506.
Ovoviviparous (2 marks)
Func of maxilla n mandible(2 marks)
Hemimetabola ordes (3 marks)
Difference between skeleton of mollusca
n arthropoda (3 marks)
Different positions of head (5 marks)
Types of metamorphosis(5 marks)
I need 505....
Today 506 paper
Mcqs are very easy...
5 marks question digestive system of insects,
5 marks question head of insects and types,
3 marks question different types of
exoskeleton of mulloucsa
3 marks question breathing of insects
2 marks what is seminal receptcal

(4) How many Parts of mouth in insects?:

(1) Labrum — Front lip
(2) Labium — hinder lip
(3) mandibles
(4) Maxilla

(1) Labrum:-

On front of (in hyPoganathous head) are above the mouth opening (Prognathous head) is the front lip or labrum.

(2) Labium:-

Behind the maxillae and closing the mouth opening behind is the hinder lip or Labium

(3) Mandibles:-

At the side of the mouth opening immediately behind the Labrum. is a Pair of jaws, the mandibles

(4) Maxilla:-

Immediately behind each manalible at the side of mouth is a second appendage, the maxilla.

(10) Function of Maxillae and mandibles. 2

The function of the maxillae appears to be to hold and retain the food in the mouth while it is being worked upon by the mandibles, and also to aid these in breaking it up.

(11) Difference b/w the skeleton of Mollusca and arthropoda. 3

The materials of which the skeleton is composed are quite different Being largely calcium carbonate in the Mollusca.

and chitin which somewhat resembles horn in its nature, sometime with calcareous salts deposited in it. in the arthropoda.

(12) Types of metamorphosis = 5

There are three type of metamorphosis:

1. Growth and molting
2. in complete metamorphosis

→ The hind intestine those the stomach to the anus

The fore intestine, by difference of structure.

(1 Mouth cavity
(2 Esophagus
(3 Crop
(4 Proventriculus
(5 The stomach may develop side Pouches or gastric caeca.

The hind intestine is often seperable by differences.

→ Ileum
→ Colon
→ Rectum.

---

(18) Breathing of insects ? ≦

Sol

- ovoviviparous ✓ 2 45 PPt

- Difference form of larva ? ✓
- characteristics of insects 5
- Contact insecticides ✓ 32 PPt
- Different types of head and type.
- Formation of exoskeleton
- Different types of metamorphosis

(3) Complete metamorphosis.
Gradual.

(a) Growth and molting
(i) egg → (ii) → young → (iii) adult
(b) In Complete metamorphosis
egg → nymphs → adult

(c) Complete metamorphosis.
egg → larvae → Pupa → adult.

(8) what type of brain in insects? ≡
In the head, in front of or above the esophagus, is the largest ganglion of the body, called the brain, produced by the fusion of several ganglia.

(9) what is ovipositor :- ≡
The ovipositor is an organ used by some animals for the laying of eggs.

(15) Characteristics of insects?

(i) → Bilaterally symmetrical animal.

(ii) → Consisting of a series of segments:
(A) Head (B) Thorax (C) Abdomen

(iii) → The animal is covered by a skeleton, shell-like in that it is on the outside of the body, but horny in its nature.

(iv) → Three Pairs of pointed legs attached to the Thorax

(v) → Pair of antennae

(vi) → mouth Parts

(vii) → two Pairs of wings

(viii) → Breathing through air tube.

(ix) → The ReProductive organs open near the hinder end of the body.

---

(16) Define hemimetabola?

The Term Hemimetabola was used for many year to include all those orders in which the insects

(5) Define: ovoviviparous?

Those having eggs that remain the body for a time after hatching are termed ovoviviparous.

(6) Order of Hemimetabola? 3

Three orders

①- Ephemerida

②- odonata

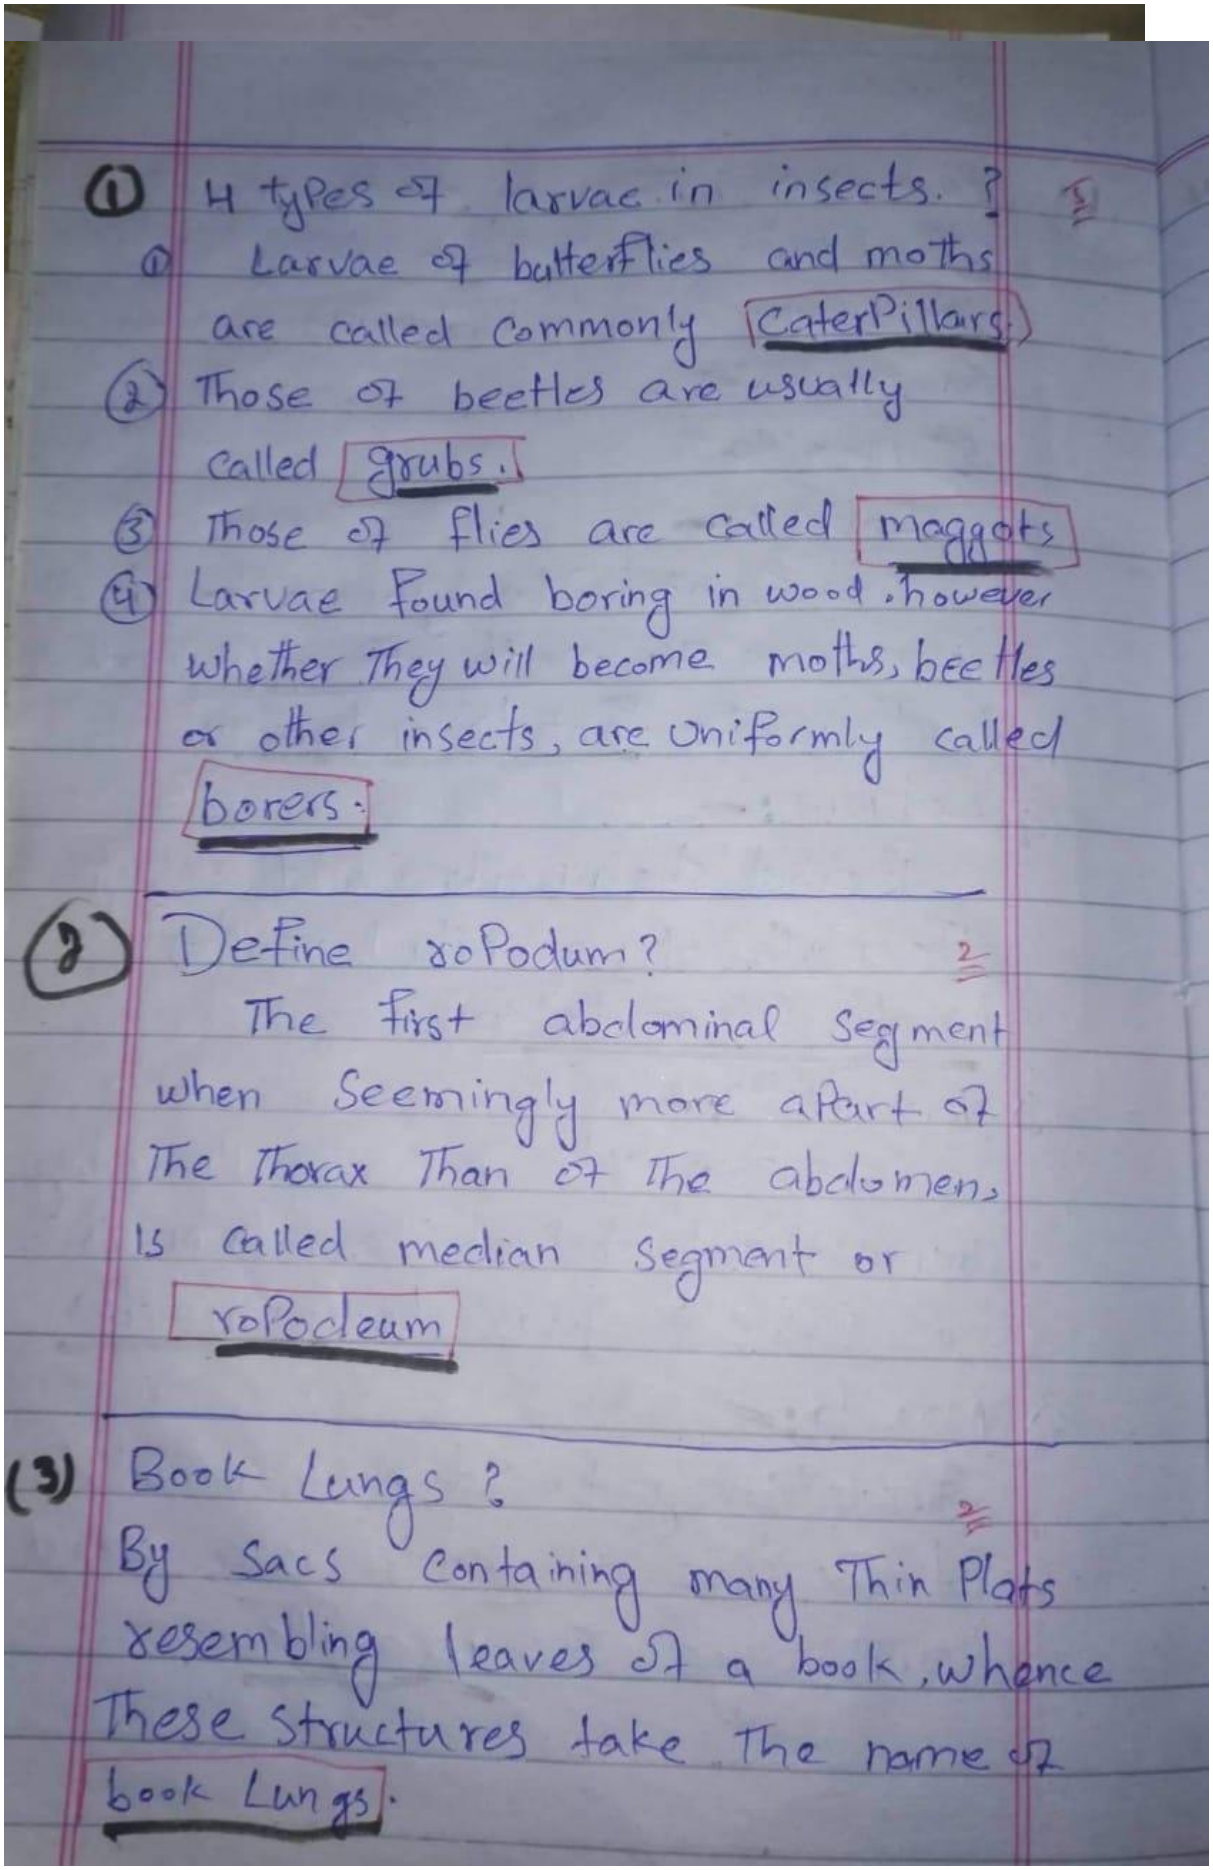

③- Plecoptera

(7) What is seminal receptacle? 2

A side Pouch called Seminal receptacle is connected with the Vagina is for the storag of the sperms which fertilize the eggs.

(8) Contact insecticides? 3

It was formerly supposed that certain material called Contact insecticides which kill insects by Contact with their bodies.

(1) 4 types of larvae in insects. ? 1

① Larvae of butterflies and moths are called commonly caterpillars.

② Those of beetles are usually called grubs.

③ Those of flies are called maggots

④ Larvae found boring in wood, however whether they will become moths, beetles or other insects, are uniformly called borers.

---

(2) Define propodum? 2

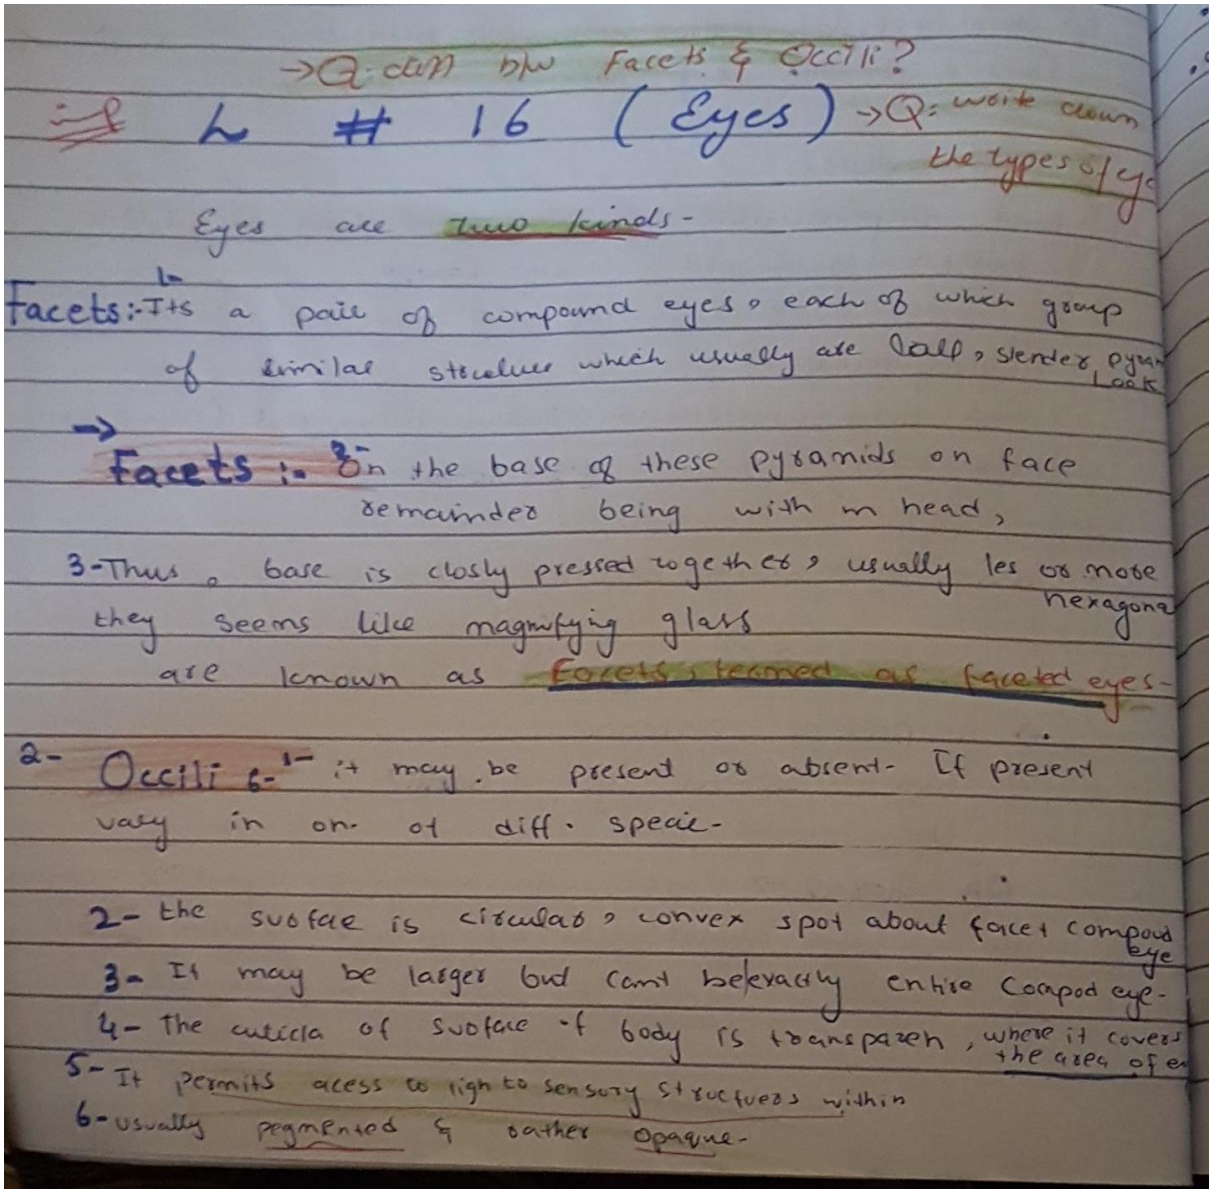

The first abdominal segment when seemingly more apart of the thorax than of the abdomen, is called median segment or propodeum

---

(3) Book Lungs ? 2

By sacs containing many thin plates resembling leaves of a book, whence these structures take the name of book lungs.
