

Data of a variable at one point in time for different regions is known as:

Cross sectional data shez correct

Which of the following deals with the study of economic behavior of individual firms and units?

Mathematical economics

Direct demand is also known as:

Consumer's demand

Derived demand is also known as

Business demand

The branch of economics which deals with the study of overall behavior of the economy is known as

Macroeconomics

Which of the following is marketing research approach to estimate the demand?

Consumer Interviews

Consumer Clinics

Market Experiments

All of the given options shez correct

$Y = a + bX + e$?

Intercept

Slope

Elasticity

Error term

MCQ's are difficult

1:- $\ln Q = \ln A + a \ln K + b \ln L$. This is the logarithmic form of:

Select correct option:

Investment function

Cobb Douglas production function page(94)

Simple production function

Regression function

2:- Inputs that are Fixed during the production process are known as ----- inputs.

Select correct option:

Fixed

Variable

Good

Bad

3:- No Cash is define in

implicit cost

4:- In which of the following games, players decide about their strategy choices at the same time?

Select correct option:

Repeated games

Non-repeated games

Simultaneous games

Sequential games

5:- Public utilities are an example of:

Select correct option:

Perfect competition

Natural monopoly

Monopolistic competition

Oligopoly

6:- Question # 11 of 20 (Start time: 06:11:25 PM) Total Marks: 1

$Y = 3.35 + 2.63X$ shows slop in this regression equation.

Select correct option:

2.63

3.35

4.5

2.5

7:- $GNP = C + I + G$ equation is

Definitional Equation

Behavior equation

8:- **Cigarettes are an example of which type of market structure?**

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Oligopoly

9:- **Which of the following is TRUE for the law of supply'?**

Select correct option:

There is inverse relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity supplied of that good

10:- There is inverse relationship between income and quantity supplied of a good

Decreasing part of marginal product of labor curve shows which of the following law?

Select correct option:

Law of diminishing returns

Law of diminishing marginal utility

Law of demand

Law of supply

$Y = a + b_1X_1 + b_2X_2$. This equation is an example of:

Multiple regression model shez correct

Which of the following is an example of a deterministic relation?

Profit relation shez correct

wo products are said to be compliments if cross price elasticity of demand between these two products is:

Zero shez correct

Which of the following assumes constant percentage change in economic variable over different periods of time?

Growth trend analysis **shez correct**

We get the following regression line after trend projection of time series data: $S_t = 10.20 + 0.852t$. In this equation, the estimated value of the time series in the base period is:

Out of pocket costs of firm are known as:

Explicit costs **shez correct**

$S_t = S_0 + bt$ is an example of:

Linear trend analysis shez correct

Quiz No. 3 ECO404

Question # 1 of 10

Multiple equation econometric models consist of:

Select correct option:

Equalities only

Identities only

Behavioral equations only

Both Identities and behavioral equations

Question # 2 of 10

Profit is maximized where:

Select correct option:

Marginal revenue = Marginal cost

Marginal revenue = Average cost

Marginal cost = Average revenue

Average revenue = Average cost

Question # 3 of 10 (Start time: 02:42:05 PM) Total Marks: 1

If a firm takes opinion of different individuals for the purpose of forecasting, this is known as:

Select correct option:

Personal insight approach to forecasting

Panel consensus approach to forecasting

Delphi approach to forecasting

Time series analysis

Question # 4 of 10 (Start time: 02:43:17 PM) Total Marks: 1

Fluctuations should be random. It is the requirement of which of the following technique(s)?

Select correct option:

Moving average technique only

Exponential smoothing technique only

Both moving average and exponential techniques

Barometric technique

Question # 5 of 10 (Start time: 02:44:32 PM) Total Marks: 1

Non-price determinant of supply includes:

Select correct option:

Prices of other goods or services

Input prices

Weather conditions

All of the given options

Question # 6 of 10 (Start time: 02:45:31 PM) Total Marks: 1

If the percentage change in profit is Rs. 400 and percentage change in sales is Rs. 100 then what will be the degree of operating leverage?

Select correct option:

1

2

3

4

Question # 7 of 10 (Start time: 02:46:43 PM) Total Marks: 1

Given the Cobb Douglas production function: $Q = A L^a K^b$ There will be decreasing returns to scale if:

Select correct option:

$a + b > 1$

$a + b < 1$

$a + b = 1$

$a + b = 0$

Question # 8 of 10 (Start time: 02:47:37 PM) Total Marks: 1

$Y = a + bX + e$ "b" shows ----- in this regression equation.

Select correct option:

Intercept

Slope

Elasticity

Power

Question # 9 of 10 (Start time: 02:49:01 PM) Total Marks: 1

Given the marginal cost function, $MC = 5Q^2 - 10Q + 50$, what is dMC/dQ ?

Select correct option:

$$5Q + 50$$

$$10Q - 10$$

$$10Q + 50$$

$$5Q - 10Q$$

Question # 10 of 10 (Start time: 02:49:44 PM) Total Marks: 1

In which of the following cases, cost elasticity will be more than one?

Select correct option:

When percentage change in cost is less than the percentage change in output

When percentage change in cost is greater than the percentage change in output

When percentage change in cost is equal to the percentage change in output

When percentage change in cost is less than the percentage change in input

Quiz 4

Question 1 of 20

The price that equates the quantity demanded with the quantity supplied is called:

Select correct option:

Equilibrium price

Price floor

Support price

Nominal Price

Question 2 of 20

In fiscal policy, tax rates are determined by the:

Select correct option:

Government

Central bank

General public

Commercial bank

Question 3 of 20

Percentage change in profit due to one unit change in sales is known as:

Select correct option:

Degree of operating leverage

Economies of scale

Degree of freedom

Cost elasticity

Question 4 of 20

Which economist introduces the simplex method?

Leonid Kantorovich

George B Dantzig

John von Neumann

Ioel Dean

Question 5 of 20

Change in total cost caused by one unit change in output is known as:

Select correct option:

Marginal revenue

Average revenue

Marginal cost

Average cost

Question 6 of 20

Suppose $Y = f(x)$, if $Y = 16X + 57$? then what will be dY/dX according to rules of differentiation?

Select correct option:

16

16X

57

57X

Question 7 of 20

Which of the following is also known as analysis of variance?

Select correct option:

T statistic

Z statistic

F statistic

Durbin Watson Statistic

Question 8 of 20

Firms are price makers in which of the following market structures?

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Question 9 of 20

We get the point of optimal input combination if:

Select correct option:

Iso-cost and Iso-quant curves are tangent

Budget line and indifference curves are tangent

Demand and supply curves intersect

Iso-cost and supply curve intersect

Question 10 of 20

If the percentage change in profit is Rs. 400 and percentage change in sales is Rs. 100 then what will be the degree of operating leverage?

1

2

3

4

Question 11 of 20

Which of the following computer soft wares are used to solve the problem of linear programming'?

Select correct option:

Fore Profit software

LINDU

MS Excel Solver

All of the above

Question 12 of 20

Which of the following is a behavioral equation?

Select correct option:

$$GNP = C + I + G$$

$$St = b_0 + b_1 R_t + u_1$$

$$\text{Profit} = TR / TC$$

None of the given options

Question 13 of 20

If oligopoly firm is producing homogenous product, it is known as:

Select correct option:

Pure oligopoly

Differentiated oligopoly

Triopoly

Monopoly

If there are three sellers, we have Triopoly.

If the product is homogenous, it is called pure oligopoly.

If the product is differentiated, it is called differentiated oligopoly.

Question 14 of 20

Cigarettes are an example of which type of market structure?

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Oligopoly

Question 15 of 20

The branch of economics which deals with the study of overall behavior of the economy is known as:

Select correct option:

Microeconomics

Macroeconomics

Development economics

Mathematical economics

Question 16 of 20

Short run average cost curves are U-shaped because of:

Select correct option:

The law of diminishing returns

The law of diminishing utility

The law of demand

The law of supply

Question 17 of 20

Derived demand is also known as:

Select correct option:

Consumer's demand

Direct demand

Market demand

Business demand

Question 18 of 20

Percentage change in output due to 1% change in inputs is called:

Select correct option:

Output elasticity of inputs

Inputs elasticity of output

Elasticity of substitution

Cross price elasticity

Question 19 of 20

Which of the following is TRUE for the law of supply'?:

Select correct option:

There is inverse relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity supplied of that good

There is inverse relationship between income and quantity supplied of a good

Question 20 of 20

Which of the following shows accounting profit of the firm'?:

Select correct option:

Total revenue + explicit or accounting costs of production

Total revenue - explicit or accounting costs of production

Total revenue / explicit or accounting costs of production

Total revenue X explicit or accounting costs of production

QUIZ NO. 4

Question # 1 of 20

Game which is played repeatedly over a period of time is known as:

Select correct option:

Repeated game

Non-repeated game

Simultaneous game

Sequential game

Question # 2 of 20

The questionnaires which include answers like Yes or No are called:

Select correct option:

Open ended questionnaires

Closed questionnaires

Bad questionnaires

Good questionnaires

Question # 3 of 20

Change in slope of the function can be shown by:

Select correct option:

First derivative of the function

Second derivative of the function

Elasticity of the function

Tangent of the function

Question # 4 of 20

The questionnaire which allows the respondents to answer according to their own choice is called:

Select correct option:

Open ended questionnaire

Closed questionnaire

Bad questionnaire

Good questionnaire

Question # 5 of 20

Break even output can be calculated as:

Select correct option:

Break even output = Total fixed cost / (Price – Average variable cost)

Break even output = Total variable cost / (Price + Average variable cost)

Break even output = Total fixed cost / (Price + Average fixed cost)

Break even output = Total fixed cost + (Price – Average variable cost)

Question # 6 of 20

Percentage change in profit due to one unit change in sales is known as:

Select correct option:

Degree of operating leverage

Economies of scale

Degree of freedom

Cost elasticity

Question # 7 of 20

Decreasing part of marginal product of labor curve shows which of the following law?

Select correct option:

Law of diminishing returns

Law of diminishing marginal utility

Law of demand

Law of supply

Question # 8 of 20

What will happen if there is an increase in wage rate?

Select correct option:

Short run cost curve will shift upward

Short run cost curve will shift downward

There is movement along the short run cost curve

No change will happen in the cost curve

Question # 9 of 20

The term of regression was first used by:

Select correct option:

Milton Friedman

Francis Galton

Dominick Salvatore

J M Keynes

Question # 10 of 20

Monopoly firm breaks even at the point where:

Select correct option:

Average total cost = Price

Average total cost > Price

Average total cost < Price

Average total cost = Marginal cost

If $ATC = P$ at best level of output, the monopolist breaks even,
and if $ATC > P$ at the best level of output, the monopolist incur a loss.

Question # 11 of 20

Which of the following is the similarity of monopolistic competition with perfect competition?

Select correct option:

Small number of buyers and sellers

Free entry and exit of firms

Barriers to entry and exit of firms

Single buyer

Question # 12 of 20

Price always exceeds marginal revenue in which of the following market structures?

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Oligopoly

Question # 13 of 20

Given the total revenue equation: $TR = 26Q$, marginal revenue is:

Select correct option:

Q

$26Q$

26

$26 + Q$

Question # 14 of 20

Which of the following type of demand directly satisfy consumer desires?

Select correct option:

Direct demand

Indirect demand

Derived demand

Market demand

Question # 15 of 20

Marginal product of labor is defined as the:

Select correct option:

Change in total product due to one unit change in labor

Change in average product due to one unit change in labor

Change in total product due to one unit change in average product

Change in total product due to one unit change in cost of labor

Question # 16 of 20

Average product of labor is defined as the:

Select correct option:

Total product / Labor input

Average product / Input

Total product / Average product

Total product / Cost of labor

Question # 17 of 20

Cournot oligopoly model was developed in:

Select correct option:

1830

1838

1840

1845

Question # 18 of 20

If price elasticity of demand for any product is constant, the demand curve of that product will be:

Select correct option:

Horizontal

Vertical

Rectangular hyperbola

Positively sloped

Question # 19 of 20

Parameters of structural equations can not be estimated by ----- technique.

Select correct option:

Ordinary least square

Root mean square error

Simultaneous equation

Behavioral equation

Question # 20 of 20

The total cost (TC) function is given as: $TC = 200 + 80Q$. What is the variable cost?

Select correct option:

80Q

250

340

200

Data of a variable at one point in time for different regions is known as:

Cross sectional data shez correct

Which of the following deals with the study of economic behavior of individual firms and units?

Mathematical economics

Direct demand is also known as:

Consumer's demand

Derived demand is also known as

Business demand

The branch of economics which deals with the study of overall behavior of the economy is known as

Macroeconomics

Which of the following is marketing research approach to estimate the demand?

Consumer Interviews

Consumer Clinics

Market Experiments

All of the given options are correct

$Y = a + bX + e$?

Intercept

Slope

Elasticity

Error term

MCQ's are difficult

1:- $\ln Q = \ln A + a \ln K + b \ln L$. This is the logarithmic form of:

Select correct option:

Investment function

Cobb Douglas production function page(94)

Simple production function

Regression function

2:- Inputs that are Fixed during the production process are known as ----- inputs.

Select correct option:

Fixed

Variable

Good

Bad

3:- No Cash is define in

implicit cost

4:- In which of the following games, players decide about their strategy choices at the same time?

Select correct option:

Repeated games

Non-repeated games

Simultaneous games

Sequential games

5:-Public utilities are an example of:

Select correct option:

Perfect competition

Natural monopoly

Monopolistic competition

Oligopoly

6:- Question # 11 of 20 (Start time: 06:11:25 PM) Total Marks: 1

$Y = 3.35 + 2.63X$ shows slop in this regression equation.

Select correct option:

2.63

3.35

4.5

2.5

7:- $GNP = C + I + G$ equation is

Definitional Equation

Behavior equation

8:- **Cigarettes are an example of which type of market structure?**

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Oligopoly

9:- **Which of the following is TRUE for the law of supply'?** :

Select correct option:

There is inverse relationship between the price of a good and quantity demanded of that good
There is positive relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity supplied of that good

10:-There is inverse relationship between income and quantity supplied of a good

Decreasing part of marginal product of labor curve shows which of the following law?

Select correct option:

Law of diminishing returns

Law of diminishing marginal utility

Law of demand

Law of supply

$Y = a + b_1X_1 + b_2X_2$. This equation is an example of:

Multiple regression model shez correct

Which of the following is an example of a deterministic relation?

Profit relation shez correct

wo products are said to be compliments if cross price elasticity of demand between these two products is:

Zero shez correct

Which of the following assumes constant percentage change in economic variable over different periods of time?

Growth trend analysis shez correct

We get the following regression line after trend projection of time series data: $S_t = 10.20 + 0.852t$. In this equation, the estimated value of the time series in the base period is:

Out of pocket costs of firm are known as:

Explicit costs **shez correct**

$S_t = S_0 + bt$ is an example of:

Linear trend analysis shez correct

Quiz No. 3 ECO404

Question # 1 of 10

Multiple equation econometric models consist of:

Select correct option:

Equalities only

Identities only

Behavioral equations only

Both Identities and behavioral equations

Question # 2 of 10

Profit is maximized where:

Select correct option:

Marginal revenue = Marginal cost

Marginal revenue = Average cost

Marginal cost = Average revenue

Average revenue = Average cost

Question # 3 of 10 (Start time: 02:42:05 PM) Total Marks: 1

If a firm takes opinion of different individuals for the purpose of forecasting, this is known as:

Select correct option:

Personal insight approach to forecasting

Panel consensus approach to forecasting

Delphi approach to forecasting

Time series analysis

Question # 4 of 10 (Start time: 02:43:17 PM) Total Marks: 1

Fluctuations should be random. It is the requirement of which of the following technique(s)?

Select correct option:

Moving average technique only

Exponential smoothing technique only

Both moving average and exponential techniques

Barometric technique

Question # 5 of 10 (Start time: 02:44:32 PM) Total Marks: 1

Non-price determinant of supply includes:

Select correct option:

Prices of other goods or services

Input prices

Weather conditions

All of the given options

Question # 6 of 10 (Start time: 02:45:31 PM) Total Marks: 1

If the percentage change in profit is Rs. 400 and percentage change in sales is Rs. 100 then what will be the degree of operating leverage?

Select correct option:

1

2

3

4

Question # 7 of 10 (Start time: 02:46:43 PM) Total Marks: 1

Given the Cobb Douglas production function: $Q = AL^aK^b$ There will be decreasing returns to scale if:

Select correct option:

$a + b > 1$

$a + b < 1$

$a + b = 1$

$a + b = 0$

Question # 8 of 10 (Start time: 02:47:37 PM) Total Marks: 1

$Y = a + bX + e$ "b" shows ----- in this regression equation.

Select correct option:

Intercept

Slope

Elasticity

Power

Question # 9 of 10 (Start time: 02:49:01 PM) Total Marks: 1

Given the marginal cost function, $MC = 5Q^2 - 10Q + 50$, what is dMC/dQ ?

Select correct option:

$5Q + 50$

$10Q - 10$

$10Q + 50$

$5Q - 10Q$

Question # 10 of 10 (Start time: 02:49:44 PM) Total Marks: 1

In which of the following cases, cost elasticity will be more than one?

Select correct option:

When percentage change in cost is less than the percentage change in output

When percentage change in cost is greater than the percentage change in output

When percentage change in cost is equal to the percentage change in output

When percentage change in cost is less than the percentage change in input

Quiz 4

Question 1 of 20

The price that equates the quantity demanded with the quantity supplied is called:

Select correct option:

Equilibrium price

Price floor

Support price

Nominal Price

Question 2 of 20

In fiscal policy, tax rates are determined by the:

Select correct option:

Government

Central bank

General public

Commercial bank

Question 3 of 20

Percentage change in profit due to one unit change in sales is known as:

Select correct option:

Degree of operating leverage

Economies of scale

Degree of freedom

Cost elasticity

Question 4 of 20

Which economist introduces the simplex method?

Leonid Kantorovich

George B Dantzig

John von Neumann

Ioel Dean

Question 5 of 20

Change in total cost caused by one unit change in output is known as:

Select correct option:

Marginal revenue

Average revenue

Marginal cost

Average cost

Question 6 of 20

Suppose $Y = f(x)$, if $Y = 16X + 57$? then what will be dY/dX according to rules of differentiation?

Select correct option:

16

16X

57

Question 7 of 20

Which of the following is also known as analysis of variance?

Select correct option:

T statistic

Z statistic

F statistic

Durbin Watson Statistic

Question 8 of 20

Firms are price makers in which of the following market structures?

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Oligopoly

Question 9 of 20

We get the point of optimal input combination if:

Select correct option:

Isocost and Isoquant curves are tangent

Budget line and indifference curves are tangent

Demand and supply curves intersect

Isocost and supply curve intersect

Question 10 of 20

If the percentage change in profit is Rs. 400 and percentage change in sales is Rs. 100 then what will be the degree of operating leverage?

1

2

3

4

Question 11 of 20

Which of the following computer soft wares are used to solve the problem of linear programming'?

Select correct option:

Fore Profit software

LINDU

MS Excel Solver

All of the above

Question 12 of 20

Which of the following is a behavioral equation?

Select correct option:

$GNP = C + I + G$

$St = b_0 + b_1R_t + u_1$

Profit = TR / TC

None of the given options

Question 13 of 20

If oligopoly firm is producing homogenous product, it is known as:

Select correct option:

Pure oligopoly

Differentiated oligopoly

Triopoly

Monopoly

If there are three sellers, we have Triopoly.

If the product is homogenous, it is called pure oligopoly.

If the product is differentiated, it is called differentiated oligopoly.

Question 14 of 20

Cigarettes are an example of which type of market structure?

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Oligopoly

Question 15 of 20

The branch of economics which deals with the study of overall behavior of the economy is known as:

Select correct option:

Microeconomics

Macroeconomics

Development economics

Mathematical economics

Question 16 of 20

Short run average cost curves are U-shaped because of:

Select correct option:

The law of diminishing returns

The law of diminishing utility

The law of demand

The law of supply

Question 17 of 20

Derived demand is also known as:

Select correct option:

Consumer's demand

Direct demand

Market demand

Business demand

Question 18 of 20

Percentage change in output due to 1% change in inputs is called:

Select correct option:

Output elasticity of inputs

Inputs elasticity of output

Elasticity of substitution

Question 19 of 20

Which of the following is TRUE for the law of supply'?:

Select correct option:

There is inverse relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity supplied of that good

There is inverse relationship between income and quantity supplied of a good

Question 20 of 20

Which of the following shows accounting profit of the firm'?:

Select correct option:

Total revenue + explicit or accounting costs of production

Total revenue - explicit or accounting costs of production

Total revenue / explicit or accounting costs of production

Total revenue X explicit or accounting costs of production

QUIZ NO. 4

Question # 1 of 20

Game which is played repeatedly over a period of time is known as:

Select correct option:

Repeated game

Non-repeated game

Simultaneous game

Sequential game

Question # 2 of 20

The questionnaires which include answers like Yes or No are called:

Select correct option:

Open ended questionnaires

Closed questionnaires

Bad questionnaires

Good questionnaires

Question # 3 of 20

Change in slope of the function can be shown by:

Select correct option:

First derivative of the function

Second derivative of the function

Elasticity of the function

Tangent of the function

Question # 4 of 20

The questionnaire which allows the respondents to answer according to their own choice is called:

Select correct option:

Open ended questionnaire

Closed questionnaire

Bad questionnaire

Good questionnaire

Question # 5 of 20

Break even output can be calculated as:

Select correct option:

Break even output = Total fixed cost / (Price – Average variable cost)

Break even output = Total variable cost / (Price + Average variable cost)

Break even output = Total fixed cost / (Price + Average fixed cost)

Break even output = Total fixed cost + (Price – Average variable cost)

Question # 6 of 20

Percentage change in profit due to one unit change in sales is known as:

Select correct option:

Degree of operating leverage

Economies of scale

Degree of freedom

Cost elasticity

Question # 7 of 20

Decreasing part of marginal product of labor curve shows which of the following law?

Select correct option:

Law of diminishing returns

Law of diminishing marginal utility

Law of demand

Law of supply

Question # 8 of 20

What will happen if there is an increase in wage rate?

Select correct option:

Short run cost curve will shift upward

Short run cost curve will shift downward

There is movement along the short run cost curve

No change will happen in the cost curve

Question # 9 of 20

The term of regression was first used by:

Select correct option:

Milton Friedman

Francis Galton

Dominick Salvatore

J M Keynes

Question # 10 of 20

Monopoly firm breaks even at the point where:

Select correct option:

Average total cost = Price

Average total cost > Price

Average total cost < Price

Average total cost = Marginal cost

If $ATC = P$ at best level of output, the monopolist breaks even,

and if $ATC > P$ at the best level of output, the monopolist incur a loss.

Question # 11 of 20

Which of the following is the similarity of monopolistic competition with perfect competition?

Select correct option:

Small number of buyers and sellers

Free entry and exit of firms

Barriers to entry and exit of firms

Single buyer

Question # 12 of 20

Price always exceeds marginal revenue in which of the following market structures?

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Oligopoly

Question # 13 of 20

Given the total revenue equation: $TR = 26Q$, marginal revenue is:

Select correct option:

Q

$26Q$

26

$26 + Q$

Question # 14 of 20

Which of the following type of demand directly satisfy consumer desires?

Select correct option:

Direct demand

Indirect demand

Derived demand

Market demand

Question # 15 of 20

Marginal product of labor is defined as the:

Select correct option:

Change in total product due to one unit change in labor

Change in average product due to one unit change in labor

Change in total product due to one unit change in average product

Change in total product due to one unit change in cost of labor

Question # 16 of 20

Average product of labor is defined as the:

Select correct option:

Total product / Labor input

Average product / Input

Total product / Average product

Total product / Cost of labor

Question # 17 of 20

Cournot oligopoly model was developed in:

Select correct option:

1830

1838

1840

1845

Question # 18 of 20

If price elasticity of demand for any product is constant, the demand curve of that product will be:

Select correct option:

Horizontal

Vertical

Rectangular hyperbola

Positively sloped

Question # 19 of 20

Parameters of structural equations can not be estimated by ----- technique.

Select correct option:

Ordinary least square

Root mean square error

Simultaneous equation

Behavioral equation

Question # 20 of 20

The total cost (TC) function is given as: $TC = 200 + 80Q$. What is the variable cost?

Select correct option:

80Q

250

340

MCQ's are difficult

1:- $\ln Q = \ln A + a \ln K + b \ln L$. This is the logarithmic form of:

Select correct option:

Investment function

Cobb Douglas production function page(94)

Simple production function

Regression function

2:- Inputs that are Fixed during the production process are known as ----- inputs.

Select correct option:

Fixed

Variable

Good

Bad

3:- No Cash is define in

implicit cost

4:- In which of the following games, players decide about their strategy choices at the same time?

Select correct option:

Repeated games

Non-repeated games

Simultaneous games

Sequential games

5:- Public utilities are an example of:

Select correct option:

Perfect competition

Natural monopoly

Monopolistic competition

Oligopoly

6:- Question # 11 of 20 (Start time: 06:11:25 PM) Total Marks: 1

$Y = 3.35 + 2.63X$ shows slop in this regression equation.

Select correct option:

2.63

3.35

4.5

2.5

7:- $GNP = C + I + G$ equation is

Definitional Equation

Behavior equation

8:- **Cigarettes are an example of which type of market structure?**

Select correct option:

Perfect competition

Monopoly

Monopolistic competition

Oligopoly

9:- Which of the following is TRUE for the law of supply'?' :

Select correct option:

There is inverse relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity demanded of that good

There is positive relationship between the price of a good and quantity supplied of that good

10:-There is inverse relationship between income and quantity supplied of a good

Decreasing part of marginal product of labor curve shows which of the following law?

Select correct option:

Law of diminishing returns

Law of diminishing marginal utility

Law of demand

Law of supply

1: $\ln Q = \ln A + a \ln K + b \ln L$. This is the logarithmic form of:

- Investment function
- **Cobb Douglas production function shez correct**
- Simple production function
- Regression function

2: Suppose $Y = f(X)$, if $Y = 80 - 100X$ then what will be dY/dX according to rules of differentiation?

- 80
- -100
- 180
- 80X

3: Given the Cobb Douglas production function: $Q = AL^aK^b$ There will be decreasing returns to scale if:

- $a + b > 1$
- $a + b < 1$
- $a + b = 1$
- $a + b = 0$

4: Suppose $Y = f(X)$, if $Y = 16X + 57$ then what will be dY/dX according to rules of differentiation?

- 16
- 16X
- 57
- 57X

5: $Y = a + bX + e$ "b" shows ----- in this regression equation.

- Intercept
- Slope
- Elasticity
- Power

6: $GNP = C + I + G$. This is an example of:

- **Definitional equation** shez correct
- Reduced form equations
- Simultaneous equation
- Behavioral equation

7: Two inputs cannot be substituted with each other in the production process. It shows that:

- Inputs are perfect substitutes
- Inputs are perfect compliments
- Inputs are not sufficient
- Inputs are more than sufficient

8: The technique of conducting survey interviews is the part of which of the following forecasting analysis?

- Qualitative forecasting
- Quantitative forecasting
- Time series analysis

9: In the map of Isoquants, a higher Isoquant shows:

- Higher level of output
- Higher level of input
- Higher level of price
- Higher level of satisfaction

10: $Y = a + bX + e$ In this regression equation, "X" is:

- Dependent variable
- Independent variable
- Slack variable
- Random variable

11: Consider the following equation of time series data: $Y_t = f(T_t, C_t, S_t, R_t)$ ----- shows seasonal component at time t.

- T_t
- C_t
- S_t
- R_t

12: Smoothing techniques will be more beneficial if:

- Smaller number of time periods is used
- Greater number of time periods is used
- No time period is used
- Two time periods are used
