MUHAMMAD ZAHID	BT201 Ecology, Biodiversity & Evolution-II
MCQs	Fall 2020(14 February 2020)
Quiz 2	Final Term

1. A food web summarizes the ----------relations in a community……..Feeding
2. Succession within a desert stream occurs in less than ---------- months……..2 months
3. succession in the intertidal zone requires ---------- years……1-3 years
4. A pathogenic fungus manipulates the growth program of its host plant in a way to produce……Pseudoflowers
5. The ability to bounce back after disturbance is called----------……..Resilience
6. When species can live without their mutualistic partners, the type of relationships is _____…… Facultative
7. The rate of decomposition in terrestrial ecosystems increases with ---------- content of litter……Nitrogen (N)
8. ---------- is generally limited by nutrient availability……Aquatic primary production
9. The rate of decomposition in terrestrial ecosystems decreases with ---------- content of litter……Lignin
10. The length of stream required for an atom of a nutrient to complete a cycle is called the ------……Spiraling length
11. ---------- is the intermediate hosts for pathogenic human parasites i.e. Schistosoma……Snails
12. Procambarus clarkia is the biological name of ----------……Crabs (crayfish)
13. Various investigators have found that the diversity of forest ------ increases with increased foliage height diversity……Birds
14. Zooxanthellae is a ---------- type of symbiotic association……Mutualism
15. ---------- proposed that the feeding activities of a few species have inordinate influences on community structure……Robert Paine (1966)

Muhammad Zahid (Haveli Lakha)

16. ---------- demonstrated that the influence of consumers on community structure depends upon their feeding preferences, their local population density, and the relative competitive abilities of prey species……**Jane Lubchenko (1978)**

17. Primary forest succession around Glacier Bay may require about ---------- years.**1,500**

18. Reef-building corals obtain energy from their principal energy source known as……**Zooxanthellae**

19. ---------- concentration usually limits rates of marine primary production…..**Nitrogen**

20. A food web summarizes the feeding relations in a ----------……..**Community**

21. The total amount of energy fixed by all the autotrophs in the ecosystem is ---------- ……**Gross primary production**

22. Mycorrhizal association is formed between ---------- and ----------…….**Fungi and plants**

23. ---- graphed the abundance of species in collections as distributions of species abundance, with each abundance interval twice the preceding one.**Frank Preston (1948)**

24. Recent research in Kenya has shown that a crayfish controls the ----------……**Snails**

25. A parasitic infestation reduced the ---------- population in Sweden by 70%....**Red fox**

26. Interactions between individuals that benefit both partners……**Mutualism**

27. He found that even the so-called simple communities included very complex feeding relations……**Charles Elton(1927)**

28. On islands and habitat patches on continents, species richness __with area…….**Increases**

29. _____discovered five coexisting warbler species feed in different layers of forest vegetation……**Robert MacArthur (1958)**

30. Reef-building corals depend upon mutualistic relationships with……**Algae and animals**

31. Though intense human disturbance reduces species diversity. moderate levels of disturbance may increase the diversity of some _____ such as the European chalk grasslands.,…… **Communities**

32. Community changes during succession include _____in species diversity..**increases**

33. He added the concepts of the fundamental niche, the physical conditions under which a species might live in the absence of other species……..**Hutchinson**

Muhammad Zahid (Haveli Lakha)

34. secondary forest succession on the Piedmont Plateau takes about ___ years.....150

35. Human disturbance also increases export of from aquatic catchments.....Phosphorous

36. Expanded the logistic model of population growth to represent interspecific competition.....Lotka

37. Expanded the logistic model of population growth to represent interspecific competition..... Volterra

38. 'The niches of Galapagos finches are largely determined by their .....Feeding

39. _____proposed that high diversity is a consequence of continually changing conditions not of competitive accommodation at equilibrium.....Joseph Connell(1975,1978)

40. The niche of a salt marsh grass is determined by.....Tidal levels

41. Chinese formers have used ants as keystone predators to control pests in citrus orchards for over _____ years.....1700

42. The total amount of energy fixed by all the autotrophs in the ecosystem is __ production.....Gross

43. Humans disturbed tropical rain forests in Central America beginning about _____ years ago.....11,000

44. The local population density of a butterfly _____ is lower on larger and on isolated habitat patches..... Melitaea cinxia

45. _____ studied the effects of disturbance on the diversity of sessile marine algae and invertebrates growing on intertidal boulders, found support for the intermediate disturbance hypothesis..... Wayne Sousa (1979)

46. The _____ concentration and export by the earth's major rivers correlate directly with human population density..... Nitrate

47. _____ predicted that some predators may increase species diversity by reducing the probability of competitive exclusion..... Robert Paine (1966)

48. The__ concentration usually limits rates of primary production in freshwater ecosystems..... Phosphorous

49. Leafhoppers are an example of ___ competition..... Intraspecific

50. The ____ reflects the environmental requirements of species.....Niche

Muhammad Zahid (Haveli Lakha)

51. ____ percent of terrestrial plants form mycorrhizal association……..**90%**

52. The relative abundance and diversity of species can be portrayed using _____ curves…….. **Rank-abundance**

53. A species that is dependent on other organism is called as…… **Obligate**

54. When species are so dependent on the mutualistic relationship that they cannot live without their mutualistic partners, the type of relationships is…….. **Obligate**

55. It has been observed that invasive _____ devastated the native species of lake Atitlan and Gatun Lake in central America…… **Fishes**

56. Self-thinning occurs in _____ as a competition for their survival…….. **Plants**

[BEST OF LUCK]

Muhammad Zahid (Haveli Lakha)
