BT201

ECOLOGY, BIODIVERSITY& EVOLUTION-II

QUIZ #02

1: A food web summarizes the ----------relations in a community.

FEEDING

2: Succession in the intertidal zone requires --------- years.

1-3

3: Recent research in Kenya has shown that a crayfish controls the ----------.

SNAILS

4: A parasitic infestation reduced the ---------- population in Sweden by 70%.

RED FOX

5: Interactions between individuals that benefit both partners.

MUTUALISM

6: He found that even the so-called simple communities included very complex feeding relations.

CHARLES ELTON

7: ---------- is the intermediate hosts for pathogenic human parasites i.e. Schistosoma.

SNAILS

8: **Procambarus clarkia** is the biological name of ----------.

CRABS (CRAYFISH) TRUE ANS

9: Various investigators have found that the diversity of forest ------ increases with increased foliage height diversity.

BIRDS

10: ---------- demonstrated that the influence of consumers on community structure depends upon their feeding preferences, their local population density, and the relative competitive abilities of prey species.

JANE LUBCHENKO (1978)

11: Primary forest succession around Glacier Bay may require about ---------- years.

1,500

12: Reef-building corals obtain energy from their principal energy source known as----------.

ZOOXANTHELLAE

13: ---------- concentration usually limits rates of marine primary production.

NITROGEN

14: The total amount of energy fixed by all the autotrophs in the ecosystem is ---------- production.

GROSS

15: Zooxanthellae is a ---------- type of symbiotic association.

MUTUALISM

16: ---------- proposed that the feeding activities of a few species have inordinate influences on community structure.

ROBERT PAINE (1966)

17: A food web summarizes the feeding relations in a ----------.

COMMUNITY

18: The total amount of energy fixed by all the autotrophs in the ecosystem is ----------.

GROSS PRIMARY PRODUCTION

19: He found that even these so-called simple communities included very complex feeding relations.

CHARLES ELTON (1927)

20: Mycorrhizal association is formed between ---------- and ----------.

FUNGI AND PLANTS

21: ---------- graphed the abundance of species in collections as distributions of species abundance, with each abundance interval twice the preceding one.

FRANK PRESTON (1948)

22: Succession within a desert stream occurs in less than ---------- months.

2 MONTHS

23: succession in the intertidal zone requires ---------- years.

1-3 YEARS

24: A pathogenic fungus manipulates the growth program of its host plant in a way to produce --.

PSEUDOFLOWERS

25: The ability to bounce back after disturbance is called----------.

RESILIENCE

26: When species can live without their mutualistic partners, the type of relationships is ----------.

OBLIGATE

27: The rate of decomposition in terrestrial ecosystems increases with ---------- content of litter.

NITROGEN (N)

28: ---------- is generally limited by nutrient availability.

AQUATIC PRIMARY PRODUCTION

29: The rate of decomposition in terrestrial ecosystems decreases with ---------- content of litter.

LIGNIN

30: The length of stream required for an atom of a nutrient to complete a cycle is called the ------.

SPIRALING LENGTH
