

PSY406

Mid-Term (Solved)

ABSTRACT

This comprehensive collection of notes is accurately crafted to empower students to excel academically, ensuring they achieve a minimum of 80% marks in their examinations. The content is organized with clarity and precision, focusing on key concepts, critical analyses, and practical applications tailored to the syllabus. These notes serve as a reliable resource for both thorough preparation and last-minute revision. Designed to inspire confidence and mastery, this guide is an essential tool for students striving for academic excellence.

Maha Malik

Educational Psychology

PSY406_Educational Psychology
Mid-Term (Solved)

[B.Ed. \(1.5 Years\)](#)

[BS English](#)

[Files](#)

Q. What is the difference between hostile and instrumental aggression? Explain with two examples.

Instrumental Aggression is used to gain an object or achieve a goal, not to harm.

Example: A child fights another to take a pen—aim is to get the pen, not to hurt.

Hostile Aggression is intended to harm someone.

- ✚ Overt aggression: Physical harm, e.g., slapping a peer.
- ✚ Relational aggression: Damaging relationships, e.g., spreading rumors.

Q. How does enactive learning differ from vicarious learning? Provide examples.

Enactive Learning: Learning by doing and experiencing consequences.

Example: Learning to ride a bicycle by actually doing it.

Vicarious Learning: Learning through observation.

Example: A child learns how to wear a dupatta by watching elders.

Q. What is the difference between continuous reinforcement and intermittent reinforcement? Which is more suitable for teaching students with autism?

- ✚ Continuous Reinforcement: Reinforcer is presented after every appropriate response.
- ✚ Intermittent Reinforcement: Reinforcer is given only at certain times, not every time.

For teaching children with autism, continuous reinforcement is preferred initially to build behavior, followed by intermittent reinforcement for maintaining it.

Q. What do you know about demonstrating as a teaching strategy?

- ✚ Demonstrating is a part of expository teaching where the teacher presents material in a structured way, from general to specific.
- ✚ It's effective when combined with lecturing and practice, especially for engaging students and clarifying abstract concepts.

Q. Describe the strategy of problem-solving. Explain the working backward strategy with an example.

- ✚ Problem-Solving: Finding new answers to achieve a goal by going beyond known rules.
- ✚ Working Backward Strategy: Start from the goal and move backward to the starting point.

Example: In geometry, students may start with the proof and trace back to the given data.

Q. List and explain common strategies for problem solving.

Algorithms: Step-by-step procedures for solving a specific problem (domain-specific).

PSY406_Educational Psychology Mid-Term (Solved)

Heuristics: General strategies like:

o Working backward

- ✚ Analogical thinking (solving a new problem based on similar old ones)
- ✚ Verbalization (clearly stating the problem aloud to help process it).

Q. What are some teaching strategies for handling talented students?

While not explicitly listed for talented students alone, general strategies for effective teaching include:

- ✚ Well-organized lessons
- ✚ Anticipating student difficulties
- ✚ Clear explanations
- ✚ Linking previous and current learning
- ✚ Variety and interactive questioning These strategies help meet the advanced cognitive needs of talented students.

Q. How can modeling and self-talk be used as effective learning strategies?

- ✚ Modeling: Students learn behaviors by observing others (e.g., teachers, peers). Teachers can act as role models to promote positive behaviors like enthusiasm and punctuality.
- ✚ Self-talk: Helps children plan, guide, and regulate their own actions. Positive self-talk enhances learning, performance, and even health. Teachers should encourage rather than dismiss it.

Q. What is the difference between long-term and short-term memory?

- ✚ Short-term Memory: Holds information temporarily (15–20 seconds), can hold 5–9 items.
- ✚ Long-term Memory: Stores information permanently and is divided into:
 - Declarative memory: Facts and information
 - Procedural memory: How-to knowledge (skills)
 - Episodic memory: Personal events
 - Implicit/Explicit memory: Unconscious vs. conscious recall.

Q. How is perception related to past experiences? Provide examples.

Perception is attaching meaning to sensations. It is influenced by:

- ✚ Bottom-up processing: Perceiving based on features
- ✚ Top-down processing: Influenced by prior knowledge and expectations

Example: Hearing a ringtone and recognizing it as your phone ringing because of past experience.

Q. What is sensory memory?

Sensory memory is the initial processing stage where stimuli from the environment (e.g., sights, sounds, smells) are briefly stored. It allows us to transform incoming stimuli into information we can interpret before it fades away.

PSY406_Educational Psychology
Mid-Term (Solved)

Q. What is the significance of attention in vicarious learning?

According to Bandura, attention is one of the four core processes in vicarious learning. Without attention, observational learning cannot occur. Teachers must make presentations clear and highlight critical features to ensure students stay focused.

Q. Learning mathematical formulas is an example of which kind of memory?

Learning mathematical formulas involves declarative memory, which contains facts and verbal information like mathematical symbols and rules.

Q. Explain bottom-up and top-down processing with two examples of each.

Bottom-up processing: Perception starts from stimuli (features) to form a whole.

- ✚ Example 1: Recognizing a letter by its lines and curves.
- ✚ Example 2: Hearing sounds and assembling them into a word.

Top-down processing: Perception guided by prior knowledge and expectations.

- ✚ Example 1: Recognizing your phone's ringtone based on memory.
- ✚ Example 2: Expecting certain words while reading due to context.

Q. What is metacognition? How does it affect student learning?

Metacognition is thinking about one's own thinking—it includes planning, monitoring, and evaluating one's learning. Students with strong metacognitive skills perform better because they can:

- ✚ Plan tasks
- ✚ Monitor progress
- ✚ Evaluate outcomes

Teachers can enhance this by teaching students how to reflect on their performance.

Q. How does the development of self-concept occur during childhood?

Self-concept begins developing in childhood and evolves through interactions with family, teachers, and peers. Children observe feedback and evaluate themselves accordingly, forming beliefs about their abilities and worth.

Q. How would you differentiate between self-concept and self-esteem?

- ✚ Self-concept: One's knowledge and belief about oneself (e.g., "I am good at math").
- ✚ Self-esteem: One's overall judgment of self-worth (e.g., "I feel proud of myself"). These develop through experiences and feedback from significant others.

Q. Explain Erik Erikson's eight stages of psychosocial development.

PSY406_Educational Psychology
Mid-Term (Solved)

Erikson proposed that individuals go through eight stages:

1. Trust vs. Mistrust
2. Autonomy vs. Shame and Doubt
3. Initiative vs. Guilt
4. Industry vs. Inferiority
5. Identity vs. Role Confusion
6. Intimacy vs. Isolation
7. Generativity vs. Stagnation
8. Integrity vs. Despair

Each stage represents a conflict that must be resolved for healthy development.

Q. What is the law of contiguity? Describe a personal experience where this law affected your behavior.

The law of contiguity states that when two sensations occur together repeatedly, they become associated.

Example from life: If you always hear a notification sound before a message arrives, over time, just hearing the sound may make you check your phone—even if no message comes.

This principle is foundational in classical conditioning (Pavlov's experiment).

Q. How does the law of continuity influence behavior? Provide an example.

The law of continuity suggests that we remember things that occur together repeatedly. When two stimuli are frequently experienced together, they become linked.

Example: A student hears the school bell and immediately starts packing up, associating the bell with the end of class due to past experience.

Q. What is learned helplessness? How can it be addressed in a classroom setting?

Learned helplessness is the belief that one's efforts will always result in failure due to previous negative experiences.

In the classroom, it causes:

- ✚ Low motivation
- ✚ Poor critical thinking
- ✚ Negative emotions like hopelessness

To address it: Teachers should boost student confidence, provide encouragement, structure learning tasks clearly, and ensure success experiences early on.

Q. What are the forms of negative labeling? Explain with examples.

Labeling students as “dumb” or “slow” based on classroom performance can:

- ✚ Stigmatize: Give them a bad name

PSY406_Educational Psychology
Mid-Term (Solved)

- ✚ Lead to a self-fulfilling prophecy: The child performs poorly due to being treated as a low achiever

Example: A teacher believes a student is weak, so gives less attention. The student performs poorly, confirming the label.

Q. What is the stigma and how does the self-fulfilling prophecy play a role in education?

- ✚ Stigma: A negative label that brings shame or social rejection.
- ✚ Self-fulfilling prophecy: A belief or label that causes itself to become true.

In education: If a teacher believes a student is not intelligent, the teacher's low expectations may cause the student to underperform, reinforcing the original belief.

Q. What is the difference between cultural diversity and cultural compatibility?

- ✚ Cultural diversity: Presence of multiple distinct cultural identities (e.g., Punjabi, Sindhi, Balochi).
- ✚ Cultural compatibility: Different cultures working together toward shared goals despite differences.

In Pakistani classrooms, this involves respecting all backgrounds while promoting collective learning.

Q. Define material and non-material culture. Provide examples.

Material Culture: Physical objects/structures like buildings, roads, and clothing.

Example: The architectural design of Lahore.

Non-material Culture: Language, traditions, customs, gestures.

Example: The way people greet each other or dress.

Q. Give examples of gender bias in textbooks and explain how it can be eliminated.

Gender bias may appear in textbooks through:

- ✚ Male-centered stories and characters
- ✚ Traditional gender roles (e.g., boys as doctors, girls as nurses)

To eliminate:

- ✚ Use gender-inclusive language
- ✚ Include examples of both genders in diverse roles
- ✚ Train teachers to recognize and avoid reinforcing stereotypes.

Q. What traits are associated with masculinity and femininity in Pakistani culture?

While not listed explicitly in trait form, the text implies:

PSY406_Educational Psychology Mid-Term (Solved)

- ✚ Masculinity: Leadership, competitiveness, dominance (e.g., societal expectations from males)
- ✚ Femininity: Nurturing, modesty, cooperation

These roles are culturally shaped and reinforced by family, media, and school environments.

Q. How does peer culture influence moral development?

Peer culture influences how students:

- ✚ Learn acceptable social behaviors
- ✚ Conform or rebel against authority
- ✚ Share values through group interactions

Positive peer relationships enhance cooperation, empathy, and moral decision-making.

Q. How does peer pressure affect academic achievement? Explain with an example.

Peer pressure can both positively or negatively impact academic outcomes.

Example: A student may skip homework because their friend group views studying as “uncool,” leading to lower achievement.

Conversely, peers valuing education can uplift each other's performance.

Q. What is the role of home environment and resources in academic achievement?

Children from low-income families often lack access to educational tools like books and computers. Poor nutrition, family stress, and limited parental involvement also contribute to poor academic performance. Teachers should be aware of these limitations and support students accordingly.

Q. How can tracking influence a student's academic performance?

Tracking refers to grouping students based on ability. Students placed in low-ability tracks often receive less rigorous instruction and are taught to memorize rather than think critically. This can limit their academic growth and self-perception, particularly affecting students from poor backgrounds.

Q. What is the difference between a speech disorder and a language disorder?

- ✚ Speech disorder: Difficulty in producing sounds properly (e.g., stuttering, articulation, voicing problems).
- ✚ Language disorder: Difficulty in understanding or using language appropriately.

Students with speech issues may be unintelligible, while those with language disorders may use very few words or rely on gestures.

Q. What are the common causes of speech problems in children?

Causes include:

PSY406_Educational Psychology Mid-Term (Solved)

- ✚ Hearing impairments
- ✚ Emotional issues (e.g., trauma, fear)
- ✚ Motor dysfunctions
- ✚ Cognitive impairments

Environmental factors like poor language exposure at home also play a role.

Q. How does slurred speech relate to learning disabilities?

Slurred speech can be a sign of a broader learning disability. These students often struggle with making friends, reading, mathematics, and writing. Their attention spans are short, and they tend to be passive learners. Early diagnosis and support are essential to prevent learned helplessness.

Q. What are two areas of research in educational psychology? Identify dependent and independent variables in each.

1. Effect of classroom environment on academic performance

- ✚ Independent Variable: Classroom environment
- ✚ Dependent Variable: Academic performance

2. Impact of reinforcement strategies on student behavior

- ✚ Independent Variable: Type of reinforcement
- ✚ Dependent Variable: Student behavior

(These examples are derived from various themes discussed throughout the text on behavior, reinforcement, and learning strategies.)

Q. What is the scope of educational psychology?

Educational psychology studies how students learn and how different factors like teaching methods, classroom environments, and psychological principles impact learning. It helps develop instructional strategies, supports learners with disabilities, and improves teaching effectiveness.

Q. Describe the contribution of educational psychology to teaching and learning methods.

It has:

- ✚ Identified learning differences
- ✚ Emphasized individualized instruction
- ✚ Introduced strategies like scaffolding, modeling, reinforcement
- ✚ Improved assessments and teacher-student interaction methods.

Q. Mention the contribution of Edward Thorndike to educational psychology.

Thorndike proposed:

- ✚ Law of Effect: Responses followed by satisfaction are likely to be repeated.

PSY406_Educational Psychology
Mid-Term (Solved)

- ✚ Advocated for objective testing and measurable outcomes in learning. He emphasized that learning is gradual and influenced by consequences of behavior.

Q. Describe a plan to help a student who avoids social interaction during break time.

- ✚ Observe the student to identify causes (e.g., shyness, bullying).
- ✚ Create opportunities for interaction through pair or group work.
- ✚ Model and reinforce positive social behaviors.
- ✚ Gradually include the student in activities.
- ✚ Provide emotional support and ensure the classroom is a safe space.

Q. How should teachers respond to students experiencing a developmental crisis, such as parents' divorce?

Teachers should:

- ✚ Understand that each developmental stage brings a crisis (e.g., trust vs. mistrust, identity vs. role confusion).
- ✚ Provide emotional support, stability, and consistent routines.
- ✚ Avoid reinforcing negative emotions.
- ✚ Engage the child in activities that foster confidence and social support.

Q. How can teachers help students who benefit from token economy systems?

Teachers can:

- ✚ Use token systems where students earn points or tokens for positive behaviors.
- ✚ Let students exchange tokens for rewards (e.g., toys, privileges).
- ✚ Start with frequent reinforcement, then gradually move to intermittent reinforcement.

Used effectively with students who are:

- ✚ Disinterested in academics
- ✚ Repeatedly unsuccessful
- ✚ Displaying behavior problems.

Q. What kind of students benefit most from token economy systems?

- ✚ Students with mental retardation
- ✚ Students who have frequently failed
- ✚ Students with behavioral issues
- ✚ Students with low academic skills

These students respond well due to the clear and tangible nature of token rewards.

Q. Describe a seven-step plan to manage student behavior effectively.

Although not labeled as “seven steps,” strategies include:

PSY406_Educational Psychology
Mid-Term (Solved)

1. Remind students of goals and importance of completing tasks.
2. Warn them about consequences of inaction.
3. Use verbal prompts and eye contact.
4. Direct them gently but clearly.
5. Show how to stay on task.
6. Offer respectful choices (e.g., comply now or discuss after class).
7. If unresolved, escalate to administration as last resort.

Q. Describe Piaget's cognitive development stages using the example of Amna pretending to be a doctor.

Amna is in the Preoperational Stage (2–7 years):

- ✚ Uses symbolic thinking
- ✚ Engages in pretend play

This stage allows her to imagine roles and act them out, e.g., being a doctor, without logical reasoning yet fully developed.

Q. What is orderly and gradual development in children?

- ✚ Orderly development: Children develop in a sequence (e.g., sitting → standing → walking).
- ✚ Gradual development: It occurs over time, not suddenly (e.g., a seed turning into a tree).

Q. One of the three principles of development is orderly development. Explain this principle.

This principle states that development follows a predictable pattern. For example, before learning to walk, a child must first sit and stand. It implies step-by-step growth, foundational for teaching and curriculum planning.

Q. List three limitations of the experimental method in educational research.

Not directly listed, but inferred:

1. Control over variables in classroom settings is difficult.
2. Ethical concerns with manipulation.
3. Generalizability is often limited due to artificial settings.

Q. What are dependent and independent variables? Provide examples from educational research.

- ✚ Independent Variable: Manipulated factor (e.g., teaching method)
- ✚ Dependent Variable: Measured outcome (e.g., student achievement) Example: Studying how group work (IV) affects math test scores (DV).

Q. Provide three benefits of habit formation.

While not listed as a specific list, inferred benefits include:

PSY406_Educational Psychology Mid-Term (Solved)

1. Improves efficiency through repeated practice.
2. Reduces cognitive load—actions become automatic.
3. Supports skill mastery, such as through repeated review and reinforcement.

Q. What is transpersonal psychology?

Transpersonal psychology is a subfield of psychology that integrates the spiritual and transcendent aspects of human experience with modern psychology. It goes beyond the individual (personal) to explore higher states of consciousness, mystical experiences, and spiritual development.

Q. What is co-construction in learning?

Co-construction refers to learning that occurs through social interaction. Vygotsky emphasized that children develop understanding by interacting with more knowledgeable members of society. Children learn through dialogue, imitation, and internalization, especially within joint family systems or communal environments.

Q. How does labeling affect students' academic self-perception?

Labeling can negatively impact students by:

- ✚ Stigmatizing them
- ✚ Leading to self-fulfilling prophecies

If a teacher believes a student is weak, they may provide less attention, and the student may underperform, reinforcing the label. Teachers should avoid labeling and instead offer supportive strategies tailored to student needs.

Q. How are intelligence and academic performance related? Is intelligence inherited or acquired?

Intelligence is influenced by both genetics and environment.

- ✚ Children of intelligent parents tend to be more intelligent, showing a hereditary component.
- ✚ However, environment and educational experiences also shape intelligence. Identical twins raised in different environments can have different IQ levels, suggesting that intelligence can be polished and improved.

Q. What is the difference between achieving grades and working to learn?

Students focused only on grades may prioritize memorization over understanding.

Educators should design assessments that encourage deep learning, not just superficial knowledge. Motivation should come from the desire to understand content, not just from fear of failure or a desire for high marks.

Q. What is correlation in educational research?

PSY406_Educational Psychology

Mid-Term (Solved)

Correlation refers to a statistical relationship between two variables. For example, a positive correlation between time spent studying and academic achievement means as study time increases, so do grades. Correlation does not imply causation.

Q. What are some resources that support self-regulation in students?

Teachers can help students develop self-regulation through:

- ✚ Goal setting
 - ✚ Self-monitoring
 - ✚ Self-reinforcement
 - ✚ Emotional intelligence
- These strategies improve academic performance, behavior, and motivation.

Q. How do teacher qualifications and training impact student outcomes?

Good teachers:

- ✚ Understand their subject
- ✚ Use varied teaching strategies
- ✚ Know student backgrounds
- ✚ Promote motivation and self-assessment

These learned characteristics—not inherited ones—help create effective teaching and better student outcomes.

Q. Who are students that benefit from reinforcement schedules like token economies?

- ✚ Students with learning disabilities
- ✚ Students with behavioral issues
- ✚ Students struggling academically

These students benefit from clear, immediate reinforcement to shape and encourage desirable behavior.

Q. Describe the architectural style of the Mughal era as an example of culture.

This is an example of material culture, which includes tangible items like buildings, clothes, and artifacts. Mughal architecture, such as domes, gardens, and ornate decorations, reflects the aesthetic values and traditions of that historical period.

Q. Teachers & Teaching of Educational Psychology

Good teachers:

- ✚ Know their students' strengths, weaknesses, and cultural backgrounds.
- ✚ Understand learning processes and use varied teaching strategies (e.g., demonstration, practice).
- ✚ Motivate and properly assess students.

PSY406_Educational Psychology

Mid-Term (Solved)

- ✚ Engage in self-regulation and reflective teaching. These skills are learned, not inherited, and critical for becoming a professional teacher.

Q. Cognitive Development & Language

- ✚ Cognitive development includes growth in reasoning, problem-solving, and abstract thinking.
- ✚ Language is deeply linked to this development.
- ✚ Vygotsky emphasized dialogue, imitation, and co-construction as key processes in learning.
- ✚ He believed children learn through interaction with more knowledgeable others.

Q. Personal, Social & Emotional Development

- ✚ Development in this area includes building self-esteem, moral reasoning, and peer relationships.
- ✚ Peer influence plays a crucial role in moral growth.
- ✚ Teachers must recognize and address low self-esteem, as it's linked to dropout rates and criminal behavior.

Q. Learner Differences

- ✚ Learners differ based on gender, socioeconomic background, cognitive abilities, and more.
- ✚ Teachers should tailor strategies to these differences, promoting inclusion and equity.
- ✚ Educational psychology promotes individualized instruction based on these unique needs.

Q. Culture & Community

- ✚ Pakistan has diverse cultures: Punjabi, Sindhi, Balochi, Pakhtoon, etc.
- ✚ These cultures influence learning styles, communication, and expectations.
- ✚ Cultural compatibility is possible when diverse groups work together for a shared goal.

Q. Behavioral Views of Learning

Emphasizes observable behavior changes through conditioning.

Includes theories like:

- ✚ Classical Conditioning (Pavlov)
- ✚ Operant Conditioning (Skinner)

Focuses on reinforcement, punishment, and behavior shaping.

Q. Complex Cognitive Processes

- ✚ Refers to higher-order thinking skills like reasoning, problem-solving, and reflection.
- ✚ Includes strategies like summarizing, questioning, clarifying, and predicting (Reciprocal Teaching).
- ✚ Encourages comprehension monitoring and independent learning.

PSY406_Educational Psychology
Mid-Term (Solved)

Q. Is intelligence acquired from environment or genetic factor? Describe with logical arguments.

- ✚ Intelligence is both inherited and influenced by the environment.
- ✚ **Example:** Identical twins raised apart may show differences in IQ.
- ✚ Educational psychologists agree intelligence can be improved through education, experiences, and practice.

Q. Jean Piaget Stage name in sequence and explain any one of them

Piaget's 4 stages:

1. Sensorimotor (0–2 years)
2. Preoperational (2–7 years)
3. Concrete Operational (7–11 years)
4. Formal Operational (11+ years)

Formal Operational Stage: Involves abstract reasoning, problem-solving, and understanding social issues. Students begin to think critically and independently.

Q. Difference between cognitive development and physical development

- ✚ Cognitive development: Involves thinking, reasoning, morality, problem-solving.
- ✚ Physical development: Involves bodily changes like height, motor skills, muscle coordination. Each progresses differently but both are crucial for overall growth.

Q. Explain variable rate and continuous development

- ✚ Continuous development: Human development occurs throughout life, not in abrupt steps.
- ✚ Variable rate: Individuals develop at different rates—e.g., boys and girls grow at different times. These principles are widely accepted in educational psychology.

Q. Enlist language differences found in the classroom

- ✚ Dialect differences: Regional variations in pronunciation, grammar, and vocabulary.
- ✚ Bilingualism: Many students speak and learn in more than one language (e.g., Urdu and English).

These differences affect communication and must not be confused with language disorders.

Q. What is declarative memory and procedural memory?

- ✚ Declarative memory: Knowledge of facts, rules, and information (e.g., math formulas, capital cities).
- ✚ Procedural memory: Knowledge of how to perform tasks (e.g., driving a car, solving a math problem). These are part of long-term memory and essential in learning.

Q. Principle of contiguity

PSY406_Educational Psychology Mid-Term (Solved)

This principle states that when two or more sensations occur together often, they become associated.

Example: Pavlov's experiment—dog learns to salivate at the sound of a bell after repeated pairing with food.

Q. Difference between stuttering and voicing problem or articulator disorder

- ✚ Stuttering: Repetitions or blocks in speech, usually appears between ages 3–4.
- ✚ Articulation disorder: Mispronouncing sounds (e.g., “po-y” for “pony”).
- ✚ Voicing problem: Issues with pitch, loudness, or monotone speech.

All require attention and often referral to a speech therapist.

Q. Concrete Operational Stage

Occurs between ages 7–11 years:

- ✚ Children begin to solve concrete problems logically
- ✚ Understand multiple perspectives (e.g., pros and cons of a situation)
- ✚ Can classify objects and understand cause-effect in real-world scenarios.

Q. How we change the behavior of a child through Applied Behavior Analysis

ABA involves:

- ✚ Identifying behaviors
- ✚ Understanding antecedents and consequences
- ✚ Applying reinforcement strategies (positive or negative) to shape desired behaviors

Example: Reinforcing a student with praise or rewards for appropriate classroom participation.

Q. Write five characteristics of Formal Operational stage of Piaget

1. Abstract thinking
2. Hypothetical reasoning
3. Understanding metaphors and symbolism
4. If-then logical thinking
5. Metacognition (thinking about thinking)

Occurs typically from age 11 and up.

Q. What is If-Then Thinking?

A hallmark of the Formal Operational Stage, where individuals can:

- ✚ Form hypotheses (If this happens, then this will follow)
- ✚ Think logically about abstract concepts Used in mathematics, science, and critical reasoning.

Q. Define Script

PSY406_Educational Psychology
Mid-Term (Solved)

A script is a mental framework or schema for how a sequence of events typically unfolds. Example: A student has a script for “attending a class” – sit down, take notes, ask questions, etc.

Scripts help with memory, behavior planning, and comprehension.

Q. Mosque and church are material or non-material and explain

- ✚ Mosque: A physical structure where Muslims gather for worship.
- ✚ Church: A physical building for Christian religious activities.
- ✚ Mosque and Church: Represent religious practices, beliefs, and rituals, making them part of non-material culture.

Q. Amna is of two years, and is stubborn to change her clothes until she wears them herself or call for help. Which stage of Erick Erickson is this?

(Erik Erikson’s Autonomy vs. Shame and Doubt stage)

Q. Ali hit Salman in anger to stop the goal and Salman hit him back in anger. which type of aggression is this?

(Instrumental Aggression)

Q. Conventional Moral

Conventional morality is a stage of moral development proposed by Lawrence Kohlberg. It occurs during adolescence and is focused on societal norms and external expectations. Individuals at this stage believe that social rules and the expectations of others determine what is acceptable or unacceptable behavior. They value social order and responsibilities within relationships.

Q. Correlational research

Correlational research investigates relationships between variables without manipulating them. Researchers measure variables and assess their statistical relationship. It helps identify associations but does not establish causality. For example, studying the correlation between coffee consumption and tiredness.

Q. Experimental study of a drug and treatment of cancer (Identify Independent and dependent variables)

In an experimental study, researchers investigate the effects of an intervention (independent variable) on an outcome (dependent variable).

Example:

- ✚ Independent Variable: The drug (intervention) administered to cancer patients.
- ✚ Dependent Variable: The treatment outcome, such as tumor size reduction or patient survival rate.

Q. Explain any two reinforcements of Skinner

PSY406_Educational Psychology Mid-Term (Solved)

- ✚ **Positive Reinforcement:** Adding a desirable stimulus to increase the likelihood of a behavior (e.g., giving praise for completing homework).
- ✚ **Negative Reinforcement:** Removing an aversive stimulus to increase the likelihood of a behavior (e.g., taking away chores for good behavior).

Q. what is Culturally compatible class?

A culturally compatible class recognizes students' diverse backgrounds and integrates their cultural identities into the learning environment. It acknowledges students' languages, traditions, customs, and experiences. Teachers create an inclusive atmosphere where students feel valued and connected to their cultural heritage. Culturally compatible classes promote cross-cultural understanding and celebrate diversity.

Q. Real life example of Moral development through Modeling

Imagine a child observing their parents' behavior during a conflict. If the parents calmly discuss the issue, compromise, and show empathy, the child learns prosocial behaviors. However, if the parents yell, insult each other, or use aggression, the child may internalize negative patterns. This modeling influences the child's moral development, shaping their understanding of conflict resolution and empathy.

Q. Home environment or Resources academic Achievement

- ✚ Research shows a significant relationship between students' home environment and academic performance.
- ✚ Factors such as family communication, parental attitudes, and resources impact students' success.
- ✚ Having a separate study room, positive interactions at home, and necessary facilities contribute to better academic outcomes.
- ✚ Social isolation within the home environment may negatively affect academic achievement.

Q. Passive learner

- ✚ A passive learner is someone who receives information without actively engaging in the learning process.
- ✚ They may listen, read, or watch but lack active participation, critical thinking, or questioning.
- ✚ Passive learners often memorize facts without deeper understanding or application.

Q. Difference between short term memory and long term memory

Short-Term Memory (STM):

- ✚ STM is the temporary storage of information that lasts only a few seconds to a minute.
- ✚ It has a limited capacity, typically holding around 5 to 9 "chunks" of information at a time.
- ✚ Information in STM decays quickly if not actively rehearsed or used.

PSY406_Educational Psychology
Mid-Term (Solved)

- ✚ Active processing (repeating, visualizing, or manipulating information) is required to maintain it.
- ✚ Examples of STM include remembering a phone number, directions, or a grocery list.

Long-Term Memory (LTM):

- ✚ LTM involves the more permanent storage of information that can last from minutes to a lifetime.
- ✚ It seemingly has an unlimited capacity.
- ✚ Encoding in LTM is primarily semantic (meaning-based) and contextual.
- ✚ Retrieval from LTM can be effortless or automatic.
- ✚ Examples of LTM include remembering your name, childhood memories, or acquired skills.

Q. Difference between physical and cognitive development with example

- ✚ **Physical Development:** This refers to the changes in our body and brain. It includes things like growing taller, gaining weight, and developing motor skills (like walking or holding a pencil). For example, when a baby learns to crawl or a child practices riding a bike, they are experiencing physical development.
- ✚ **Cognitive Development:** This involves how our brain processes information, thinks, and learns. It includes memory, problem-solving, language, and understanding concepts. For instance, when a child learns to count, read, or solve puzzles, it's cognitive development.

Q. First stage of Erikson theory/Stages of Erikson

1. Trust vs. Mistrust (Infancy, birth to 18 months):

During this stage, infants are uncertain about the world and rely on their primary caregiver for stability and consistency.

- ✚ **Trust:** If caregivers are reliable, consistent, and nurturing, the child develops a sense of trust, believing the world is safe and people are dependable.
- ✚ **Mistrust:** Inconsistent care fosters mistrust, suspicion, and anxiety, leading to a belief in an unpredictable world.

2. Autonomy vs. Shame and Doubt (Toddler years, 18 months to three years): Toddlers seek independence and autonomy. They want to do things on their own.

- ✚ **Autonomy:** Encouragement and support from caregivers allow toddlers to explore and develop a sense of self-control.
- ✚ **Shame and Doubt:** Overly restrictive or critical caregivers can lead to feelings of shame and doubt about their abilities.

3. Initiative vs. Guilt (Preschool years, three to five):

Preschoolers become more curious and take initiative in exploring their environment.

PSY406_Educational Psychology

Mid-Term (Solved)

- ✚ Initiative: Encouragement to explore and try new things fosters a sense of purpose and curiosity.
- ✚ Guilt: If caregivers discourage initiative or criticize their efforts, children may feel guilty or anxious about their actions.

4. Industry vs. Inferiority (Middle school years, six to 11):

Children focus on mastering skills and achieving competence.

- ✚ Industry: Positive experiences in school and other activities build a sense of industry and accomplishment.
- ✚ Inferiority: Failure or lack of encouragement can lead to feelings of inadequacy and inferiority.

Q. Why speech is necessary for students learning

Speech is crucial because it allows students to communicate effectively. Here's why:

- ✚ Learning: Students need speech to understand and express ideas, ask questions, and participate in class discussions.
- ✚ Social Interaction: Speech helps students connect with peers, build friendships, and collaborate.
- ✚ Academic Success: Good communication skills lead to better academic performance and confidence.
- ✚ Problem-Solving: Students use speech to explain their thinking and solve problems.

Q. Define non-material culture/ material culture

- ✚ Material culture includes physical objects (like houses, tools, and technology) that define a culture.
- ✚ Non-material culture refers to ideas, beliefs, norms, values, language, and institutions. For example, religious beliefs, moral codes, and social norms are part of non-material culture.

Q. Explain classical and Operant Conditioning

Classical Conditioning:

- ✚ Discovered by Ivan Pavlov.
- ✚ Involves pairing a neutral stimulus (like a bell) with an unconditioned stimulus (like food) to create a learned response (like salivating).

Example: Pavlov's dogs salivating at the sound of a bell because it was associated with food.

Operant Conditioning:

- ✚ Developed by B. F. Skinner.
- ✚ Focuses on voluntary behaviors and their consequences (reinforcement or punishment).

Example: Students studying harder to get good grades (reinforcement) or avoiding procrastination due to fear of missing deadlines (punishment)
