development

- Stage 3
- Stage 4

Post-Conventional Moral Development

- Stage 5
- Stage 6

Stage 1 - Obedience and Punishment

Especially common in young children, but adults are capable of expressing this type of reasoning. At this stage, children see rules as fixed and absolute.

- Obeys rules in order to avoid punishment
- Determines a sense of right and wrong by what is punished and what is not punished
- Obeys superior authority and allows that authority to make the rules, especially if that authority has the power to inflict pain
- Is responsive to rules that will affect his/her physical well-being

Stages of Development (According to School Level)

- Preschool and kindergarten (3-6 years)
- Primary grades: 1,2, and 3 (6-9 years)
- Elementary grades: 4, 5 and 6 (9-12 years)
- Junior high school: 7,8, and 9 (12-14 years)
- Senior high school: 10,11 and 12 (15-18 years)

Q 1.describe any one level of kohlerberg moral development .__5mrks

ANS: Level 1: Preconventional Morality 0-9 years

Stage 1 - Obedience and Punishment

Especially common in young children, but adults are capable of expressing this type of

reasoning. At this stage, children see rules as fixed and absolute.

- Obeys rules in order to avoid punishment
- Determines a sense of right and wrong by what is punished and what is not punished

Q 2..explain testing methods of human personality. 5 mark

ANS: . Physical Test Methods or Physiological Methods

In physiological methods of assessment of personality following instruments are commonly used:

1. Pneumograph:

It is used for measuring the rate of respiratory activity of the individual.

2. Plenthysmograph:

It is used for measuring the individual's Blood pressure.

3. Shymograph:

It is used for measuring the activity of heart.

4. Electrocardiograph:

It is used for measuring the activity-of-heart.

5. Electro-encephalograph:

It is used for measuring the electrical activity in the human brain,

6. Graphology:

The individual's personality is assessed through a study of his handwriting.

7. Electromyogram:

It is used for measuring muscular activity

Q3.what is moral development???2 mrk

ANS: Moral development is the gradual development of an individuals concept of right or

wrong – conscious, religious values, social attitudes and certain behaviour.

Q4..list down the names of sociophysiological ---3mrk

ANS:

Q5.what are the characteristics of pre schooling kingerden theory---3 mrk

ANS: Preschool & Kindergarten(3-6 years)

Children have the first exposure with school routine whereby they interact with more

than a few peers. They get opportunities to prepare for initial academic experiences in group

settings. It is important for them to learn to follow directions and get along with others.

Q6: date of birth of vygotsky

ANS: Lev Semonovich Vygotsky Background Vygotsky was called "The Mozart of Psychology“. He was born in 1896- same year as Piaget - in the small Russian town of Orsha.

Q7: poems and rythems are explmes of which intelligence

ANS: Verbal linguistic

Q8: first level of moral development comprises of years of

ANS: Preconventional Morality 0-9 years

Q9: age of preschool children according to kingderstin

ANS: 3-6 year

Q10: devotion of growth by crow and crwo is

ANS: According to Crow and Crow (1962)

Growth refers to structural and physiological changes

Q 11 .describe 2 factors that affect human development???

ANS:

Factors	Affects
Sex: Sex is a very important factor which influences human growth and development. There is lot of difference in growth and development between girls and boys. Physical growth of girls in teens is faster than boys. Overall the body structure and growth of girls are different from boys.	Pollution: According to studies, air pollution not only affects the respiratory organs but also have harmful effects on human growth. Indoor pollution or the pollution from housing conditions can result in ill health which can negatively impact human growth and development.
Race: Racial factors also influence height, weight, color, features, and body constitution of a human being. The body growth and development differences show a relationship with varied cultural groups.	Socioeconomic: Socioeconomic factors definitely have some affect. It has been seen that the children from different socioeconomic levels vary in average body size at all ages. The upper level families being always more advanced. The most important reasons behind this are better nutrition, better facilities, regular meals, sleep, and exercise.

Q12: level of kohlerberg moral development .__3 mark

ANS: Level 1: Pre conventional Morality 0-9 years

Q13: methods of human personality. 5 mark

ANS: Physical Test Methods or Physiological Methods

In physiological methods of assessment of personality following instruments are commonly used:

Pneumograph:

It is used for measuring the rate of respiratory activity of the individual.

Plenthysmograph:

It is used for measuring the individual's Blood pressure.

Shymograph:

It is used for measuring the activity of heart.

Q14: social interaction of preschool5

ANS: Social interaction is an essential part of social development during preschool years. The study of the social interaction experienced by pairs of preschool-age children during a structured play situation might provide additional information relative to the development of social behavior.

Q15: define primary grade 2

ANS: Primary Grades 1, 2 & 3 (6-9 years)

This age is the age of first experiences with school learning. Children are eager to learn reading and writing who are likely to be upset due to lack of progress in academics. They learn initial attitudes toward schooling. Initial roles in a group setting are formed.

Q16: classical conditioning 2

ANS: CLASSICAL CONDITIONING

A behaviorist learning theory in which individuals learn by association, pairing automatic responses to new stimuli. A simultaneous presentation of TWO events • A stimulus is presented • in order to get a response

Edu 302 mid term paper 23 june 2018

Q17: write down stages of development

ANS: Developmental stages

- Infancy - Early Childhood (birth to 5 years)

- Middle Childhood (6 to 12 years)
- Adolescence (13 to 18 years)
- Early adulthood (19 to 29 years)
- Middle Adulthood (30-60 years)
- Later Maturity (60>)

Q18: what is meant by operant conditioning

ANS: Operant Conditioning is a type of learning in which a behavior is strengthened (meaning, it will occur more frequently) when it's followed by reinforcement, and weakened (will happen less frequently) when followed by punishment. Operant conditioning is based on a simple idea

Q19: three physical characteristic of students at primary grade level

ANS: 1. Preschool children are very active. They have good control of their bodies and enjoy activity for its own sake. Teachers should provide them many opportunities to run, climb and jump but keep them under control. Instead of allowing these children complete freedom in choice of activities, some specific games and activities could be used to achieve semi controlled play.

2. As they are inclined toward a lot of activity, they need frequent rest periods after physical exertion. These children do not know to slow down. They may literally run till they drop. Strenuous activities should be followed by quiet activities. Use some signals to stop them and shift to another activity.

3. Large muscles of preschoolers are more developed than their small muscles. Their gross motor skills involving large muscles improve greatly from ages 2 to 5. As a result, their balance improves and their center of gravity moves lower. So they are able to run, jump, paper climb* and hop. Their fine motor skills involving control of small muscles greatly improves but they can't control fingers and hands as effectively as control of arms and legs. Teachers should avoid too many detailed and specific activities like pasting paper chains. King-size brushes, scissors, drawing materials and pencils be provided that are appropriate to their level of muscular development.

Q20: early childhood in developmental task theory

ANS: Infancy - Early Childhood (birth to 5 years)

- Learning to take solid foods
- Learning to walk.
- Learning to talk
- Learning to control the elimination of body wastes
- Learning gender differences
- Forming concepts and learning language to describe social and physical reality.
- Getting ready to read

Q21: background of vygotsky theory

ANS: Lev Semonovich Vygotsky Background

Vygotsky completed 270 scientific articles, numerous lectures, and ten books based on a wide range of Marxist-based psychological and teaching theories. He died on June 10, 1934, at the young age of thirty-seven after long battle with TB. Vygotsky's work did not become known in the West until 1958, and was not published there until 1962.

Edu (302)24th june 2018.

Q22: Personality Assessment techniques..3

ANS: Personality Assessment Techniques

Subjective Methods.

Objective Methods.

Projective Methods.

Psycho-Analytical Methods

Physical Test Methods or Physiological Methods.

Q23: Development task theory 2 marks..

ANS: 1. Although many theorists are responsible for contributing to the Developmental Tasks Theory, it was Robert J. Havighurst who elaborated this theory in a most systematic and extensive manner.

2. Havighurst's main claim is that development is continuous throughout the entire lifespan, occurring in stages, where the individual moves from one stage to the next by means of successful resolution of problems or performance of developmental tasks.

Q24: ZPD 2 mrks.

ANS: Zone of Proximal Development (ZPD).

The difference between what a child can do independently and what the child needs help from a more knowledgeable person to do.

Q25: Gilligan's theory of Moral Development.5 marks..

ANS: STAGES OF MORAL DEVELOPMENT

1. Selfish Stage
2. Belief in Conventional Morality
3. Post-Conventional Stage

Q26: behaviour of teacher with preschool and Kindergarten.2 marks

ANS: Teachers should allow children to settle the differences and intervene only when quarrel gets out of hand. They may either suggest another equally attractive activity or impose rules to take turns.

Teachers should encourage desirable forms of dramatic play and decide on their own what restrictions should be imposed in order to discourage aggressive behaviour.

Q27: Gardner's theory of intelligence isk 5 steps btany thy just..5 marks.

ANS: 1. Logical mathematical intelligence

2. Verbal linguistic
3. Interpersonal intelligence
4. Body Kinesthetic Intelligence
5. Musical Intelligence
6. Visual Spatial
7. Intrapersonal intelligence

Edu 302 today paper 25 june

Q28: According to vygotsky learning appears twice is ko explain krna tha 3 marks

ANS: Learning appears twice.

First on the social level, and later, on the individual level;
first between people (interpsychology), and then inside the child (intrapsychology).

Q29: Infancy and early childhood in developmental task theory k is ko explain krna tha 3 marks

ANS: Infancy - Early Childhood (birth to 5 years)

- Learning to take solid foods
- Learning to walk.
- Learning to talk
- Learning to control the elimination of body wastes
- Learning gender differences
- Forming concepts and learning language to describe social and physical reality.
- Getting ready to read

Q30: Five intelligence ko explain krna tha 5 marks

ANS: • Intelligence is an inferred process that humans use to explain the different degrees of adaptive success in people's behavior

- The mental abilities that enable one to adapt to, shape, or select one's environment
- The ability to judge, comprehend, and reason
- The ability to understand and deal with people, objects, and symbols
- The ability to act purposefully, think rationally, and deal effectively with the environment
- Intelligence (in all cultures) is the ability to learn from experience, solve problems, and use our knowledge to adapt to new situations.

Q31: Cognitive development ki 2 stages ko explain krna tha 5 marks

ANS: 1. Piaget believed that children took an active role in the learning process, acting much like little scientists as they perform experiments, make observations, and learn about the world.

2. As kids interact with the world around them, they continually add new knowledge, build upon existing knowledge, and adapt previously held ideas to accommodate new information.

Q32: Define Definition of Dyadic interaction. 2 marks

ANS: Focus on DYADIC INTERACTIONS (e.g., child being taught by a parent how to perform some culturally specific action), rather than child by himself.

Q33: Define Verbal linguistic intelligence by giving one example. 2 marks

ANS: Verbal linguistic

- People with high verbal linguistic intelligence probably they are good at:
- Poems • Rhyming words • Reading and writing • Story teller

Q34: Where can Vygotsky theory can be applied. 3 marks

ANS: The Relevance and Implications of Vygotsky's Sociocultural Theory in the Second Language Classroom .

Q35: Explain main principles and concepts of Sociocultural theory of Vygotsky. 5 marks

ANS: Theory's Principles and Concepts

Children construct their knowledge.

Knowledge is not transferred passively, but is personally constructed.

The learning is mediated.

Cognitive development is not a direct result of activity, but it is indirect; other people must interact with the learner, use mediatory tools to facilitate the learning process, and then cognitive development may occur.

Language plays a central role in mental development.

The most significant sociocultural tool is language, as it is used to teach tool use and is vital in the process of developing higher psychological functions..

Q36: Write the Crisis on Erick theory.

ANS: Crisis: must adaptively or maladaptively cope with task in each developmental stage

- Respond adaptively: acquire strengths needed for next developmental stage
- Respond maladaptively: less likely to be able to adapt to later problems

If find some mistake in file so firstly sorry for that.

Remember me in prayers
