

Introduction to Psychology

Compose by Faiza zahid

Mega Quiz File

1. A child who gives many answers in response to a question resorts to the process of _____.
- a. Convergent thinking
 - b. Latent thinking
 - c. Divergent thinking
 - d. Critical thinking
2. Identify the correct order in the multi-store model of human memory?
- a. L TM, Sensory register, STM, rehearsal buffer
 - b. Sensory register, STM, rehearsal buffer, L TM
 - c. Rehearsal buffer, Sensory register, STM, L TM
 - d. STM, Sensory register, rehearsal buffer, L TM
3. A type of thinking which is aimed at solving problems or creating something new is called:
- a. Creative thinking
 - b. Autistic thinking
 - c. Directed thinking
 - d. Symbolic thinking
4. Which one of the following best supports the heuristic approach of problem solving?
- a. Trying different responses until one works
 - b. Following a rule that guarantees a solution to a specific type of problem
 - c. Applying solutions that were previously successful with other problems similar in underlying structure
 - d. Employing rules of thumb suggested by our experience that are often used to solve problems
5. Which one of the following is not a secondary/learned motive?
- a. Achievement
 - b. Power
 - c. Hunger
 - d. Curiosity
6. _____ are enduring dimensions of personality characteristics that

differentiate a person from others.

- a. Behaviour
- b. Personality

c. Traits

- d. All of the given options

7. In _____ defense mechanism, a person reverts back to a stage that was satisfying.

- a. Sublimation
- b. Repression
- c. Denial

d. Regression

8. Hunger, thirst and sleep are the _____.

- a. Learnt motives

b. Primary motives

- c. Social motives
- d. None of the given options

9. According to _____ theory, physiological changes create specific sensations, and our brain interprets these sensations as different emotions.

a. James- Lange Theory of Emotions

- b. Cannon- Bard Theory of Emotions

. Opponent- Process Theory

- d. Activation Theory

10 _____ is the process whereby logical conclusions, inferences, and implications are drawn by using a set of assumptions.

- a. Statistical analysis

b. Deductive reasoning

- c. Inductive reasoning
- d. None of the given options

11) A correlation is a numerical measure of the _____.

- a) Unintended changes in participant's behavior due to cues from the experimenter.
- b) Behaviors of participants of different ages compared at a given time.
- c) Behaviors of participants followed and periodically assessed over time.
- d) Strength of relationship between two variables.**

12) An adjustment in the lens shape in order to keep images in sharp focus is called:

- a) lens-image inversion
- b) top-down processing
- c) Accommodation.**
- d) Optical adaptation

13) A researcher stops people at the mall and asks them questions about their attitude toward gun control. Which research technique is being used?

- a) Survey
- b) Experiment
- c) Naturalistic observation
- d) Case study

14) As Saadia is walking across the campus, a car swerves toward her. Her heart beat races and sweat breaks out as she jumps out of harm's way. This mobilization of energy is due to the action of Saadia's _____ system:

- a) Sympathetic
- b) Para sympathetic
- c) Somatic nervous
- d) Skeleton nervous

15) What two categories of dream content did Sigmund Freud describe?

- a) Latent and manifest
- b) Poetic and realistic
- c) Delusional and hallucinatory
- d) Literal and symbolic

16) In survey research method:

- a) Existing data are examined
- b) A control group is necessary
- c) New data is generated

d) A sample of people are asked questions

17) A psychologist with a _____ perspective focuses on how people know, understand, and think about the world:

- a) Psychodynamic
- b) Behavioral
- c) Humanistic

d) Cognitive

18) The change that an experimenter deliberately produces in a situation is called:

- a) The experimental manipulation
- b) Randomization
- c) Replication
- d) The control group

9) The proper sequence of structures that sound passes when it enters the ear is the following:

- a) Oval window, eardrum, stirrup, cochlea
- b) Cochlea, stirrup, eardrum, oval window
- c) Stirrup, eardrum, oval window, cochlea
- d) Eardrum, stirrup, oval window, cochlea

20) The endocrine system is a _____ communication network that sends messages

throughout the nervous system via the bloodstream:

- a) Photo
- b) Neural
- c) Electrical
- d) **Chemical**

21. The brain and the spinal cord comprise which of the following nervous systems?

- a) **Central nervous system**
- b) Peripheral nervous system
- c) Autonomic nervous system
- d) Sympathetic nervous system

22. The lobe of the cerebral cortex responsible for motor control and higher mental processes is known as the _____.

- a) Occipital lobe
- b) Temporal lobe
- c) Parietal lobe
- d) **Frontal lobe**

23. The band of muscles behind the cornea that gives the eye its color and controls the size of the pupil is known as the _____.

- a) Sclera
- b) **Iris**
- c) Pupil
- d) Cornea

24. The _____ theory suggests color vision depends on red-green, blue-yellow, and black-white processes in the brain. It suggests that the receptor cells are linked in pairs and they work in opposition to each other.

- a) Figure-ground
- b) Trichromatic
- c) Photopigment
- d) **Opponent-process**

25. Which of the following glands abnormal secretion result in a condition called “cretinism”?

- a) Parathyroid gland
- b) **Thyroid gland**
- c) Pancreas
- d) Gonads

26. What is conduction deafness?

- a) Hearing loss due to failure of the auditory nerve
- b) **Hearing loss due to problems with the bones of the middle ear**
- c) Hearing loss due to failure of the visual nerve
- d) Hearing loss due to problems with the bones of the outer ear

27. Who will be interested to study how cognitions are acquired and used in various groups

and institutional settings?

- a) Anthropologists
- b) Computer scientist

c) Sociologists

- d) Geeks

28. _____ refers to the degree of stability or change across the life span.

a) Temporal aspects

- b) Situational aspects
- c) Environmental aspects
- d) Spatial aspects

29. Who developed REBT (Rational Emotive Behavior Therapy)?

- a) George Kelly
- b) John Dollard

c) Albert Ellis

- d) Neal Miller

30. In which of the following stage, OEDIPUS COMPLEX is observed?

- a) Oral stage
- b) Anal stage

c) Phallic stage

- d) Genital stag

31. The duration of iconic memory is _____ than echoic memory, but its capacity is probably _____.

- 1) Longer; larger
- 2) Shorter; about the same

3) shorter; smaller

- 4) Longer; about the same

32. Which memory system provides us with a very brief representation of all the stimuli present at a particular moment?

1) Sensory memory

- 2) Short-term memory
- 3) Long-term memory
- 4) Primary memory

33. The ability to produce solutions to problems that are unusual, inventive, novel, and appropriate is called _____.

Insight

Creativity

Heuristics

Latent learning

34. _____ of the following perspectives would be associated with free will

Behavioral
Psychodynamic
Biological

Humanistic

35. In the statement "Critical thinking requires reasoned judgments," the word **reasoned** means _____.

Giving it a lot of thought
Seeing one side of an argument very clearly
Focusing on opinion

Logical and well thought out

36. The correct formula for determining IQ as used in Stanford - Binet test was

_____.

MA/CA
 $MA/DA \times 100$
 $CA/MA \times 100$
 $MA/CA \times 100$

37. Critical thinking means making judgments based on _____.

Emotion
Authority and expertise
Keeping a closed mind

Reason and logical evaluation

38. The behavioral treatment approaches assume that abnormal behavior is _____

Learned

A function of dysfunctional cognitions
A consequence of restricted growth potential
The result of a biological dysfunction

39. The therapy based upon _____ theory is too time consuming and therefore expensive.

Psychodynamic

Psycho social
Trait
None of the given options

40. What is one similarity shared by clinical psychologists and psychiatrists?

They diagnose and treat people experiencing behavioral and emotional problems.

They have the same training experiences after college
They view abnormal behaviors as arising from the same causes.
They obtain the same graduate degree

 Fill in the blanks.....

41. **Impression formation** is the process by which an individual organizes information about another individual to form an overall impression of that person.

42. Learning the experiences through modeling and imitation is known as "**Observational learning**".

43. Bipolar disorder is a combination of depression and Mania.

44. Major depression is previously known as "melancholia".

45. Claustrophobia is known as fear of closed spaces.

Choose the one best option.

46. American Psychological Association has _____ divisions.

1. 55
2. 65
3. 54
4. 45

47. _____ version of DSM was published in 2000 .

1. DSM III
2. DSM IV
3. DSM IV TR
4. DSM II

48. _____ contributions began with the revolutionary changes at the La Bicetre hospital in Paris.

1. Philippe Pinel
2. Galen
3. Plato
4. Mesmer

49. Hierarchical theory of intelligence is consists of _____ levels.

1. 3
2. 4
3. 5
4. 6

50. According to Sternberg theory, intelligence has three components which component is not a part of this theory.

1. Analytic intelligence
2. Crystalline intelligence
3. Practical intelligence
4. Creative intelligence

51. Galton considered intelligence to be _____.

- a. Not heritable
- b. Similar between most people
- c. A property of our nervous system or hereditary
- d. The product of social differences

52. If a man experiences chest pains while at a department store, and later experiences anxiety attacks when visiting department stores, this can be explained by what type of learning?

- a. Operant
- b. Classical conditioning
- c. Observational
- d. Vicarious

53. Who proposed that a power similar to magnetism existed in humans?

a. Franz Friedrich Anton Mesmer

b. Philippe pinel

c. Galen

d. Plato

54. Social phobia is characterized by ____.

a. A fear of people

b. A fear of rejection

c. A fear of social situations

d. A fear of social isolation

55. Who was the founder of REBT?

a. Allbert Ellis

b. Aron beck

c. Albert Einstein

d. Aron Feldr

56. Which one is NOT a type of schizophrenia?

a. Disorganized type

b. Catatonic type

c. Paranoid type

d. Differentiated type

57. Which model of psychotherapy consists of Systematic de-sensitization and contingency management?

a. Biological

b. Family and couples.

c. Behavioral

d. Cognitive

58. Name the concept when there is a feeling of integration between the self and ideal self.

a. Empathy

b. Respect

c. Congruence

d. Genuineness

59. When our initial perception about a person is positive then we tend to expect that same person has other positive characteristics too is known as ____.

a. Halo effect

b. Social influence

c. Hello effect

d. Positive effect

60. In terms of its causes and the factors affecting its course, bipolar disorder is most similar to which of these disorders?

a. Panic disorder.

b. Schizophrenia.

c. Substance use disorders.

d. Unipolar depression.

61) _____ Is a defense mechanism which refuses to acknowledge or accept anxiety provoking thoughts or impulses.

i) Displacement

ii) **Denial**

- iii) Projection
- iv) None of the above

62) Structures of consciousness, according to psychodynamic approach, are conscious, subconscious, _____ and unconscious.

- i) Super conscious
- ii) Hyperconscious
- iii) Non conscious
- iv) None of the above

63) The therapy based upon _____ theory is too time consuming and therefore expensive.

- i. Psychodynamic
- ii. Psycho social
- iii. Trait
- iv. None of the above

64) _____ described personality in terms of two major dimensions.

- i. Cattell
- ii. Eysenik
- iii. Adler
- iv. None of the above

65) TAT is a _____.

- i) Self Report Inventory
- ii) Projection Test
- iii) Perception Test
- iv) None of the above

66) _____ was the first to use the term "Mental Test" for devices used to measure intelligence.

- i) Galton
- ii) Cattell
- iii) Thorndike
- iv) None of the above

67) Multiple Intelligence theory maintains that human possesses around _____ kinds of intelligence.

- i) Two
- ii) Seven
- iii) Eight
- iv) None of the above

68) Binet and Simon were _____ scientists. They were the first to measure intelligence formally.

- i) German
- ii) American
- iii) French
- iv) None of the above

69) Cole and Hass gave the idea of _____.

- i) Social Intelligence

ii) Moral Intelligence

iii) Emotional Intelligence

iv) None of the above

70) Available statistics show that majority of the people have an I.Q level between _____.

i) 75 - 115

ii) 80 - 115

iii) 85 - 115

iv) None of the above

71) The function of memory responsible for the initial recording of information is _____.

v) Encoding

Storage

vii) Retrieval

viii) None of the above

72) Information gathered by our visual sense is reflected by the _____.

i. Echoic Memory

ii. Iconic Memory

iii. Long Term Memory

iv. None of the above

73) _____ is a technique used to transfer short-term memory information into long-term memory.

i) Chunking

ii) Echoic Memory

iii) Retrieval

iv) None of the above

74) According to _____ information is remembered in terms of schemas.

v. Maslow

vi. John Jenkins

vii. Bartlett

viii. None of the above

75) MCI stands for _____.

v) Memory Critical Impairment

vi) Memory Coding Impairment

vii) Memory Cognitive Impairment

viii) None of the above

76) A process which is responsible for a stable and well-maintained state of internal biological balance is called _____.

v) Motivation

vi) Adaptation

vii) Metabolism

viii) None of the above

77) A motivation from within that energizes the person to satisfy or accomplish a goal in which no external tangible reward is involved is called _____.

v) Intrinsic Motivation

- vi) Curiosity
- vii) Extrinsic Motivation
- viii) None of the above

78) _____ divided the emotions in three types as primary, secondary and derived.

- v) Maslow
- vi) Freud

vii) Mc Dougall

- viii) None of the above

79) _____ has a dual function. Its functions are both arousing and alarming.

- v) S.N.S

- vi) P.N.S

vii) A.N.S

- viii) None of the above

80) J.B. Watson talked about three main emotions anger, love and _____.

- v) Disgust

vi) Fear

- vii) Sadness

- viii) None of the above

81. Galton considered intelligence to be _____.

- a. Not heritable

b. Similar between most people

- c. A property of our nervous system or hereditary

- d. The product of social differences

82. If a man experiences chest pains while at a department store, and later experiences anxiety attacks when visiting department stores, this can be explained by what type of learning?

- a. Operant

b. Classical conditioning

- c. Observational

- d. Vicarious

83. Who proposed that a power similar to magnetism existed in humans?

a. Franz Friedrich Anton Mesmer

- b. Philippe pinel

- c. Galen

- d. Plato

84. Social phobia is characterized by _____.

a. A fear of people

- b. A fear of rejection

- c. A fear of social situations

- d. A fear of social isolation

85. Who was the founder of REBT?

a. Allbert Ellis

- b. Aron beck

- c. Albert Einstein

d. Aron Feldr

86. Which one is NOT a type of schizophrenia?

a. Disorganized type

b. Catatonic type

c. Paranoid type

d. Differentiated type

87. Which model of psychotherapy consists of Systematic de-sensitization and contingency management?

a. Biological

b. Family and couples.

c. Behavioral

d. Cognitive

88. Name the concept when there is a feeling of integration between the self and ideal self.

a. Empathy

Respect

c. Congruence

d. Genuineness

89. When our initial perception about a person is positive then we tend to expect that same person has other positive characteristics too is known as _____.

a. Halo effect

b. Social influence

c. Hello effect

d. Positive effect

90. In terms of its causes and the factors affecting its course, bipolar disorder is most similar to which of these disorders?

a. Panic disorder.

b. Schizophrenia.

c. Substance use disorders.

d. Unipolar depression.

91. According to Hippocrates, Choleric humor is associated with the temperament of _____.

· Cheerful and active

· Sad

· Angry and aggressive

· Calm and passive

92. The ability to feel what the client feels is called _____.

· Respect

· Sympathy

· Empathy

· Congruence

93. _____ is founder of Rational Emotive Behavior Therapy.

· Aron Beck

· Albert Ellis

· Carl Jung

· Carl Rogers

94. _____ is a neurotransmitter that plays important role in anxiety, arousal and learning.

· GABA

· Serotonin

· Epinephrine

· Glutamate

95. _____ focuses on the unconscious forces that drive or motivate human behavior.

· Psychodynamic model

· Functionalism

· Structuralism

· Gestalt psychology

96. The process of constructing comparable, exposure and comparison groups is called _____.

· Time series design

· Prospective design

· Retrospective design

· Matching

97. _____ gave the concept that human capacity for learning the language is innate.

· Jean Piaget

· Noam chomsky

· Stanley schacter

· Tolman

98. If reinforcement is withheld, response rate decreases and finally no response is shown this is called _____.

· Negative rein forcer

· Extinction

· Punishment

· Positive rein forcer

99. The observer becomes a part of the situation and plays an active and significant role in situation, event, or context under study. This is called _____.

· Participant observation

· Structured observation

· Naturalistic observation

· Field experiments

100. _____, a French surgeon and anthropologist, discovered speech centre in brain.

· Paul Broca

· Philippe Pinel

· Galen

· Cabanis

101) Psychology is defined as the science of:

- § Sensation and perception.
- § Experience and mental illness.
- § Culture and group dynamics.
- Behavior and mental processes.

102) Who is considered the "father of psychology" by his establishment of the first psychology lab?

- Wilhelm Wundt
- § William James
- § Sigmund Freud
- § E. B. Tichener

103) Which of the following is considered the founder of the psychodynamic perspective in psychology?

- § Wilhelm Wundt
- § William James
- Sigmund Freud
- § E. B. Tichener

104) The behaviorists believed:

- § Psychology should emphasize the study of healthy people.
- § Psychology should only study observable and objectively described acts
- § Psychology should study the self examination of inner ideas and experiences.
- § All of the above.

105) The psychological school of thought that stressed the whole or complete view of a situation was:

- § Structuralism.
- § Functionalism
- § Behaviorism
- Gestalt

106) According to this Psychological school of thought, to understand human behavior and thought, one must understand the unconscious mind and the key events that happened early in life that influence the unconscious mind. What is this school of thought?

- Psychoanalysis.
- § Functionalism
- § Behaviorism
- § Gestalt

107) Manifest content of a dream is:

- The obvious and apparent part
- § Hidden content.
- § Conscious part of dream.
- § Overt part of dream.

108) Who established the first psychology lab in the United States?

- G. Stanley Hall
- § William James
- § Francis Cecil Sumner
- § Mary Whiton Calkins

109) Edward Titchener used a method for studying the mind that became very popular during the Structuralist period. The method, called _____ required trained participants to report their conscious mental experiences to the investigator. For example, if a person was angry, they would report all of their experiences during the time they were angry.

§ Empiricism

§ Functionalism

§ Contemplation

· Introspection.

110) _____ is the school of thought in where psychology is defined as the study of the structure of the mind.

§ Functionalism.

§ Behaviorism.

· Structuralism.

§ All of the above.

111. Dr. Usman studies the diagnosis, causes, treatments , and prevention of mental illnesses. Which type of psychologist is Dr. Usman?

· a) Clinical psychologist

b) Developmental psychologist

c) Forensic psychologist

d) Health psychologist

112) Which one of the following models believes that behavior is motivated by inner forces over which individuals have little control?

a) Cognitive model

· b) Psychodynamic model

c) Humanistic model

d) Behavioral model

113. Which one of the following schools of thought focused on what the mind does and how it does?

a) Structuralism

· b) Functionalism

c) Gestalt

d) Behaviorist

114. Which one of the following drugs is a stimulant?

· a) Nicotine

b) Lorazepam

c) Barbiturates

d) LSD

115. Tahir often experiences intense feelings of anger and frustration. In order to cope with these feeling, he enrolls in a kickboxing class as an outlet for his emotions. Tahir's actions are an example of which type of defense mechanism?

a) Projection

b) Displacement

c) Repression

· d) Sublimation

116. Which type of learning process did Burrhus Frederic Skinner describe?

a) Classical Conditioning

- b) Modeling
- c) Observational Learning
- d) Operant Conditioning

117) _____ refers to genetic composition of a person.

- a) Genotype
- b) Phenotype
- c) Monotype
- d) None of the given options

118. In a correlational study, when one variable goes up as another goes down is known as a _____.

- a) Positive Correlation
- b) No Correlation
- c) Negative Correlation
- d) Illusory Correlation

119. A researcher accessed information on the Internet from a series of surveys of women that was conducted during the 1970s and 1980s. The data were analyzed to examine changes in attitudes and behaviors over time. Which of the following method was used?

- a) Participant observation
- b) Case study
- c) Archival data
- d) Field experiments

120) A researcher wants to study the effects of violence displayed in movies on children behavior. In this research violence displayed in movies is the _____ variable as it is manipulated by the experimenter.

- a) Independent
- b) Dependent
- c) Confounding
- d) All of the given options

121. John B. Watson believed that psychology should involve the study of _____.

- a. Consciousness
- b. The brain
- c. The mind
- Behavior

122. A _____ is a measure of how strongly two variables are related to one another.

- a. Independent variable
- Correlation
- b. Experimental effect
- c. Dependent variable

123. A variable that the experimenter manipulates is called a(n) _____.

- a. Control condition
- Independent variable
- b. Coefficient of correlation
- c. Dependent variable

124) Observing behavior as it happens in real-life natural settings without imposing laboratory controls is known as the _____.

· Naturalistic observation method

- a. Experimental method
- b. Psychometric approach
- c. Survey method

125. Who claimed that behavior is affected by positive reinforcement?

· B. F. Skinner

- a. Sigmund Freud
- b. William James
- c. Wilhelm Wundt

126) A detailed description of a particular individual being studied or treated is called _____.

- a. A single-blind study
- b. A representative sample
- c. A naturalistic observation

· A case study

127. The psychodynamic perspective was based on the work of _____.

- a. Freud
- b. Watson
- c. Gestalt
- d. Wundt

128. Who was an early proponent of functionalism?

- a. Wilhelm Wundt
- b. Ivan Pavlov
- c. William James
- d. Max Wertheimer

129. Which of the following terms do NOT belong together?

- a. Natural selection; functionalism
- b. Psychoanalysis; unconscious conflict
- c. **Structuralism; observable behavior**
- d. Gestalt; whole

130. "The whole is greater than the sum of the parts" is a statement associated with the perspective of _____.

- a. Introspection
- b. **Gestalt psychologists**
- c. Psychoanalysis
- d. Functionalism

131) A branch of psychology that studies the psychology in action at the workplace is known as which of the following?

Clinical psychology

Forensic psychology

Health psychology

Industrial / Organizational Psychology

132.

Which of the followings model focuses on how people know, understand and think about the world?

Cognitive model

Behavioral model

Humanistic model

Psychodynamic model

133

Which of the following school of thought gave emphasis on the structure of consciousness?

Behaviorism

Functionalism

Structuralism

Gestalt school of thought

134

Which of the following system is a chemical communication network that sends messages through out the nervous system via the bloodstream?

Endocrine

Neuron

Electrical

Central

135

During which stage of development, the Oedipal and Electra complex takes place?

The Latency Period

The Anal Stage

The Oral Stage

The Phallic Stage

136

Which of the following will happen where we stop the reinforcement and the behavior will be extinguished?

Generalization

Extinction

Spontaneous recovery

Shaping

137

Identify who among the following developed his system of psychotherapy called Client Centered Therapy.

Alfred Adler

William. H. Sheldon

Albert Ellis

Carl Rogers

138

The recording of the behavior of people or animals in their natural environments, with little or no intervention by the researcher is known as what?

Experimental research

Naturalistic observation

Manipulative research
Laboratory observation

139

When a detailed description of a particular individual is gathered, this sort of data collection is known as what?

A single-blind study
A representative sample
A naturalistic observation

A case study

140

The branch of psychology that studies how physiological and social changes take place over the lifespan is known as what?

Forensic Psychology

Developmental Psychology

Clinical Psychology

Social Psychology

141. While maintenance rehearsal will help keep information in short-term memory for longer periods of time, it does not help transfer information into long-term memory. In order to get information into long-term memory we need to engage in:

A. Elaborative rehearsal

B. Maintenance priming

C. Chunking

D. Episodic rehearsal

142. In sensory memory, visual stimuli are held for a very brief time as _____ memories, whereas auditory stimuli are held as _____ memories.

A. Short-term; long-term

B. Iconic; echoic

C. Echoic; iconic

D. Long-term; short-term

143. Which of the following is NOT true of long-term memory?

A. It has unlimited space

B. It includes both semantic and episodic memory

C. It can hold information for unlimited lengths of time

D. It has about seven slots or chunks for information storage

144. People do things (like work) for all different reasons. Some work for money, some work for power, and some work for satisfaction. Internal motivation that causes us to do something because we receive self-satisfaction is called:

A. Humanistic

B. Intrinsic

C. Socio biological

D. Optimum arousal

145. Which of the following is NOT a biological motive that operates within a homeostatic cycle (is not regulated by homeostasis)?

A. Sex

B. Hunger

C. Body temperature

D. Thirst

146. According to Piaget, children's thinking develops through two simultaneous processes. Identify them.

a. Assimilation and accommodation

b. Assimilation and mental representation

c. Mental representation and equilibrium

d. Equilibrium and accommodation

147 Which of the following statement best describe Erik Erikson?

a. He was an id psychologist

b. He developed a theory based on social rather than sexual relationships

c. He described archetypes

d. He gave the concept of basic anxiety

148) Which of the followings are the branch-like structures that receive messages from other neurons?

a. Nerve bundles

b. Axons

c. Dendrites

d. Synapses

149) The peripheral nervous system consists of _____.

a. The spinal cord and autonomic system

b. All nerves in the brain and the spinal cord

c. The brain and the autonomic system

d. All the nerve cells that are not in the brain and spinal cord

150) The fovea is made up of what?

a. All cones and no rods

b. Mostly cones with some rods

c. All rods and no cones

d. Mostly rods with some cones

Remember Me In Your Prayer's.....!.

MCQs PSY101

chkashif_unique

Psychology is defined as the science of:

Sensation and perception

Experience and mental illness

Culture and group dynamics

Behavior and mental processes

Who is considered the "father of psychology" by his establishment of the first psychology lab?

Wilhelm Wundt

William James

Sigmund Freud

E. B. Tichener

Which of the following is considered the founder of the psychodynamic perspective in psychology?

Wilhelm Wundt

William James

Sigmund Freud

E. B. Tichener

The behaviorists believed:

Psychology should emphasize the study of healthy people.

Psychology should only study observable and objectively described acts

Psychology should study the self examination of inner ideas and experiences.

All of the above.

The psychological school of thought that stressed the whole or complete view of a situation was:

Structuralism.

Functionalism

Behaviorism

Gestalt

According to this Psychological school of thought to understand human behavior and thought one must understand the unconscious mind and the key events that happened early in life that influence the unconscious mind. What is this school of thought?

Psychoanalysis

Functionalism

Behaviorism

Gestalt

Manifest content of a dream is:

The obvious and apparent part

Hidden content

Conscious part of dream

Overt part of dream

Who established the first psychology lab in the United States?

G. Stanley Hall

William James

Francis Cecil Sumner

Mary Whiton Calkins

Edward Titchener used a method for studying the mind that became very popular during the Structuralist period. The method called _____ required trained participants to report their conscious mental experiences to the investigator. For example if a person was angry they would report all of their experiences during the time they were angry.

Empiricism

Functionalism

Contemplation

Introspection

_____ is the school of thought in where psychology is defined as the study of the structure of the mind.

Functionalism

Behaviorism

Structuralism

All of the above

Dr. Usman studies the diagnosis causes treatments and prevention of mental illnesses. Which type of psychologist is Dr. Usman?

Clinical psychologist

Developmental psychologist

Forensic psychologist

Health psychologist

Which one of the following models believes that behavior is motivated by inner forces over which individuals have little control?

Cognitive model

Psychodynamic model

Humanistic model

Behavioral model

Which one of the following schools of thought focused on what the mind does and how it does?

Structuralism

Functionalism

Gestalt

Behaviorist

Which one of the following drugs is a stimulant?

Nicotine

Lorazepam

Barbiturates

LSD

Tahir often experiences intense feelings of anger and frustration. In order to cope

with these feeling he enrolls in a kickboxing class as an outlet for his emotions.

Tahir's actions are an example of which type of defense mechanism?

Projection

Displacement

Repression

Sublimation

Which type of learning process did Burrhus Frederic Skinner describe?

Classical Conditioning

Modeling

Observational Learning

Operant Conditioning

_____ refers to genetic composition of a person.

Genotype

Phenotype

Monotype

None of the given options

In a correlational study when one variable goes up as another goes down is known as a _____.

Positive Correlation

No Correlation

Negative Correlation

Illusory Correlation

A researcher accessed information on the Internet from a series of surveys of women that was conducted during the 1970s and 1980s. The data were analyzed to

examine changes in attitudes and behaviors over time. Which of the following method was used?

Participant observation

Case study

Archival data

Field experiments

A researcher wants to study the effects of violence displayed in movies on children behavior. In this research violence displayed in movies is the

variable as it is manipulated by the experimenter.

Independent

Dependent

Confounding

None of the given options

The brain and the spinal cord comprise which of the following nervous systems?

Central nervous system

Peripheral nervous system

Autonomic nervous system

Sympathetic nervous system

The lobe of the cerebral cortex responsible for motor control and higher mental processes is known as the _____.

Occipital lobe

Temporal lobe

Parietal lobe

Frontal lobe

The band of muscles behind the cornea that gives the eye its color and controls the size of the pupil is known as the _____.

Sclera

Iris

Pupil

Cornea

The _____ theory suggests color vision depends on red-green blue-yellow and black-white processes in the brain. It suggests that the receptor cells are linked in pairs and they work in opposition to each other.

Figure-ground

Trichromatic

Photopigment

Opponent-process

Which of the following glands abnormal secretion result in a condition called "cretinism" ?

Parathyroid gland

Thyroid gland

Pancreas

Gonads

What is conduction deafness?

Hearing loss due to failure of the auditory nerve

Hearing loss due to problems with the bones of the middle ear

Hearing loss due to failure of the visual nerve

Hearing loss due to problems with the bones of the outer ear

Who will be interested to study how cognitions are acquired and used in various groups and institutional settings?

Anthropologists

Computer scientist

Sociologists

Geeks

_____ refers to the degree of stability or change across the life span.

Temporal aspects

Situational aspects

Environmental aspects

Spatial aspects

Who developed REBT (Rational Emotive Behavior Therapy)?

George Kelly

John Dollard

Albert Ellis

Neal Miller

In which of the following stage OEDIPUS COMPLEX is observed?

Oral stage

Anal stage

Phallic stage

Genital stage

While maintenance rehearsal will help keep information in short-term memory for longer periods of time, it does not help transfer information into long-term memory. In order to get information into long-term memory we need to engage in

Elaborative rehearsal

Maintenance priming

Chunking

Episodic rehearsal

In sensory memory, visual stimuli are held for a very brief time as _____ memories, whereas auditory stimuli are held as _____ memories

Short-term; long-term

Iconic; echoic

Echoic; iconic

Long-term; short-term

Which of the following is NOT true of long-term memory?

It has unlimited space

It includes both semantic and episodic memory

It can hold information for unlimited lengths of time

It has about seven slots or chunks for information storage

People do things (like work) for all different reasons. Some work for money, some work for power, and some work for satisfaction. Internal motivation that causes us to do something because we receive self-satisfaction is called

Humanistic

Intrinsic

Sociobiological

Optimum arousal

Which of the following is NOT a biological motive that operates within a homeostatic cycle (is not regulated by homeostasis)?

Sex

Hunger

Body temperature

Thirst

John B. Watson believed that psychology should involve the study of _____.

Consciousness

The brain

The mind

Behavior

A(n) _____ is a measure of how strongly two variables are related to one another.

Independent variable

Correlation

Experimental effect

Dependent variable

A variable that the experimenter manipulates is called a(n) _____.

Control condition

Independent variable

Coefficient of correlation

Dependent variable

Observing behavior as it happens in real-life natural settings without imposing laboratory controls is known as the _____.

Naturalistic observation method

Experimental method

Psychometric approach

Survey method

Who claimed that behavior is affected by positive reinforcement?

B. F. Skinner

Sigmund Freud

William James

Wilhelm Wundt

A detailed description of a particular individual being studied or treated is called _____.

A single-blind study

A representative sample

A naturalistic observation

A case study

The psychodynamic perspective was based on the work of _____.

Freud

Watson

Gestalt

Wundt

Who was an early proponent of functionalism?

Wilhelm Wundt

Ivan Pavlov

William James

Max Wertheimer

Which of the following terms do NOT belong together?

Natural selection; functionalism

Psychoanalysis; unconscious conflict

Structuralism; observable behavior

Gestalt; whole

The whole is greater than the sum of the parts” is a statement associated with the perspective of _____.

Introspection

Gestalt psychologists

Psychoanalysis

Functionalism

Drugs that speed up the functioning of the nervous system are called _____.

Stimulants

Psychogenics

Narcotics

Depressants

According to Sigmund Freud, the important underlying meaning of our dreams is found in the _____.

Manifest content

Deep content

Latent content

Subliminal content

Freud’s psychoanalytic theory of dreaming states that _____.

The purpose of dreaming is to express unconscious wishes, thoughts, and

conflicts

Dreaming is a by-product of a process of eliminating or strengthening neural connections

The purpose of dreaming is to resolve current concerns and problems

There is no purpose to dreaming; dreams occur because of random brain stem signals

Daydreaming, meditation, intoxication, sleep, and hypnosis are all types of _____.

Altered states of consciousness

Waking consciousness

Self-awareness

Self-absorption

The branchlike structures that receive messages from other neurons are called _____.

Nerve bundles

Dendrites

Axons

Synapses

The idea that learning occurs and is stored up, even when behaviors are not reinforced, is called _____.

Innate learning

Insight

Placebo learning

Latent learning

In operant conditioning, _____ is necessary to create the association between the stimulus and the voluntary response

The law of negative effect

A long time delay

Conditional emotional linkages

Reinforcement

_____ is synonymous with short-term memory

Sensory registers

Shadow memory

Working memory

Secondary memory

_____ of the following statements is true about retrieval.

It is a process of getting information from the sensory receptors to the brain

It is a process that allows an extinguished CR to recover.

It is the reason that conditioned taste aversions last so long.

It is a process of getting stored memories back out into consciousness.

Receptor cells in the retina responsible for color vision are _____.

Cones

Rods

Bipolar cells

Ganglion cells

To be fully functioning” means doesn’t experiencing which of the following?

Optimal psychological adjustment

Complete openness to experience

Complete congruence

Biased regional values

Which one of the following correctly states Descartes' position on the relationship between the mind and body?

The two are completely separate, with no links whatsoever

Only physical matter exists, mental processes are just a result of 'matter in motion'

The two are separate entities influencing each other

The two are linked, with mental experiences residing in the heart

Which of the following is NOT one of the goals of Psychology

To understand the nature and mechanisms of behavior and mental processes

To apply understanding to real life situations and on the basis of this understanding,

To understand the influence of spirits on the behavior of man

To develop an understanding of the relationship between behavior and mental

Functionalists emphasize on which of the following statement

Consciousness is a continuous flow

Individual differences are the basis of human behavior

Consciousness is composed of three components

Research should be done through objective introspection

According to which of the following psychologist, education should be based on the children’s need?

John Dewey

Jean Piaget

Wilhelm Wundt

Charles Darwin

Which of the following method has been used for treatment of mental and behavioral disorders with drugs and chemicals

Psychotherapy

Shock therapy

. Psycho surgery

Chemotherapy

Which of the following is incorrect about insulin-shock therapy?

It was developed by Paul Broca who was a French surgeon and anthropologist

It is used to cure psychological disorders by administering insulin

In this therapy the comma is caused because of a reduction in blood sugar level

It has found to be effective with schizophrenics, addicts etc., if used with

According to Jung, which of the following, tend to be sociable, outgoing, and interested in parties and group activities.

Moving against people

Moving away people

Extroverts

Introverts

Who among the following said that psychologists must discard all reference to consciousness and must only look at behavior of animals and man

Wilhelm Wundt

J. B. Watson

. Karen Horney

Abraham Maslow

Which of the following is an effective therapy that focuses on changing individual's irrational and dogmatic cognitions

Behavioral Therapy

Psychoanalysis

Rational Emotive Behavior Therapy

Psychodrama

Which of the following statement best describes "Endocrine glands

Secrete hormones directly into the bloodstream

These are a thin layer of cells coating the axons

These are an extensive network of specialized cells

These are chemicals released into the particular organ of body

Fatima is using newspaper records to study the rate of crime during the past 20 years. Which type of method is she utilizing?

Participant Observation

Archival data

Structured Observation

Field experiments

Which of the following system arouses us for defensive action e.g. fight or flight

Parasympathetic Nervous System

. Central Nervous System

Sympathetic Nervous System

Endocrine System

A researcher stops people at the mall and asks them questions about their attitude toward love marriages. Which kind of research technique is being used here

. Experiment

Naturalistic observation

Case study

Survey

Ovum is a term used to describe which of the following

The female sex cell or egg

The developing organism from conception to the end of the second week after

Male sex cell

The developing organism from 2 to 8 weeks after fertilization

Faiza is a young girl; she is very obedient and seeks approval from others,

According to Kohlberg she is at which of the following stage

Pre-Conventional

Conventional

Post-Conventional

Preoperational

Which of the following means negative correlation

There is no relationship between the two variables

Low values of one variable are associated with low values of the other

High values of one variable are associated with low values of the other

High values of one variable are associated with high values of the other

Which of the following statement best describes Erik Erikson

He was an id psychologist

He described archetypes

He gave the concept of basic anxiety

He developed a theory based on social rather than sexual relationships

The limbic system often referred as which of the following

Emotional brain

Thinking brain

Reactive brain

Sensory brain

Moosa is planning a research. He wants to study the “impact of violent movies on the behavior of young generations”. The impact of violent movies will be

Controlled variable

Independent variable

. Dependent variable

. Extraneous variable

1. According to Hippocrates, Choleric humor is associated with the temperament of _____.

Cheerful and active

Sad

Angry and aggressive

Calm and passive

2. The ability to feel what the client feels is called _____.

Respect

Sympathy

Empathy

Congruence

3. _____ is founder of Rational Emotive Behavior Therapy.

Aron Beck

Albert Ellis

Carl Jung

Carl Rogers

4. _____ is a neurotransmitter that plays important role in anxiety, arousal and learning.

GABA

Serotonin

Epinephrine

Glutamate

5. _____ focuses on the unconscious forces that drive or motivate human behavior.

Psychodynamic model

Functionalism

Structuralism

Gestalt psychology

6. The process of constructing comparable, exposure and comparison groups is called _____.

Time series design

Prospective design

Retrospective design

Matching

7. _____ gave the concept that human capacity for learning the language is innate.

Jean Piaget

Noam comsky

Stanley schacter

Tolman

8. If reinforcement is withheld, response rate decreases and finally no response is shown this is called _____.

Negative rein forcer

Extinction

Punishment

Positive rein forcer

9. The observer becomes a part of the situation and plays an active and significant role in situation, event, or context under study. This is called

_____.

Participant observation

Structured observation

Naturalistic observation

Field experiments

. _____, a French surgeon and anthropologist, discovered speech centre in brain.

Paul Broca

Philippe Pinel

Galen

Cabanis

_____ is the process of perceiving information and bringing it into the memory system

Storage

Retrieval

Recording

Encoding

According to Woodworth Memory =L -I -R, R stands for _____.

recording

remembering

resonance

recall

_____ derives from the Latin word “Emovere” means to excite, stir up.

Motion

Emotion

Motivation

Cognition

_____ was the first person who identify pupillometrics phenomenon

William James

. Wilhelm Wundt

Lazarus

Darwin

According to _____ every emotional arousal has an opposite, i.e. When one type of emotion is elicited, and then there must be an opposite that is there to suppress or cancel it

Opponent process theory

Activation theory

Cognitive theory

None of the above option

The branch of psychology that studies cognition, and related areas issues are called _____.

Forensic psychology

Cognitive psychology

Counseling psychology

Clinical psychology

_____ is the universal forms and patterns of thought. These include themes that can be seen in myths e.g. masculinity, femininity, good and evil opposites.

1. Ego

2. Superego

3. Unconscious

4. Archetypes

MMPI stands for _____.

Minnesota Multiphasic Personal Inventory

Minnesota Multiphasic Personality Inventory

Minnesota Multiphasic Psychology Inventory

None of the above options

s _____ are the people who are quiet, passive and careful people.

Extroverts

Introverts

Neurotics

Stable

_____ is a Greek word which means forgetfulness.

Amnesia

Dementia

Alzheimer's disease

None of the above option.

While maintenance rehearsal will help keep information in short-term memory for longer periods of time it does not help transfer information into long-term memory. In order to get information into long-term memory we need to engage in:

Elaborative rehearsal

Maintenance priming

Chunking

Episodic rehearsal

In sensory memory visual stimuli are held for a very brief time as _____ memories whereas auditory stimuli are held as _____ memories.

Short-term; long-term

Iconic; echoic

Echoic; iconic

Long-term; short-term

Which of the following is NOT true of long-term memory?

It has unlimited space

It includes both semantic and episodic memory

It can hold information for unlimited lengths of time

It has about seven slots or chunks for information storage

People do things (like work) for all different reasons. Some work for money some work for power and some work for satisfaction. Internal motivation that causes us to do something because we receive self-satisfaction is called:

Humanistic

Intrinsic

Sociobiological

Optimum arousal

Which of the following is NOT a biological motive that operates within a homeostatic cycle (is not regulated by homeostasis)?

Sex

Hunger

Body temperature

Thirst

Identify the correct order in the multi-store model of human memory?

L TM Sensory register STM rehearsal buffer

Sensory register STM rehearsal buffer L TM

Rehearsal buffer Sensory register STM L TM

STM Sensory register rehearsal buffer L TM

A child who gives many answers in response to a question resorts to the

process of _____.

Convergent thinking

Latent thinking

Divergent thinking

Critical thinking

A type of thinking which is aimed at solving problems or creating something new is called:

Creative thinking

Autistic thinking

Directed thinking

Symbolic thinking

Which one of the following best supports the heuristic approach of problem solving?

Trying different responses until one works

Following a rule that guarantees a solution to a specific type of problem

Applying solutions that were previously successful with other problems similar in underlying structure

Employing rules of thumb suggested by our experience that are often used to solve problems

. Which one of the following is not a secondary/learn motive?

Achievement

Power

Hunger

Curiosity

PSY101 Introduction to Psychology Frequently Asked Question's (FAQ'S)

Question: What is Primary and secondary memory?

Answer: Information that is perceived enters a short-term store that they termed primary memory. Primary memory has a limited capacity; it can only contain a few items. However, retrieval from primary memory is quite easy. If a piece of information is present in primary memory, the person is almost certain to be able to recall it. While information is in primary memory, it may be rehearsed. Rehearsal has two functions. It tends to maintain information in primary memory, and it can cause transfer of the information to the long-term memory store (which Waugh and Norman called secondary memory). If information is not rehearsed, then it is lost (forgotten) from primary memory, perhaps without ever being transferred to secondary memory. Secondary memory differs from primary memory in several ways. It has an unlimited capacity. Waugh and Norman saw no reason not to assume that an essentially infinite amount of information could be stored in secondary memory. Also, there was no evidence that information is ever lost from secondary memory after it has been transferred there. However, retrieval from secondary memory is much more difficult than retrieval from primary memory. Even if a piece of information is present in secondary memory, we might not be able to find it.

Question: What's the difference between a clinical psychologist and a psychiatrist?

Answer: A clinical psychologist has a doctor of philosophy (PhD) or doctor of psychology (PsyD) degree in clinical psychology. These degrees involve 4-6 years of study and practical experience in graduate school and a year or more of full-time supervised experience in a clinical internship. A doctorate in psychology prepares the psychologist to understand psychological research, and conduct psychological assessment and psychotherapy, which requires a license. Currently, psychologists do not prescribe medication except in the state of New Mexico or when trained for certain federal programs, and only then with extensive additional training in psychopharmacology. A psychiatrist has a doctor of medicine (MD) or sometimes doctor of osteopathic medicine (D.O.) degree, and four years of supervised experience in a psychiatric residency. Medical school primarily prepares the psychiatrist to conduct physical exams and prescribe medical treatments. The psychiatric residency provides training in treating psychiatric disorders.

Question: 7- Can Psychologists predict fate or destiny?

Answer: This is not actually the case. Lay people have these views because they see that psychologists are capable of accurately telling what type of people others are, what they are capable of doing, what are their potentials and capacities etc. In reality, the case is different since psychologists can only predict not the destiny but the direction that one may adopt in future; psychologists can assess and predict personality and behavior because they get professional training for studying human behavior and that is why they can easily tell what type of a person one is, what might be his potentials, and how much he/ she is capable of performing certain tasks.

Question: 8- Can Psychologists give medicines?

Answer: Not psychologist, but psychiatrists are the ones who prescribe medicine to the mentally ill patients, as they have a professional degree in medicine that authorizes them to prescribe medication.

Question: 9- What are the most prevalent models/approaches/perspectives of psychology?

Answer: • Biological Approach • Psychodynamic Approach • Behaviorist / Behavioral Approach • Humanistic Approach • Cognitive Approach

Question: 18- How would you define Experimental Research?

Answer: In experimental research experimentation is used for studying a phenomenon. In an experiment the variable of interest (independent variable) is manipulated/ altered and the effect of this manipulation is studied. The main feature of experimentation is control; keeping all those variables and conditions under control, that can have an impact on the findings of the study i.e. variables that can interfere with the impact of the independent variable.

Question: 20- What is meant by cognitive development?

Answer: Cognitive development is the process of the development of children understanding of the world as a function of age and experience. Cognitive development is the development of the 'thinking' and 'organizing systems' of the brain. It involves Language, Mental imagery, Thinking, Reasoning, Problem solving and Memory development

Question: 21- Explain the nervous system?

Answer: The Nervous system The system that controls and regulates the structure and function of the brain, spinal cord, nerves, and the nerve cells; it maintains coordination between the nervous system and the rest of the bodily systems. It is responsible for the internal communication system that ensures the integrated functioning of the various systems. Main Parts of the Nervous System The Central Nervous System The Peripheral Nervous System

Question: 22- What is meant by peripheral nervous system?

Answer: The Peripheral Nervous System (PNS): The part of the nervous system that includes all parts of the nervous system except the brain and the spinal cord Includes: • Somatic Division / Somatic Nervous System/ SNS • Autonomic division / Autonomic Nervous System/ ANS Somatic Division: controls the voluntary movements of the skeletal muscles. Autonomic division: controls the involuntary movements all over the body; movements of the heart, lungs, stomach, glands and other organs.

Question: 23- How can we explain endocrine system?

Answer: Endocrine system is a collection of glands that produce hormones that regulate body's growth, metabolism, sexual development and functions. The hormones are released into the bloodstream and transported to tissues and organs throughout the body.

Question: 24- What is perception?

Answer: Perception is the process of selecting, organizing, and interpreting stimuli; it includes identification, recognition, and images of the stimulus in question; previous experiences have a role to play in it. Perception is holistic. Perception is the mental organization and interpretation of sensory information

Question: 26- What does perceptual organization mean?

Answer: Organizing raw sensory stimuli into meaningful experiences.

Question: 27- What is Phi phenomenon?

Answer: When two lights are in close proximity to each other, flashing alternately, appear to be one light moving back and forth; therefore the whole was different from the separate parts. Movement is perceived whereas it never occurred.

Question: 28- How would you describe illusions?

Answer: Illusion is misperception, or false perception. It is when the physical stimulus constantly and persistently produces error in perception.

Question: 32- What are the main stages or extensions of classical conditioning?

Answer: Stages and Extensions of Classical Conditioning: • Acquisition • Extinction • Spontaneous recovery • Stimulus generalization • Stimulus discrimination • Higher Order Conditioning

Question: 34- How can we apply operant conditioning in real life situations?

Answer: Applications of Operant Conditioning • Child rearing. • Classroom management. • Teaching of skills. • Animal taming. • Advertising. • Psychological intervention and Psychotherapy: behavior modification, assertiveness training, and token economy.

Question: 36- How latent learning can be defined?

Answer: The type of learning in which the organism does learn or acquire a particular behavior but does not readily demonstrate it until reinforcement is provided; performance may not be the same as what one has actually learnt.

Question: 37- What is meant by observational Learning?

Answer: Observational learning refers to learning through observation of others' behavior; or as a result of modeling. According to Albert Bandura and colleagues, a major portion of our learning is based upon learning by observation.

Question: 38- Apply observational learning in real life situations?

Answer: Observational learning can be, and has been, used successfully for: • Overcoming fears in children • Assertiveness training • Treating fear of medical treatment and surgery • Learning sports and athletics • Learning new skills, like swimming • Classroom situation: good performers and high achievers are rewarded so that they act as models for other children • Learning gender roles • Adopting new fashions • Starting smoking • Drug abuse • Drinking alcohol • Violence and aggression learnt and displayed by children

Question: 52- What is Maslow's Hierarchy of Needs?

Answer: It is basically a stage theory. It states that needs at one level have to be met in order for one to move on to higher order. The needs at the lowest/primary/base level are the physiological needs, whereas the highest order needs are the self-actualization needs

Question: 53- What do you mean by self actualization?

Answer: Self-Actualization is most advanced human need based on the desire to grow and utilize One's potential up to the optimal level.

Question: 54- What are emotions?

Answer: A response that includes feelings such as happiness, fear, sadness, grief, sorrow etc. It involves: • Physiological arousal • Expression of and • The conscious or the cognitive experience of the situation that influence behavior.

Question: 61-Is the personality measurable?

Answer: Psychologists do measure the personality. Following are the assessment techniques used: 1. Interview 2. Observation and behavioral assessment 3. Psychological tests 4. Self-report measures 5. Projective tests

Question: 62-Define 16 pf: sixteen personality factor questionnaire?

Answer: Cattell identify 16 traits that represent basic dimensions of personality. He called these traits, source traits. Cattell developed a measure that provided a score for each of the 16 source traits. The measure is called sixteen personality factor questionnaire or 16pf.

Question: 68-Define emotional intelligence or EI/EQ?

Answer: It is the type of social intelligence which is the ability to cope with one's own and Other's emotions, to differentiate between them and use information for guiding one's thoughts and actions. It includes these aspects: • Self-awareness • Managing emotions • Empathy • Handling relationships.

Question: 3- Who study Psychology?

Answer: Psychology attracts many students. Some specialize in Psychology, and they complete BSc or BA degrees with Psychology as their major subject. Others take Psychology because it complements many degrees. For example, many students take some psychology to go with their degrees in Law, Health Sciences, Education, Philosophy, Management, Marketing, Neuroscience, Computer Science, Physical Education, or Consumer and Applied Sciences.

Question: 4- What is the scope of Psychology?

Answer: After doing a degree course in psychology one may join a variety of work settings, the most common being: • Education/teaching • Research • Hospitals/clinics • Recruiting/screening agencies • Specialized professional settings e.g. armed forces, social welfare etc.

Question: How can you differentiate between a clinical psychologist and a psychiatrist?

Answer: Clinical Psychologists and Psychiatrists are both trained to diagnose and treat psychological disorders and dysfunctions. Both can provide therapy and counseling services for children and adults. Psychiatrists have a general medical degree and then advanced training in psychiatry. Psychiatrists can prescribe medication for people with serious mental illness, such as schizophrenia, whereas psychologists cannot. Clinical Psychologists have a MA, MSc or PhD in Psychology and advanced training in Clinical Psychology (Postgraduate Diploma in Clinical Psychology). As well as therapy and counseling services, clinical psychologists can do

psychological testing with well-researched tests. Psychiatrists usually do not do psychological testing.

Question: 6- Can psychologists study mind or personality?

Answer: This is the most frequent thought that comes into the mind of people who believe that psychologists are like magicians who can tell every thing about any person, his thoughts, feelings emotions, personality and all that other people cannot tell. This actually is not the case, because psychologists are not the magicians or something like that. They are professionals and their area of interest is basically the study of human behavior and mental processes; and this requires good observation as well as good prediction. Another important thing that has to be kept in mind is that not all of those who have a degree in psychology can understand, explain, and predict the personality or behavior of a person, because it mainly requires not just good observation but proper training as well.

Question: 10- What are the main concerns of Gestalt psychology?

Answer: An approach that focuses on the organization of perception and thinking in a “whole” sense rather than on the individual elements of perception. Instead of considering the individual parts that make up thinking, gestalt psychologists took the opposite track. They concentrated on how people consider individual elements as units or wholes. Their contribution in understanding the perceptual phenomena is very significant.

Question: 11- What is the main interest of psychodynamic school of thought?

Answer: Psychodynamic School focuses on the unconscious forces that drive/ motivate human behavior. This approach concentrates on the belief that behavior is motivated by the inner forces, over which individuals have little control. Founded by the Viennese physician Sigmund Freud in early 1900s, proponents of psychodynamic perspective give importance to the inner unconscious experiences and the forces that led that behavior. Freud believed that unconscious determinants of behavior had a revolutionary effect on 20th century thinking, not just in psychology but also in related fields as well. Although many of the basic principles of psychodynamic thinking have been highly criticized, the model grown out of Freud’s work has provided a way not only for treating mental disorders but also for understanding everyday phenomena such as prejudice and aggression.

Question: 12- What is the main focus of behavioristic school of thought?

Answer: Behavioristic school of thought focuses on the overt observable behavior. The model emerged as a reaction to the earlier approaches that emphasized the significance of hidden, underlying, predetermined forces. The behaviorists suggest that observable behavior alone should be the main area of interest to psychology.

Question: 13- Explain the view of Humanistic school of thought?

Answer: The psychological model, that suggests that people are in control of their lives. It is considered as one of the most recent approaches to psychology. This approach rejected the view, that predetermined, automatic, biological forces, unconscious processes or the environment determines behavior. On the contrary, it proposes that people themselves decide about their lives. A failure in being capable of doing so leads to psychological problems. It also stresses the idea that people, by nature, tend to move towards higher levels of maturity and maximum potential.

Question: 14- What is the main focus of cognitive school of thought?

Answer: The psychological model that focuses on how people know, understands, and thinks about the world. Main emphasis is on how people understand of the world, and their thinking, affects their responses; how it may lead to positive or negative psychological consequences, and even health-related outcomes.

Question: 15- What is view of biological school of thought?

Answer: The psychological model that views behavior from the perspective of biological functioning, the role of brain, genes, neurotransmitters, endocrine glands etc. How the individual nerve cells are joined together, how the inheritance of certain characteristics from parents and other ancestors influences behavior, how the functioning of the body affects hopes and fears, what behaviors are due to instincts, and so on. Psychologists using the biological model view even more complex kinds of behaviors such as emotional responses e.g. anxiety, as having critical biological components.

Question: 16- How would you enlist main steps of scientific method?

Answer: Main steps of scientific methods are listed below: • Identifying the research problem • Review of the related literature • Formulation of hypotheses • Designing and conducting the research • Analysis of data • Drawing conclusions

Question: 43- Are Mnemonics the strategies?

Answer: Strategies used for organizing material to be learnt in such a way that encoding and recall is facilitated. These are short, verbal devices that help form association between material to be learnt and material that is familiar and is already stored in memory.

Question: 44- What is meant by chunking?

Answer: Chunking is a process whereby the items to be learnt are configured by grouping them considering their similarity, or combining them into larger patterns based upon information residing in long-term memory, or on the basis of some other principle of organization.

Question: 45- How Tip-of-the-tongue Phenomenon can be defined?

Answer: Tip-of-the-tongue Phenomenon means the Inability to recall events, details, or information that we thought we knew very well.

Question: 47- How many types of memory disorders/dysfunctions are there?

Answer: • Amnesia • Dementia • Alzheimer's disease • Huntington's disease (HD) • Amyotrophic Lateral Sclerosis (ALS) • Korsakoff's syndrome

Question: 48- What is Motivation?

Answer: Motivation is a desire, drive, instinct or need that speeds up our behavior towards some goal.

Question: 49- What does motive mean?

Answer: A motive is a need or a want that causes us to act. Basically, there are two types of motives that are essential for the proper human functioning: • Primary/ unlearned/ physiological/ biological motives • Secondary/ learnt/ psychological motives

Question: 65-What is Intelligence Quotient: IQ?

Answer: An indicator or measure of intelligent that considers a person's mental as well as Chronological age. The formula for IQ is: $\text{IQ score} = \frac{\text{Mental Age}}{\text{Chronological Age}} \times 100$

Question: 69-What is DSM-IV-TR?

Answer: Diagnostic and statistical manual of mental disorders is the classification system compiled by the American Psychiatric Association. This is the most widely used classification system all over the world.

Question: 70-What are major categories of disorders in DSM-IV-TR?

Answer: • Anxiety disorders • Somatoform disorders • Dissociative disorders • Mood disorders • Schizophrenia • Personality disorders • Sexual disorders • Substance-related disorders • Delirium, dementia, amnesia, and other cognitive disorders.

Question: 2- What are the major Sub-fields of Psychology?

Answer: • Behavioral Neuroscience • Clinical psychology • Clinical Neuropsychology • Cognitive Psychology • Counseling Psychology • Cross-cultural Psychology • Developmental Psychology • Educational Psychology • Environmental Psychology • Evolutionary Psychology • Experimental psychology • Forensic Psychology • Health Psychology • Industrial/Organizational Psychology • Personality psychology • Program Evaluation • Psychology of women • School Psychology • Social Psychology • Sport psychology

Question: 17- What are the types of descriptive research?

Answer: • Observations • Correlational Research • Surveys • Unobtrusive Methods • Focus groups • Case studies • Meta analysis

Question: 19- What are main issues of interest for a developmental psychologist?

Answer: Developmental psychologists usually focus on following issues: • Is development continuous or discontinuous? • Is development general or specific? • Is development stable or changing? • Are Humans active or passive beings? • What is more important in human development nature or nurture?

Question: Define depth perception?

Answer: Depth perception is the perceptual tendency/ ability to see objects in three dimensions, although the image that falls on the retina of the eye is two-dimensional; thus enabling us to perceive distance. This sort of perception is largely due to the fact that we have two eyes which are slightly distant from each other, so the brain integrates the two slightly different images and combines them into one consolidated view; However the differences in images or 'Binocular Disparity' is not ignored by the brain.

Question: 29- What is learning?

Answer: Learning is commonly understood as the act, process, or experience of gaining knowledge or skill. For a layperson it is knowledge or skill gained through schooling or study. Learning is a relatively permanent change in behavior, and the frequency of its occurrence; this change is not automatic and results from practice or experience

Question: 30- Enlist the main explanations of learning?

Answer: Three main explanations of learning are: • Classical conditioning • Operant conditioning • Cognitive approaches to learning

Question: 31- Define classical conditioning?

Answer: A type of learning in which a previously neutral stimulus starts eliciting a response that was originally the response to a natural stimulus i.e., a stimulus that was meant to produce that response; it so happens because the neutral stimulus had been closely associated with the natural stimulus.

Question: 33- What is operant learning?

Answer: Type of learning in which a voluntary response becomes stronger or weaker depending on its positive or negative consequences.

Question: 35- What does cognitive approach state about learning?

Answer: Cognitive approach focuses upon the thought processes underlying learning. This approach gives importance to cognition for understanding and explaining learning. This approach emphasizes • Thoughts • Feelings • Thinking • Values • Expectations etc

Question: 46- What is forgetting?

Answer: Forgetting is the inability to retrieve or recall information from the long- term memory.

50- What are the main psychological needs?

Answer: Main psychological needs are: • Achievement • Curiosity • Need for appraisal • Need for affiliation • Need for power • Work as motive

Question: 55- Can we live without emotions?

Answer: Emotions make our life bright and enlightened, because without the experience of emotions, our life would be dull, uninteresting, gloomy and without any purpose. Psychologists identified number of functions of emotions that have a vital role in our daily life. They are: • Stirred up for the fight or flight action • Modifying the future responses and behavior • Social interactions are enhanced

Question: 56- Do physiological changes occur during emotions?

Answer: Following are the changes observed during emotions o Respiratory Changes o Pupillometrics o Changes in Blood Pressure and heart rate o Glandular Responses o Neural Reactions o Galvanic Skin Response o Emotional Intensity and State of Arousal o 8. Other Common Bodily Changes During Emotions • Dryness of throat and mouth, • Muscle tension, • Weakness or fainting, • Trembling, and • Sinking feeling in heart or stomach.

Question: 57-Differentiate creativity and creative thinking?

Answer: Creativity may be defined as the innovative, novel responses and ideas into a harmonious whole/ form while Creative thinking is the ability to generate a variety of unusual solutions to a problem

Question: 58-What is personality?

Answer: Personality is the sum total of characteristics on the basis of which people can be differentiated from each other. It consists of characteristics that are relatively enduring, and that make us behave in a consistent and predictable way.

Question: 59-How can we summarize the key concepts of psychodynamic approach?

Answer: Psychic Determinism: All behaviors are determined i.e., it has a cause that lies in the mind/psyche. Role of Unconscious: A significant part of our behavior is generated by unconscious forces. Conscious: Contains thoughts and feelings which one is immediately aware of. Subconscious: Mind level below the level of conscious awareness. Preconscious: Part of the sub conscious that can be accessed by deliberate choice. Unconscious: Id: The source of basic drives; operates under the 'pleasure principle' i.e., wants immediate gratification of needs. Ego: Mediates the link of the self with the outside world, the 'real world', as well as between the id and superego; ego operates under the "reality principle" or the demands of the environment. Super Ego: Governed by the moral constraints Opposes the id and represents the moral demands of the family and society; it is the 'moral self' or the 'conscience' of a person.

Question: 60-What does trait approaches states?

Answer: Trait approaches states that there are certain traits that form the basis of an individual's personality.

Question: 63-What is MMPI (Minnesota Multiphasic Personality Inventory)?

Answer: It is the most frequently used personality test. It was initially developed to identify people having specific sorts of psychological difficulties. But it can predict a variety of other behaviors too.

Question: 64-What is intelligence?

Answer: According to Feldman "intelligence is the capacity to understand the world, think rationally, and use resources effectively when faced with challenges"

Question: 66-How we can define moral Intelligence?

Answer: It is the ability to differentiate between right and wrong. More comprehensively, it is the capacity of making right decisions that are not only beneficial for one self but to others as well

Question: 67-What is Social Intelligence?

Answer: It is the ability to understand and deal with people; salesmen, politicians, teachers, clinicians, and religious leaders exhibit this type of intelligence It is also the ability to understand and deal one's own self by identifying one's thoughts, feeling, attitudes and behaviors

Question: 72-Define the Interventions used in different perspectives?

Answer: Psychoanalysis • Free association • Dream Analysis Behavioristic approach to treatment • Systematic desensitization • Aversive therapy • Flooding and implosive therapy. • Observational Learning • Token Economy/ Token System: • Contingency Contracting: Cognitive Approach in Behavior Modification • Negative and unacceptable behavior is modified through constructive strategies. • In order to modify the behavior, reinforcement techniques are used. • Rational-Emotive Behavior Therapy Developed by Albert Ellis (1962, 1977). Focused on altering the irrational beliefs into more acceptable way. Humanistic therapies • Carl Roger's Psychotherapy: known as "person- centered/Client- centered therapy/ Non- directive therapy.

Question: 73-What is Social Influence?

Answer: The process through which our behavior is affected by the actions of another individual or a group.

Question: 75-What is a Stereotype?

Answer: A kind of schema in which beliefs and expectations about members of a group are held simply on the basis of their membership in that group. It can be both positive and negative.

Question: 79-What is industrial/organizational psychology?

Answer: The branch of psychology that investigates the psychology of the workplace. Industrial/organizational psychologists use the scientific methods and knowledge for studying the affects, cognitions, and behaviors of people in the work settings. Major focus of interest is • How best to fit the right person to a given job. • How best to fit the job to the person

Question: 81-How sports psychology can be defined?

Answer: The branch of psychology that studies, understands, describes, and predicts the impact of psychological variables on athletic and sport performance. Sport psychology is the application of the principles, knowledge, training, and understanding of psychology for the understanding of factors affecting sport performance, with an aim to improve it, and to make the sportspersons feel stronger and more confident.

Question: 82-What is forensic psychology?

Answer: It is the area of psychology that applies psychological principles and methods to various areas of the legal system.

Question: 83-What role does psychologist play in the legal system?

Answer: • Assessment of the accused. • Testimony. • Psychological intervention for those under trial. • Rehabilitation of the convicted. • Research in criminal psychology: causes and contributing variables.

Question: 39- How would you define memory?

Answer: Memory refers to the processes by which people and other organisms encode, store, and retrieve information.

Question: 40- What are the three main functions of Memory?

Answer: • Encoding • Storage • Retrieval

Question: 41- How Memory Storage Systems/Memory Storehouses can be categorized?
Answer: • Sensory Memory • Short - term Memory • Long - term Memory

Question: 42- What does elaborative rehearsal mean?
Answer: A technique or process whereby the material to be learnt or remembered is elaborated upon in order to improve encoding of information. The information is organized in a manner easy to be stored or encoded.

Question: 51- Are the Intrinsic and Extrinsic Motivation different?
Answer: Intrinsic motivation: Motivation from within, or Internal motivation that energizes the person to satisfy or accomplish the goal; the goal is to attain enjoyment and personal satisfaction, in which no external tangible reward is involved e.g. altruistic behavior. Extrinsic motivation: Revolves around the tangible rewards such as money, social contacts.

Question: 71-How do the different perspectives view abnormality? Medical Perspective
Answer: Psychological problems are caused by physiological factors. These can be the biological processes and systems, genetic factors, the nervous system and the neurotransmitters, hormonal changes, or external variables affecting the biology of a person. Psychodynamic Perspective Childhood experiences are the root cause of mental disorders. Unconscious determinants are significant. Behavioral Perspective Abnormal behavior is learned. Abnormality is a learned response. It results from our interaction with the external world. Cognitive Perspective The factors causing mental disorders are a person's cognitions, thoughts, and beliefs. Humanistic Perspective People's need to self-actualize, and their responsibility for their own actions, play a central role in abnormality behavior. Sociocultural Perspective The social set up in which one lives, the family and the people around, the society, and the culture at large are of primary importance in the onset, and later treatment, of mental illness

Question: 74-How we can define prejudice?
Answer: Prejudice refers to the negative or positive expectations about social groups and their members.

Question: 76-Are Self-fulfilling prophecies the expectations?
Answer: Self-fulfilling prophecies are the expectation about the occurrence of an event or behavior that increases the likelihood that the event or behavior will happen.

Question: 77-What is health psychology?
Answer: The branch of psychology that focuses upon the role of psychological factors in the development and prevention of illness, in coping with disease, and in health promotion. It studies the relationship between psychological variables and well-being of a person.

Question: 78-Enlist concerns of a health psychologist?
Answer: A health psychologist works in the following areas: • Enhancement of health • Prevention of disease • Treatment of disease • Identification of risk factors • Improvement of the health care system • Shaping public opinion regarding health

Question: 80-Does consumer psychology concern consumer behavior?

Answer: Consumer psychology studies consumers' buying behavior and the effect of advertisement on these behaviors. Consumer psychology focuses upon consumers' decision making and their behavior in the market place. It also studies the effect of advertisement on people's attitude and buying habits is an area of special interest for a consumer psychologist.

Question: 1: What is psychology?

Answer: Beginning with the first psychological laboratory, founded in 1879 by German philosopher and physiologist Wilhelm Wundt, modern psychology's can be traced in many disciplines and countries. Psychology's historical perspectives and current activities lead us to define the field as the science of behavior and mental processes. It studies the way people and animals interact with the world and each other. This covers a wide range of topics. Here are few, questions they might address. Biopsychology. How do sleep, hormone levels and drugs affect our behaviour? Neuropsychology. How does our brain work? Development. Why do our abilities and behaviour change with age? Perception. What do our eyes tell our brain? Social Psychology. Why do groups of people treat each other the way they do? Abnormal Psychology. When do we decide that behaviour is "abnormal" and what causes such problems? Learning. How do our experiences influence our behaviour? Cognition. How do we remember things, solve problems and use language? Applied Psychology. How do we apply our knowledge of behaviour to everyday situations?

PSY101 Introduction to Psychology Short Notes for Midterm Exam Preparation

INTRODUCTION:

German philosopher and physiologist Wilhelm Wundt set the foundations of modern psychology in 1879, by establishing the first psychology laboratory in Leipzig, Germany.

“Psychology is the scientific study of behavior and mental processes Human or Animal”

Psychologists study animals’ behavior too; to better understand and predict human behavior, the study of animal behavior becomes essential at times, especially because some researches cannot be carried out with humans due to safety reasons or ethical issues

Main goals of psychology are:

- a) Observation,
- b) Description,
- c) Understanding,
- d) Explanation,
- e) Prediction, and
- f) Control of human behavior and mental processes.

Psychology is a science that uses scientific method for gathering knowledge and information.

Scientific method is a systematic and organized series of steps that scientists adopt for exploring any phenomenon in order to obtain accurate and consistent results.

Steps involved in Scientific method: observation, description, control, and replication

“Psychology has a long past, but only a short history.” (Hermann Ebbinghaus, 1908)

Trephining was a procedure whereby a hole was drilled into the skull of a mental patient. This was done in order to let the evil spirits or demons escape from the sufferer’s body.

In 1590, Rudolf Goeckel used the term “psychology”.

This word is the combination of two Greek words “**psyche**” and “**logos**”, the former means the “**soul**” and the later “**discursive knowledge**”. Thus literally, **psychology means the science of soul.**

Aristotle gave a very important place to soul in human life. **Life has no meaning without soul.**

Psychology was also defined as the “**science of mind**”.

Psychology has also been defined as the **science of consciousness** defined by **Wilhelm Wundt**

Modern physiologists and **Watson**, the founder of the behaviorist school of thought, defined **psychology** as a **science of behavior, both of animals and humans**

The new scientific psychology is a fusion of two psychologies, i.e., **philosopher's psychology** and the **sensory psychology**. So basically **Psychology emerged from Philosophy**

POPULAR AREAS OF PSYCHOLOGY:

Clinical Psychology

A branch of psychology concerned with the study, diagnosis, and treatment of abnormal behavior.

It is the oldest as well as the most well known branch of psychology.

Industrial / Organizational Psychology

A branch of psychology that studies the psychology in action at the workplace, including productivity, job satisfaction, and decision-making

Health Psychology

The branch of psychology that explores the relationship of psychological factors and physical illness or disease

Consumer Psychology

A branch of psychology that studies and explains our buying habits and our effects of advertising a buying behavior. Mainly dealt with the likes and dislikes and preferences of people.

Environmental Psychology

A branch of psychology, that focuses upon the relationship between people and their physical environment.

Sport Psychology

The branch of psychology that studies the psychological variables that have an impact upon the sportspersons' performance; e.g. how stress can affect sport performance, how morale can be boosted, the impact of crowd behavior etc.

Forensic Psychology

The branch of psychology that investigates legal issues and psychological variables involved in criminal behavior.

THE GREEK PHILOSOPHERS:

HIPPOCRATES (460-377 B.C.)

Hippocrates was a **physician**, Regarded as the “**Father of Medicine**”
He postulated a theory of “**humors**” that account for the basic human activity.

PLATO (427-347 B.C.)

He was the **first person in history to produce a great all- embracing system of philosophy**.
He developed the **theory of knowledge, theory of conduct, theory of state, and the theory of universe**.

According to **Plato**, the **soul has three parts or components**, which he calls **reason, spirit, and appetite**.

According to **Plato**, when a person moves from **believing to thinking**, he moves from the **visible world to the intelligible world**, from the **realm of opinion to the realm of knowledge**.

Plato believed that thinking gives us **knowledge of truth**.

ARISTOTLE (384-322 B.C.)

He was not only a philosopher in the modern sense but he was a **man of universal learning**.
There was no branch of knowledge, which did not receive his attention **except, mathematics**.
It is to him that we owe the **first systematic treatment of psychology**.

His method was two- fold, both inductive and deductive.

He introduced:

- The **first theory of learning**
 - **Succession of ideas**
 - The **theory that ideas are generated in consciousness based on four principles:**
Contiguity, Similarity, Contrast, Succession
-

SOCRATES (469- 399)

For him, soul was the essential man.

For him, soul was the capacity for intelligence and character.

It was man's conscious personality. The activity of soul is to know and to direct a person's daily conduct.

The man's greatest concern should be the proper care of his soul so as to make the soul as good as possible.

ALCAMEON: (500 BC)

A **physician**, who performed the **first dissection**

He was interested in philosophy and directed his attention to understanding **perception**

He believed that **sensations and thoughts** occur in the **brain**.

ALCAMEON was known as "**father of Greek medicine**"

He **was the first** to take **anatomical dissection** for **research purposes** and also the **first vivisectionist**.

THE MUSLIM INFLUENCE:

The period which was called **Europe's Dark Age** was the period when Muslim philosophy, science, and knowledge flourished.

Muslims presented the “**humane concept**” of **mental treatment**. Muslim thinkers and philosophers established the **first mental hospital in Spain**

Types of Soul: Man is a compound of body and soul.

Soul is of two types:

Rooh-e –Rabbani: The part of the soul that makes it possible for man to make a connection with God.

Rooh-e-Haewani: Man possesses ‘Nafs’ or the soul. It is the force with the help of which man fulfills all his desires.

Levels of ‘Nafs’: Nafs is divided into three levels:

Nafs-e- Mutmaina: At this stage, the body and soul are in complete harmony. There is no conflict between good and bad and man is satisfied physically, mentally and spiritually.

Nafs-e- Liwama/Nafs-e-Natiqua: At this stage, the conflict between good and bad starts, both positive and negative forces clash with each other. Man is in a state of “do” and “don’t”.

Nafs-e- Ammaraa: At this stage, negative forces have a complete control over the individual. It is the animal tendency of man. All bad habits and wrong doings are due to this Nafs e.g. greed, pride, anger, lust, hatred etc

AL-FARABI (870-950 AD)

- Philosopher and poet
- According to him, **Man is composed of two elements; body and soul**
- Believed in **dualistic nature of Man**
- He was of the view that there exists **no relationship between body and soul**

IBNE- MUSKAVIA (930-1030 AD)

- “**Man is a compound of body and soul**”
- ‘**Rooh**’ is the main factor that **controls our actions** and maintains them
- If ‘**soul**’ rules over the body then person remains mentally healthy but if body rules over the soul then the person becomes mentally ill

IBN-E-SINA/AVICENNA (980-1037 AD)

- A **physician, scientist** and a **philosopher**
- Considered as the great **physicians of ‘Middle Ages’**
- Gave importance to the ‘**sentiments**’ of the individual
- He said, “**When man is away from God’s love, he is also away from man’s love**”

According to him, there are three kinds of mind:

- Vegetable Mind

- Animal Mind
- Human Mind

IMAM-GHAZALI (1058-1111 AD)

- Believed that 'self' which is called 'Qalb' is the **essence of Man**.
- It is **spiritual entity** residing in human body which **controls the organic & physical functions of an individual**
- 'Self' is the **center of personality** from which all the **psychological phenomena** originate
- He classified the **behavioral mal-adjustments** into the **bodily and spiritual disorders**

According to IMAM-GHAZALI, there are *SIX* powers of "Self":

- Anger
- Impulse
- Apprehension
- Intellect
- Appetite
- Will

Anger is the '**bestly power**' and 'intellect' is the '**Devine power**'.

His method of treatment is called "contradictory treatment" i.e., illiteracy is treated with literacy.

The **therapist** was named '**Sheikh**' and **patient** called 'Mureed'.

IBNE ARABI (1165-1240 AD)

Believed in the idea of "**WAHDAT- UL WAJOOD**" which means that **Man is the part of God himself**

Because **Man is created by God**, so for **mental health**, it is essential that he should **perish himself in the "ZAAT" of God**

MUJADAD ALFSANI (1564-1625 AD)

- Supported the idea of "**WAHADT -UL-SHAHOOD**" means "**REFLECTION OF GOD**" which means that the God's reflection can be seen in the things, which have been created by God.
- A person who is complete in his self and a follower of **Shariat** and **Tareequat** is **mentally healthy**.

SHAH WALI ULLAH (1703-1762 AD)

- **Mentioned about two forces:**
 - I. Beastly Force or Baheemi
 - II. Ar-Rabbani or Devine.
- Both are contradictory forces and are always struggling. This struggle is called "**TAJAZUB**".
- When there is no struggle between these forces, then the individual's condition is called "**ISTALLAH**" (mentally healthy and well balanced).

- But when they are struggling and have conflict, then it is called “**ALLAHIE TAJAZUB**”
(Tendency towards mental illness)
-

RAPID DEVELOPMENTS SINCE 17TH CENTURY A.D

RENE DESCARTES (1596-1650 AD)

- His most important work was his attempt to resolve the **mind- body problem**, an issue that had been controversial for centuries.
- He saw **human body** as a **piece of machinery**; difficult and complicated.
- Mind-Body “**Interactive Dualism**”: mind and body are separate entities influencing each other
- Nerves are hollow tubes through which “**Animal Spirits**” conduct “**Impulses**”

FRANZ JOSEPH GALL (1758-1828 AD)

- Known for his work on **phrenology**
- He postulated the idea that **particular psychic functions** are represented by **particular areas of the brain**.
- Intelligence, moral character and other personality characteristics can be distinguished by the shape of, and the number of bumps on, a person’s skull.

JOHN LOCKE (1632-1704 AD)

His **major contribution** to psychology was an **essay concerning human understanding**, which appeared in **1690** and was the conclusion of some 20 years of study and thought; it was later considered as the formal beginning of **English/British Empiricism**.

His **primary question** was how the mind acquires knowledge?

Locke, gave the concept of “**Tabula Rasa**”; People are born in this world with empty minds i.e. “**Tabula Rasa**” or a **blank slate**. The ideas and memories are imprinted on our minds as a result of experience.

SCHOOLS OF THOUGHT

STRUCTURALISM

Focused on studying the conscious experience by looking into its individual parts or elements
Analyze consciousness into basic elements and study how they are related.

A method used to study the 'structure of the mind' was called "**INTROSPECTION**" (Self-observation of one's own conscious experiences)

FUNCTIONALISM

Focused on what the mind does and how it does.

Investigate the function, or purpose of consciousness rather than its structure.

This school founded by the American psychologist **William James**, became prominent in the **1900s**.

Emphasized "function" rather than "Structure" of human consciousness i.e., what the mind does

John Dewey: Famous American educator. One of the key founders of "Functionalism"

GESTALT PSYCHOLOGY

Focused on studying the whole experience of a person rather than breaking it into individual components

'The whole is different than the sum of its parts'

In contrast to the structuralist approach of breaking down conscious experience into elements, or focusing upon the structure, the Gestalt emphasized the significance of studying any phenomenon in its overall form.

The word gestalt means "**Configuration**"

Three German psychologists Max Wertheimer, Kurt Koffka and Wolfgang Kohler were regarded as the founders of gestalt school

BIOLOGICAL MODEL

The psychological model that views behavior from the **perspective of biological functioning**

The role of brain, genes, neurotransmitters, endocrine glands etc

PSYCHODYNAMIC MODEL

Focuses on the unconscious forces that drive/ motivate human behavior

This approach concentrates on belief that behavior is motivated by the inner forces over which individuals have little control. It was founded by the **Viennese physician Sigmund Freud** in **early 1900s**.

COGNITIVE MODEL

The psychological model that focuses on how people know, understands, and thinks about the world.

Cognition: The mental processes involved in acquiring, processing, storing & using information
Cognition means “the known”, “knowledge”, or “the process of knowing”

BEHAVIORAL MODEL

Focuses on studying the behavior that is observable and overt

The behaviorists relate overt behaviors (responses) to observable events in the environment (stimulus)

John B. Watson was the first person to advocate the behavioral approach.

HUMANISTIC MODEL

The psychological model that suggests that people are in control of their lives

Humanistic perspective emphasizes the unique qualities of humans especially their freedom & their potential for personal growth. Humanists take an optimistic view of human nature

GENERAL INFORMATION ABOUT PSYCHOLOGIST:

James Mckeen Cattell: Known for his work on individual differences and “**Mental Tests**”

Emil Kraepelin: Postulated a **physical cause of mental illness**, in **1883**, he gave **first classification system of mental disorders**

Hugo Munsterberg: First to apply psychology to **industry and law**

Edward B. Tichener:

Known as the formal founder of **Structuralism**

American psychologist, English by birth, which spent his most productive years in Cornell University, New York

He believed that we can study perception, emotions and ideas through introspection, by reducing them to their elementary parts

There are **four elements** in the **sensation of taste**: sweet, sour, salty and bitter

Ideas and images are related.

Max Wertheimer: The founder of Gestalt psychology, born in Prague in 1880

Phi phenomenon = When two lights are in close proximity to each other, flashing alternately, they appear to be one light moving back and forth; therefore the whole was different from the separate parts; movement perceived whereas it never occurred

We perceive experiences in a way that calls for the simplest explanation, even though reality may be entirely different; this is **Gestalt Law of Minimum Principle**.

Kurt Koffka

Wrote the famous “**Principles of Gestalt Psychology**” (1935)

Talked about geographical versus behavioral environment

Wolfgang Kohler

Gave the concept of “**insight**” and “**transposition**”, as a result of his observations of a caged chimpanzee and experiments with chickens

- Insight = spontaneous restructuring of the situation
- Transposition = generalization of knowledge from one situation to another
- Kohler also talked about Isomorphism; changes in the brain structure yield changes in experiences

Galen (129-199 A.D): Born to Greek parents in Asia Minor. Known for anatomical studies on animals and observations of human body functions

Julien Offroy De La Mettrie (1709-1751 Ad): French priest turned physician

Cabanis: French physician

Philippe Pinel (1745-1826 Ad): French physician

Wilhelm Griesinger (1817 – 1868 Ad): German psychiatrist

Paul Broca (1824-1880): French surgeon and anthropologist, Discovered speech center in brain

Emil Kraepelin (1856-1926 Ad): German psychiatrist. Stressed the likely physical cause of mental illness

Charles Darwin: (1809-1882 Ad): British scientist, Author of the revolutionary “The Origin of Species” (1859), gave the concept of “**Survival of the Fittest**”

IMPORTANT TOPICS & TERMS

Neurotransmitters: The synapse of the neuron releases special chemicals called “**neurotransmitters**”

Neurotransmitters and Their Role:

- **Acetylcholine:** Learning, Memory and Muscle control
- **Dopamine:** Motor activity, Coordination, Emotion and Memory
- **Epinephrine:** Emotion, Stress
- **GABA (Gamma-Amino Butyric Acid):** Anxiety, Arousal, Learning
- **Serotonin:** Sensory Processing, Sleep, Arousal
- **Glutamate:** Anxiety, Mood

“**Pharmacology** is the science of the study of drugs to treat a wide range of less severe psychological disorders”

1. **Narcosis:** The word “Narcosis” is derived from the Greek word meaning, “**be numb**”
2. **Chemotherapy:** It is the type of therapy that treats mental and behavioral disorders with drugs and chemicals

Tranquilizers: Drugs that produce soothing and calming effects

Energizers: They are used with the sufferers of depression who are not helped by sedatives

THE PSYCHODYNAMIC APPROACH/ MODEL: The approach that concentrated on the unconscious forces that drive our behavior; belief that the inner forces over which individuals have little control motivate behavior.

Founded by **Sigmund Freud**

- He was founder of psychoanalysis.
- Austrian physician, neurologist, psychologist.
- In 1895: wrote “**Studies on Hysteria**”

Structure of Consciousness

Conscious: Contains thoughts and feelings of which one is immediately aware

Subconscious: Mind level below the level of conscious awareness

Preconscious: Part of the sub conscious that can be accessed by deliberate choice

Unconscious: Part of the sub conscious that cannot be accessed directly although impulses, ideas, and feelings may permeate out through other sources e.g. dreams, slips of tongue etc.

Sources of motivation

Psychodynamic Model of Personality Is a three-part structure of the mind; Id, ego and super ego.

Id

At birth, the entire mind consists of only id. It consists of pure, unadulterated, instinctual energy and exists entirely on the unconscious level. It is the source of basic drives; operates under the 'pleasure principle' i.e., it wants immediate gratification of needs.

The id has two means of satisfying bodily needs, reflex action and wish fulfillment.

Reflex action is responding automatically to a source of irritation .e.g. an infant may sneeze in response to an irritant in the nose. In such case, reflex action is effective in reducing tension. Coughing and blinking are other examples of reflex action.

Wish- fulfillment is more complicated. It is the illusion of an image of an object or event that is capable of satisfying a biological need e.g. a hungry person thinks of food- related objects.

Ego

Mediates the link of the self with the outside world, “Real World”, as well as between the id and superego; operates under the demands of the environment. The ego comes into existence in order to bring the person into contact with experiences that will truly satisfy his/ her needs. When the person is hungry, the ego finds food, when the person is thirsty, the ego finds liquid. The ego goes through reality testing to find appropriate objects.

Super Ego

There is a third component of personality that makes things much more complicated, i.e. super ego. It is governed by the moral constraints. It develops from the internalized patterns of reward and punishment that the young child experiences i.e. Depending on the values of the parents, certain things the child does or says are rewarded and encouraged and others not liked are punished or discouraged.

Anxiety

- An emotional state experienced as a result of felt threat to the self
 - Anxiety arises when ego cannot cope too much of:
 - i. Demands of the id
 - ii. Demands of the ego
 - iii. External danger
 - In order to protect itself against anxiety and threat, ego uses **defense mechanism**
-

DEFENSE MECHANISMS

- i. **Repression**: Blocking unpleasant/unacceptable thoughts by pushing them into the unconscious e.g. forgetting events of the painful childhood.
- ii. **Regression**: Reverting back to a stage that was satisfying e.g. a boss showing temper tantrums like a child; or acting like a baby.
- iii. **Displacement**: Redirecting the expression of unwanted desires or impulses to a substitute rather than the actual target e.g. beating children when a wife cannot express anger toward husband.
- iv. **Rationalization**: In order to justify one's behavior, one develops a socially acceptable explanation or reasoning e.g. going for a second marriage saying that the first wife was quarrelsome.
- v. **Denial**: Refusing to acknowledge or accept anxiety provoking thoughts or impulses e.g. being a heavy smoker but saying 'I am an occasional smoker'.
- vi. **Projection**: Attributing unwanted thoughts and impulses to others e.g. a person takes bribe and blames the organization for paying him not enough salary.
- vii. **Sublimation**: Converting unwanted impulses into socially approved thoughts, feelings and actions e.g. disliking the in-laws but behaving in a very friendly manner.

Psychotherapy: Psychoanalysis

- An intensive, long-term psychotherapeutic procedure.
- Requires long sessions over extended periods----- may be years.
- Better suited to intelligent individuals.
- Involves a special relationship between the therapist and the patient.
- **Target**: To explore unconscious motivation, conflicts, desires.
- **Goal**: Establishing intra psychic harmony by developing awareness of the role of the id, reducing over compliance with super ego, and by strengthening the ego.
- **Understanding of 'repression'**: The therapy gives central importance to the understanding of the manner in which the person uses repression for handling conflict.

Stimulus: A physical energy source that has an effect on a sense organ, thus producing a response

Response: The action, behavior, or reaction triggered by a stimulus.

Environment: External factors, variables, conditions, influences, or circumstance affecting one's development or behavior.

Variable: A behavior, factor, setting, or event that can change / vary in amount or kind.

Learning: A relatively permanent change in behavior that takes place as a result of practice and/or experience.

Shaping: Successive approximations of a required/desired response are reinforced until that response is fully learnt

Stages in Shaping:

1. **Acquisition**: Initially the response rate following reinforcement may be slow but at one stage it increases to the maximum.
2. **Extinction**: If reinforcement is withheld the response rate decreases and finally no response is shown.

Shaping Can Best Be Used For:

- Learning alphabets, vocabulary, mathematical tables, or a new language.
 - Learning to play a musical Instrument.
 - Appropriate classroom behavior.
 - Training mentally handicapped children.
-

STEPS OF SCIENTIFIC METHOD IN PSYCHOLOGY

- 1. Identifying the research problem:** The research problem can be identified in many ways, including personal interest, brainstorming, scientific developments, knowledge etc.
- 2. Review of the related literature:** In order to see how others approached the same or similar issues.
- 3. Formulation of hypotheses:** A hypothesis is a speculative statement about the relationship between two or more variables. Reviewing the related research articles helps one formulate various hypotheses.
- 4. Designing and conducting the research:** After reviewing the related literature and making hypotheses, the research is conducted by using different strategies such as Questionnaires, mail interviews, telephonic interviews, face to face interviews etc.
- 5. Analysis of data:** After collecting information, the data will be tabulated with the help of statistical methods and computation in order to see whether the finding prove or disprove the hypotheses.
- 6. Drawing conclusions:** Conclusions are drawn after the statistical analysis of data. On the basis of this, a decision is made about the rejection or acceptance of the hypothesis.

RESEARCH METHODS IN PSYCHOLOGY:

1. **Observation**: Systematic observation is used. Phenomenon of interest is observed, studied, and the observations are recorded. The recorded observations are analyzed. Conclusions are drawn on the basis of analysis. **Types of observation**: Observation without Intervention, Observation with Intervention

2. **Correlation Research**: A method used for identifying predictive relationships among naturally occurring variables

3. **Surveys**: Surveys are used when quick information is required in limited time e.g. opinion polls, product preference

Sources of data/information in Surveys

- **Questionnaires**: in person, mailed, internet
- **Interviews**: personal, telephonic
- **Newspaper Surveys**

Five Steps involve in conducting the Survey:

Conceiving the problem: The purpose of the study. How is the information to be used? What kind of information to be gathered etc

Designing the instrument: There are numerous ways by which information can be gathered from the general public such as mailed questionnaires, telephonic interviews, through internet etc

Sampling the population: With this procedure, each age, sex, income, religious and ethnic group in the population will be proportionately represented in the sample

Conducting interviews: Experiments have shown that females are the best interviewers: at least 21 years of age, who like people, who are unbiased, who are good listeners, who have some college education, and who are fairly familiar with the section they are working in.

Interpreting the results: When all the findings are carried out properly, there is always a chance of misinterpreting the results. Errors in questionnaires, statistical methods, and investigator's own subjectivity can easily bias the results. So be careful about that.

4. **Unobtrusive Measures of Behavior**: Indirect ways of data collection, The person/s who are the focus of interest may not be present at the time of investigation.

5. **Content Analysis**: The analysis may cover contents of live human behavior, books, journals, magazines, poetry, drama, movies, folktales, TV programs, school textbooks and curricula, advertisements etc

6. **Focus Groups**: A variety of interviews conducted in a group setting

7. **Meta Analysis**: A statistics based method

Development: “The process of growth and differentiation”

Developmental Psychology: The branch of psychology that studies how growth and physiological/ psychological/ social changes take place over the life span

Nature versus Nurture

- Nature means hereditary influences.
- Nurture refers to environmental influences, in child development.

Limitations of Nature-Nurture Research:

- Ethical considerations in research with humans
- Not all animal research can be applied to humans

Genes: parts of chromosome that are the transmitters of inheritance.

Genes may be **dominant or recessive;** a dominant gene means that its characteristics will dominate those of the recessive one e.g. if father has brown eyes and mother has black eyes, and if the father’s genes dominate then the baby will have brown eyes.

- The **zygote** contains **23 pairs of chromosomes**
- Deoxyribonucleic Acid (**DNA**)

Prenatal Stages:

Embryo: A developed zygote with a heart, a brain and other organs.

Fetus: A developing child; 9 weeks after conception till birth.

Genotype: genetic composition of a person.

Phenotype: observable characteristics.

Alleles: This difference in color is due to the fact that genes come in alternative forms called “Alleles” (alternative forms of a gene).

When alleles are identical, a person is **homozygous** for a trait;

When alleles are dissimilar the person is **heterozygous**.

Anthropologists: Focus on, and measure, how cognition develops in different cultures.

Sociologists: study how cognitions are acquired and used in various groups and institutional settings.

Computer scientists: Target to create ‘artificial intelligence’.

Biological Bases of Behavior

The Nervous system: The system that controls and regulates the structure and function of the brain, spinal cord, nerves, and the nerve cells; it maintains coordination between the nervous system and the rest of the bodily systems

Endocrine Glands: These glands form the body’s “slow” chemical communication system; a set of ductless glands that secrete hormones (special chemicals) into the bloodstream”

Central Nervous System (CNS): The system that controls and regulates the structure and function of the brain, spinal cord, nerves, and the nerve cells; it maintains coordination between the nervous system and the rest of the bodily systems.

Peripheral Nervous System (PNS): Consists of the spinal and cranial nerves; these connect the CNS to the rest of the body. PNS connects the body's sensory receptors to the CNS, and the CNS to the muscles and glands.

Neuron: A nervous system cell is constituted in such a way that it is specialized in receiving, processing, and/or transmitting information to other cells.

The Brain

- The center of the nervous system.
- The vital organ that is responsible for the functions of seeing, hearing, smelling, tasting, thinking, feeling, remembering, speaking, dreaming, information processing, and a lot more.

Structure of Brain

- The deeply grooved structure lies safely and securely in our skull.
- The average adult human brain weighs 1.3 to 1.4 kg (approx. 3 pounds).
- If you look at it from the outside the brain is pinkish gray in color; soft, spongy, and mottled.
- The brain contains billions of nerve cells (neurons) and trillions of "support cells".

The brain is made of three main parts:

- Fore brain
- Mid brain
- Hind brain

Electroencephalogram (EEG): An apparatus/machine that measure records and displays electrical activity within the brain of a person.

Magnetic Resonance Imaging (MRI): The scan produces a powerful magnetic field to provide a computer generated, detailed image of the structure of the brain.

Super Conducting Quantum Interference Device (SQUID): a scan sensitive to minute changes in the magnetic field occurring when neurons are firing.

Positron Emission Tomography (PET): a scan showing biochemical activity within the brain at any given moment.

Cerebellum:

- "Cerebellum" comes from the Latin word for "little brain". The cerebellum is located behind the brain stem.
- It carries 10% of the weight of the brain.
- It contains as many neurons as in the rest of the brain.
- Its function is to coordinate body movements i.e. coordination, maintenance of posture & balance.

Cerebrum: Largest part of the human brain, associated with higher brain functions such as thought and action.

Cerebrospinal Fluid (CSF):

A clear, colorless fluid covering the entire surface of central nervous system

Endocrine system is a collection of glands that produce hormones that regulate body's growth, metabolism, and sexual development and function. The hormones are released into the bloodstream and transported to tissues and organs throughout the body. Endocrine glands are known as the "**Managers of Human Body**"

Sensation: Sensation is a process that makes possible, and facilitates our contact with reality. 'To sense' means to become aware of something.

The five senses:

- Vision
 - Hearing/ Auditory sense or Audition; also associated with maintenance of bodily balance
 - Smell/ Olfaction
 - Taste
 - The skin sensations/ Kinesthetic sense; touch, pressure, temperature, and pain
-

VISION:

The Human Eye:

Cornea: A transparent external surface, five-layered membrane that covers both the pupil and the iris.

Sclera: Outer walls of the eye are formed by a hard, white substance called 'sclera', hence sclerotic coat that covers 5/6th of the surface of the eye.

Pupil: A dark, adjustable opening in the center of the eye through which the light enters. It changes its size as the amount of light entering the eye varies

Iris: Around the pupil of the eye, there is a ring of muscle tissue that controls the size of the pupil opening, through its contraction and expansion

Lens: The transparent part of the eye that is located behind the pupil that changes its shape in order to focus images on the retina. The lens changes its own thickness in order to focus image properly on retina__ this ability of the lens is called “**accommodation**”

Eye has three important layers or chambers:

- i. Anterior layer that lies between the cornea and iris
 - ii. Posterior layer that lies between iris and lens
 - iii. Vitreous layer that lies between the lens and the retina
-

HEARING:

Ear is regarded as the organ of hearing.

Some Interesting Facts about Hearing:

- Animals have the capability of hearing more sounds than humans
- Dolphins have the best sense of hearing among all animals
- When people go up high in the mountains, the changes in pressure cause the ear to pop
- Babies can get ear aches because of the milk deposit in the Eustachian tube, which helps the bacteria to grow there and may cause problems later in life
- Children can hear more noises than adults, as their ears are more sensitive than that of adults
- Ear aches result when too much fluid causes pressure in the eardrum__ often occur due to allergies, virus or some sort of infection

The Human Ear: Anatomy/ Structure:

The primary apparatus of hearing i.e., the ear is divided into three parts

1. The outer ear: The outer ear serves the function of collecting the sound waves from the environment to the internal portions of the ear. It is shaped like a reverse megaphone

Auditory Canal: When sound waves originate from the vibrating object, they then pass through the auditory canal, which is a tube like passage through which the sound travels to the inner part of the ear or “ the eardrum”.

Eardrum:

- The part of the ear that starts vibrating when sound waves strike/ hit it.
- Its intensity of vibration is dependent on how intense the sound waves are__ the more intense the sound, the more intensely it vibrates.
- These vibrations are then transmitted to the “middle ear”.

2. The middle ear:

- A tiny chamber between the eardrum and cochlea containing three bones---- the hammer, the anvil, and the stirrup, which transmit vibrations to the oval window
- These three bones have only one function, i.e. to convey/ transmit the message to the inner ear.

Hammer ➡ Anvil ➡ Stirrup ➡ Oval window

Oval Window:

- A membrane between the middle and the inner ear that increases the strength of the stimulus (vibration) while transmitting them.
- Serves as the amplifier so that tiny or hiss voices could be heard, which otherwise may remain unnoticed.

3. The inner ear:

The innermost region/ part of the ear that contains important structures such as cochlea, semi circular canals and vestibular sacs, and that changes/ transforms the sound waves into the neural impulse.

Frequency: Is the prominent feature/ characteristic of sound and refers to the number of complete wave lengths that occur or pass a point in each second.

Pitch: Primarily related with the frequency and refers to the quality of sound that is being produced by the frequency of the sound wave; expressed in cycles per second.

Timbre: Quality of sound determined by the complexity of sound waves

PERCEPTION

Perception: The ability to process or use information coming/received from the senses.

Gestalt Laws of Perceptual Organization

The Law of Closure: It is the perceptual tendency to fill in the gaps and completing the line; enables us to perceive the disconnected parts as the whole object.

The Law of Proximity: Close or nearer objects are perceived as coherent and related.

Law of Continuity/Good Continuation: Tendency to group the stimuli into smooth and continuous patterns or parts.

Law of Similarity: Tendency to perceive objects, patterns or stimuli as groups, which are similar in appearance

Law of Simplicity: People intuitively prefer the simplest, most stable, straightforward, and basic form of possible organizations.

Law of Common Fate: It is the tendency to group together the objects that move together, or seem to move together, and in the same direction.

Law of Enclosure/ Connectivity: It is our perceptual tendency to perceive features/ patterns, such as dots or objects as a single unit when uniform and link; lines, dots, areas, objects etc are perceived as single or same unit when combined or linked.

Feature Analysis: The process of perceiving a shape, pattern, object, or scene by attending to the individual elements making it up.

Steps in Feature Analysis:

- Identify the feature, shape of any object, of which the image falls on the retina.
- Combine/ gather object in some form/pattern so that some sort of representation can be formed.
- In the final stage, we identify/ compare each component/element/ object with the help of past experiences or memories.

Depth Perception:

Depth perception is the perceptual tendency/ ability to see objects in three dimensions, although the image that falls on the retina of the eye is two-dimensional; thus enabling us to perceive distance.

“Depth Perception” is the skill to perceive depth and distance e.g. we are able to judge the distance of the incoming car, height of the cliff or of a roof top, size of an object, weight of a sand bag etc, in a glance, just by having a look at it.

This sort of perception is largely due to the fact that we have two eyes which are slightly distant from each other, so the brain integrates the two slightly different images and combines them into one consolidated view; However the differences in images or 'Binocular Disparity' is not ignored by the brain. Eleanor Gibson and Richard Walk discovered these phenomena in 1960 by using the miniature cliff with a drop-off covered by sturdy glass.

Motion Parallax: The change in the position of the retinal image with the side-to-side movement of the head; providing a cue to the distance.

Occurs when objects are at different distances and we are also moving at different rates when in motion.

A **binocular cue** for depth perception that illustrates, that when we assume that the two objects are of same size, the one that produces a relatively smaller image will be perceived as distant

Selective Attention:

Perceptual process in which the person chooses the stimulus which he is interested in; paying attention to only the stimulus of interest

Dichotic Listening:

- A procedure in which individual wears earphones in which different messages are sent to each ear at the same time.
- After hearing the stimuli, the individual is asked to reproduce them aloud as it comes to one ear: "shadowing".
- In this process, individual can easily identify the talking person as man or woman and whether change in voices takes place during the message or not.

Form-Perception:

- A perceptual phenomenon in which we perceive the shape, form or pattern of any object____ give name to objects as house, tree, table, chair etc

Mainly it involves two important principles:

- Figure- ground relationship
- Contours

Figure- Ground Relationship:

Our perceptual tendency to see objects with the foreground as well as the background____ the object is being recognized with respect to its back ground e.g. Black board and chalk, painting against the wall etc. It is a vise- versa relationship i.e., figure cannot be observed without a ground and ground cannot be recognized without having a figure.

Contours:

Perceptual phenomenon in which we are able to maintain a difference of the form from its background due to the perception of contours e.g. In observing the paper, which has two colors, white and black____ there is no contour at all. But as it becomes lighter rather than becoming dark, a person can simply identify the difference. And when the difference is much

apparent, we simply divide into two parts as light and dark and skip different shades as lighter or darker____ where brightness changes suddenly, we perceive contours.

Motion Perception: Motion simply means the relative/ progressive change in the position of the person in space with time. Objects cannot be perceived fully when in motion. It is also difficult due to the fact that our eyes cannot follow the moving object with great precision and efficiency all the time.

Relative Motion: While looking at moving automobiles, the ones that are nearer seem to be moving more rapidly than those at a moderate distance, and those that are more distant seem to be moving along. Relative motion can also be interpreted through experience, when one can fairly tell the speed of a train or a bus by noticing outside the window as to how rapidly the nearby objects are passing.

Radical Motion: A movement directly towards or away from the observer. Continuous and radical motion is being perceived when the retinal image continuously changes. The change in size of the retinal image gives the perception of motion.

Perceptual Constancy: A perceptual tendency to perceive object as unchanging in size, shape, color, lightness etc., even though changes in illumination and retinal image do take place

Lightness Constancy: object's lightness or brightness remains the same in spite of changes in illumination.

Color Constancy: color of the object remains the same in spite of changes in lighting conditions

Shape Constancy: Means the shape of the object remains the same in spite of some changes in its orientation.

Size Constancy: refers to our ability or tendency to perceive objects as remaining of the same size despite having distance from the observer

Visual Illusion

Also known as optical illusion. Illusion is misperception, or false perception.

It is when the physical stimulus constantly and persistently produces error in perception

Muller- Lyer Illusion: The visual illusion in which the two lines of the same lengths appear different because of the change in position of arrows at each end of two lines__ arrows pointing out appear shorter than the arrows pointing inwards.

Causes of Illusions

- Sensory deficits and defects
- Readiness and expectation
- Atmospheric variables
- Effect of drugs
- Artistic manipulation
-

Consciousness: The awareness of the sensations, thoughts, feelings and emotions, events, and surroundings that are experienced by a person.

Varied States of Consciousness

- Sleep
- Dreaming
- Hypnosis and Meditation
- Drug induced states

Sleep

- A state of total or partial unawareness ranging from slight wakefulness to light tranquility, to nearly total detachment from the external world.
- Sleep is the time of rest and rejuvenation for the body.
- The muscles and the nerves relax.
- The body recharges its energy for the hours of work to come the next day.
- Sleep Stages: Stage-1, Stage-2, Stage-3, Stage-4

REM: Rapid Eye Movement Sleep

- Occurs during stage-1 sleep
- Eyes move back and forth
- Sleep is very deep and the major muscles seem as if paralyzed
- Difficult to wake up the person during REM sleep.
- Usually people dream during REM.
- It is thought that eyes move back and forth during REM because they are following the action-taking place in dreams.
- REM sleep plays an important part in a person's life, both physical and psychological, as the body needs a certain amount of REM sleep.
- Experiments have shown that people whose REM sleep was interrupted and disturbed by being awakened, exhibit a rebound effect.

Sleep Deprivation Effects:

- Sleep deprivation in humans as well as animals has adverse effects although temporary
- Sleep deprivation affects all faculties, mental and physical: causes fatigue, and irritability; concentration and logical thinking are adversely affected.
- Reaction time is slowed.
- Sleep Deprivation may have serious consequences in case of academic performance, automobile driving, and certain professions requiring sharp alertness of mind and body.

Sleep Disorders

Sleep related problems ranging from inability to sleep, to difficulty falling to sleep, to interrupted sleep, to feeling sleepy even when one has had enough hours of deep sleep; Generally known by the name of Insomnia, sleep disorders include sleep walking and sleep talking as well.

Causes of Sleep Disorders

- Stress
- Preoccupation (concern or fear etc.)
- Mental illness
- Noise pollution
- Digestive problems
- Physical illness
- Drug abuse and medication
- High caffeine intake and many other

Practical Steps for Getting Rid of Most Sleep Problems

- Avoid taking sleeping pills.
- Fix a place/room where you will go to sleep every night, and do not do anything else over there.
- Keep television away from your sleeping place, and if it is there NEVER EVER watch an interesting movie or program at sleep time.
- Develop a habit of reading at bedtime, but NEVER EVER read an interesting or exciting book.
- If you are in your bed and still can't go to sleep, then get out of the bed and take a round around the house and come back. Develop a habit of rising early in the morning every day, at the same time.
- Do not change your sleep time.
- Learn some relaxation exercises.
- Avoid caffeine.
- Avoid heavy meals at night, and eat your dinner about two hours before bedtime.
- A glass of warm milk helps quite often.

Dreams and Sleeping

- Dreams are mental experiences during sleep.
- Every body dreams though they may forget the contents.

Dreams in Freudian Approach: Dreams reflect unconscious needs, desires, and impulses.

Dreams have two levels of dream content: manifest and latent.

Manifest content: The obvious, apparent part: what a dream appears to be to the dreamer.

Latent content: The dream's true meaning, which is usually disguised or distorted by dream work.

Hypnosis

- A condition in which the person is in a highly suggestible state.
- Following a number of instructions by the hypnotist, the person enters a trance and follows the suggestions or further instructions without resistance.
- The instructions are followed even after the person is out of the trance.
- However, a hypnotic state does not mean total loss of will; people may not follow instructions that clash with their moral/ethical ideology.
- It is primarily a varied state of consciousness in which one is not fully awake.

Why Do People Go For Hypnosis?

People may choose hypnosis as a therapy for various reasons; e.g. for:

- Quitting smoking
- Quitting alcohol
- Pain management
- Assertiveness training/overcoming shyness
- Improving sport performance
- Treatment of psychological problems (fears/ phobias)
- Eating Disorders
- Recalling events

How Effective Is Hypnosis? There is no conclusive evidence available in this regard.

Meditation

- The person learns (after instruction) to refocus attention and to concentrate in such a way that he/she is totally detached from all the unwanted stimulation for as long as he/she desires.
- For focusing attention a word, syllable, or sound may be repeated e.g. the way we do in transcendental meditation (TM).
- In some forms of meditation some object e.g. a marble, crystal, candle flame, or picture may be used
- The main idea is to concentrate.

Physiological changes due to meditation

- Decreased heart rate
- Lowered blood pressure
- Lessened oxygen usage
- Changed brainwave pattern

How does meditation affect?

- It gives a heightened feeling of relief and relaxation.
- Concentration is sharper.
- Insight is improved and problem solving better.
- It has a positive effect on health, and in some studies longevity has been found to be associated with prolonged practice of TM.

Drug Induced States: Changes in consciousness due to use/abuse of different drugs.

Psychoactive drugs:

- Drugs that affect behavior and mental processes including cognitions, emotions and perceptions.
- More deep rooted and adverse effects are caused by the addictive drugs; drugs causing dependence.

Effects of Drugs

- Withdrawal effects
- Overdose effects

Categories of Drugs

- Stimulants
- Depressants
- Narcotics
- Hallucinogens

Why do people take drugs?

- Addiction
- Role modeling

- Peer pressure
 - Stress/ Relaxation
 - Thrill/Excitement/Experimenting
-

Learning: A relatively permanent change in behavior that takes place as a result of practice and/or experience.

Learning usually refers to improved performance, acquisition of skills, and a positive change in behavior; however the change may also be negative in nature

There are varieties of learning:

i. Verbal learning: Basically man is a verbal learner who learns about the environment through experiences

ii. Motor learning: It involves the practical application of the learned phenomena. e.g. learning the skills like playing football, tennis, cricket etc; or the training of technicians whose motor skills need to be highly efficient.

iii. Problem solving: Problem solving tasks usually involves trial and error and primarily includes verbal processes. While doing the problem-solving task, individual learns many responses that can be helpful for him in different situations

OPERANT CONDITIONING:

Operant conditioning forms an association between a behavior and a consequence

Consequences of Behavior:

Reinforcement: Increasing the probability that preceding behavior will be repeated through a stimulus.

Positive Rein forcer: A stimulus whose introduction brings about an increase in the preceding response.

Negative Rein forcer: A stimulus whose removal reinforces and leads to a higher chance that the response bringing about this removal will be repeated.

Punishment: An unpleasant or painful stimulus whose introduction following a certain behavior decreases likelihood that the behavior will occur again.

No reinforcement: This also deters or stops a behavior from being repeated.

Applications of Operant Conditioning in Everyday Life

- Child rearing
 - Classroom management
 - Teaching of skills
 - Animal taming
 - Advertising
-

Solved By Personage:

USAMA GEE (BACHELOR OF SCIENCE IN BUSINESS ADMINISTRATION 7TH SEMESTER)

Types of Hearing Impairment

1. **Conduction Deafness:** problem in conduction of air vibrations to the cochlea; the bones in the middle ear do not function properly. Treatment: microsurgery for replacing the affected bone with an artificial one.
2. **Nerve Deafness:** deafness caused by a damage to the neural mechanism that creates nerve impulses or relays them to the auditory cortex; deafness may also be caused by a damage to the auditory cortex itself.

Explain i) Relative Motion ii) Relative Size

Relative motion: A monocular cue for perceiving depth and distance in which when we move, the objects at different distances change their relative positions with the visual image with those that are closest seem to be moving faster.

Relative Size : The monocular cue for depth perception in which we assume that the two objects are similar in size, the one that make the smaller image appears to be more distant.

Q4-If rat is under observation by scientists..... rat don't feel hungry and thirsty then in which part of the brain scientists implant electrodes to find the reason of not feeling hungry and thirsty? Also tell some characteristics of that part of brain. (3marks).

Thalamus is further divided into two sub-categories 1-Cerebellum 2- Limbic System

- Evolutionarily the structure of limbic system is rather old.
- The limbic system, often referred to as the "emotional brain", is found buried within the cerebrum.
- At the border of the brainstem and cerebral hemispheres it is a doughnut-shaped system of neural structures; associated with emotions e.g. fear and aggression, and drives like hunger and sex; regulates body temperature, blood sugar level and blood pressure.

Operant Conditioning

- Type of learning in which a voluntary response becomes stronger or weaker depending on its positive or negative consequences.
- The organism plays an active role and 'operates' on environment to produce the desired outcome.

Operant conditioning forms an association between a behavior and a consequence. Consequences have to be immediate, or clearly linked to the behavior. With verbal humans, we can explain the connection between the consequence and the behavior, even if they are separated in time.

What is Sleep disorder? Causes of sleep disorder(5 marks)

Sleep Disorders

- Sleep related problems ranging from inability to sleep, to difficulty falling to sleep, to interrupted sleep, to feeling sleepy even when one has had enough hours of deep sleep; Generally known by the name of Insomnia, sleep disorders include sleep walking and sleep talking as well.

Causes of Sleep Disorders

- Sleep disorders or slumbering problems may be due to various reasons:
- Stress • Preoccupation (concern or fear etc.) • Mental illness • Noise pollution
- Digestive problems • Physical illness

Four diseases caused by abnormal secretion of thyroid glands?

Diseases Resulting from Abnormal Secretion of Endocrine Glands

- Too much or too less secretions of endocrine glands can be harmful for the body.
- These secretions can be treated by controlling the over production, providing the essentials for production, or replacing hormones.
- Some of such abnormalities are:

1. Cretinism

- Occurs due to the lack of thyroid gland secretions. • Prevalent mostly in Southern France, Spain, Italy, and Switzerland

The major symptoms are:

- Person becomes restless and thin • Shows excessive emotionality
- Sleeplessness • Rapid heartbeat • Tremors

What will happen when you enter into the movie theatre/ a dark room and hardly see anything? (3 marks)

The isle, other people, or your seat. And what happens after a few moments? It is an example of adaptation to darkness

- Dark Adaptation means a heightened sensitivity to light resulting from being in low level of light for some duration
- On the contrary, you can see quite well in light after coming from the darkness__ dark adaptation
- The speed of processing from dark to light and light to dark adaptation is largely dependent on the rate at which the chemical composition in the rods and cones takes place.

Portion of Adrenal Cortex and their name.

The adrenal cortex is essential to life because it has very important functions to perform, but the Medulla may be removed with no life-threatening effects.

Hormones of the Adrenal Cortex

- The adrenal cortex consists of three different portions/ regions, each region produce different type of hormones. • Chemically, all these cortical hormones are steroid.

a. Mineralocorticoids

- Secreted by the outermost region of the adrenal cortex.

b. Glucocorticoids

- Secreted by the middle region of the adrenal cortex.

c. Gonad corticoids

- Also known as the sex hormones.
- These are secreted by the innermost region of the adrenal cortex.

Q: Brain layers and their names i think

Membranes of the Brain

- Between the surfaces of the brain and the skull, there are three layers of membrane called the meninges, which completely cover the brain and spinal cord.
- These three membranes are:

1. Dura Matter 2. Arachnoid 3.Pia Matter

THE EVOLUTIONARY LAYERS OF THE HUMAN BRAIN

The **reptilian** brain, the oldest of the three, controls the body's vital functions such as heart rate, breathing, body temperature and balance.

The **limbic** brain emerged in the first mammals. It can record memories of behaviours that produced agreeable and disagreeable experiences,

The **neocortex** first assumed importance in primates and culminated in the human brain with its two large cerebral hemispheres that play such a dominant role.

Q- Edward B. Tichener

Known as the formal founder of Structuralism

Edward Bradford Tichener

He was solely concerned with studying the brain, and the unconscious, and for this he believed, we should break it down into basic elements. After that, we can construct the separate elements into a whole and understand what it does.

- He believed that we can study perception, emotions and ideas through introspection, by reducing them to their elementary parts
- There are four elements in the sensation of taste: sweet, sour, salty and bitter

Q10- what do you know about cerebellum. What are its functions? 5 MARKS

- "Cerebellum" comes from the Latin word for "little brain". The cerebellum is located behind the brain stem.
- Cerebellum is somehow similar to the cerebral cortex: the cerebellum is divided into hemispheres and has a cortex that surrounds these hemispheres.
- It carries 10% of the weight of the brain. • It contains as many neurons as in the rest of the brain.
- Its function is to coordinate body movements i.e. coordination, maintenance of posture & balance.
- Damage to cerebellum results into jerky and uncoordinated body movements.

Q7. Humanistic approach main points

Psychological model that is considered as one of the most recent approaches to psychology .

It is the approach that focused on:

- **The idea that people are in control of their life.**
- **The person or the self and personal growth and development are to be emphasized.**

The humanistic approach includes a number of other theories with the same or similar orientation e.g., 'existential' and 'phenomenological' psychology.

Q- Humanistic Vs Psychodynamic & behaviorist Approaches

- Humanistic approach emphasizes the person, the psychodynamic stresses unconscious determinants, and the behaviorists focus upon external determinants.
- Humanistic approach is more optimistic than the other two in the sense that it believes in the person's ability and will.

Q10. Who presented the cognitive maps? Define it briefly 3 marks

Cognitive Approaches to Learning

The approaches that focus upon the thought processes underlying learning . Latent Learning and cognitive maps (Edward Tolman); Tolman talked about the 'cognitive maps'; it is not necessary to have an association between stimulus and response, a person can learn without showing any apparent response; in other words learning and performance are not the same

Social learning / Observational learning and Modeling (Albert Bandura): a major portion of our learning is based upon learning by observation

Q15. Describe function of auditory canal and tell three parts of ear. 3 marks

Auditory canal: When sound waves originate from the vibrating object, they then pass through the auditory canal, which is a tube like passage through which the sound travels to the inner part of the ear or "the eardrum".

Eardrum

- The part of the ear that starts vibrating when sound waves strike/ hit it.
- Its intensity of vibration is dependent on how intense the sound waves are the more intense the sound, the more intensely it vibrates.
- These vibrations are then transmitted to the "middle ear".

1. The outer ear 2. The middle ear 3. The inner ear

Q- Ear impairments 5 mark

1. Conduction Deafness: problem in conduction of air vibrations to the cochlea; the bones in the middle ear do not function properly. Treatment: microsurgery for replacing the affected bone with an artificial one.

2. Nerve Deafness: deafness caused by a damage to the neural mechanism that creates nerve impulses or relays them to the auditory cortex; deafness may also be caused by a damage to the auditory cortex itself.

Q3. Name and explain that specific learning principle.

[Educational psychologists](#) and [pedagogues](#) have identified several principles of learning, also referred to as laws of learning, which seem generally applicable to the [learning](#) process. These principles have been discovered, tested, and used in practical situations. They provide additional insight into what makes people learn most effectively. Edward Thorndike developed the first three "Laws of learning:" readiness, exercise, and effect. Since Thorndike set down his basic three laws in the early part of the twentieth century, five additional principles have been added: primacy, recency, intensity, freedom and requirement.

Q- Cerebrospinal Fluid (CSF)

- The subarachnoid space contains a fluid called cerebrospinal fluid (CSF), a clear, colorless fluid covering the entire surface of central nervous system.
- The total volume of CSF is 125-150 ml.
- Total production of CSF is about 400-500 ml/day (about 0.36ml/min).

Q- Phi phenomenon: Wertheimer became aware of a form of apparent motion that was called

When two lights are in close proximity to each other, flashing alternately, appear to be one light moving back and forth; therefore the whole was different from the separate parts.

- Movement is perceived whereas it never occurred.
- Explanation of phi phenomenon led to a separate school of thought that had deep rooted impact on learning, ethics, and social psychology.

Q6. What is top- down processing; write its factor which influences 5 marks

Top- Down and Bottom- Up Processing

‘Top- Down’ processing refers to the perceptual phenomenon guided/ and influenced by; Knowledge, Experience, Motivation Expectation

A-e- yo- g-o - ng t- sc—l?

Top- down processing is guided by the higher mental/ knowledge faculty such as meaning of the sentence of which the important letters are missing__ individuals are able to understand the meaning of the sentence and fill in the gaps by using their prior experiences and memories.

Q7. Deferent theories of “pitch Perception and hearing” are being presented over theyears. Which one is your favorite and why? (5 marks)

ITS SAME WITH DIFFERENT NAMES

- The most frequent question that comes to mind is that how can our brain sort out the sound waves of different frequencies and intensities without any hindrance or problem?
- The answer lies in the studies done in this regard. They show that the basal membrane (inner most region of the ear near the cochlea) and its associated areas are most sensitive to high pitched frequency sounds, and the area near the cochlea is more sensitive to low-frequency sounds.

Q3. Compare intimate and observation??

Intimate: to make known especially publicly or formally, to communicate delicately and indirectly

Observation: the action or process of closely observing or monitoring something or someone , a statement based on something one has seen, heard, or noticed.

Q8. Define the shaping techniques. Discuss how will you practice this technique in your life? (3 marks)

Shaping: Successive approximations of a required / desired response are reinforced until that response is fully learnt:

- In the beginning each and every success is reinforced with a reward, no matter how small the success.
- Once the desired response is learnt the rein forcer immediately follows it, every time it happens.
- Once learnt the behavior, in many cases, the organism may not need reinforcement any more, since many behaviors are self-reinforcing e.g. learning to play a musical instrument.

Q11. Define cornea briefly explain? 3 marks

- A transparent external surface, a five-layered membrane that covers both the pupil and the iris.
- It is the first and most powerful lens or layer of the visual apparatus that helps to form the sharp image on the retinal photoreceptor cells, along with the crystalline lens

Q8. How does the endocrine system influence behavior? Describe the functions of any two glands and the hormones each secretes. (2.5+2.5 marks)

The endocrine system consists of glands which secrete hormones into the blood stream. There many different types of hormones secreted by different glands in the body, each serving a different function. Some hormones are known to have an effect on mood and behavior. An example of this would be estrogen, which has been known to cause mood swings in menopausal women. This is because estrogen, as well as many other steroid hormones are able to cross the blood brain barrier and act directly on neurons in the brain to cause them to act differently, hence giving rise to behavioral changes.

PSY101 - Introduction to Psychology

Midterm Long Questions

Total Questions 32

MCQ's 28 (10 MCQS past papers ma thy bqi new thy)

2 Questions 5 Marks each

2 Questions 3 Marks each

Q. Definitions of what is Relative motion, Relative Weight

Relative motion

A monocular cue for perceiving depth and distance in which when we move, the objects at different distances change their relative positions with the visual image___ with those that are closest seem to be moving faster.

Q. Describes function of auditory canal and tell three parts of ear. 3 mark

Auditory Canal

When sound waves originate from the vibrating object, they then pass through the auditory canal, which is a tube like passage through which the sound travels to the inner part of the ear or “the eardrum”.

The ear is divided into three parts

1. The outer ear
2. The middle ear
3. The inner ear

Q. Sadia unintentionally bought a branded perfume which have “Shan’s” picture on it, which principle tell aur defines this behavior and who first proposed this principle (3 marks)

Q. Why people try to imitate James bond which part of his characteristic attract them” 5 marks

Q. How drug type and which condition use drug 3 marks.

Q. About ear impairments 5 marks

Types of Hearing Impairment

1. Conduction Deafness: problem in conduction of air vibrations to the cochlea; the bones in the middle ear do not function properly. Treatment: microsurgery for replacing the affected bone with an artificial one.
2. Nerve Deafness: deafness caused by damage to the neural mechanism that creates nerve impulses or relays them to the auditory cortex; deafness may also be caused by a damage to the auditory cortex itself.

Q. Different theories of “pitch Perception and hearing” are being presented over the years. Which one is your favorite and why? (5 marks)

Theories of Hearing/ Theories of Pitch Perception

Place Theory of Hearing

- The most frequent question that comes to mind is that how can our brain sort out the sound waves of different frequencies and intensities without any hindrance or problem?
- The answer lies in the studies done in this regard. They show that the basal membrane (inner most region of the ear near the cochlea) and its associated areas are most sensitive to high pitched frequency sounds, and the area near the cochlea is more sensitive to low-frequency sounds.
- The findings of these studies led to the formation of place theory of hearing, which says that different areas in the basal membrane respond to different frequencies of sound; pitch corresponds to the location of greatest stimulation along the basilar membrane.
- The most important shortcoming of this theory is that it is unable to explain the process of hearing, i.e. sounds of low frequencies also trigger the neurons in the basal membrane and its associated areas.
- Due to this incomplete explanation of auditory phenomena, an additional explanation came in the form of “ frequency theory of hearing”.

Frequency Theory of Hearing

- This theory explains that the entire basal membrane acts as a microphone, vibrating in response to sound i.e. activation occurs in the whole area in response to the vibration.
- The theory tends to explain that the nerve impulses in that region are directly connected/ associated with the frequencies of sound to which they are exposed___ so the higher the pitch of the sound, the more the nerves trigger and send messages to the brain.
- Both theories are important and useful in the sense that they provide the accurate description of the whole auditory phenomena. Specifically, place theory gives a better explanation of processing the high- frequency sounds and frequency theory tells us that how the low- frequency sounds are encountered and dealt with.

Q. How does the endocrine system influence behavior? Describe the functions of any two glands and the hormones each secretes. (2.5+2.5 marks)

Endocrine system is a collection of glands that produce hormones that regulate body's growth, metabolism, and sexual development and function. The hormones are released into the bloodstream and transported to tissues and organs throughout the body.

Although there are eight major endocrine glands scattered throughout the body, they are still considered to be one system because they have similar functions, similar mechanisms of influence, and many important interrelationships.

- Endocrine glands are known as the “Managers of Human Body”.
 - Endocrine system is the system in which a number of glands secrete numerous hormones directly into the blood stream which regulate:
- Body's growth
 - Metabolism

- Sexual development and functions, and
 - Other vital functions of the body
- Endocrine glands are ductless glands that secrete their hormones directly into the bloodstream.
 - Hormones act as chemical messenger controlling various functions, reaching to the tissues and other vital organs of the body.

Endocrine Glands

These glands form the body's "slow" chemical communication system; a set of ductless glands that secrete hormones (special chemicals) into the bloodstream"

Endocrine Glands and Abnormality

- Low secretions of the thyroid produce anxiety like symptoms such as irritability and tension
- Low level of pituitary secretions produces depression like symptoms—Fatigue, apathy etc.
- Abnormal secretions of hormones may cause major depression

Q. After a gunshot wound to the head, Amir is unable to control his aggression and fear, Doctor's says his "Emotional Brain" is hurt because of this wound. What could be the possible location of Amir's wound? Also mention two characteristics of that part. (1+2 marks)

- Evolutionarily the structure of limbic system is rather old.
- The limbic system, often referred to as the "emotional brain", is found buried within the cerebrum.
- At the border of the brainstem and cerebral hemispheres it is a doughnut-shaped system of neural structures; associated with emotions e.g. fear and aggression, and drives like hunger and sex; regulates body temperature, blood sugar level and blood pressure.

Q. Name three part of the human ear and what is the function of Ear drum? (1+2 marks)

The Human Ear: Anatomy/ Structure

The primary apparatus of hearing i.e., the ear is divided into three parts

1. The outer ear
2. The middle ear
3. The inner ear

Eardrum

- The part of the ear that starts vibrating when sound waves strike/ hit it.
- Its intensity of vibration is dependent on how intense the sound waves are___ the more intense the sound, the more intensely it vibrates.
- These vibrations are then transmitted to the "middle ear".

Q. Define the shaping techniques. Discuss how will you practice this technique in your life? (3 marks)

The most effective schedule of reinforcement is the variable-interval schedule.

Shaping

- Successive approximations of a required/-desired response are reinforced until that response is fully learnt:
- In the beginning each and every success is reinforced with a reward, no matter how small the success.
- Once the desired response is learnt the reinforcer immediately follows it, every time it happens.
- Once learnt the behavior, in many cases, the organism may not need reinforcement since many behaviors are self-reinforcing e.g. learning to play a musical instrument.

Stages in Shaping

Acquisition: Initially the response rate following reinforcement may be slow but at one stage it increases to the maximum-----acquisition.

Extinction: If reinforcement is withheld the response rate decreases and finally no response is shown-----extinction.

Shaping Can Best Be Used For

- Learning alphabets, vocabulary, mathematical tables, or a new language.
- Learning to play a musical Instrument.
- Appropriate classroom behavior.
- Training mentally handicapped children.

Q. How humanistic approach is different from psychodynamic approach? (3 marks)

Humanistic Vs Psychodynamic & behaviorist Approaches

- Humanistic approach emphasizes the person, the psychodynamic stresses unconscious determinants, and the behaviorists focus upon external determinants.
- Humanistic approach is more optimistic than the other two in the sense that it believes in the person's ability and will.
- According to the humanistic thinkers, limiting ourselves to observable behavior and external stimuli alone is ignoring the thinking-feeling person, and that is dehumanizing.

Free will: Humans possess the ability to make decisions about their life

Humanistic Approach

The psychological model, that suggests that people are in control of their lives. It is considered as one of the most recent approaches to psychology. This approach rejected the view that predetermined, automatic, biological forces, unconscious processes or the environment determines behavior. On the contrary, it proposes that people themselves decide about their lives. A failure in being capable of doing so leads to psychological problems. It also stresses the idea that people, by nature, tend to move towards higher levels of maturity and maximum potential.

Psychodynamic Approach

The approach that concentrates on the belief that behavior is motivated by the inner forces, over which individuals have little control. Founded by the Viennese physician Sigmund Freud in early 1900s, proponents of psychodynamic perspective give importance to the inner unconscious experiences and the forces that led that behavior. Freud believed that unconscious determinants of behavior had a revolutionary effect on 20th century thinking, not just in psychology but also in related fields as well. Although many of the basic principles of psychodynamic thinking have been highly criticized, the model grown out of Freud's work has provided a way not only for treating mental disorders but also for understanding everyday phenomena such as prejudice and aggression.

Q. How Mr. Sharif got deafness, he is working in a factory (3 marks)

1. Prolonged Exposure to the Loud Noise

- It is also called stimulation deafness
- It includes various types of loud tones/ sounds such as speech, music, machinery, and other complex sounds
- The damage is irreversible as the receptors which are damaged do not regenerate
- Large amount of damage occurs between the frequencies of 1000 Hz to 2000 Hz

Q. Name the 3 membranes that separate the brain and define what is CSF? (5 marks)

Membranes of the Brain

- Between the surfaces of the brain and the skull, there are three layers of membrane called the meninges, which completely cover the brain and spinal cord.
- These three membranes are:

1. Dura Matter

2. Arachnoid

3. Pia Matter

Cerebrospinal Fluid (CSF)

- The subarachnoid space contains a fluid called cerebrospinal fluid (CSF), a clear, colorless fluid covering the entire surface of central nervous system.
- The total volume of CSF is 125-150 ml.
- Total production of CSF is about 400-500 ml/day (about 0.36ml/min).

Q. Limitation of nature nurture research. 3/-

Limitations of Nature-Nurture Research

- o Ethical considerations in research with humans
- o Not all animal research can be applied to humans

Q. Phi phenomenon (3 marks)

The Phi phenomenon is an optical illusion of our brains and eyes that allows us to perceive constant movement instead of a sequence of images. We are supplying information that does not exist (between image and image) that creates the illusion of a smooth movement. The phi phenomenon, which might be considered the basis of the

correct working of the cinema, is only a limitation of the human eye, which depends on the persistence of visual sensations.

Studying at the University of Frankfurt he became aware of a form of apparent motion that was called “**Phi phenomenon**”

- **Phi phenomenon** = when two lights are in close proximity to each other, flashing alternately they appear to be one light moving back and forth; therefore the whole was different from the separate parts; movement perceived whereas it never occurred
- Explanation of phi phenomenon led to a separate school of thought i.e., Gestalt school, that had deep rooted impact on learning, ethics, and social psychology

Q. Chemical of neuron (3 marks)

Neuron

A nervous system cell is constituted in such a way that it is specialized in receiving, processing, and/or transmitting information to other cells.

Connection between nerve cells

- **Synapse:** the gap between one neuron and the other.
- **Synaptic Transmission:** the procedure through which information is relayed from one neuron to another across the synaptic gap.
- **Neurotransmitters:** The post synaptic neuron is stimulated by the chemical messages released from neurons; they cross the synapse from one neuron to another.

The neurons follow an all-or-none law.... either a neuron will be firing or resting /off.

- **Excitatory Message:** The chemical message that makes it more likely that the receiving neuron will fire and the action potential will travel down its axon.
- **Inhibitory Message:** The chemical message that inhibits a receiving neuron from firing so that the action potential does not travel down its axon.

Q. What is meant by EEG? Write a brief note on EEG? 1+2

Electroencephalogram (EEG): recording of the electrical signals being transmitted within the brain, through electrodes attached to the skull.

- An apparatus/machine that measure records and displays electrical activity within the brain of a person.
- Brain wave activity, or electrical charge, is recorded in the form of a graphic pattern.

Q. Professor Faheem gives quizzes to his students every Monday. While Professor Nabeela gives surprise quizzes to her students. Which type of reinforcement is used by both of them. 1.5 + 1.5

Answer:

- Professor Faheem gives quizzes to his students every Monday. **(Positive Reinforcement)**
- While Professor Nabeela gives surprise quizzes to her students. **(Negative Reinforcement)**

27. Last question was about some steroid hormones that if they are diagnosed by the doctor then what are their symptoms and which gland is having the problem in this case. Sorry, I forgot the name of the hormones. 5

Adrenal insufficiency

- Condition occurring due to the decreased function of the adrenal cortex, and consequently underproduction of adrenal corticosteroid hormones.
- The symptoms of adrenal insufficiency may include,

- Weakness
- Fatigue
- Abdominal pain
- Nausea
- Dehydration
- Skin changes

Treatment

Doctors treat adrenal insufficiency by giving replacement corticosteroid hormones.

Q. Sara is having sleeping disorder. Being a psychology student, suggest her how to overcome this problem.(pg.116)

- **A good night's sleep keeps one fresh and ready for facing stresses of everyday life.**

Sleep Disorders

- Sleep related problems ranging from inability to sleep, to difficulty falling to sleep, to interrupted sleep, to feeling sleepy even when one has had enough hours of deep sleep; generally known by the name of Insomnia, sleep disorders include sleep walking and sleep talking as well.

Causes of Sleep Disorders

- Sleep disorders or slumbering problems may be due to various reasons:
- Stress
- Preoccupation (concern or fear etc.)
- Mental illness
- Noise pollution
- Digestive problems
- Physical illness
- Drug abuse and medication
- High caffeine intake, and many other

How to Handle and Treat Sleep Disorders?

REMEMBER: The actual problem of most people suffering from sleep disorders is not that they can not fall asleep, but the concern that “I will not be able to sleep today too.”

Practical Steps for Getting Rid of Most Sleep Problems

- **Avoid taking sleeping pills.**
- Fix a place/room where you will go to sleep every night, and do not do anything else over there.
- Do not “think” about going to sleep.
- Keep television away from your sleeping place, and if it is there **NEVER EVER** watch an interesting movie or program at sleep time.
- Develop a habit of reading at bedtime, but **NEVER EVER** read an interesting or exciting book.
- If you are in your bed and still can’t go to sleep, then get out of the bed and take a round around the house and come back. Develop a habit of rising early in the morning every day, at the same time.
- Do not change your sleep time.
- Learn some relaxation exercises.
- Avoid caffeine.
- Avoid heavy meals at night, and eat your dinner about two hours before bedtime.
- A glass of warm milk helps quite often.

Dreams and Sleeping

- Dreams are mental experiences during sleep.
- Every body dreams though they may forget the contents.

2) Briefly describe role of Cornea. (pg. 89)

Cornea

- A transparent external surface, a five-layered membrane that covers both the pupil and the iris.
- It is the first and most powerful lens or layer of the visual apparatus that helps to form the sharp image on the retinal photoreceptor cells, along with the crystalline lens

3) Write briefly about Cerebellum. ((pg.75)

Cerebellum

- "Cerebellum" comes from the Latin word for "little brain". The cerebellum is located behind the brain stem.
- Cerebellum is somehow similar to the cerebral cortex: the cerebellum is divided into hemispheres and has a cortex that surrounds these hemispheres.
- It carries 10% of the weight of the brain.
- It contains as many neurons as in the rest of the brain.
- Its function is to coordinate body movements i.e. coordination, maintenance of posture & balance.
- Damage to cerebellum results into jerky and uncoordinated body movements.

Question No: 29 (Www.vugoogle.com: 3)

Write a brief note on the nature of cognition.

Cognition is the mental process Of Knowing as well as known. It refers to the Knowledge that has been acquired to use In mental process. There is probably no aspect of human life that is void of cognition .Not even sleep. All human Intellectual activities like thinking, Problem solving, Learning require mental process and knowledge.

Question No: 30 (marks 3)

Mention the four main categories of drugs and explain any one of them. (1+2)

Categories of Drugs

- Stimulants
- Depressants
- Narcotics
- Hallucinogens

Stimulants

They give you a “high” feeling; they influence the CNS, and the person’s heart rate, Blood pressure, and muscle tension is increased.

- Cocaine
- Amphetamines
- Benzedrine
- Dexedrine

Question No: 31 (Www.vugoogle.com: 5)

What Erik Erikson stated about the human development. How many developmental stages are identified by Erikson? Identify any three stages and briefly explain them. (1+1+3)

His developmental theory of the "Eight Stages of Man" was unique and different in the sense that it covered the entire lifespan rather than ‘childhood’ and adolescent development’.

He believed that social environment combined with biological maturation results in a set of "crises" that must be resolved. The results of the resolution, whether successful or not, are passed on to the next crisis and provide the foundation for its resolution.

Oral-Sensory Stage

The infant develops a sense of who and when to trust.

He learns when to protect oneself and be cautious.

Young adulthood

Focuses On maintaining one’s individuality, Making friends, Relationships and intimacy

Middle adulthood

Age of;

- Creativity
- Productivity
- Concern about guiding and helping the next generation
- Concern for others or self-indulgence
- Impoverishment of self

Question No: 32 (marks 5)

What is meant by Feature Analysis? Briefly demonstrate the steps in feature analysis.

The process of perceiving a shape, pattern, object, or scene by attending to the individual elements making it up. The approach of feature analysis looks into the individual components in order to understand the entire nature of what we perceive.

The feature analysis starts with the activation of the neurons in the brain, as they are sensitive to particular spatial configurations such as circles, angles, edges, curves etc. Since these neurons are individually present, it is taken to be the evidence of the idea that any pattern, sequence or component can be broken down into simpler events or parts.

Steps in Feature Analysis:

Identify the feature, shape of any object, of which the image falls on the retina.

Combine/ gather object in some form/pattern so that some sort of representation can be formed.

In the final stage, we identify/ compare each component/element/ object with the help of past experiences or memories.

Gestalt Laws of Perceptual Organization

Organizing raw sensory stimuli into meaningful experiences involve “cognition”, a set of mental activities that includes thinking, knowing, and remembering. Knowledge and experiences are extremely important for perception, because they help us make sense of the input to our sensory systems.

- We organize our experiences according to certain rules, in a simple way:

1. The Law of Closure.
2. The Law of Proximity.
3. The Law of Continuity.
4. The Law of Similarity.
5. The Law of Simplicity.
6. The Law of Common Fate.
7. The Law of Enclosure/ Connectivity.

MCQs PSY101

chkashif_unique

Psychology is defined as the science of:

Sensation and perception

Experience and mental illness

Culture and group dynamics

Behavior and mental processes

Who is considered the "father of psychology" by his establishment of the first psychology lab?

Wilhelm Wundt

William James

Sigmund Freud

E. B. Tichener

Which of the following is considered the founder of the psychodynamic perspective in psychology?

Wilhelm Wundt

William James

Sigmund Freud

E. B. Tichener

The behaviorists believed:

Psychology should emphasize the study of healthy people.

Psychology should only study observable and objectively described acts

Psychology should study the self examination of inner ideas and experiences.

All of the above.

The psychological school of thought that stressed the whole or complete view of a situation was:

Structuralism.

Functionalism

Behaviorism

Gestalt

According to this Psychological school of thought to understand human behavior and thought one must understand the unconscious mind and the key events that happened early in life that influence the unconscious mind. What is this school of thought?

Psychoanalysis

Functionalism

Behaviorism

Gestalt

Manifest content of a dream is:

The obvious and apparent part

Hidden content

Conscious part of dream

Overt part of dream

Who established the first psychology lab in the United States?

G. Stanley Hall

William James

Francis Cecil Sumner

Mary Whiton Calkins

Edward Titchener used a method for studying the mind that became very popular during the Structuralist period. The method called _____ required trained participants to report their conscious mental experiences to the investigator. For example if a person was angry they would report all of their experiences during the time they were angry.

Empiricism

Functionalism

Contemplation

Introspection

_____ is the school of thought in where psychology is defined as the study of the structure of the mind.

Functionalism

Behaviorism

Structuralism

All of the above

Dr. Usman studies the diagnosis causes treatments and prevention of mental illnesses. Which type of psychologist is Dr. Usman?

Clinical psychologist

Developmental psychologist

Forensic psychologist

Health psychologist

Which one of the following models believes that behavior is motivated by inner forces over which individuals have little control?

Cognitive model

Psychodynamic model

Humanistic model

Behavioral model

Which one of the following schools of thought focused on what the mind does and how it does?

Structuralism

Functionalism

Gestalt

Behaviorist

Which one of the following drugs is a stimulant?

Nicotine

Lorazepam

Barbiturates

LSD

Tahir often experiences intense feelings of anger and frustration. In order to cope

with these feeling he enrolls in a kickboxing class as an outlet for his emotions.

Tahir's actions are an example of which type of defense mechanism?

Projection

Displacement

Repression

Sublimation

Which type of learning process did Burrhus Frederic Skinner describe?

Classical Conditioning

Modeling

Observational Learning

Operant Conditioning

_____ refers to genetic composition of a person.

Genotype

Phenotype

Monotype

None of the given options

In a correlational study when one variable goes up as another goes down is known as a _____.

Positive Correlation

No Correlation

Negative Correlation

Illusory Correlation

A researcher accessed information on the Internet from a series of surveys of women that was conducted during the 1970s and 1980s. The data were analyzed to

examine changes in attitudes and behaviors over time. Which of the following method was used?

Participant observation

Case study

Archival data

Field experiments

A researcher wants to study the effects of violence displayed in movies on children behavior. In this research violence displayed in movies is the

variable as it is manipulated by the experimenter.

Independent

Dependent

Confounding

None of the given options

The brain and the spinal cord comprise which of the following nervous systems?

Central nervous system

Peripheral nervous system

Autonomic nervous system

Sympathetic nervous system

The lobe of the cerebral cortex responsible for motor control and higher mental processes is known as the _____.

Occipital lobe

Temporal lobe

Parietal lobe

Frontal lobe

The band of muscles behind the cornea that gives the eye its color and controls the size of the pupil is known as the _____.

Sclera

Iris

Pupil

Cornea

The _____ theory suggests color vision depends on red-green blue-yellow and black-white processes in the brain. It suggests that the receptor cells are linked in pairs and they work in opposition to each other.

Figure-ground

Trichromatic

Photopigment

Opponent-process

Which of the following glands abnormal secretion result in a condition called "cretinism" ?

Parathyroid gland

Thyroid gland

Pancreas

Gonads

What is conduction deafness?

Hearing loss due to failure of the auditory nerve

Hearing loss due to problems with the bones of the middle ear

Hearing loss due to failure of the visual nerve

Hearing loss due to problems with the bones of the outer ear

Who will be interested to study how cognitions are acquired and used in various groups and institutional settings?

Anthropologists

Computer scientist

Sociologists

Geeks

_____ refers to the degree of stability or change across the life span.

Temporal aspects

Situational aspects

Environmental aspects

Spatial aspects

Who developed REBT (Rational Emotive Behavior Therapy)?

George Kelly

John Dollard

Albert Ellis

Neal Miller

In which of the following stage OEDIPUS COMPLEX is observed?

Oral stage

Anal stage

Phallic stage

Genital stage

While maintenance rehearsal will help keep information in short-term memory for longer periods of time, it does not help transfer information into long-term memory. In order to get information into long-term memory we need to engage in

Elaborative rehearsal

Maintenance priming

Chunking

Episodic rehearsal

In sensory memory, visual stimuli are held for a very brief time as _____ memories, whereas auditory stimuli are held as _____ memories

Short-term; long-term

Iconic; echoic

Echoic; iconic

Long-term; short-term

Which of the following is NOT true of long-term memory?

It has unlimited space

It includes both semantic and episodic memory

It can hold information for unlimited lengths of time

It has about seven slots or chunks for information storage

People do things (like work) for all different reasons. Some work for money, some work for power, and some work for satisfaction. Internal motivation that causes us to do something because we receive self-satisfaction is called

Humanistic

Intrinsic

Sociobiological

Optimum arousal

Which of the following is NOT a biological motive that operates within a homeostatic cycle (is not regulated by homeostasis)?

Sex

Hunger

Body temperature

Thirst

John B. Watson believed that psychology should involve the study of _____.

Consciousness

The brain

The mind

Behavior

A(n) _____ is a measure of how strongly two variables are related to one another.

Independent variable

Correlation

Experimental effect

Dependent variable

A variable that the experimenter manipulates is called a(n) _____.

Control condition

Independent variable

Coefficient of correlation

Dependent variable

Observing behavior as it happens in real-life natural settings without imposing laboratory controls is known as the _____.

Naturalistic observation method

Experimental method

Psychometric approach

Survey method

Who claimed that behavior is affected by positive reinforcement?

B. F. Skinner

Sigmund Freud

William James

Wilhelm Wundt

A detailed description of a particular individual being studied or treated is called _____.

A single-blind study

A representative sample

A naturalistic observation

A case study

The psychodynamic perspective was based on the work of _____.

Freud

Watson

Gestalt

Wundt

Who was an early proponent of functionalism?

Wilhelm Wundt

Ivan Pavlov

William James

Max Wertheimer

Which of the following terms do NOT belong together?

Natural selection; functionalism

Psychoanalysis; unconscious conflict

Structuralism; observable behavior

Gestalt; whole

The whole is greater than the sum of the parts” is a statement associated with the perspective of _____.

Introspection

Gestalt psychologists

Psychoanalysis

Functionalism

Drugs that speed up the functioning of the nervous system are called _____.

Stimulants

Psychogenics

Narcotics

Depressants

According to Sigmund Freud, the important underlying meaning of our dreams is found in the _____.

Manifest content

Deep content

Latent content

Subliminal content

Freud’s psychoanalytic theory of dreaming states that _____.

The purpose of dreaming is to express unconscious wishes, thoughts, and

conflicts

Dreaming is a by-product of a process of eliminating or strengthening neural connections

The purpose of dreaming is to resolve current concerns and problems

There is no purpose to dreaming; dreams occur because of random brain stem signals

Daydreaming, meditation, intoxication, sleep, and hypnosis are all types of _____.

Altered states of consciousness

Waking consciousness

Self-awareness

Self-absorption

The branchlike structures that receive messages from other neurons are called _____.

Nerve bundles

Dendrites

Axons

Synapses

The idea that learning occurs and is stored up, even when behaviors are not reinforced, is called _____.

Innate learning

Insight

Placebo learning

Latent learning

In operant conditioning, _____ is necessary to create the association between the stimulus and the voluntary response

The law of negative effect

A long time delay

Conditional emotional linkages

Reinforcement

_____ is synonymous with short-term memory

Sensory registers

Shadow memory

Working memory

Secondary memory

_____ of the following statements is true about retrieval.

It is a process of getting information from the sensory receptors to the brain

It is a process that allows an extinguished CR to recover.

It is the reason that conditioned taste aversions last so long.

It is a process of getting stored memories back out into consciousness.

Receptor cells in the retina responsible for color vision are _____.

Cones

Rods

Bipolar cells

Ganglion cells

To be fully functioning” means doesn’t experiencing which of the following?

Optimal psychological adjustment

Complete openness to experience

Complete congruence

Biased regional values

Which one of the following correctly states Descartes' position on the relationship between the mind and body?

The two are completely separate, with no links whatsoever

Only physical matter exists, mental processes are just a result of 'matter in motion'

The two are separate entities influencing each other

The two are linked, with mental experiences residing in the heart

Which of the following is NOT one of the goals of Psychology

To understand the nature and mechanisms of behavior and mental processes

To apply understanding to real life situations and on the basis of this understanding,

To understand the influence of spirits on the behavior of man

To develop an understanding of the relationship between behavior and mental

Functionalists emphasize on which of the following statement

Consciousness is a continuous flow

Individual differences are the basis of human behavior

Consciousness is composed of three components

Research should be done through objective introspection

According to which of the following psychologist, education should be based on the children’s need?

John Dewey

Jean Piaget

Wilhelm Wundt

Charles Darwin

Which of the following method has been used for treatment of mental and behavioral disorders with drugs and chemicals

Psychotherapy

Shock therapy

. Psycho surgery

Chemotherapy

Which of the following is incorrect about insulin-shock therapy?

It was developed by Paul Broca who was a French surgeon and anthropologist

It is used to cure psychological disorders by administering insulin

In this therapy the comma is caused because of a reduction in blood sugar level

It has found to be effective with schizophrenics, addicts etc., if used with

According to Jung, which of the following, tend to be sociable, outgoing, and interested in parties and group activities.

Moving against people

Moving away people

Extroverts

Introverts

Who among the following said that psychologists must discard all reference to consciousness and must only look at behavior of animals and man

Wilhelm Wundt

J. B. Watson

. Karen Horney

Abraham Maslow

Which of the following is an effective therapy that focuses on changing individual's irrational and dogmatic cognitions

Behavioral Therapy

Psychoanalysis

Rational Emotive Behavior Therapy

Psychodrama

Which of the following statement best describes "Endocrine glands

Secrete hormones directly into the bloodstream

These are a thin layer of cells coating the axons

These are an extensive network of specialized cells

These are chemicals released into the particular organ of body

Fatima is using newspaper records to study the rate of crime during the past 20 years. Which type of method is she utilizing?

Participant Observation

Archival data

Structured Observation

Field experiments

Which of the following system arouses us for defensive action e.g. fight or flight

Parasympathetic Nervous System

. Central Nervous System

Sympathetic Nervous System

Endocrine System

A researcher stops people at the mall and asks them questions about their attitude toward love marriages. Which kind of research technique is being used here

. Experiment

Naturalistic observation

Case study

Survey

Ovum is a term used to describe which of the following

The female sex cell or egg

The developing organism from conception to the end of the second week after

Male sex cell

The developing organism from 2 to 8 weeks after fertilization

Faiza is a young girl; she is very obedient and seeks approval from others,

According to Kohlberg she is at which of the following stage

Pre-Conventional

Conventional

Post-Conventional

Preoperational

Which of the following means negative correlation

There is no relationship between the two variables

Low values of one variable are associated with low values of the other

High values of one variable are associated with low values of the other

High values of one variable are associated with high values of the other

Which of the following statement best describes Erik Erikson

He was an id psychologist

He described archetypes

He gave the concept of basic anxiety

He developed a theory based on social rather than sexual relationships

The limbic system often referred as which of the following

Emotional brain

Thinking brain

Reactive brain

Sensory brain

Moosa is planning a research. He wants to study the “impact of violent movies on the behavior of young generations”. The impact of violent movies will be

Controlled variable

Independent variable

. Dependent variable

. Extraneous variable

1. According to Hippocrates, Choleric humor is associated with the temperament of _____.

Cheerful and active

Sad

Angry and aggressive

Calm and passive

2. The ability to feel what the client feels is called _____.

Respect

Sympathy

Empathy

Congruence

3. _____ is founder of Rational Emotive Behavior Therapy.

Aron Beck

Albert Ellis

Carl Jung

Carl Rogers

4. _____ is a neurotransmitter that plays important role in anxiety, arousal and learning.

GABA

Serotonin

Epinephrine

Glutamate

5. _____ focuses on the unconscious forces that drive or motivate human behavior.

Psychodynamic model

Functionalism

Structuralism

Gestalt psychology

6. The process of constructing comparable, exposure and comparison groups is called _____.

Time series design

Prospective design

Retrospective design

Matching

7. _____ gave the concept that human capacity for learning the language is innate.

Jean Piaget

Noam comsky

Stanley schacter

Tolman

8. If reinforcement is withheld, response rate decreases and finally no response is shown this is called _____.

Negative rein forcer

Extinction

Punishment

Positive rein forcer

9. The observer becomes a part of the situation and plays an active and significant role in situation, event, or context under study. This is called

_____.

Participant observation

Structured observation

Naturalistic observation

Field experiments

. _____, a French surgeon and anthropologist, discovered speech centre in brain.

Paul Broca

Philippe Pinel

Galen

Cabanis

_____ is the process of perceiving information and bringing it into the memory system

Storage

Retrieval

Recording

Encoding

According to Woodworth Memory =L -I -R, R stands for _____.

recording

remembering

resonance

recall

_____ derives from the Latin word “Emovere” means to excite, stir up.

Motion

Emotion

Motivation

Cognition

_____ was the first person who identify pupillometrics phenomenon

William James

. Wilhelm Wundt

Lazarus

Darwin

According to _____ every emotional arousal has an opposite, i.e. When one type of emotion is elicited, and then there must be an opposite that is there to suppress or cancel it

Opponent process theory

Activation theory

Cognitive theory

None of the above option

The branch of psychology that studies cognition, and related areas issues are called _____.

Forensic psychology

Cognitive psychology

Counseling psychology

Clinical psychology

_____ is the universal forms and patterns of thought. These include themes that can be seen in myths e.g. masculinity, femininity, good and evil opposites.

1. Ego

2. Superego

3. Unconscious

4. Archetypes

MMPI stands for _____.

Minnesota Multiphasic Personal Inventory

Minnesota Multiphasic Personality Inventory

Minnesota Multiphasic Psychology Inventory

None of the above options

s _____ are the people who are quiet, passive and careful people.

Extroverts

Introverts

Neurotics

Stable

_____ is a Greek word which means forgetfulness.

Amnesia

Dementia

Alzheimer's disease

None of the above option.

While maintenance rehearsal will help keep information in short-term memory for longer periods of time it does not help transfer information into long-term memory. In order to get information into long-term memory we need to engage in:

Elaborative rehearsal

Maintenance priming

Chunking

Episodic rehearsal

In sensory memory visual stimuli are held for a very brief time as _____ memories whereas auditory stimuli are held as _____ memories.

Short-term; long-term

Iconic; echoic

Echoic; iconic

Long-term; short-term

Which of the following is NOT true of long-term memory?

It has unlimited space

It includes both semantic and episodic memory

It can hold information for unlimited lengths of time

It has about seven slots or chunks for information storage

People do things (like work) for all different reasons. Some work for money some work for power and some work for satisfaction. Internal motivation that causes us to do something because we receive self-satisfaction is called:

Humanistic

Intrinsic

Sociobiological

Optimum arousal

Which of the following is NOT a biological motive that operates within a homeostatic cycle (is not regulated by homeostasis)?

Sex

Hunger

Body temperature

Thirst

Identify the correct order in the multi-store model of human memory?

L TM Sensory register STM rehearsal buffer

Sensory register STM rehearsal buffer L TM

Rehearsal buffer Sensory register STM L TM

STM Sensory register rehearsal buffer L TM

A child who gives many answers in response to a question resorts to the

process of _____.

Convergent thinking

Latent thinking

Divergent thinking

Critical thinking

A type of thinking which is aimed at solving problems or creating something new is called:

Creative thinking

Autistic thinking

Directed thinking

Symbolic thinking

Which one of the following best supports the heuristic approach of problem solving?

Trying different responses until one works

Following a rule that guarantees a solution to a specific type of problem

Applying solutions that were previously successful with other problems similar in underlying structure

Employing rules of thumb suggested by our experience that are often used to solve problems

. Which one of the following is not a secondary/learn motive?

Achievement

Power

Hunger

Curiosity

PSY - All Old Quizzes

1. John B. Watson believed that psychology should involve the study of _____.
 - a. Consciousness
 - b. The brain
 - c. The mind
 - d. Behavior
2. A(n) _____ is a measure of how strongly two variables are related to one another.
 - a. Independent variable
 - b. Correlation
 - c. Experimental effect
 - d. Dependent variable
3. A variable that the experimenter manipulates is called a(n) _____.
 - a. Control condition
 - b. Independent variable
 - c. Coefficient of correlation
 - d. Dependent variable
4. Observing behavior as it happens in real-life natural settings without imposing laboratory controls is known as the _____.
 - a. Naturalistic observation method
 - b. Experimental method
 - c. Psychometric approach
 - d. Survey method
5. Who claimed that behavior is affected by positive reinforcement?
 - a. B. F. Skinner
 - b. Sigmund Freud
 - c. William James
 - d. Wilhelm Wundt
6. A detailed description of a particular individual being studied or treated is called _____.
 - a. A single-blind study
 - b. A representative sample
 - c. A naturalistic observation
 - d. A case study

7. The psychodynamic perspective was based on the work of _____.

- a. Freud
- b. Watson
- c. Gestalt
- d. Wundt

8. Who was an early proponent of functionalism?

- a. Wilhelm Wundt
- b. Ivan Pavlov
- c. William James
- d. Max Wertheimer

9. Which of the following terms do NOT belong together?

- a. Natural selection; functionalism
- b. Psychoanalysis; unconscious conflict
- c. Structuralism; observable behavior
- d. Gestalt; whole

10. “The whole is greater than the sum of the parts” is a statement associated with the perspective of _____.

- a. Introspection
- b. Gestalt psychologists
- c. Psychoanalysis
- d. Functionalism

1. Drugs that speed up the functioning of the nervous system are called _____.

Stimulants

Psychogenics

Narcotics

Depressants

2. According to Sigmund Freud, the important underlying meaning of our dreams is found in the _____.

Manifest content

Deep content

Latent content

Subliminal content

3. Freud's psychoanalytic theory of dreaming states that _____.

The purpose of dreaming is to express unconscious wishes, thoughts, and conflicts

Dreaming is a by-product of a process of eliminating or strengthening neural connections

The purpose of dreaming is to resolve current concerns and problems

There is no purpose to dreaming; dreams occur because of random brain stem signals

4. Daydreaming, meditation, intoxication, sleep, and hypnosis are all types of _____.

Altered states of consciousness

Waking consciousness

Self-awareness

Self-absorption

5. The branchlike structures that receive messages from other neurons are called _____.

Nerve bundles

Dendrites

Axons

Synapses

6. The idea that learning occurs and is stored up, even when behaviors are not reinforced, is called _____.

Innate learning

Insight

Placebo learning

Latent learning

7. In operant conditioning, _____ is necessary to create the association between the stimulus and the voluntary response.

The law of negative effect

A long time delay

Conditional emotional linkages

Reinforcement

8. _____ is synonymous with short-term memory.

Sensory registers

Shadow memory

Working memory

Secondary memory

9. _____ of the following statements is true about retrieval.

It is a process of getting information from the sensory receptors to the brain

It is a process that allows an extinguished CR to recover.

It is the reason that conditioned taste aversions last so long.

It is a process of getting stored memories back out into consciousness.

10. Receptor cells in the retina responsible for color vision are _____.

Cones

Rods

Bipolar cells

Ganglion cells

1. The duration of iconic memory is _____ than echoic memory, but its capacity is probably _____.

Longer; larger

Shorter; about the same

Shorter; smaller

Longer; about the same

2. Which memory system provides us with a very brief representation of all the stimuli present at a particular moment?

Sensory memory

Short-term memory

Long-term memory

Primary memory

3. The ability to produce solutions to problems that are unusual, inventive, novel, and appropriate is called _____.

Insight
Creativity
Heuristics
Latent learning

4. _____ of the following perspectives would be associated with free will.

Behavioral
Psychodynamic
Biological
Humanistic

5. In the statement “Critical thinking requires reasoned judgments,” the word **reasoned means** _____.

Giving it a lot of thought
Seeing one side of an argument very clearly
Focusing on opinion
Logical and well thought out

6. The correct formula for determining IQ as used in Stanford - Binet test was _____.

MA/CA
 $MA/DA \times 100$
 $CA/MA \times 100$
 $MA/CA \times 100$

7. Critical thinking means making judgments based on _____.

Emotion
Authority and expertise
Keeping a closed mind
Reason and logical evaluation

8. The behavioral treatment approaches assume that abnormal behavior is _____.

Learned
A function of dysfunctional cognitions

A consequence of restricted growth potential
The result of a biological dysfunction

9. The therapy based upon _____ theory is too time consuming and therefore expensive.

Psychodynamic

Psycho social

Trait

None of the given options

10. What is one similarity shared by clinical psychologists and psychiatrists?

They diagnose and treat people experiencing behavioral and emotional problems.

They have the same training experiences after college

They view abnormal behaviors as arising from the same causes.

They obtain the same graduate degree

Total marks: 10

Solution Quiz no 1

1) Psychology is defined as the science of:

- Sensation and perception.
- Experience and mental illness.
- Culture and group dynamics.
- **Behavior and mental processes.**

2) Who is considered the "father of psychology" by his establishment of the first psychology lab?

- **Wilhelm Wundt**
- William James
- Sigmund Freud
- E. B. Titchener

3) Which of the following is considered the founder of the psychodynamic perspective in psychology?

- Wilhelm Wundt
- William James
- **Sigmund Freud**

- E. B. Titchener

4) The behaviorists believed:

- Psychology should emphasize the study of healthy people.
- **Psychology should only study observable and objectively described acts**
- Psychology should study the self examination of inner ideas and experiences.
- All of the above.

5) The psychological school of thought that stressed the whole or complete view of a situation was:

- Structuralism.
- Functionalism
- Behaviorism
- **Gestalt**

6) According to this Psychological school of thought, to understand human behavior and thought, one must understand the unconscious mind and the key events that happened early in life that influence the unconscious mind. What is this school of thought?

- **Psychoanalysis.**
- Functionalism
- Behaviorism
- Gestalt

7) Manifest content of a dream is:

- **The obvious and apparent part**
- Hidden content.
- Conscious part of dream.
- Overt part of dream.

8) Who established the first psychology lab in the United States?

- **G. Stanley Hall**
- William James
- Francis Cecil Sumner
- Mary Whiton Calkins

9) Edward Titchener used a method for studying the mind that became very popular during the Structuralist period. The method, called _____ required trained participants to report their conscious mental experiences to the

investigator. For example, if a person was angry, they would report all of their experiences during the time they were angry.

- Empiricism
- Functionalism
- Contemplation
- **Introspection.**

10) _____ is the school of thought in where psychology is defined as the study of the structure of the mind.

- Functionalism.
- Behaviorism.
- **Structuralism.**
- All of the above.

Introduction to Psychology PSY101

Total marks: 10 Quiz no. 02

(Part 1)

1. While maintenance rehearsal will help keep information in short-term memory for longer periods of time, it does not help transfer information into long-term memory. In order to get information into long-term memory we need to engage in:

- A. Elaborative rehearsal**
- B. Maintenance priming
- C. Chunking
- D. Episodic rehearsal

2. In sensory memory, visual stimuli are held for a very brief time as _____ memories, whereas auditory stimuli are held as _____ memories.

- A. Short-term; long-term
- B. Iconic; echoic**
- C. Echoic; iconic
- D. Long-term; short-term

3. Which of the following is NOT true of long-term memory?

- A. It has unlimited space
- B. It includes both semantic and episodic memory

- C. Sociobiological
- D. Optimum arousal

5. Which of the following is NOT a biological motive that operates within a homeostatic cycle (is not regulated by homeostasis)?

- A. Sex**
- B. Hunger
- C. Body temperature
- D. Thirst

(Part 2)

INSTRUCTIONS: Fill in the following blanks. Each carries 1 mark.

In learning theory, remember that positive means *adding* something and negative means *subtracting* something. Reinforcement will increase the likelihood of a response in the future; punishment will *decrease* the likelihood of a response in the future.

Identify each of the following examples as either:

Positive reinforcement

Negative reinforcement

Positive punishment

Negative punishment

1. **Positive reinforcement** Maliha's father gives her 10 Rs for making tea for him.
2. **Negative punishment** Maria was fighting with her sister. Her mother says she can't watch TV tonight.
3. **Positive punishment** Moona is 4 years old. Her mother spansks her for running out into the street.
4. **Negative reinforcement** your teacher says you don't have to take the final exam if you have a "B" average at the end of the semester.
5. **Positive reinforcement** you receive a 1000 Rs incentive bonus from your boss for completing a project early.

- **Introspection.**

10) _____ is the school of thought in where psychology is defined as the study of the structure of the mind.

- Functionalism.
- Behaviorism.
- **Structuralism.**
- All of the above.

Solution of Assignment No: 3

1) A correlation is a numerical measure of the_____.

- a) Unintended changes in participant's behavior due to cues from the experimenter.
- b) Behaviors of participants of different ages compared at a given time.
- c) Behaviors of participants followed and periodically assessed over time.
- d) **Strength of relationship between two variables.**

2) An adjustment in the lens shape in order to keep images in sharp focus is called:

- a) lens-image inversion
- b) top-down processing
- c) **Accommodation.**

- d) optical adaptation
- 3) A researcher stops people at the mall and asks them questions about their attitude toward gun control. Which research technique is being used?
- a) **Survey**
 - b) Experiment
 - c) Naturalistic observation
 - d) Case study
- 4) As Saadia is walking across the campus, a car swerves toward her. Her heart beat races and sweat breaks out as she jumps out of harm's way. This mobilization of energy is due to the action of Saadia's _____ system:
- a) **Sympathetic**
 - b) Para sympathetic
 - c) Somatic nervous
 - d) Skeleton nervous
- 5) What two categories of dream content did Sigmund Freud described?
- a) **Latent and manifest**
 - b) Poetic and realistic
 - c) Delusional and hallucinatory
 - d) Literal and symbolic
- 6) In survey research method:
- a) Existing data are examined
 - b) A control group is necessary
 - c) New data is generated
 - d) **A sample of people are asked questions**
- 7) A psychologist with a _____ perspective focuses on how people know, understand, and think about the world:
- a) Psychodynamic
 - b) Behavioral
 - c) Humanistic
 - d) **Cognitive**
- 8) The change that an experimenter deliberately produces in a situation is called:
- a) **The experimental manipulation**
 - b) Randomization
 - c) Replication
 - d) The control group

9) The proper sequence of structures that sound passes when it enters the ear is the following:

- a) Oval window, eardrum, stirrup, cochlea
- b) Cochlea, stirrup, eardrum, oval window
- c) Stirrup, eardrum, oval window, cochlea
- d) **Eardrum, stirrup, oval window, cochlea**

10) The endocrine system is a _____ communication network that sends messages throughout the nervous system via the bloodstream:

- a) Photo
- b) Neural
- c) Electrical
- d) **Chemical**

Quiz – 04 (Solution)

1) The function of memory responsible for the initial recording of information is _____.

- i) **Encoding**
- ii) Storage
- iii) Retrieval
- iv) None of the above

2) Information gathered by our visual sense is reflected by the _____.

- i) Echoic Memory
- ii) **Iconic Memory**
- iii) Long Term Memory
- iv) None of the above

3) _____ is a technique used to transfer short-term memory information into long-term memory.

- i) Chunking
- ii) Echoic Memory
- iii) Retrieval
- iv) **None of the above**

4) According to _____ information is remembered in terms of schemas.

- i) Maslow

- ii) John Jenkins
- iii) Bartlett
- iv) None of the above

5) MCI stands for _____.

- i) Memory Critical Impairment
- ii) Memory Coding Impairment
- iii) Memory Cognitive Impairment
- iv) None of the above

6) A process which is responsible for a stable and well-maintained state of internal biological balance is called _____.

- i) Motivation
- ii) Adaptation
- iii) Metabolism
- iv) None of the above

7) A motivation from within that energizes the person to satisfy or accomplish a goal in which no external tangible reward is involved is called _____.

- i) Intrinsic Motivation
- ii) Curiosity
- iii) Extrinsic Motivation
- iv) None of the above

8) _____ divided the emotions in three types as primary, secondary and derived.

- i) Maslow
- ii) Freud
- iii) Mc Dougall
- iv) None of the above

9) _____ has a dual function. Its functions are both arousing and alarming.

- i) S.N.S
- ii) P.N.S
- iii) A.N.S
- iv) None of the above

10) J.B. Watson talked about three main emotions anger, love and _____.

- i) Disgust
- ii) Fear
- iii) Sadness
- iv) None of the above

Quiz- 4

1) _____ Is a defense mechanism which refuses to acknowledge or accept anxiety provoking thoughts or impulses.

- v) Displacement
- vi) Denial
- vii) Projection
- viii) None of the above

2) Structures of consciousness, according to psychodynamic approach, are conscious, subconscious, _____ and unconscious.

- v) Super conscious
- vi) Hyperconscious
- vii) Non conscious
- viii) None of the above

3) The therapy based upon _____ theory is too time consuming and therefore expensive.

- v) Psychodynamic
- vi) Psycho social
- vii) Trait
- viii) None of the above

4) _____ described personality in terms of two major dimensions.

- v) Cattell
- vi) Eysenik
- vii) Adler
- viii) None of the above

5) TAT is a _____.

- v) Self Report Inventory
- vi) Projection Test
- vii) Perception Test
- viii) None of the above

6) _____ was the first to use the term “Mental Test” for devices used to measure intelligence.

- v) Galton
- vi) Cattell
- vii) Thorndike
- viii) None of the above

7) Multiple Intelligence theory maintains that human possesses around _____ kinds of intelligence.

- v) Two
- vi) Seven
- vii) Eight
- viii) None of the above

8) Binet and Simon were _____ scientists. They were the first to measure intelligence formally.

- v) German
- vi) American
- vii) French
- viii) None of the above

9) Cole and Hass gave the idea of _____.

- v) Social Intelligence
- vi) Moral Intelligence
- vii) Emotional Intelligence
- viii) None of the above

10) Available statistics show that majority of the people have an I.Q level between _____.

- v) 75 - 115
- vi) 80 - 115
- vii) 85 - 115
- viii) None of the above

1. According to Hippocrates, Choleric humor is associated with the temperament of _____.
 - Cheerful and active
 - Sad
 - Angry and aggressive
 - Calm and passive
2. The ability to feel what the client feels is called _____.
 - Respect
 - Sympathy
 - Empathy
 - Congruence
3. _____ is founder of Rational Emotive Behavior Therapy.
 - Aron Beck
 - Albert Ellis
 - Carl Jung
 - Carl Rogers
4. _____ is a neurotransmitter that plays important role in anxiety, arousal and learning.
 - GABA
 - Serotonin
 - Epinephrine
 - Glutamate
5. _____ focuses on the unconscious forces that drive or motivate human behavior.
 - Psychodynamic model
 - Functionalism
 - Structuralism
 - Gestalt psychology
6. The process of constructing comparable, exposure and comparison groups is called _____.
 - Time series design
 - Prospective design

- Retrospective design
- Matching

7. _____ gave the concept that human capacity for learning the language is innate.

- Jean Piaget
- Noam chomsky
- Stanley schacter
- Tolman

8. If reinforcement is withheld, response rate decreases and finally no response is shown this is called _____.

- Negative rein forcer
- Extinction
- Punishment
- Positive rein forcer

9. The observer becomes a part of the situation and plays an active and significant role in situation, event, or context under study. This is called _____.

- Participant observation
- Structured observation
- Naturalistic observation
- Field experiments

10. _____, a French surgeon and anthropologist, discovered speech centre in brain.

- Paul Broca
- Philippe Pinel
- Galen
- Cabanis

1. _____ is the process of perceiving information and bringing it into the memory system

1. Storage
2. Retrieval
3. Recording
4. Encoding

2. According to Woodworth Memory =L -I -R, R stands for

_____.

1. recording
2. remembering
3. resonance
4. recall

3. _____ derives from the Latin word “Emovere” means to excite, stir up.

1. Motion
2. Emotion
3. Motivation
4. Cognition

4. _____ was the first person who identify pupillometrics phenomenon.

1. William James
2. Wilhelm Wundt
3. Lazarus
4. Darwin

5. According to _____ every emotional arousal has an opposite, i.e. When one type of emotion is elicited, and then there must be an opposite that is there to suppress or cancel it.

1. Opponent process theory
2. Activation theory
3. Cognitive theory
4. None of the above option

6. The branch of psychology that studies cognition, and related areas issues are called _____.

1. Forensic psychology
2. Cognitive psychology
3. Counseling psychology
4. Clinical psychology

7. _____ is the universal forms and patterns of thought. These include themes that can be seen in myths e.g. masculinity, femininity, good and evil opposites.

1. Ego
2. Superego
3. Unconscious
4. Archetypes

8. MMPI stands for _____.

1. Minnesota Multiphasic Personal Inventory
2. Minnesota Multiphasic Personality Inventory
3. Minnesota Multiphasic Psychology Inventory
4. None of the above options

9.s _____ are the people who are quiet, passive and careful people.

1. Extroverts
2. Introverts
3. Neurotics
4. Stable

10. _____ is a Greek word which means forgetfulness.

- Amnesia
- Dementia
- Alzheimer's disease
- None of the above option.

Q 1: Fill in the blanks.

1. Impression formation is the process by which an individual organizes information about another individual to form an overall impression of that person.
2. Learning the experiences through modeling and imitation is known as "Observational learning".

3. Bipolar disorder is a combination of depression and Mania.
4. Major depression is previously known as “melancholia”.
5. Claustrophobia is known as fear of closed spaces.

Q 2: Choose the one best option.

6. American Psychological Association has _____ divisions.

1. 55
2. 65
3. 54
4. 45

7. _____ version of DSM was published in 2000.

1. DSM III
2. DSM IV
3. DSM IV TR
4. DSM II

8. _____ contributions began with the revolutionary changes at the La Bicetre hospital in Paris.

1. Philippe Pinel
2. Galen
3. Plato
4. Mesmer

9. Hierarchical theory of intelligence is consists of _____ levels.

1. 3
2. 4
3. 5
4. 6

10. According to Sternberg theory, intelligence has three components which component is not a part of this theory.

1. Analytic intelligence
2. Crystalline intelligence
3. Practical intelligence
4. Creative intelligence

SPRING 2008

Solution

Quiz No. 1 Total Marks: 10

Q1. Read carefully each statement and fill in appropriate answer. Every right statement contains “1” mark. Multiple answers will result in “0” mark.

1. Dr. Usman studies the diagnosis, causes, treatments, and prevention of mental illnesses.

Which type of psychologist is Dr. Usman?

- a) **Clinical psychologist**
- b) Developmental psychologist
- c) Forensic psychologist
- d) Health psychologist

2. Which one of the following models believes that behavior is motivated by inner forces over which individuals have little control?

- a) Cognitive model
- b) **Psychodynamic model**
- c) Humanistic model
- d) Behavioral model

3. Which one of the following schools of thought focused on what the mind does and how it does?

- a) Structuralism
- b) **Functionalism**
- c) Gestalt
- d) Behaviorist

4. Which one of the following drugs is a stimulant?

- a) **Nicotine**
- b) Lorazepam
- c) Barbiturates
- d) LSD

5. Tahir often experiences intense feelings of anger and frustration. In order to cope with these feeling, he enrolls in a kickboxing class as an outlet for his emotions. Tahir's actions are an example of which type of defense mechanism?

- a) Projection
- b) Displacement
- c) Repression
- d) **Sublimation**

6. Which type of learning process did Burrhus Frederic Skinner describe?

- a) Classical Conditioning
- b) Modeling
- c) Observational Learning
- d) **Operant Conditioning**

7. _____ refers to genetic composition of a person.

- a) **Genotype**

- b) Phenotype
- c) Monotype
- d) None of the given options

8. In a correlational study, when one variable goes up as another goes down is known as a _____.

- a) Positive Correlation
- b) No Correlation
- c) Negative Correlation
- d) Illusory Correlation

9. A researcher accessed information on the Internet from a series of surveys of women that was conducted during the 1970s and 1980s. The data were analyzed to examine changes in attitudes and behaviors over time. Which of the following method was used?

- a) Participant observation
- b) Case study
- c) Archival data
- d) Field experiments

10 A researcher wants to study the effects of violence displayed in movies on children behavior. In this research violence displayed in movies is the _____ variable as it is manipulated by the experimenter.

- a) Independent
- b) Dependent
- c) Confounding
- d) All of the given options

1. The brain and the spinal cord comprise which of the following nervous systems?

- a) Central nervous system
- b) Peripheral nervous system
- c) Autonomic nervous system
- d) Sympathetic nervous system

2. The lobe of the cerebral cortex responsible for motor control and higher mental processes is known as the _____.

- a) Occipital lobe
- b) Temporal lobe
- c) Parietal lobe
- d) Frontal lobe

3. The band of muscles behind the cornea that gives the eye its color and controls the size of the pupil is known as the _____.

- a) Sclera
- b) Iris
- c) Pupil
- d) Cornea

4. The _____ theory suggests color vision depends on red-green, blue-yellow, and black-white processes in the brain. It suggests that the receptor cells are linked in pairs and they work in opposition to each other.

- a) Figure-ground
- b) Trichromatic
- c) Photopigment
- d) Opponent-process**

5. Which of the following glands abnormal secretion result in a condition called “cretinism”?

- a) Parathyroid gland
- b) Thyroid gland**
- c) Pancreas
- d) Gonads

6. What is conduction deafness?

- a) Hearing loss due to failure of the auditory nerve
- b) Hearing loss due to problems with the bones of the middle ear**
- c) Hearing loss due to failure of the visual nerve
- d) Hearing loss due to problems with the bones of the outer ear

7. Who will be interested to study how cognitions are acquired and used in various groups and institutional settings?

- a) Anthropologists
- b) Computer scientist
- c) Sociologists**
- d) Geeks

8. _____ refers to the degree of stability or change across the life span.

- a) Temporal aspects**
- b) Situational aspects
- c) Environmental aspects
- d) Spatial aspects

9. Who developed REBT (Rational Emotive Behavior Therapy)?

- a) George Kelly
- b) John Dollard
- c) Albert Ellis**
- d) Neal Miller

10. In which of the following stage, OEDIPUS COMPLEX is observed?

- a) Oral stage
- b) Anal stage
- c) Phallic stage**
- d) Genital stage

(Spring 2008)

Solution Quiz 03

1. A child who gives many answers in response to a question resorts to the process of _____.

- a. Convergent thinking
- b. Latent thinking
- c. Divergent thinking**
- d. Critical thinking

2. Identify the correct order in the multi-store model of human memory?

- a. L TM, Sensory register, STM, rehearsal buffer
- b. Sensory register, STM, rehearsal buffer, L TM**
- c. Rehearsal buffer, Sensory register, STM, L TM
- d. STM, Sensory register, rehearsal buffer, L TM

3. A type of thinking which is aimed at solving problems or creating something new is called:

- a. Creative thinking**
- b. Autistic thinking
- c. Directed thinking
- d. Symbolic thinking

4. Which one of the following best supports the heuristic approach of problem solving?

- a. Trying different responses until one works
- b. Following a rule that guarantees a solution to a specific type of problem
- c. Applying solutions that were previously successful with other problems similar in underlying structure
- d. Employing rules of thumb suggested by our experience that are often used to solve problems**

5. Which one of the following is not a secondary/learned motive?

- a. Achievement
- b. Power
- c. Hunger**
- d. Curiosity

6. _____ are enduring dimensions of personality characteristics that differentiate a person from others.

- a. Behaviour
- b. Personality
- c. Traits**
- d. All of the given options

7. In _____ defense mechanism, a person reverts back to a stage that was satisfying.

- a. Sublimation
- b. Repression
- c. Denial
- d. Regression

8. Hunger, thirst and sleep are the_____.

- a. Learnt motives
- b. Primary motives
- c. Social motives
- d. None of the given options

9. According to _____ theory, physiological changes create specific sensations, and our brain interprets these sensations as different emotions.

- a. James- Lange Theory of Emotions
- b. Cannon- Bard Theory of Emotions
- c. Opponent- Process Theory
- d. Activation Theory

10 _____is the process whereby logical conclusions, inferences, and implications are drawn by using a set of assumptions.

- a. Statistical analysis
- b. Deductive reasoning
- c. Inductive reasoning
- d. None of the given options

(Spring 2008) Solution Quiz 04

1. Galton considered intelligence to be _____.

- a. Not heritable
- b. Similar between most people
- c. A property of our nervous system or hereditary
- d. The product of social differences

2. If a man experiences chest pains while at a department store, and later experiences anxiety attacks when visiting department stores, this can be explained by what type of learning?

- a. Operant
- b. Classical conditioning
- c. Observational
- d. Vicarious

3. Who proposed that a power similar to magnetism existed in humans?

- a. Franz Friedrich Anton Mesmer
- b. Philippe pinel
- c. Galen
- d. Plato

4. Social phobia is characterized by ____.

- a. A fear of people
- b. A fear of rejection
- c. A fear of social situations
- d. A fear of social isolation

5. Who was the founder of REBT?

- a. Allbert Ellis
- b. Aron beck
- c. Albert Einstein
- d. Aron Feldr

6. Which one is NOT a type of schizophrenia?

- a. Disorganized type
- b. Catatonic type
- c. Paranoid type
- d. Differentiated type

7. Which model of psychotherapy consists of Systematic de-sensitization and contingency management?

- a. Biological
- b. Family and couples.
- c. Behavioral
- d. Cognitive

8. Name the concept when there is a feeling of integration between the self and ideal self.

- a. Empathy
- b. Respect
- c. Congruence
- d. Genuineness

9. When our initial perception about a person is positive then we tend to expect that same person has other positive characteristics too is known as ____.

- a. Hallo effect
- b. Social influence
- c. Hello effect
- d. Positive effect

10. In terms of its causes and the factors affecting its course, bipolar disorder is most similar to which of these disorders?

- a. Panic disorder.
- b. Schizophrenia.
- c. Substance use disorders.
- d. Unipolar depression.

1. The brain and the spinal cord comprise which of the following nervous systems?

a) Central nervous system

- b) Peripheral nervous system
- c) Autonomic nervous system
- d) Sympathetic nervous system

2. The lobe of the cerebral cortex responsible for motor control and higher mental processes is known as the _____.

- a) Occipital lobe
- b) Temporal lobe
- c) Parietal lobe

d) Frontal lobe

3. The band of muscles behind the cornea that gives the eye its color and controls the size of the pupil is known as the _____.

- a) Sclera

b) Iris

- c) Pupil
- d) Cornea

4. The _____ theory suggests color vision depends on red-green, blue-yellow, and black-white processes in the brain. It suggests that the receptor cells are linked in pairs and they work in opposition to each other.

- a) Figure-ground
- b) Trichromatic
- c) Photopigment

d) Opponent-process

5. Which of the following glands abnormal secretion result in a condition called "cretinism"?

- a) Parathyroid gland

b) Thyroid gland

- c) Pancreas
- d) Gonads

6. What is conduction deafness?

- a) Hearing loss due to failure of the auditory nerve

b) Hearing loss due to problems with the bones of the middle ear

- c) Hearing loss due to failure of the visual nerve
- d) Hearing loss due to problems with the bones of the outer ear

7. Who will be interested to study how cognitions are acquired and used in various groups and institutional settings?

- a) Anthropologists
- b) Computer scientist

c) Sociologists

- d) Geeks

8. _____ refers to the degree of stability or change across the life span.

a) Temporal aspects

- b) Situational aspects
- c) Environmental aspects
- d) Spatial aspects

9. Who developed REBT (Rational Emotive Behavior Therapy)?

- a) George Kelly
- b) John Dollard
- c) Albert Ellis**
- d) Neal Miller

10. In which of the following stage, OEDIPUS COMPLEX is observed?

- a) Oral stage
- b) Anal stage
- c) Phallic stage**
- d) Genital stage

1. **Positive reinforcement** Ali's father gives him 5 Rs for washing the car.
2. **Negative punishment** Maria was fighting with her sister. Her mother says she can't watch TV tonight.
3. **Positive punishment** Kiran is 4 years old. Her mother spansks her for running out into the street.
4. **Negative reinforcement** your teacher says you don't have to take the final exam if you have a "B" average at the end of the semester.
5. **Positive reinforcement** You receive a 1000 Rs incentive bonus from your boss for completing a project early.
6. **Positive punishment** You are assigned 10 hours of trash pick up after being caught smoking in the campus library restroom.
7. **Negative punishment** Alena's parents don't allow her to use the family car for 2 weeks after she received a "D" in her high school chemistry class.
8. **Negative reinforcement** you always put on your seat belt so that the annoying buzzer will stop.
9. **Positive reinforcement** Teacher gives a candy to students when they show good behavior.
10. **Positive punishment** Ahmar beats his younger sister when she refuses to give him Chocolates.

1. A child who gives many answers in response to a question resorts to the process of _____.

- a. Convergent thinking
- b. Latent thinking
- c. Divergent thinking**
- d. Critical thinking

2. Identify the correct order in the multi-store model of human memory?

- a. L TM, Sensory register, STM, rehearsal buffer

b. Sensory register, STM, rehearsal buffer, L TM

- c. Rehearsal buffer, Sensory register, STM, L TM
- d. STM, Sensory register, rehearsal buffer, L TM

3. A type of thinking which is aimed at solving problems or creating something new is called:

a. Creative thinking

- b. Autistic thinking
- c. Directed thinking
- d. Symbolic thinking

4. Which one of the following best supports the heuristic approach of problem solving?

- a. Trying different responses until one works
- b. Following a rule that guarantees a solution to a specific type of problem
- c. Applying solutions that were previously successful with other problems similar in underlying structure

d. Employing rules of thumb suggested by our experience that are often used to solve problems

5. Which one of the following is not a secondary/learned motive?

- a. Achievement
- b. Power

c. Hunger

- d. Curiosity

6. _____ are enduring dimensions of personality characteristics that differentiate a person from others.

- a. Behaviour
- b. Personality

c. Traits

- d. All of the given options

7. In _____ defense mechanism, a person reverts back to a stage that was satisfying.

- a. Sublimation
- b. Repression
- c. Denial

d. Regression

8. Hunger, thirst and sleep are the _____.

- a. Learned motives

b. Primary motives

- c. Social motives
- d. None of the given options

9. According to _____ theory, physiological changes create specific sensations, and our brain interprets these sensations as different emotions.

a. James- Lange Theory of Emotions

- b. Cannon- Bard Theory of Emotions
- c. Opponent- Process Theory
- d. Activation Theory

10 _____ is the process whereby logical conclusions, inferences, and implications are drawn by using a set of assumptions.

- a. Statistical analysis
- b. Deductive reasoning**
- c. Inductive reasoning
- d. None of the given options

1)A correlation is a numerical measure of the_____.

- a) Unintended changes in participant's behavior due to cues from the experimenter.
- b) Behaviors of participants of different ages compared at a given time.
- c) Behaviors of participants followed and periodically assessed over time.
- d) Strength of relationship between two variables.**

2)An adjustment in the lens shape in order to keep images in sharp focus is called:

- a) lens-image inversion
- b) top-down processing
- c) Accommodation.**
- d) optical adaptation

3)A researcher stops people at the mall and asks them questions about their attitude toward gun control. Which research technique is being used?

- a) Survey**
- b) Experiment
- c) Naturalistic observation
- d) Case study

4)As Saadia is walking across the campus, a car swerves toward her. Her heart beat races and sweat breaks out as she jumps out of harm's way. This mobilization of energy is due to the action of Saadia's _____ system:

- a) Sympathetic**
- b) Para sympathetic
- c) Somatic nervous
- d) Skeleton nervous

5)What two categories of dream content did Sigmund Freud describe?

a) Latent and manifest

- b) Poetic and realistic
- c) Delusional and hallucinatory
- d) Literal and symbolic

6) In survey research method:

- a) Existing data are examined
- b) A control group is necessary
- c) New data is generated

d) A sample of people are asked questions

7) A psychologist with a _____ perspective focuses on how people know, understand, and think about the world:

- a) Psychodynamic
- b) Behavioral
- c) Humanistic

d) Cognitive

8) The change that an experimenter deliberately produces in a situation is called:

a) The experimental manipulation

- b) Randomization
- c) Replication
- d) The control group

9) The proper sequence of structures that sound passes when it enters the ear is the following:

- a) Oval window, eardrum, stirrup, cochlea
 - b) Cochlea, stirrup, eardrum, oval window
 - c) Stirrup, eardrum, oval window, cochlea
- d) Eardrum, stirrup, oval window, cochlea**

10) The endocrine system is a _____ communication network that sends messages throughout the nervous system via the bloodstream:

- a) Photo
- b) Neural
- c) Electrical

d) Chemical

1. The duration of iconic memory is _____ than echoic memory, but its capacity is probably _____.

Longer; larger

Shorter; about the same

Shorter; smaller

Longer; about the same

2. Which memory system provides us with a very brief representation of all the stimuli present at a particular moment?

Sensory memory

Short-term memory

Long-term memory

Primary memory

3. The ability to produce solutions to problems that are unusual, inventive, novel, and appropriate is called _____.

Insight

Creativity

Heuristics

Latent learning

4. _____ of the following perspectives would be associated with free will.

Behavioral

Psychodynamic

Biological

Humanistic

5. In the statement "Critical thinking requires reasoned judgments," the word reasoned means _____.

Giving it a lot of thought

Seeing one side of an argument very clearly

Focusing on opinion

Logical and well thought out

6. The correct formula for determining IQ as used in Stanford - Binet test was _____.

- MA/CA
- MA/DA $\times 100$
- CA/MA $\times 100$
- MA/CA $\times 100$**

7. Critical thinking means making judgments based on _____.

- Emotion
- Authority and expertise
- Keeping a closed mind
- Reason and logical evaluation**

8. The behavioral treatment approaches assume that abnormal behavior is _____.

Learned

- A function of dysfunctional cognitions
- A consequence of restricted growth potential
- The result of a biological dysfunction

9. The therapy based upon _____ theory is too time consuming and therefore expensive.

Psychodynamic

- Psycho social
- Trait
- None of the given options

10. What is one similarity shared by clinical psychologists and psychiatrists?

They diagnose and treat people experiencing behavioral and emotional problems.

- They have the same training experiences after college
- They view abnormal behaviors as arising from the same causes.
- They obtain the same graduate degree

Fill in the blanks.

1. **Impression formation** is the process by which an individual organizes information about another individual to form an overall impression of that person.

2. Learning the experiences through modeling and imitation is known as "**Observational learning**".

3. Bipolar disorder is a combination of depression and **Mania**.

4. Major depression is previously known as "**melancholia**".

5. Claustrophobia is known as fear of **closed spaces**.

Q 2: Choose the one best option.

6. American Psychological Association has _____ divisions.

1. **55**

2. 65

3. 54

4. 45

7. _____ version of DSM was published in 2000 .

1. DSM III

2. DSM IV

3. **DSM IV TR**

4. DSM II

8. _____ contributions began with the revolutionary changes at the La Bicetre hospital in Paris.

1. **Philippe Pinel**

2. Galen

3. Plato

4. Mesmer

9. Hierarchical theory of intelligence is consists of _____ levels.

1. **3**

2. 4

3. 5

4. 6

10. According to Sternberg theory, intelligence has three components which component is not a part of this theory.

1. Analytic intelligence

2. **Crystalline intelligence**

3. Practical intelligence

4. Creative intelligence

1. Galton considered intelligence to be _____.

a. Not heritable

b. Similar between most people

c. A property of our nervous system or hereditary

d. The product of social differences

2. If a man experiences chest pains while at a department store, and later experiences anxiety attacks when visiting department stores, this can be explained by what type of learning?

a. Operant

b. Classical conditioning

c. Observational

d. Vicarious

3. Who proposed that a power similar to magnetism existed in humans?

a. Franz Friedrich Anton Mesmer

b. Philippe pinel

c. Galen

d. Plato

4. Social phobia is characterized by ____.

a. A fear of people

b. A fear of rejection

c. A fear of social situations

d. A fear of social isolation

5. Who was the founder of REBT?

a. Allbert Ellis

b. Aron beck

c. Albert Einstein

d. Aron Feldr

6. Which one is NOT a type of schizophrenia?

a. Disorganized type

b. Catatonic type

c. Paranoid type

d. Differentiated type

7. Which model of psychotherapy consists of Systematic de-sensitization and contingency management?

a. Biological

b. Family and couples.

c. Behavioral

d. Cognitive

8. Name the concept when there is a feeling of integration between the self and ideal self.

a. Empathy

b. Respect

c. Congruence

d. Genuineness

9. When our initial perception about a person is positive then we tend to expect that same person has other positive characteristics too is known as ____.

a. Halo effect

- b. Social influence
- c. Hello effect
- d. Positive effect

10. In terms of its causes and the factors affecting its course, bipolar disorder is most similar to which of these disorders?

- a. Panic disorder.
- b. Schizophrenia.
- c. Substance use disorders.

d. Unipolar depression.

1) _____ is a defense mechanism which refuses to acknowledge or accept anxiety provoking thoughts or impulses.

- i) Displacement
- ii) Denial**
- iii) Projection
- iv) None of the above

2) Structures of consciousness, according to psychodynamic approach, are conscious, subconscious, _____ and unconscious.

- i) Super conscious
- ii) Hyperconscious
- iii) Non conscious
- iv) None of the above**

3) The therapy based upon _____ theory is too time consuming and therefore expensive.

- i. **Psychodynamic**
- ii. Psycho social
- iii. Trait
- iv. None of the above

4) _____ described personality in terms of two major dimensions.

- i. Cattell
- ii. **Eysenik**
- iii. Adler
- iv. None of the above

5) TAT is a _____.

- i) Self Report Inventory

ii) Projection Test

iii) Perception Test

iv) None of the above

6) _____ was the first to use the term “Mental Test” for devices used to measure intelligence.

i) Galton

ii) Cattell

iii) Thorndike

iv) None of the above

7) Multiple Intelligence theory maintains that human possesses around _____ kinds of intelligence.

i) Two

ii) Seven

iii) Eight

iv) None of the above

8) Binet and Simon were _____ scientists. They were the first to measure intelligence formally.

i) German

ii) American

iii) French

iv) None of the above

9) Cole and Hass gave the idea of _____.

i) Social Intelligence

ii) Moral Intelligence

iii) Emotional Intelligence

iv) None of the above

10) Available statistics show that majority of the people have an I.Q level between _____.

i) 75 - 115

ii) 80 - 115

iii) 85 - 115

iv) None of the above

1) The function of memory responsible for the initial recording of information is _____.

v) **Encoding**

vi) Storage

vii) Retrieval

viii) None of the above

2) Information gathered by our visual sense is reflected by the _____.

i. Echoic Memory

ii. **Iconic Memory**

iii. Long Term Memory

iv. None of the above

3) _____ is a technique used to transfer short-term memory information into long-term memory.

i) Chunking

ii) Echoic Memory

iii) Retrieval

iv) **None of the above**

4) According to _____ information is remembered in terms of schemas.

v. Maslow

vi. John Jenkins

vii. **Bartlett**

viii. None of the above

5) MCI stands for _____.

v) Memory Critical Impairment

vi) Memory Coding Impairment

vii) **Memory Cognitive Impairment**

viii) None of the above

6) A process which is responsible for a stable and well-maintained state of internal biological balance is called _____.

v) Motivation

vi) Adaptation

vii) Metabolism

viii) None of the above

7) A motivation from within that energizes the person to satisfy or accomplish a goal in which no external tangible reward is involved is called _____.

v) Intrinsic Motivation

- vi) Curiosity
- vii) Extrinsic Motivation
- viii) None of the above

8) _____ divided the emotions in three types as primary, secondary and derived.

- v) Maslow
- vi) Freud

vii) Mc Dougall

- viii) None of the above

9) _____ has a dual function. Its functions are both arousing and alarming.

- v) S.N.S
- vi) P.N.S

vii) A.N.S

- viii) None of the above

10) J.B. Watson talked about three main emotions anger, love and _____.

- v) Disgust

vi) Fear

- vii) Sadness
- viii) None of the above

1. Galton considered intelligence to be _____.

- a. Not heritable

b. Similar between most people

- c. A property of our nervous system or hereditary
- d. The product of social differences

2. If a man experiences chest pains while at a department store, and later experiences anxiety attacks when visiting department stores, this can be explained by what type of learning?

- a. Operant

b. Classical conditioning

- c. Observational
- d. Vicarious

3. Who proposed that a power similar to magnetism existed in humans?

a. Franz Friedrich Anton Mesmer

- b. Philippe pinel
- c. Galen
- d. Plato

4. Social phobia is characterized by ____.

a. A fear of people

- b. A fear of rejection
- c. A fear of social situations
- d. A fear of social isolation

5. Who was the founder of REBT?

a. Allbert Ellis

- b. Aron beck
- c. Albert Einstein
- d. Aron Feldr

6. Which one is NOT a type of schizophrenia?

a. Disorganized type

- b. Catatonic type
- c. Paranoid type
- d. Differentiated type

7. Which model of psychotherapy consists of Systematic de-sensitization and contingency management?

- a. Biological
- b. Family and couples.

c. Behavioral

- d. Cognitive

8. Name the concept when there is a feeling of integration between the self and ideal self.

- a. Empathy
- b. Respect

c. Congruence

- d. Genuineness

9. When our initial perception about a person is positive then we tend to expect that same person has other positive characteristics too is known as ____.

a. Halo effect

- b. Social influence
- c. Hello effect
- d. Positive effect

10. In terms of its causes and the factors affecting its course, bipolar disorder is most similar to which of these disorders?

- a. Panic disorder.
- b. Schizophrenia.
- c. Substance use disorders.

d. Unipolar depression.

1. According to Hippocrates, Choleric humor is associated with the temperament of ____.

- Cheerful and active
- Sad
- **Angry and aggressive**
- Calm and passive

2. The ability to feel what the client feels is called _____.

- Respect
- Sympathy
- **Empathy**
- Congruence

3. _____ is founder of Rational Emotive Behavior Therapy.

- Aron Beck
- **Albert Ellis**
- Carl Jung
- Carl Rogers

4. _____ is a neurotransmitter that plays important role in anxiety, arousal and learning.

- **GABA**
- Serotonin
- Epinephrine
- Glutamate

5. _____ focuses on the unconscious forces that drive or motivate human behavior.

- **Psychodynamic model**
- Functionalism
- Structuralism
- Gestalt psychology

6. The process of constructing comparable, exposure and comparison groups is called _____.

- Time series design
- Prospective design
- Retrospective design

· **Matching**

7. _____ gave the concept that human capacity for learning the language is innate.

- Jean Piaget
- **Noam chomsky**
- Stanley schacter
- Tolman

8. If reinforcement is withheld, response rate decreases and finally no response is shown this is called _____.

- Negative rein forcer
- **Extinction**
- Punishment
- Positive rein forcer

9. The observer becomes a part of the situation and plays an active and significant role in situation, event, or context under study. This is called _____.

- **Participant observation**
- Structured observation
- Naturalistic observation
- Field experiments

10. _____, a French surgeon and anthropologist, discovered speech centre in brain.

- **Paul Broca**
- Philippe Pinel
- Galen
- Cabanis

1) Psychology is defined as the science of:

- § Sensation and perception.
- § Experience and mental illness.
- § Culture and group dynamics.

· **Behavior and mental processes.**

2) Who is considered the "father of psychology" by his establishment of the first psychology lab?

- **Wilhelm Wundt**
- § William James
- § Sigmund Freud
- § E. B. Tichener

3) Which of the following is considered the founder of the psychodynamic perspective in psychology?

- § Wilhelm Wundt
- § William James
- **Sigmund Freud**
- § E. B. Titchener

4) The behaviorists believed:

- § Psychology should emphasize the study of healthy people.
- § **Psychology should only study observable and objectively described acts**
- § Psychology should study the self examination of inner ideas and experiences.
- § All of the above.

5) The psychological school of thought that stressed the whole or complete view of a situation was:

- § Structuralism.
- § Functionalism
- § Behaviorism
- **Gestalt**

6) According to this Psychological school of thought, to understand human behavior and thought, one must understand the unconscious mind and the key events that happened early in life that influence the unconscious mind. What is this school of thought?

- **Psychoanalysis.**
- § Functionalism
- § Behaviorism
- § Gestalt

7) Manifest content of a dream is:

- **The obvious and apparent part**
- § Hidden content.
- § Conscious part of dream.
- § Overt part of dream.

8) Who established the first psychology lab in the United States?

· **G. Stanley Hall**

- § William James
- § Francis Cecil Sumner
- § Mary Whiton Calkins

9) Edward Titchener used a method for studying the mind that became very popular during the Structuralist period. The method, called ____ required trained participants to report their conscious mental experiences to the investigator. For example, if a person was angry, they would report all of their experiences during the time they were angry.

- § Empiricism
- § Functionalism
- § Contemplation

· **Introspection.**

10) _____ is the school of thought in where psychology is defined as the study of the structure of the mind.

- § Functionalism.
 - § Behaviorism.
- **Structuralism.**
- § All of the above.

1. Dr. Usman studies the diagnosis, causes, treatments , and prevention of mental illnesses. Which type of psychologist is Dr. Usman?

· **a) Clinical psychologist**

- b) Developmental psychologist
- c) Forensic psychologist
- d) Health psychologist

2. Which one of the following models believes that behavior is motivated by inner forces over which individuals have little control?

a) Cognitive model

· **b) Psychodynamic model**

- c) Humanistic model
- d) Behavioral model

3. Which one of the following schools of thought focused on what the mind does and how it does?

a) Structuralism

· **b) Functionalism**

- c) Gestalt
- d) Behaviorist

4. Which one of the following drugs is a stimulant?

· **a) Nicotine**

- b) Lorazepam
- c) Barbiturates
- d) LSD

5. Tahir often experiences intense feelings of anger and frustration. In order to cope with these feeling, he enrolls in a kickboxing class as an outlet for his emotions. Tahir's actions are an example of which type of defense mechanism?

- a) Projection
- b) Displacement
- c) Repression

· **d) Sublimation**

6. Which type of learning process did Burrhus Frederic Skinner describe?

- a) Classical Conditioning
- b) Modeling
- c) Observational Learning

· **d) Operant Conditioning**

7. _____ refers to genetic composition of a person.

· **a) Genotype**

- b) Phenotype
- c) Monotype
- d) None of the given options

8. In a correlational study, when one variable goes up as another goes down is known as a _____.

- a) Positive Correlation
- b) No Correlation

· **c) Negative Correlation**

- d) Illusory Correlation

9. A researcher accessed information on the Internet from a series of surveys of women that was conducted during the 1970s and 1980s. The data were analyzed to examine changes in attitudes and behaviors over time. Which of the following method was used?

- a) Participant observation
- b) Case study

· **c) Archival data**

- d) Field experiments

10 A researcher wants to study the effects of violence displayed in movies on children behavior. In this research violence displayed in movies is the _____ variable as it is manipulated by the experimenter.

· **a) Independent**

- b) Dependent
- c) Confounding
- d) All of the given options

1. John B. Watson believed that psychology should involve the study of _____.

- a. Consciousness
- b. The brain
- c. The mind

· **Behavior**

2. A(n) _____ is a measure of how strongly two variables are related to one another.

- a. Independent variable

· **Correlation**

- b. Experimental effect
- c. Dependent variable

3. A variable that the experimenter manipulates is called a(n) _____.

- a. Control condition

· **Independent variable**

- b. Coefficient of correlation
- c. Dependent variable

4. Observing behavior as it happens in real-life natural settings without imposing laboratory controls is known as the _____.

· **Naturalistic observation method**

- a. Experimental method
- b. Psychometric approach
- c. Survey method

5. Who claimed that behavior is affected by positive reinforcement?

· **B. F. Skinner**

- a. Sigmund Freud
- b. William James
- c. Wilhelm Wundt

6. A detailed description of a particular individual being studied or treated is called _____.

- a. A single-blind study
- b. A representative sample
- c. A naturalistic observation

A case study

7. The psychodynamic perspective was based on the work of _____.

- a. **Freud**
- b. Watson
- c. Gestalt
- d. Wundt

8. Who was an early proponent of functionalism?

- a. Wilhelm Wundt
- b. Ivan Pavlov
- c. **William James**
- d. Max Wertheimer

9. Which of the following terms do NOT belong together?

- a. Natural selection; functionalism
- b. Psychoanalysis; unconscious conflict
- c. **Structuralism; observable behavior**
- d. Gestalt; whole

10. "The whole is greater than the sum of the parts" is a statement associated with the perspective of _____.

- a. Introspection
- b. **Gestalt psychologists**
- c. Psychoanalysis
- d. Functionalism

A branch of psychology that studies the psychology in action at the workplace is known as which of the following?

- Clinical psychology
- Forensic psychology
- Health psychology

Industrial / Organizational Psychology

Which of the followings model focuses on how people know, understand and think about the world?

Cognitive model

- Behavioral model
- Humanistic model

Psychodynamic model

Which of the following school of thought gave emphasis on the structure of consciousness?

Behaviorism

Functionalism

Structuralism

Gestalt school of thought

Which of the following system is a chemical communication network that sends messages through out the nervous system via the bloodstream?

Endocrine

Neuron

Electrical

Central

During which stage of development, the Oedipal and Electra complex takes place?

The Latency Period

The Anal Stage

The Oral Stage

The Phallic Stage

Which of the following will happen where we stop the reinforcement and the behavior will be extinguished?

Generalization

Extinction

Spontaneous recovery

Shaping

Identify who among the following developed his system of psychotherapy called Client Centered Therapy.

Alfred Adler

William. H. Sheldon

Albert Ellis

Carl Rogers

The recording of the behavior of people or animals in their natural environments, with little or no intervention by the researcher is known as what?

Experimental research

Naturalistic observation

Manipulative research

Laboratory observation

When a detailed description of a particular individual is gathered, this sort of data collection is known as what?

A single-blind study

A representative sample

A naturalistic observation

A case study

The branch of psychology that studies how physiological and social changes take place over the lifespan is known as what?

Forensic Psychology

Developmental Psychology

Clinical Psychology

Social Psychology

1. While maintenance rehearsal will help keep information in short-term memory for longer periods of time, it does not help transfer information into long-term memory. In order to get information into long-term memory we need to engage in:

A. Elaborative rehearsal

- B. Maintenance priming
- C. Chunking
- D. Episodic rehearsal

2. In sensory memory, visual stimuli are held for a very brief time as ____ memories, whereas auditory stimuli are held as ____ memories.

A. Short-term; long-term

B. Iconic; echoic

- C. Echoic; iconic
- D. Long-term; short-term

3. Which of the following is NOT true of long-term memory?

- A. It has unlimited space
- B. It includes both semantic and episodic memory
- C. It can hold information for unlimited lengths of time

D. It has about seven slots or chunks for information storage

4. People do things (like work) for all different reasons. Some work for money, some work for power, and some work for satisfaction. Internal motivation that causes us to do something because we receive self-satisfaction is called:

A. Humanistic

B. Intrinsic

- C. Sociobiological
- D. Optimum arousal

5. Which of the following is NOT a biological motive that operates within a homeostatic cycle (is not regulated by homeostasis)?

- A. Sex
- B. Hunger
- C. Body temperature
- D. Thirst

Fill in the Blanks_____

1. Positive reinforcement Maliha's father gives her 10 Rs for making tea for him.

2. Negative punishment Maria was fighting with her sister. Her mother says she can't watch TV tonight.

3. Positive punishment Moona is 4 years old. Her mother spanks her for running out into the street.

4. Negative reinforcement your teacher says you don't have to take the final exam if

you have a "B" average at the end of the semester.

5. **Positive reinforcement** you receive a 1000 Rs incentive bonus from your boss for completing a project early.

According to Piaget, children's thinking develops through two simultaneous processes. Identify them.

a. Assimilation and accommodation

- b. Assimilation and mental representation
- c. Mental representation and equilibrium
- d. Equilibrium and accommodation

Which of the following statement best describe Erik Erikson?

a. He was an id psychologist

b. He developed a theory based on social rather than sexual relationships

- c. He described archetypes
- d. He gave the concept of basic anxiety

Which of the followings are the branch-like structures that receive messages from other neurons?

- a. Nerve bundles
- b. Axons

c. Dendrites

d. Synapses

The peripheral nervous system consists of _____.

- a. The spinal cord and autonomic system
- b. All nerves in the brain and the spinal cord
- c. The brain and the autonomic system

d. All the nerve cells that are not in the brain and spinal cord

The fovea is made up of what?

a. All cones and no rods

- b. Mostly cones with some rods
- c. All rods and no cones
- d. Mostly rods with some cones

What are the hammer, anvil, and stirrup?

a. Types of sound that most people can detect

b. Tiny bones located in the middle ear

- c. Types of cones on the retina
- d. Words often used by audiologists in testing for hearing difficulties

Which of the following is not one of the Gestalt principles?

- a. Figure and ground
- b. Proximity

c. Synchronicity

d. Closure

Which of the following statement best describes the concept of an illusion?

- a. It is due to the action of the rods versus the cones in the retina

- b. Corresponds directly to something that you dreamed
- c. It is the same thing as a vision

d. It is a perception that does not correspond to reality

Which two categories of dream content did Sigmund Freud describe?

- a. Poetic and realistic
- b. Delusional and hallucinatory

c. Latent and manifest

- d. Literal and symbolic

All of the following statements concern with the concept of learning EXCEPT:

- a. Learning is relatively permanent
- b. Learning involves experiences

c. Learning is another word for physical growth

- d. Learning involves changes in behavior

1. Drugs that speed up the functioning of the nervous system are called _____.

Stimulants

Psychogenics

Narcotics

Depressants

2. According to Sigmund Freud, the important underlying meaning of our dreams is found in the _____.

Manifest content

Deep content

Latent content

Subliminal content

3. Freud's psychoanalytic theory of dreaming states that _____.

The purpose of dreaming is to express unconscious wishes, thoughts, and conflicts

Dreaming is a by-product of a process of eliminating or strengthening neural connections

The purpose of dreaming is to resolve current concerns and problems

There is no purpose to dreaming; dreams occur because of random brain stem signals

4. Daydreaming, meditation, intoxication, sleep, and hypnosis are all types of _____.

Altered states of consciousness

Waking consciousness

Self-awareness

Self-absorption

5. The branchlike structures that receive messages from other neurons are called _____.

Nerve bundles

Dendrites

Axons

Synapses

6. The idea that learning occurs and is stored up, even when behaviors are not reinforced, is called ____.

Innate learning

Insight

Placebo learning

Latent learning

7. In operant conditioning, _____ is necessary to create the association between the stimulus and the voluntary response.

The law of negative effect

A long time delay

Conditional emotional linkages

Reinforcement

8. _____ is synonymous with short-term memory.

Sensory registers

Shadow memory

Working memory

Secondary memory

9. _____ of the following statements is true about retrieval.

It is a process of getting information from the sensory receptors to the brain

It is a process that allows an extinguished CR to recover.

It is the reason that conditioned taste aversions last so long.

It is a process of getting stored memories back out into consciousness.

10. Receptor cells in the retina responsible for color vision are ____.

Cones

Rods

Bipolar cells

Ganglion cells

1. _____ is the process of perceiving information and bringing it into the memory system

1. Storage
2. Retrieval
3. Recording
4. **Encoding**

2. According to Woodworth Memory = L - I - R, R stands for _____.

1. recording
2. **remembering**
3. resonance
4. recall

3. _____ derives from the Latin word "Emovere" means to excite, stir up.

1. Motion
2. **Emotion**
3. Motivation
4. Cognition

4. _____ was the first person who identify pupillometrics phenomenon.

1. William James
2. Wilhelm Wundt
3. Lazarus
4. **Darwin**

5. According to _____ every emotional arousal has an opposite, i.e. When one type of emotion is elicited, and then there must be an opposite that is there to suppress or cancel it.

1. **Opponent process theory**
2. Activation theory
3. Cognitive theory
4. None of the above option

6. The branch of psychology that studies cognition, and related areas issues are called _____.

1. Forensic psychology
2. **Cognitive psychology**

3. Counseling psychology
4. Clinical psychology

7. _____ is the universal forms and patterns of thought. These include themes that can be seen in myths e.g. masculinity, femininity, good and evil opposites.

1. Ego
2. Superego
3. Unconscious

4. **Archetypes** _____

8. MMPI stands for _____.

1. Minnesota Multiphasic Personal Inventory
2. **Minnesota Multiphasic Personality Inventory**
3. Minnesota Multiphasic Psychology Inventory
4. None of the above options

9.s _____ are the people who are quiet, passive and careful people.

1. Extroverts
2. **Introverts**
3. Neurotics
4. Stable

10. _____ is a Greek word which means forgetfulness.

Amnesia

Dementia

Alzheimer's disease

None of the above option.

Solved By Personage:

USAMA GEE (BACHELOR OF SCIENCE IN BUSINESS ADMINISTRATION 7TH SEMESTER)

Types of Hearing Impairment

1. **Conduction Deafness:** problem in conduction of air vibrations to the cochlea; the bones in the middle ear do not function properly. Treatment: microsurgery for replacing the affected bone with an artificial one.
2. **Nerve Deafness:** deafness caused by a damage to the neural mechanism that creates nerve impulses or relays them to the auditory cortex; deafness may also be caused by a damage to the auditory cortex itself.

Explain i) Relative Motion ii) Relative Size

Relative motion: A monocular cue for perceiving depth and distance in which when we move, the objects at different distances change their relative positions with the visual image with those that are closest seem to be moving faster.

Relative Size : The monocular cue for depth perception in which we assume that the two objects are similar in size, the one that make the smaller image appears to be more distant.

Q4-If rat is under observation by scientists..... rat don't feel hungry and thirsty then in which part of the brain scientists implant electrodes to find the reason of not feeling hungry and thirsty? Also tell some characteristics of that part of brain. (3marks).

Thalamus is further divided into two sub-categories 1-Cerebellum 2- Limbic System

- Evolutionarily the structure of limbic system is rather old.
- The limbic system, often referred to as the "emotional brain", is found buried within the cerebrum.
- At the border of the brainstem and cerebral hemispheres it is a doughnut-shaped system of neural structures; associated with emotions e.g. fear and aggression, and drives like hunger and sex; regulates body temperature, blood sugar level and blood pressure.

Operant Conditioning

- Type of learning in which a voluntary response becomes stronger or weaker depending on its positive or negative consequences.
- The organism plays an active role and 'operates' on environment to produce the desired outcome.

Operant conditioning forms an association between a behavior and a consequence. Consequences have to be immediate, or clearly linked to the behavior. With verbal humans, we can explain the connection between the consequence and the behavior, even if they are separated in time.

What is Sleep disorder? Causes of sleep disorder(5 marks)

Sleep Disorders

- Sleep related problems ranging from inability to sleep, to difficulty falling to sleep, to interrupted sleep, to feeling sleepy even when one has had enough hours of deep sleep; Generally known by the name of Insomnia, sleep disorders include sleep walking and sleep talking as well.

Causes of Sleep Disorders

- Sleep disorders or slumbering problems may be due to various reasons:
- Stress • Preoccupation (concern or fear etc.) • Mental illness • Noise pollution
- Digestive problems • Physical illness

Four diseases caused by abnormal secretion of thyroid glands?

Diseases Resulting from Abnormal Secretion of Endocrine Glands

- Too much or too less secretions of endocrine glands can be harmful for the body.
- These secretions can be treated by controlling the over production, providing the essentials for production, or replacing hormones.
- Some of such abnormalities are:

1. Cretinism

- Occurs due to the lack of thyroid gland secretions. • Prevalent mostly in Southern France, Spain, Italy, and Switzerland

The major symptoms are:

- Person becomes restless and thin • Shows excessive emotionality
- Sleeplessness • Rapid heartbeat • Tremors

What will happen when you enter into the movie theatre/ a dark room and hardly see anything? (3 marks)

The isle, other people, or your seat. And what happens after a few moments? It is an example of adaptation to darkness

- Dark Adaptation means a heightened sensitivity to light resulting from being in low level of light for some duration
- On the contrary, you can see quite well in light after coming from the darkness__ dark adaptation
- The speed of processing from dark to light and light to dark adaptation is largely dependent on the rate at which the chemical composition in the rods and cones takes place.

Portion of Adrenal Cortex and their name.

The adrenal cortex is essential to life because it has very important functions to perform, but the Medulla may be removed with no life-threatening effects.

Hormones of the Adrenal Cortex

- The adrenal cortex consists of three different portions/ regions, each region produce different type of hormones. • Chemically, all these cortical hormones are steroid.

a. Mineralocorticoids

- Secreted by the outermost region of the adrenal cortex.

b. Glucocorticoids

- Secreted by the middle region of the adrenal cortex.

c. Gonad corticoids

- Also known as the sex hormones.
- These are secreted by the innermost region of the adrenal cortex.

Q: Brain layers and their names i think

Membranes of the Brain

- Between the surfaces of the brain and the skull, there are three layers of membrane called the meninges, which completely cover the brain and spinal cord.
- These three membranes are:

1. Dura Matter 2. Arachnoid 3.Pia Matter

THE EVOLUTIONARY LAYERS OF THE HUMAN BRAIN

The **reptilian** brain, the oldest of the three, controls the body's vital functions such as heart rate, breathing, body temperature and balance.

The **limbic** brain emerged in the first mammals. It can record memories of behaviours that produced agreeable and disagreeable experiences,

The **neocortex** first assumed importance in primates and culminated in the human brain with its two large cerebral hemispheres that play such a dominant role.

Q- Edward B. Tichener

Known as the formal founder of Structuralism

Edward Bradford Tichener

He was solely concerned with studying the brain, and the unconscious, and for this he believed, we should break it down into basic elements. After that, we can construct the separate elements into a whole and understand what it does.

- He believed that we can study perception, emotions and ideas through introspection, by reducing them to their elementary parts
- There are four elements in the sensation of taste: sweet, sour, salty and bitter

Q10- what do you know about cerebellum. What are its functions? 5 MARKS

- "Cerebellum" comes from the Latin word for "little brain". The cerebellum is located behind the brain stem.
- Cerebellum is somehow similar to the cerebral cortex: the cerebellum is divided into hemispheres and has a cortex that surrounds these hemispheres.
- It carries 10% of the weight of the brain. • It contains as many neurons as in the rest of the brain.
- Its function is to coordinate body movements i.e. coordination, maintenance of posture & balance.
- Damage to cerebellum results into jerky and uncoordinated body movements.

Q7. Humanistic approach main points

Psychological model that is considered as one of the most recent approaches to psychology .

It is the approach that focused on:

- **The idea that people are in control of their life.**
- **The person or the self and personal growth and development are to be emphasized.**

The humanistic approach includes a number of other theories with the same or similar orientation e.g., 'existential' and 'phenomenological' psychology.

Q- Humanistic Vs Psychodynamic & behaviorist Approaches

- Humanistic approach emphasizes the person, the psychodynamic stresses unconscious determinants, and the behaviorists focus upon external determinants.
- Humanistic approach is more optimistic than the other two in the sense that it believes in the person's ability and will.

Q10. Who presented the cognitive maps? Define it briefly 3 marks

Cognitive Approaches to Learning

The approaches that focus upon the thought processes underlying learning . Latent Learning and cognitive maps (Edward Tolman); Tolman talked about the 'cognitive maps'; it is not necessary to have an association between stimulus and response, a person can learn without showing any apparent response; in other words learning and performance are not the same

Social learning / Observational learning and Modeling (Albert Bandura): a major portion of our learning is based upon learning by observation

Q15. Describe function of auditory canal and tell three parts of ear. 3 marks

Auditory canal: When sound waves originate from the vibrating object, they then pass through the auditory canal, which is a tube like passage through which the sound travels to the inner part of the ear or "the eardrum".

Eardrum

- The part of the ear that starts vibrating when sound waves strike/ hit it.
- Its intensity of vibration is dependent on how intense the sound waves are the more intense the sound, the more intensely it vibrates.
- These vibrations are then transmitted to the "middle ear".

1. The outer ear 2. The middle ear 3. The inner ear

Q- Ear impairments 5 mark

1. Conduction Deafness: problem in conduction of air vibrations to the cochlea; the bones in the middle ear do not function properly. Treatment: microsurgery for replacing the affected bone with an artificial one.

2. Nerve Deafness: deafness caused by a damage to the neural mechanism that creates nerve impulses or relays them to the auditory cortex; deafness may also be caused by a damage to the auditory cortex itself.

Q3. Name and explain that specific learning principle.

[Educational psychologists](#) and [pedagogues](#) have identified several principles of learning, also referred to as laws of learning, which seem generally applicable to the [learning](#) process. These principles have been discovered, tested, and used in practical situations. They provide additional insight into what makes people learn most effectively. Edward Thorndike developed the first three "Laws of learning:" readiness, exercise, and effect. Since Thorndike set down his basic three laws in the early part of the twentieth century, five additional principles have been added: primacy, recency, intensity, freedom and requirement.

Q- Cerebrospinal Fluid (CSF)

- The subarachnoid space contains a fluid called cerebrospinal fluid (CSF), a clear, colorless fluid covering the entire surface of central nervous system.
- The total volume of CSF is 125-150 ml.
- Total production of CSF is about 400-500 ml/day (about 0.36ml/min).

Q- Phi phenomenon: Wertheimer became aware of a form of apparent motion that was called

When two lights are in close proximity to each other, flashing alternately, appear to be one light moving back and forth; therefore the whole was different from the separate parts.

- Movement is perceived whereas it never occurred.
- Explanation of phi phenomenon led to a separate school of thought that had deep rooted impact on learning, ethics, and social psychology.

Q6. What is top- down processing; write its factor which influences 5 marks

Top- Down and Bottom- Up Processing

‘Top- Down’ processing refers to the perceptual phenomenon guided/ and influenced by; Knowledge, Experience, Motivation Expectation

A-e- yo- g-o - ng t- sc—l?

Top- down processing is guided by the higher mental/ knowledge faculty such as meaning of the sentence of which the important letters are missing__ individuals are able to understand the meaning of the sentence and fill in the gaps by using their prior experiences and memories.

Q7. Deferent theories of “pitch Perception and hearing” are being presented over theyears. Which one is your favorite and why? (5 marks)

ITS SAME WITH DIFFERENT NAMES

- The most frequent question that comes to mind is that how can our brain sort out the sound waves of different frequencies and intensities without any hindrance or problem?
- The answer lies in the studies done in this regard. They show that the basal membrane (inner most region of the ear near the cochlea) and its associated areas are most sensitive to high pitched frequency sounds, and the area near the cochlea is more sensitive to low-frequency sounds.

Q3. Compare intimate and observation??

Intimate: to make known especially publicly or formally, to communicate delicately and indirectly

Observation: the action or process of closely observing or monitoring something or someone , a statement based on something one has seen, heard, or noticed.

Q8. Define the shaping techniques. Discuss how will you practice this technique in your life? (3 marks)

Shaping: Successive approximations of a required / desired response are reinforced until that response is fully learnt:

- In the beginning each and every success is reinforced with a reward, no matter how small the success.
- Once the desired response is learnt the rein forcer immediately follows it, every time it happens.
- Once learnt the behavior, in many cases, the organism may not need reinforcement any more, since many behaviors are self-reinforcing e.g. learning to play a musical instrument.

Q11. Define cornea briefly explain? 3 marks

- A transparent external surface, a five-layered membrane that covers both the pupil and the iris.
- It is the first and most powerful lens or layer of the visual apparatus that helps to form the sharp image on the retinal photoreceptor cells, along with the crystalline lens

Q8. How does the endocrine system influence behavior? Describe the functions of any two glands and the hormones each secretes. (2.5+2.5 marks)

The endocrine system consists of glands which secrete hormones into the blood stream. There many different types of hormones secreted by different glands in the body, each serving a different function. Some hormones are known to have an effect on mood and behavior. An example of this would be estrogen, which has been known to cause mood swings in menopausal women. This is because estrogen, as well as many other steroid hormones are able to cross the blood brain barrier and act directly on neurons in the brain to cause them to act differently, hence giving rise to behavioral changes.
