BIO731

what are two irreversible points in cell cycle? 2 marks
2 terminator transcription in bacteria? 2 3 types of recombination. 3 marks
what is homologus recombination and recombination repair?mention the biological role of recombination. 5 marks
transient and inchworning transcription model? 5 marks
what is the function of mismatch reapair system?2 marks
meiosis and crossing over.10 marks
intrensic and extrrensic model of apoptosis 10 marks

sign of bright future

BIO731, Advanced Molecular Biology
My Today's Final Paper

1. What are the two things in eukaryotes promoter which are not in bacteria? 2 marks
2. What two events in cell cycle which are irreversible? 2 marks
3. What are 3 types of recombinations? 3 marks
4. Write role of snRNA in homologous Recombinations and repair? 3 marks
5. What are homologous Recombinations? Mention the biological role for recombinations? 5 marks
6. What are components of TFIID ? Describe their functions? 5 marks
7. Describe extrinsic and intrinsic pathway of apoptosis? 10 marks
8. Write note on meiosis and role of crossing over in meiosis? 10

bio731

36 marks k mcqs
37= what are two irreversible points in cell cycle? 2 marks
38= 3 types of recombination. 3 marks
39=what is homologus recombination and recombination repair?mention the biological role of recombination. 5 marks
40=aor functions of mismatch repair system ka tha. 2 marks
41= function of activator protin in regulation of transcription? 5 marks
42=meiosis and crossing over.10 marks
43= intrensic and extrrensic in elongation ka tha 10 marks ka

Bio731

Linkers and readers
Protein tyrosine kinases
IP3 increade of calcoum cytosolic levels
,TFIIF
Three classes of messangers
Homologus recombination, recombination repair and biological rules
Signal transduction and its key players
Types od protein ryrosine kinases and its activation steps and its domains
What are second messangers. Write note on cAMP and phosphatidylinositol
