

VIRTUAL UNIVERSITY OF PAKISTAN

03126968553

Semester Fall 2023

LECTURE WISE NOTES:

Short Questions File & MCQ's File

03126968553

COURSE: EDU402

Short Questions File For Final Exams

Lecture # 19

What are the different levels for analyzing CL data?

Answer: The different levels for analyzing CL data are: 1) Nation wide, 2) Community wide, and 3) Area served by one school.

What types of data are already available at the national level for CL analysis?

National data are already available to guide possible objectives regarding national affairs, such as indicating critical social, political, and economic problems. There are also data available on music, arts, and aesthetic life.

What is the procedure to study a community?

The procedure to study a community involves selecting a familiar community, preparing a list of existing studies about CL, outlining the kind of studies needed for the school as a whole, outlining specific information needed about the community, suggesting ways to collect the information, and considering possible interpretations.

Who is a subject specialist (SS) and why seek suggestions from them?

A subject specialist (SS) is someone with considerable knowledge and experience in a specialized field. Suggestions are sought from SS because they can propose objectives based on their expertise and experience.

How can subject specialists contribute to the education of young students who are not specialists in their field?

Subject specialists can contribute to the education of young students by suggesting objectives based on their knowledge and experience, which can be useful in terms of discipline content and skills.

Where can we get information about subject specialists' suggestions for curricular objectives?

Information about subject specialists' suggestions for curricular objectives can be obtained from curriculum reports by commissions and committee reports by National Councils of Teachers.

What types of suggestions can be drawn from reports by subject specialists?

Two types of suggestions can be drawn from reports by subject specialists: 1) The broad function of a particular subject that it can serve, and 2) The particular contribution that the subject can make to other large functions that are not primarily functions of the subject itself.

What are some suggested curricular objectives for English as a study of language?

Some suggested curricular objectives for English as a study of language include developing effective communication of meaning and form, developing effective expression, and aiding in the clarification of thought.

Lecture # 20

What are the functions of English as Literature?

- i. Personal explorations
- ii. Extension to experience
- iii. Reading interests & habits
- iv. Ability to appreciate English as Literature

What does English as Literature provide greater extension to?

The experience of young people.

What does English as Literature develop?

Reading interests & habits.

What are the suggested objectives for language & literature?

Development of children, adolescence, and adults

What are the functions of Science as suggested in the committee report?

- i. Contribution to improvement of health
- ii. Conservation & wise use of natural resources
- iii. Providing a satisfying world picture

What does Science contribute to regarding health?

Individual and public health improvement

What does Science contribute to regarding conservation?

Conservation and wise use of natural resources

What does Science provide a satisfying picture of?

The world as viewed by scientists and man's relation to the world

What are the objectives in the Science field?

Relating to knowledge, skills, attitudes, problem solving, and interests

What are the major areas of human relations in which Science contributes?

- i. Personal living
- ii. Personal-social relations
- iii. Social-civic relations
- iv. Economic relations

Lecture # 21

What should schools try to obtain in terms of educational objectives?

Schools should try to obtain a large number of educational objectives.

How many educational objectives can a school achieve?

A school can achieve a large number of objectives.

How many objectives should a school try to achieve?

A school should try to achieve a small number of consistent and highly important objectives.

How can unimportant and inconsistent objectives be eliminated from the collection of objectives?

Through the screening of a heterogeneous collection of objectives obtained through studies of learners, CL (Curriculum Development), and SSs (Social Sciences) reports.

How can the educational and social philosophy of a school be used as a screen for selecting and eliminating objectives?

By identifying objectives that align with the values stated or implied in the school's philosophy.

What does the educational and social philosophy of a school generally attempt to define?

The nature of a good life and society.

What are the democratic values emphasized in educational philosophy?

- i. Recognition of the importance of every individual human being.
- ii. Opportunities for wide participation in all phases of activities in the society.
- iii. Encouragement of variability rather than demanding a single type of personality.
- iv. Faith in intelligence as a method of dealing with important problems.

How are objectives selected based on values and habits?

Objectives consistent with the democratic values will be picked, while inconsistent objectives will be eliminated.

What values are approved in CL (outside school)?

Material values and success.

Does the school philosophy accept contemporary emphasis on materialism and financial success as educational values?

No, it does not.

Which objectives will be eliminated from the proposed objectives?

Objectives implying skills, practices, or habits that contribute to material rewards or success will be eliminated.

Which objectives will be given a higher rank?

Objectives that lead towards spiritual values.

Should the school develop young children to fit into the society as it is?

It depends on the educational philosophy of the school.

What will a school emphasize if it believes its primary function is to teach people to adjust to society?

Obedience to present authorities, loyalty to present traditions, and skills in carrying on the present techniques.

What objectives will a school include if it intends to enable children to change society?

Critical analysis, problem-solving, freedom, and self-discipline.

Should there be different education for different classes of society?

It depends on the answer to this question.

Is it justified to state different objectives for lower-class children who leave school early to work?

Yes, it can be justified.

Should public school education be aimed at specific vocational preparation?

The answer to this question affects the selection and emphasis of objectives.

What ways are developed to attain personally and socially significant objectives?

Ways are developed to attain these objectives with a variety of students.

Does the educational philosophy of schools deal with questions about different education for different classes of society?

Yes, it does.

Lecture # 22

How is knowledge of the psychology of learning useful?

It is useful at different levels.

It helps in grade placement.

It identifies the conditions requisite for learning.

Give an example of a change in students that can result from learning and one that cannot.

Learning can help students develop health habits and knowledge.

However, learning cannot increase their height.

How does knowledge of psychology of learning help in distinguishing feasible goals from unattainable ones?

It helps in distinguishing goals that are realistic and achievable at a certain age level. For example, profound personality change is attainable during preschool and primary years but not among 16-year-olds.

What is grade placement and how does psychology of learning contribute to it?

Grade placement refers to considering educational objectives for different grades and age levels.

Psychology of learning provides insights into the time required and the age level at which efforts are more efficiently employed to achieve educational objectives.

What is an important fact about the learning of a given operation?

There is no single age level at which a given operation can be learned.

How does the psychology of learning aid in determining grade placement objectives?

Psychological knowledge helps in understanding the sequence of learning.

For example, learning basic vocabulary should precede the development of reading ability.

What are some conditions requisite for learning according to psychology?

The application of learned knowledge in daily life.

Ensuring less chances of forgetting.

Enhanced acquisition of knowledge.

What are some useful psychological findings about learning experiences?

Most learning experiences produce multiple outcomes.

Learning operations in mathematics contribute to developing a positive attitude towards the subject.

What are important suggestions regarding educational objectives?

A small number of consistent and highly important objectives should be selected.

How can unimportant and inconsistent objectives be eliminated?

Step 1: Identify and remove unimportant and inconsistent objectives from the collection.

Step 2: Focus on the selected objectives.

How can objectives be stated to guide the teaching/learning process?

They can be stated as things to be done by the instructor.

They can be expressed as topics, concepts, generalizations, and content to be taught.

What is the purpose of stating objectives as generalized patterns of behaviors?

It helps in describing the expected changes in behavior patterns of students.

Give examples of objectives stated as things to be done by the instructor.

Introduce mathematical operations.

Introduce the concept of evolution.
Demonstrate grouping and classification.

What is the problem with stating objectives as activities to be carried out by teachers?

It does not indicate the expected changes in students.

It does not provide a clear guideline for selecting materials and planning methods for the curriculum.

Lecture # 23

In what forms can objectives be stated?

Objectives can be stated as topics, concepts, content elements, or generalizations.

Do objectives stated as topics or concepts specify the expected changes among students?

No, objectives stated as topics or concepts do not specify the expected changes among students.

What is the purpose of stating objectives as generalizations?

Stating objectives as generalizations helps to provide true statements that students are expected to memorize and apply in concrete illustrations.

What are the limitations of stating objectives as topics?

Stating objectives as topics makes it more uncertain to determine the desired changes among students, and it becomes difficult to plan instructional activities to achieve the objectives.

Why do objectives stated as generalized patterns of behaviors fail to indicate specific areas of application?

Objectives stated as generalized patterns of behaviors do not specify the area of life or the content to which the behavior applies.

What is missing when objectives focus solely on behavior types?

Objectives stated in terms of behavior types alone lack the necessary guidelines for curriculum development and instruction.

What is the most useful form of stating objectives?

The most useful form of stating objectives is to identify the behavior to be developed and the content or area of life where this behavior applies.

Why is it important to include both behavior and content in well-stated objectives?

Clear objectives that include both behavior and content provide guidance in developing teaching plans and help in the selection of learning experiences.

How can clear and concise objectives be presented effectively?

A two-dimensional graphic chart can be used to present clear and concise objectives.

How can a two-dimensional chart of objectives be useful?

It helps in selecting learning experiences, achieving intended behaviors, and learning content or concepts.

What does a satisfactory formulation of objectives do?

A satisfactory formulation of objectives clearly indicates the educational task and helps define the desired educational results.

What do clearly defined educational ends provide curriculum makers with?

Clearly defined educational ends provide criteria for content selection, suggesting learning experiences, and making decisions for teaching procedures.

Lecture # 24

What are the educational purposes that the school should strive to achieve?

The school should seek to attain specific educational objectives.

How can the school provide educational experiences to achieve these purposes?

By designing and implementing curriculum and learning activities.

What is the role of learning experiences in education?

Learning experiences refer to the interaction between learners and their external environment, which facilitates learning.

What is the difference between learning experiences and the content of a course?

Learning experiences are the interactions between learners and the environment, while the content of a course refers to the subject matter being taught.

How does learning take place?

Learning occurs through the active behavior of the learner, emphasizing that what the learner does is crucial for learning.

Can two students in the same class have different learning experiences?

Yes, students in the same class can have different learning experiences based on their individual interests, attention, and reactions to the environment.

What is the responsibility of a teacher in providing educational experiences?

The teacher's role is to set up an environment and structure situations to stimulate desired reactions and create learning experiences for students.

How can a teacher manipulate the learning environment to facilitate learning?

A teacher can manipulate the learning environment by creating a stimulating atmosphere that encourages students to develop the desired behaviors.

Does the theory of learning reduce the teacher's responsibility?

No, the theory of learning recognizes that the learner's reactions determine what is learned, but the teacher still has a significant responsibility in creating the learning environment.

How do students respond to the learning environment created by the teacher?

Students respond to the learning environment designed by the teacher, and their responses contribute to what they learn in the classroom.

What responsibility does the teacher have regarding diversity among students?

The teacher needs to set up a situation that caters to the diverse experiences and needs of each student in the class.

What is the challenge in selecting learning experiences?

The challenge lies in determining the type of experiences that are likely to achieve specific educational objectives and setting up situations that provoke desired learning experiences.

How can a teacher ensure that learning experiences are significant to each student?

The teacher may need to vary the learning experiences provided to cater to the unique needs and interests of individual students.

What factors influence the selection of learning experiences?

The selection of learning experiences is influenced by the desired educational objectives and the need to provoke specific reactions from students.

What is the role of the teacher in planning an educational program?

The teacher plays a crucial role in planning and designing the educational program by determining the learning experiences that will be offered to the learners.

What is the significance of educational purposes in curriculum development?

Educational purposes guide the development of the curriculum and help define the objectives that need to be achieved through the educational program.

How can educational experiences contribute to the attainment of educational ends?

Educational experiences provide opportunities for students to learn and apply the desired behaviors and content required to achieve the educational objectives.

What is the relationship between learners and their environment in the learning process?

Learning is a result of the interaction between learners and their environment, where learners react and respond to the conditions and stimuli around them.

How can a teacher predict learning outcomes based on students' interests and backgrounds?

By understanding the interests and backgrounds of students, a teacher can make predictions about the types of learning experiences that are likely to provoke the desired reactions and facilitate learning.

What is the teacher's method of controlling learning experiences?

The teacher controls learning experiences by manipulating the learning environment, creating situations that stimulate the desired behaviors and reactions from students.

Lecture # 25

How can learning experiences be selected to achieve objectives?

The selection of learning experiences depends on the specific objectives that need to be attained.

What are the principles for selecting learning experiences?

The principles for selecting learning experiences include opportunities for practice, satisfaction for students, desired reactions, multiplicity of experiences, and multiple outcomes.

Why is it important to provide opportunities to practice?

Students need opportunities to practice the desired behaviors implied by the objectives in order to attain them.

Give an example of an objective that requires skill in problem-solving.

An example of an objective requiring skill in problem-solving is "To develop problem-solving skills in health."

How can learning experiences be satisfying for students?

Learning experiences should provide satisfaction to students while they learn the desired behaviors specified in the objectives.

What role does the teacher play in determining if a learning experience is satisfying?

The teacher needs to have sufficient knowledge of students' interests, needs, and understanding of human satisfaction to judge whether a particular learning experience will be satisfying for students.

What should be the relationship between desired reactions and the range of possibilities for students?

The desired reactions in learning experiences should be within the range of possibilities for the students involved.

What factors should a teacher consider regarding students' present attainments?

The teacher should consider students' current achievements and predispositions when selecting learning experiences.

What is the significance of the teacher's knowledge of students' existing attainments and background?

The teacher's understanding of students' attainments and background helps ensure that the desired behaviors are possible for them.

How can multiple learning experiences contribute to achieving a particular objective?

Multiple learning experiences that meet the criteria for effective learning can be used to achieve a specific objective.

What advantage does the availability of multiple learning experiences offer to teachers?

Having a variety of learning experiences allows teachers to engage in creative planning for effective teaching in the classroom.

How can a school benefit from developing a wide range of learning experiences?

A school can benefit from developing a wide range of learning experiences to achieve the same objectives by catering to the interests and needs of students and teachers/staff.

What is the relationship between objectives and learning experiences?

Objectives define the desired behaviors and content to be achieved, while learning experiences facilitate the development of those behaviors and the acquisition of content.

Can a single learning experience be used to achieve multiple objectives?

Yes, a single learning experience can be designed in such a way that it contributes to the achievement of multiple objectives.

How can teachers ensure that learning experiences are meaningful and relevant to students?

Teachers should align learning experiences with students' interests, needs, and backgrounds to make them meaningful and relevant.

Why is it important for learning experiences to be diverse?

Diverse learning experiences cater to the varying interests, learning styles, and needs of students, making education more inclusive and effective.

How can teachers foster creativity in planning learning experiences?

Teachers can foster creativity in planning learning experiences by exploring different teaching strategies, incorporating hands-on activities, and adapting the curriculum to suit students' needs.

What role does student engagement play in selecting learning experiences?

Student engagement is essential in selecting learning experiences as it ensures active participation and motivation, leading to more effective learning outcomes.

How can teachers incorporate real-world applications into learning experiences?

Teachers can integrate real-world examples, case studies, and problem-solving tasks into learning experiences to help students connect theoretical concepts with practical applications.

What impact can well-designed learning experiences have on student achievement?

Well-designed learning experiences can enhance student engagement, understanding, and skill development, leading to improved academic performance and overall achievement.

Lecture # 26

Do curricula need to provide a specific set of learning experiences to achieve desired objectives?

No, curricula do not need to provide a certain limited or prescribed set of learning experiences to ensure the attainment of desired objectives.

What is the principle regarding the multiplicity of outcomes in learning experiences?

The same learning experience can result in multiple outcomes.

Give an example of a learning experience that can lead to multiple learning objectives.

A learning experience focused on problem-solving related to health can lead to various learning objectives, such as learning about the health field, developing attitudes towards public health procedures, developing interest or disinterest in the health field, etc.

What is the positive aspect of using a single learning experience for multiple objectives?

Well-planned learning experiences that address multiple objectives allow for economy of time, as several objectives can be achieved within a limited timeframe.

What is the negative aspect of using a single learning experience for multiple objectives?

Some undesirable outcomes may arise from a learning experience that was originally planned for a different purpose, so teachers need to be cautious about unintended consequences.

What are the useful characteristics of learning experiences for achieving different types of objectives?

The characteristics of learning experiences depend on the specific objectives. Examples include developing thinking skills, acquiring information, developing social attitudes, and cultivating interests.

What does thinking skills development entail?

Thinking skills development involves activities that go beyond memorization and repetition, focusing on relating ideas, inductive and deductive reasoning, and logical thinking.

What are the steps in the process of problem-solving and thinking?

The steps include identifying a problem, analyzing the situation or problem, collecting facts, formulating questions, generating possible hypotheses or solutions, testing hypotheses, and drawing conclusions.

Is there only one type of thinking required in a particular situation?

No, different aspects of thinking are required in various situations, and learning experiences should involve multiple kinds of thinking to cater to the diverse needs of students.

What kind of problems should learning experiences for thinking skills development be based on?

Learning experiences for thinking skills development should be based on problems that are relevant to students, thought-provoking, and require the application of facts and ideas.

What is the objective of learning experiences to acquire information?

The objective is to develop understanding and knowledge about specific things, including principles, laws, theories, experiments, evidence, generalizations, facts, and ideas.

How should information be viewed in the context of learning experiences?

Information is functional and valuable when it is useful and guides students' actions in problem-solving contexts. Information itself is not an end but a means to solve problems.

What are some learning experiences that can help develop social attitudes?

Learning experiences that involve collaborative projects, discussions on social issues, role-playing, and community engagement can help develop social attitudes.

How can learning experiences be designed to develop students' interests?

Learning experiences can be designed to include topics and activities that align with students' personal interests, provide choices for exploration, and foster curiosity and engagement.

How can teachers ensure that learning experiences are thought-provoking?

Teachers can design learning experiences that present challenging questions, open-ended problems, real-life scenarios, and opportunities for critical thinking and reflection.

How can learning experiences be tailored to address individual students' needs and backgrounds?

Teachers can differentiate learning experiences by considering students' diverse backgrounds, prior knowledge, learning styles, and interests to ensure meaningful and relevant learning opportunities for all.

How can teachers create a classroom environment conducive to effective learning experiences?

Teachers can establish a supportive and inclusive classroom environment, promote active student engagement, provide clear instructions and expectations, and offer timely feedback to enhance learning experiences.

What role does feedback play in optimizing learning experiences?

Feedback helps students understand their progress, identify areas for improvement, and make adjustments in their learning approaches. It enhances the effectiveness of learning experiences.

How can learning experiences be designed to promote critical thinking?

Learning experiences that encourage students to analyze, evaluate, and generate their own ideas, make connections across disciplines, and engage in problem-solving tasks foster critical thinking skills.

How can the integration of technology enhance learning experiences?

The integration of technology can provide interactive and immersive learning experiences, facilitate access to a wide range of resources, support collaborative learning, and promote creativity and innovation.

Lecture # 27,28 & 29

How does simultaneous acquisition of information and problem-solving reduce rote memorization?

When information is acquired and immediately applied to solve problems, it reduces the likelihood of rote memorization.

Why is it important to use fewer terms when sharing information in subjects like Science and Maths?

Using fewer terms reduces confusion and helps students remember and understand the information better.

How does setting up a situation in a learning experience increase the likelihood of remembering important information?

Creating a situation intensifies the variety of impressions of the information, making it more memorable and less likely to be treated casually.

Why is it beneficial to teach important pieces of information in varied contexts?

Teaching important information in different contexts helps students remember and understand it better, ensuring they recognize its significance in different situations.

Which courses are helpful in developing social attitudes?

Social studies, literature, arts, physical education, and co-curricular activities are courses that contribute to the development of social attitudes.

What is an attitude?

An attitude is a tendency to react, even if the reaction doesn't actually occur. It is a part of one's personality that may be unexpressed but influences behavior.

Why are attitudes important?

Attitudes are important because they strongly influence behavior, values, and the types of satisfaction one desires or selects.

How do attitudes develop?

Attitudes are assimilated from the environment, influenced by emotional experiences, traumatic events, and direct intellectual processes.

How can consistent school and community environments be created?

Consistent school and community environments can be created by establishing a cohesive and supportive atmosphere that aligns with the desired attitudes and behaviors.

How do learning experiences provide a broad analysis of social situations?

Learning experiences encourage understanding and the development of desired attitudes by exploring and discussing social issues within the classroom.

How can students review their conduct in a particular area to develop their attitudes?

Students can review their behavior and assess the alignment between their beliefs and actions, identifying areas for improvement and growth.

Can attitudes be forced to change in educational settings?

No, attitudes cannot be forced to change. Attitude shifts occur through gaining insight and knowledge, experiencing satisfaction or dissatisfaction with previous views, and a combination of processes.

What is an interest?

An interest is the focus or end goal of something, and in education, it refers to the objectives students pursue. Interests determine what students pay attention to and engage in.

What are the means for developing interests in education?

Motivational forces, such as social approval, meeting physical needs, and fulfilling aspirations, contribute to the development of interests.

How can learning experiences be designed to develop interests effectively?

Learning experiences should provide opportunities to develop interests aligned with the objectives, be satisfying for the target group of students, and involve actions students are ready to perform.

What is meant by the organization of learning experiences?

Organization refers to arranging and structuring learning experiences in a coherent manner to effectively achieve educational objectives.

What are the criteria for effective organization of learning experiences?

The criteria for effective organization include continuity, sequence, and integration.

How does continuity contribute to effective organization?

Continuity ensures the repeated occurrence of curricular elements, providing recurring opportunities for development and practice.

What is the significance of sequence in organizing learning experiences?

Sequence builds upon previous experiences, delving deeper into concepts and skills to provide a more comprehensive understanding and avoid repetition.

How does integration support effective organization?

Integration establishes horizontal relationships between subject areas, allowing.

Lecture # 30

What is the main challenge in achieving integration when the organizing structure consists of specific pieces?

The main challenge is arranging the elements of each piece into a unified form and developing relationships among them.

Why does achieving integration become difficult with a large number of pieces in the organizing structure?

With a large number of pieces, it becomes challenging to establish relationships among and between them.

In an elementary school setting, why is it difficult to achieve integration with 8 or 9 subjects?

The presence of multiple subjects makes it challenging to integrate them effectively into a unified structure.

What are some broad fields that can be used for integration in elementary school?

Language arts, social studies, health and hygiene, and physical education can be used as broad fields for integration.

How does core curriculum facilitate integration compared to narrow subject boundaries?

Core curriculum poses fewer difficulties in achieving integration as it allows for interposition of boundaries between subjects.

How does integration with daily life experiences of students cut across narrow subject lines?

Daily life experiences require students to apply what they have learned in school, which often involves using knowledge from different subjects.

What is the suggested approach for organization in terms of broad groupings?

Instead of narrow units like subjects and courses, using broad fields or core programs as organizational groupings is recommended.

What advantage does a structural organization with larger blocks of time have over one with specific units?

Larger blocks of time allow for better planning and reduce the need for frequent transitions between units.

Why does an undifferentiated organization of the school day create problems?

An undifferentiated organization fails to account for the varied competencies required among teachers and the need for students to transition between activities before getting tired.

What is the importance of dividing the school day into periods of varied activity and providing interaction with multiple teachers?

Dividing the day into varied periods and involving multiple teachers allows for a more engaging and interactive learning experience.

What types of competencies are required among teachers in a school?

Various types of competencies, such as subject knowledge, teaching skills, and classroom management, are required among teachers.

Why is it important for children to move from one activity to another before they get tired?

Moving between activities prevents children from getting fatigued and helps maintain their engagement and focus.

How does an undifferentiated organizational structure make it more challenging to provide varied activities and interaction with multiple teachers?

An undifferentiated structure lacks the necessary flexibility to accommodate diverse activities and multiple teacher interactions effectively.

How can larger structural organizations contribute to better integration?

Larger structural organizations provide more opportunities for planning, flexibility, and coordination among different aspects of the curriculum.

What should be considered when planning the school day in terms of activities and teacher interactions?

Factors such as the students' needs, the content to be covered, and the availability of teachers should be considered during the planning process.

Why is it important for integration to consider the daily lives of students?

Integrating education with students' daily lives enhances relevance and application of knowledge, making learning more meaningful.

How can integration enhance the learning experience for students?

Integration allows students to make connections between different subjects and apply their knowledge to real-life situations, promoting a deeper understanding.

What are the benefits of using broad fields or core programs for organization?

Using broad fields or core programs facilitates the integration of related subjects, making the curriculum more coherent and meaningful for students.

What challenges can arise when attempting to integrate a large number of subjects within a narrow organizational structure?

Integrating a large number of subjects within a narrow structure can lead to fragmentation, lack of coherence, and difficulty in establishing connections between different areas of knowledge.

How does integration support the overall educational goals of a school?

Integration helps achieve a holistic and comprehensive educational experience by promoting interdisciplinary understanding, critical thinking, and the application of knowledge in real-world contexts.

Lecture # 31

How do we identify the learning experiences?

By determining what activities and exercises will facilitate learning.

What is the process of organizing the learning experiences?

It involves arranging the activities and exercises in a logical and coherent manner.

How can we calculate the effectiveness of a developed curriculum?

By assessing the learning outcomes and measuring the achievement of objectives.

How do we determine the objectives of a curriculum?

By clearly defining the desired outcomes and goals of the curriculum.

What are the important criteria for organizing the curriculum?

Continuity, sequence, and integration are important criteria for organizing the curriculum.

What is meant by LE organization?

LE organization refers to the organization of learning experiences within the curriculum.

What elements need to be organized in the curriculum?

The learning experiences, activities, and exercises need to be organized within the curriculum.

What are organizing principles?

Organizing principles are guidelines or principles followed to structure and arrange the curriculum content.

How do we plan a unit of organization?

By determining the specific objectives, selecting appropriate learning experiences, and arranging them in a logical sequence.

What is the purpose of organizing the learning experiences?

The purpose is to create a structured and coherent curriculum that promotes effective learning.

What is the general scheme of organization?

The general scheme of organization refers to the overall framework or structure of the curriculum.

What are the general organizing principles?

The general organizing principles are the guidelines or principles followed within each field of the curriculum.

What is the typical sequence used in mathematics curriculum?

The typical sequence in mathematics curriculum is to start with arithmetic, then move to algebraic, and finally geometric concepts.

How is social studies curriculum organized?

Social studies curriculum is typically organized by starting with problems within the community and progressing to wider world problems.

Why is it important to decide the best organizing principle during curriculum development?

It is important to choose the best organizing principle to ensure the curriculum is effective and aligned with the desired learning outcomes.

What are the different types of low-level units used in the curriculum?

The different types of low-level units include daily lesson topics in sequence or teaching units.

What is the purpose of developing flexible plans or source units?

The purpose is to provide teachers with adaptable plans and resources to meet the needs of their students.

What does a source plan provide for teachers?

A source plan provides a collection of possible materials and experiences that teachers can select from for teaching.

What are the characteristics of a source plan?

A source plan is flexible, allowing for modifications, and inclusive, providing a wide range of experiences for selection.

How does teacher-student planning contribute to curriculum organization?

Teacher-student planning involves collaboration in selecting activities and objectives, and it helps ensure the curriculum meets the needs of the students.

Lecture # 32

What is a source plan?

A source plan is a preliminary flexible plan for teaching.

What is the purpose of a source plan?

The purpose of a source plan is to provide a collection of possible materials for teachers.

What are the characteristics of a source plan?

- a) Flexible - can be modified.
- b) Inclusive - offers a wide range of experiences.
- c) Allows teachers to select materials based on the needs, interests, and abilities of their students.

What is included in the composition of a typical source unit?

- a) Statement of major objectives
- b) Description of various learning experiences
- c) Detailed outline of concluding experiences
- d) List of source materials or resources
- e) Experienced level of development of major elements

Why is it important to outline concluding experiences in a source unit?

Concluding experiences help students integrate and organize what they have learned from the unit.

What types of source materials can be included in a source unit?

Materials can include books, reference materials, slides, videos, pictures, radio programs, recordings, and more.

Why is it necessary to specify the level of development for major elements in a curriculum?

It helps prevent duplication, avoid gaps in student development, and ensure effective learning.

What are some ways to suggest learning experiences for a source unit?

Suggest learning experiences that are linked to the organizing principles of the unit and that serve a variety of student needs and interests.

How should learning experiences be linked to organizing principles in a source unit?

Learning experiences should align with the organizing principles to ensure coherence and effectiveness in teaching.

What should be considered when suggesting learning experiences for a source unit?

Learning experiences should be broad enough to fulfill a variety of needs and interests of students at the targeted grade level.

How can the variety of material be used in a source unit?

Material can be verbal (such as video tapes or audio tapes), non-verbal (concrete materials), in-school or after-school resources, or related to field trips or community activities.

Why is it important to consider culminating experiences in a source unit?

Culminating experiences tie together varied experiences, facilitate integration, and help students organize their learning.

How can source units be organized in science and social studies?

Source units in science and social studies can be organized around big ideas or around specific problems or issues.

How can source units be organized for aesthetic and art units?

Aesthetic and art units can be organized around something to be done or a series of appreciation experiences.

What is the purpose of suggesting a variety of materials in a source unit?

Suggesting a variety of materials ensures that different types of activities and learning experiences can be supported, reinforcing the objectives of the unit.

Why is it important for suggested materials and learning experiences to supplement each other?

Supplementing materials and learning experiences ensures coherence and prevents conflicts or difficulties in implementing the source unit.

What is the role of a source unit in pre-planning activities for teachers?

The source unit provides pre-planning guidance and materials for teachers to effectively teach a specific topic or subject.

Why is integration and making connections important in organizing source units?

Integration and making connections between different subject areas enhance students' understanding and help them organize their learning more effectively.

How can big ideas or problems be used to organize source units?

Big ideas or problems can serve as focal points for organizing source units, particularly in subjects like science, social studies, or geography.

What is the focus of organizing aesthetic and art units?

Aesthetic and art units can be organized around specific activities or a series of appreciation experiences to develop students' aesthetics abilities.

Lecture # 33

What is the purpose of developing effective schemes for source units in the elementary level curriculum?

Answer: The purpose is to provide creative opportunities for effective teaching in various subject areas.

What does a source unit represent in curriculum planning?

Answer: A source unit represents the pre-planning stage before actual teaching takes place.

Why is there variation in planning from group to group in elementary schools?

Answer: Each group of students has differences in background, interests, and needs, leading to variations in planning.

What are the benefits of teacher-student planning for students?

Answer: Teacher-student planning enables students to develop a greater understanding, give meaning to their learning, and be motivated for learning.

Can a particular plan developed by each group of students include all the materials given in the source unit?

Answer: No, a particular plan will never include all the materials given in the source unit itself.

What is the role of pre-planning and planning in achieving cumulative learning effects?

Answer: Pre-planning and planning help achieve the greatest cumulative effect from various learning experiences.

What are the criteria for organizing learning experiences?

Answer: The criteria for organizing learning experiences need to be followed to ensure effective organization.

What is the process of planning a unit of organization?

Answer: The process of planning a unit involves organizing or unorganized unit plans for teaching purposes.

What are the basic questions for curriculum development?

Answer: The basic questions include: What educational purposes should the school seek to attain? What educational experiences can be provided? How can these experiences be effectively organized? How can we determine if these purposes are being attained?

Why is evaluation important in curriculum development?

Answer: Evaluation helps determine whether the educational objectives and purposes are being achieved.

What are some basic notions about evaluation in curriculum development?

Answer: Evaluation involves checking learning experiences against criteria derived from educational psychology, practical experiences, and important psychological principles.

What variables affect actual teaching in the classroom?

Answer: Variables such as individual differences among students, learning environment conditions, teacher's skill in setting up learning conditions, and teacher's personality characteristics affect actual teaching.

Why is a more inclusive check needed after the plans are developed?

Answer: A more inclusive check is needed to determine whether the plans for learning experiences effectively guide the teacher in achieving the desired outcomes.

What is the purpose of evaluation in curriculum development?

Answer: The purpose of evaluation is to assess the extent to which the plans were successfully developed and executed in the classroom.

Why is evaluation necessary for learning experiences in the curriculum?

Answer: Evaluation is necessary to ensure that the learning experiences meet the desired outcomes and goals.

What is the reason for conducting evaluation after the curriculum is developed?

Answer: Evaluation is conducted to assess the effectiveness of the curriculum and teaching process in achieving desired outcomes.

What are the criteria used to check learning experiences in evaluation?

Answer: The criteria used are general principles that apply to the generalized characteristics of the learning experiences.

What variables can influence the effectiveness of teaching in the classroom?

Answer: Individual differences among students, learning environment conditions, teacher's skill, and teacher's personality characteristics are variables that can influence teaching effectiveness.

What is the purpose of evaluating the process of curriculum development?

Answer: The purpose is to ensure that the curriculum development process is effective and successful.

What is the focus of evaluating the process of curriculum development?

Answer: The focus is on determining the extent to which the plans were successfully developed and implemented in the classroom setting.

Lecture # 34

What is the purpose of evaluation?

Answer: The purpose of evaluation is to determine the effectiveness and strengths and weaknesses of instructional programs.

What does evaluation help check in terms of curriculum?

Answer: Evaluation helps check the effectiveness of the curriculum and identifies areas that need improvement.

What aspects does evaluation assess in the instructional program?

Answer: Evaluation assesses the validity of the basic hypotheses, the effectiveness of teachers, materials, and other conditions used in the instructional program.

What does the process of evaluation enable curriculum developers to do?

Answer: The process of evaluation enables curriculum developers to determine the effectiveness of the curriculum and identify areas for improvement.

What are some basic notions about evaluation?

Answer: Some basic notions about evaluation include change in behavior, frequency, modes, and sampling.

What is the main purpose of evaluation in relation to educational objectives?

Answer: The main purpose of evaluation is to determine the extent to which educational objectives are being realized through the curriculum and instruction.

Why is it necessary to conduct multiple appraisals?

Answer: Multiple appraisals are conducted to observe changes in behavior over time and assess the effectiveness of the instructional program.

Why is evaluating at the beginning of a program important?

Answer: Evaluating at the beginning of a program helps establish a baseline and provides a reference point for measuring changes in student performance.

What are the possibilities of progress on objectives before starting a program?

Answer: The possibilities are that students have either made good progress, very little progress, or no progress before beginning the program.

Why are at least two appraisals necessary in educational evaluation?

Answer: Two appraisals are necessary to assess progress over time and determine the effectiveness of the instructional program.

Is conducting two appraisals sufficient?

Answer: No, two appraisals may not be sufficient because some objectives may be acquired during the program but forgotten later.

Why is evaluating after the completion of an instructional program important?

Answer: Evaluating after the completion of a program helps estimate the learning or performance of learners and provides further evidence of their progress.

What are follow-up studies in evaluation?

Answer: Follow-up studies are conducted to gather additional evidence of performance and the durability of learning after students have left the educational institution.

What is the most desired appraisal in evaluating the curriculum?

Answer: The most desired appraisal is to evaluate the curriculum at various grades and stages of student development.

What does evaluation help identify in terms of instructional plans?

Answer: Evaluation helps identify the strengths and weaknesses of instructional plans.

What does evaluation check in relation to the basic hypotheses of instructional programs?

Answer: Evaluation checks the validity of the basic hypotheses upon which instructional programs are organized and developed.

What does evaluation assess in terms of the factors used to execute the instructional program?

Answer: Evaluation assesses the effectiveness of factors such as teachers, materials, and other conditions used to execute the instructional program.

What does evaluation enable curriculum developers to determine?

Answer: Evaluation enables curriculum developers to determine the effectiveness of the curriculum and identify areas for improvement.

What are some key aspects of evaluation?

Answer: Some key aspects of evaluation include change in behavior, frequency, modes, and sampling.

Why is it important to evaluate the curriculum before and after implementation?

Answer: Evaluating the curriculum before and after implementation helps measure changes and assess the effectiveness of the instructional program.

Lecture # 35

What are the benefits of year-after evaluation?

Answer: Year-after evaluation provides a continuing record of progress, evidence of realized objectives, and identifies stages where changes did not take place.

What is one mode of evaluation?

Answer: One mode of evaluation is the paper-pencil test.

What does the paper-pencil test provide?

Answer: The paper-pencil test provides a practicable procedure to gather evidence about various student behaviors, such as assessing prior knowledge, writing, reading, and multiple response tests.

Besides paper-pencil tests, what are other ways of gathering evidence?

Answer: Other ways of gathering evidence include observing children's personal-social adjustments, habits, and operational skills.

What is sampling involved in?

Answer: Sampling is involved in collecting evidence of students' reactions, written work, and interviews.

What can sampling be conducted on?

Answer: Sampling can be conducted on various human aspects such as attitudes, behaviors, interests, intellectual skills, and appreciations.

Is sampling only for individual appraisal?

Answer: No, sampling is not only for individual appraisal, but it can also be used to appraise the effectiveness of the curriculum by taking a carefully chosen representative sample of students.

What can sampling and follow-up studies assess?

Answer: Sampling and follow-up studies can assess the permanence of learning by studying the behavior of a representative sample of students.

What are some basic notions about evaluation?

Answer: Some basic notions about evaluation include guiding the evaluation of a program and considering implications while developing an evaluation program.

Lecture # 36

What is the need for evaluation?

Answer: Evaluation is needed to assess the extent of realization of objectives.

What are some basic notions about evaluation?

Answer: Some basic notions about evaluation include defining objectives and collecting evidence about content and behaviors.

What are the steps involved in the evaluation procedure?

Answer: The steps in the evaluation procedure include defining objectives, identifying situations, selecting and developing instruments, recording evidence, and summarizing records of learning.

When does the process of evaluation begin?

Answer: The process of evaluation begins as objectives are set.

What is the purpose of evaluation?

Answer: The purpose of evaluation is to assess the extent of realization of objectives.

How do you go about evaluation?

Answer: Evaluation procedures are developed to collect evidence about the content and behaviors implied by each major educational objective.

Give an example of an objective and the evidence required for evaluation.

Answer: Objective: To acquire knowledge about contemporary social problems.
Evidence required: Skills in analyzing social problems and appraising suggested solutions to them.

What is the importance of two-dimensional analysis?

Answer: Two-dimensional analysis serves as a basis for planning learning experiences and evaluation procedures.

What does analysis of objectives and evaluation help develop?

Answer: Analysis of objectives and evaluation help develop behaviors and knowledge skills.

How does analysis of behaviors and content headings help in evaluation?

Answer: Analysis of behaviors helps identify the behaviors to be appraised, and content headings help identify the content to be sampled in connection with the appraisal of behavior.

Give an example of an objective and the aspects for appraisal.

Answer: Objective: To develop interests in literature. Aspects for appraisal: Behavior (developing interests) and content (area to develop interests).

What aspects need to be sampled to check the development of interests?

Answer: Content and behavior aspects need to be sampled to check whether interests are actually developed.

What is the role of curriculum developer in the evaluation of curriculum?

Answer: The curriculum developer defines curriculum objectives clearly to guide the selection and planning of learning experiences.

What issues can arise if objectives are not clearly defined?

Answer: Unclear objectives lead to an unclear conception of what to evaluate.

What is the most important step in developing evaluation?

Answer: Defining objectives is the most important step in developing evaluation.

Lecture # 37

What is the purpose of identifying situations in evaluation?

Answer: The purpose is to provide students with an opportunity to express behaviors implied by educational objectives and observe the degree of realization of those objectives.

What is required to observe the degree of realization of educational objectives?

Answer: Situations that permit the expression of desired behavior and evoke that behavior are needed to observe the degree of realization of educational objectives.

What are some examples of situations for expressing behaviors?

Answer: Questioning, playing, working, and personal-social adjustments are examples of situations that can be used to observe behaviors.

What is the principle behind evaluation situations?

Answer: The principle is that any evaluation situation should give students an opportunity to express the type of behavior being appraised.

Are all situations under the control and accessible to evaluators?

Answer: No, there may be situations that are not under the control or accessible to evaluators to look for desired changes in student learning.

What should be done if a situation is difficult to handle?

Answer: If a situation is difficult to handle, the task is to try finding another simpler situation that has a high correlation with the desired behavior and can directly evoke it.

What should be examined after objectives and situations are identified?

Answer: The evaluation instruments should be examined to see how well they serve the evaluation purpose.

What should be checked when evaluating the available instruments?

Answer: The proposed instruments should be checked against the objectives to ensure they can evoke the desired behavior in the identified situations.

What might the availability of instruments reveal?

Answer: The availability of instruments may reveal that they are suitable for certain educational objectives, can be modified for other objectives, or cannot be used properly for existing objectives.

What should be done in a situation where instruments are not suitable?

Answer: In such a case, it may be necessary to develop a method for gathering evidence about the attainment of those objectives.

Lecture # 38

What are the two possible ways to devise an instrument for a particular objective?

Answer: The two possible ways are trying out situations that allow students to express desired behavior and checking if these situations serve as convenient ways of gathering evidence.

How can the ability to analyze problems be assessed?

Answer: One situation is presenting written problems and asking students to analyze them. The adequacy of the responses obtained can be checked to assess students' ability to solve problems.

How can student interests be determined?

Answer: A questionnaire with a variety of activities can be used, and students are asked to indicate their interests by checking the activities they are interested or not interested in.

Why is record-keeping necessary in situations such as playing and working together?

Answer: Recording children's reactions in situations like playing and working together provides an opportunity to appraise their personal-social adjustment after the reactions have been recorded.

What are some ways of record-keeping?

Answer: Making a detailed description of reactions by an observer, using motion pictures, sound recording, or checklists are some ways of obtaining a satisfactory record.

What should be considered when summarizing or appraising the record of behaviors obtained?

Answer: The method of summarizing should align with the implications of the behavior itself.

What decisions need to be made when summarizing records of reading interests?

Answer: Decisions need to be made about the units by which the record of student reading can be summarized, such as breadth and maturity.

How can breadth of reading be indicated?

Answer: The breadth of reading can be indicated by categorizing the reading material into different categories, such as stories, detective, adventure, religious, historical, etc.

How can maturity of reading be classified?

Answer: The maturity of reading can be classified into different levels, indicating the average level of maturity achieved.

What is the purpose of summarizing records of learning?

Answer: The purpose is to have a way to appraise the record of behaviors obtained and draw meaningful conclusions.

Lecture # 39

What are the three important aspects of evaluation mentioned in the paragraph?

Answer: The three important aspects are objectivity, reliability, and validity.

What does the analyzed profile of evaluation results indicate?

Answer: The analyzed profile indicates the present status of students in relation to the objectives and allows for comparisons with previous scores or descriptions.

How can the amount of change in reading interest be estimated?

Answer: By comparing the results obtained from several evaluations before and after a given period, it is possible to estimate the amount of change taking place.

What are the benefits of analyzing evaluation results?

Answer: Analyzing results helps identify the strengths and weaknesses of the curriculum and provides possible explanations for these patterns.

What is the next step after suggesting hypotheses to explain evaluation data?

Answer: The next step is to check the hypotheses against the present data, modify the curriculum accordingly, and assess improvement in student achievement.

What is the purpose of the cyclical process in curriculum planning?

Answer: The cyclical process ensures continuous improvement of the curriculum and instructional program, leading to an increasingly effective educational program.

What is one of the primary functions of evaluation in curriculum work?

Answer: One of the primary functions is to identify the strengths and weaknesses of the curriculum program.

How can evaluation help clarify educational objectives?

Answer: Evaluation serves as a powerful device for clarifying educational objectives if they have not already been clarified during the curriculum development process.

How does evaluation relate to learning and student studies?

Answer: Evaluation has a powerful influence on learning and student studies, providing insights into their progress and areas of improvement.

What is the role of evaluation in individual student guidance?

Answer: Evaluation plays a crucial role in individual student guidance by helping identify their needs and capabilities.

What is the purpose of continuous evaluation?

Answer: Continuous evaluation helps identify areas of improvement for both groups of students and individual students, guiding the planning of tailored educational programs.

How does evaluation relate to the success of a school?

Answer: Evaluation provides information about the success of a school in attaining objectives and needs to be communicated to parents and the public in understandable terms.

What does an evaluation procedure need to determine?

Answer: An evaluation procedure needs to determine the changes taking place among students and whether the curricular objectives are being achieved.

What are the criteria for evaluation mentioned in the paragraph?

Answer: The criteria are objectivity, reliability of sample, and validity of the method in providing evidence of desired behavior.

How should evaluation results be compared?

Answer: Evaluation results should be compared with previous scores or descriptions to assess whether changes are taking place.

What is the purpose of analyzing evaluation results?

Answer: Analyzing results helps identify the strengths and weaknesses of the curriculum and provides possible explanations for patterns observed.

What is the role of hypothesis checking in the evaluation process?

Answer: Hypothesis checking involves comparing the hypotheses against the present data, modifying the curriculum accordingly, and assessing improvements in student achievement.

What is the goal of the cyclical process in curriculum planning?

Answer: The goal is to continuously improve the curriculum and instructional program for an increasingly effective educational program.

How does evaluation help clarify educational objectives?

Answer: Evaluation serves as a powerful device for clarifying educational objectives if they haven't been clarified during the curriculum development process.

What are some other uses of evaluation mentioned in the paragraph?

Answer: Other uses include evaluation and learning, evaluation and individual student guidance, continuous evaluation, and evaluation of school success.

Lecture # 40

What are the two possibilities for applying the rationale to rebuild a school's curriculum?

Answer: The two possibilities are: a) the whole school staff agrees to reconstruct the curriculum, or b) the rationale can be applied systematically to a part of the program.

What are the demands of a school-wide program of curriculum reconstruction?

Answer: The demands include extensive faculty participation, clear understanding of instructional program objectives by each teacher, understanding of learning experiences (LEs) to attain objectives, and the ability to guide student activities to facilitate those experiences.

What can a team of teachers do in a small school during curriculum development?

Answer: The team of teachers can conduct studies of learners and life outside the school, examine reports of subject specialists, formulate the school's philosophy of education, and define the psychology of learning.

What steps are involved in planning learning experiences in a small school?

Answer: The steps include teachers working together in subject areas, same subjects at different grade levels, and related subjects collaborating to plan the learning experiences (LEs).

What is the role of the review committee in a small school's curriculum development?

Answer: The review committee, consisting of the same team of teachers, reviews the detailed plan of learning experiences and revises it as necessary. The same procedure can be followed for planning an evaluation program.

What is the first step in curriculum development for a large school?

Answer: The first step involves forming special committees to conduct studies of learners, contemporary life issues, and examine reports of subject specialists.

What is the role of drafting committees in a large school's curriculum development?

Answer: The drafting committees prepare initial drafts of the school's philosophy of education and psychology of learning.

Who participates in the study, discussion, and revision of the drafts of philosophy of education and psychology of learning in a large school?

Answer: The committee of the whole school staff participates in these activities.

What is the purpose of planning groups of teachers in a large school's curriculum development?

Answer: The purpose is for teachers to collaborate in planning learning experiences (LEs) for specific subject areas, the same subject at different grade levels, and related subjects.

What is the role of the special review committee in a large school's curriculum development?

Answer: The special review committee reviews and coordinates the detailed instructional plan.

What are the facts to remember in curriculum building?

Answer: Curriculum building, revision, and improvement can be done at the level of one school, one subject, one grade level, or a portion/segment of the curriculum.

Should curriculum revision at the school level or a part of a school follow the steps and sequence discussed in the course?

Answer: No, the factors to consider when beginning the process of curriculum revision include the issues and concerns raised by the staff and the problems already identified, along with available data.

What are some key considerations when applying the rationale to rebuild a school's curriculum?

Answer: Key considerations include the issues and concerns raised by the staff, the problems already identified, and the available data.

What are the demands of a school-wide program of curriculum reconstruction?

Answer: The demands include extensive faculty participation, clear understanding of instructional program objectives by each teacher, understanding of learning experiences (LEs) to attain objectives, and the ability to guide student activities to facilitate those experiences.

How can teachers in a small school contribute to curriculum development?

Answer: Teachers can work as a team to conduct studies, formulate the school's philosophy of education, define the psychology of learning, and plan learning experiences (LEs).

What is the role of the review committee in curriculum development for a small school?

Answer: The review committee evaluates and revises the detailed plan of learning experiences, ensuring its effectiveness and alignment with objectives.

How do teachers in a large school collaborate in curriculum development?

Answer: Teachers form committees and work together in specialized areas to study learners, address contemporary life issues, draft the school's philosophy of education and psychology of learning, and plan learning experiences (LEs).

What is the purpose of the special review committee in curriculum development for a large school?

Answer: The special review committee is responsible for reviewing and coordinating the detailed instructional plan, ensuring its coherence and effectiveness.

How can curriculum revision be approached in terms of scope?

Answer: Curriculum revision can be done at the whole curriculum level, focusing on a specific subject, targeting a particular grade level, or addressing a specific portion/segment of the curriculum.

Can the steps and sequence of curriculum development be followed exactly in every school?

Answer: No, the steps and sequence of curriculum development can be adapted based on the specific context, issues, concerns, and available data within each school.

Lecture # 41

What role does the "child study program" play in one school?

Answer: It provides an entering wedge in the study of learners.

How can deliberation about the psychology of learning benefit a school?

Answer: It can serve as an initial step in revising objectives and lead to a study and revision of learning experiences.

What is the purpose of the rationale in curriculum development?

Answer: To give a view of the elements involved in a program of instruction and their necessary interrelations.

How can the program be improved?

Answer: By making suggested modifications based on the results of analysis.

What is the outcome of following through with modifications in the curriculum?

Answer: Eventually, all aspects of the curriculum have been studied and revised.

What is the most suitable model for curriculum development?

Answer: Tyler's model.

What are the qualities of Tyler's model?

Answer: It is global in nature and helpful for conceptualizing the big picture of curriculum at the school and grade levels.

How does Tyler's model help teachers?

Answer: It helps them identify the content of the curriculum and serves as a planning tool.

What does the process of curriculum development do?

Answer: It enables teachers to formulate student behaviors and develop appropriate and reflective experiences for students.

Why are Tyler's questions important in curriculum development?

Answer: They provide a basis for the curriculum development process and help teachers identify learning outcomes, develop learning strategies, and establish assessment criteria and procedures.

What are the sources of curriculum?

Answer: Society's values, students' needs, and input from subject specialists.

How do these sources help determine educational purposes?

Answer: They provide data and suggest looking at the broader context that impacts curriculum, answering questions about educational goals, needed knowledge and skills, learning styles, integration of subjects, and thematic approaches.

What is the first step towards curriculum development?

Answer: Answering questions about educational goals, knowledge and skills, learning styles, subject hierarchy, integration, and thematic approaches.

What is the importance of answering these questions?

Answer: It helps define the scope of the curriculum and determine general goals of education.

What screens do teachers apply in the implementation of general goals of education?

Answer: Their philosophies of education and their understanding of the psychology of learning.

What do teachers do with their two screens?

Answer: They use them to construct instructional objectives and describe student learning in precise terms.

How do a teacher's philosophy of education and views about learning influence curriculum decisions?

Answer: They determine what will be included in the curriculum (ENDS) and how it will be taught (MEANS).

Why is philosophy considered a filter or screen?

Answer: It gives meaning and direction to teachers' actions regarding the curriculum.

How does psychology of learning or learning theory contribute to curriculum development?

Answer: It helps teachers understand how students learn best and determine if the goals are appropriate for the students' level.

What role do a teacher's philosophy and understanding of learning play in curriculum development?

Answer: They guide the decisions made regarding the content, teaching methods, and assessment in the curriculum.

Lecture # 42

How do people learn according to the behaviorism/stimulus-response theory?

Answer: People learn through a conditioning process where correct responses are reinforced.

What does reinforcement do in the behaviorism/stimulus-response theory?

Answer: Reinforcement strengthens the bond between stimulus and response.

How is the behaviorism/stimulus-response theory applied in the classroom?

Answer: It is applied to the lower levels of the cognitive domain, such as recall and comprehension, through techniques like assertive discipline, behavior modification, questioning, computer-assisted instruction, motivational strategies, and contingency contracts.

What factors does the cognitive/gestalt theory take into account in how students learn?

Answer: The cognitive/gestalt theory considers students' attitudes, prior experiences, values, and interests. It proceeds from the whole to parts.

How is learning described in the cognitive/gestalt theory?

Answer: Learning is seen as the formation of new perceptions when confronted with a problem situation, and it involves developing new insights influenced by individual experiences.

What are some classroom applications of the cognitive/gestalt theory?

Answer: Emphasizing problem-solving situations, seeing mistakes as learning opportunities, encouraging integrated thematic planning, engaging in self-concept activities, and focusing teacher questions on higher-order cognitive skills.

What is the role of teachers in curriculum development?

Answer: Teachers become extensively involved in curriculum development by writing precise instructional objectives for their classrooms based on general goals.

What are instructional objectives?

Answer: Instructional objectives are clearly stated descriptions of observable and measurable student behaviors.

What is included in instructional objectives?

Answer: Instructional objectives include observable and measurable student behaviors, the conditions under which the behaviors will occur (e.g., on an exam, in a classroom), and a minimum/acceptable level of performance.

What expertise is required among teachers to translate goals into instructional objectives?

Answer: Teachers need knowledge about goals, subject matter, and students.

What decisions do teachers need to make when reducing goals into instructional objectives?

Answer: Teachers need to determine the expected learning for each day of teaching and answer questions about what they want students to know and be able to do following instruction.

What is the usefulness of instructional objectives for teachers?

Answer: Writing instructional objectives helps teachers articulate specific student behaviors, develop an appropriate sequence or order for objectives, and understand what students are expected to do and how learning will take place.

How do teachers benefit from writing instructional objectives?

Answer: Writing instructional objectives ensures teachers have an understanding of what students are expected to do and what they need to do to help students achieve the objectives.

What is the focus of teacher questions in the cognitive/gestalt theory?

Answer: Teacher questions in the cognitive/gestalt theory focus on higher-order cognitive skills such as application, analysis, synthesis, and evaluation.

How can teachers help students build mental constructs of concepts?

Answer: Teachers can use conceptual models and mind maps to help students build mental constructs of concepts.

What should teachers consider when determining the scope and sequence of a course?

Answer: Teachers need to identify the essential concepts and skills that need to be learned and determine the order in which they will be taught.

What is the role of the teacher in the cognitive/gestalt theory when students make mistakes?

Answer: In the cognitive/gestalt theory, mistakes are seen as opportunities to learn, and teachers should provide guidance and support to help students learn from their mistakes.

What is the purpose of writing instructional objectives for teachers?

Answer: Writing instructional objectives helps teachers have a clear understanding of what they want students to achieve and guides their instructional planning and delivery.

How does the cognitive/gestalt theory approach student learning?

Answer: The cognitive/gestalt theory considers the whole student, including attitudes, prior experiences, values, and interests, and focuses on developing new insights through problem-solving and meaningful learning experiences.

How does the behaviorism/stimulus-response theory reinforce desired behaviors in the classroom?

Answer: The behaviorism/stimulus-response theory uses techniques such as assertive discipline, behavior modification, and motivational strategies to reinforce appropriate behaviors and strengthen the association between stimuli and responses.

Lecture # 43

What is Step I in the taxonomy of objectives?

Answer: Step I in the taxonomy of objectives is Instructional objectives.

What is Step II in the taxonomy of objectives?

Answer: Step II in the taxonomy of objectives is the Classification of objectives.

What are the two aspects of classification in the taxonomy of objectives?

Answer: The two aspects of classification in the taxonomy of objectives are the specific level and the domains of learning.

How can objectives be categorized or evaluated?

Answer: Objectives can be categorized or evaluated through the taxonomy of objectives.

How many domains of learning are there in the classification of objectives?

Answer: There are three domains of learning in the classification of objectives.

What are the three domains of learning in the classification of objectives?

Answer: The three domains of learning are cognitive, affective, and psychomotor.

What does the cognitive domain of learning involve?

Answer: The cognitive domain of learning involves intellectual skills such as reasoning, problem solving, and evaluating ideas and materials.

How many levels are there in the cognitive domain?

Answer: There are six levels in the cognitive domain.

What are the six levels of the cognitive domain?

Answer: The six levels of the cognitive domain are knowledge, comprehension, application, analysis, synthesis, and evaluation.

What does the affective domain of learning stress upon?

Answer: The affective domain of learning stresses values, feelings, and attitudes.

What are the hierarchies of the affective domain?

Answer: The hierarchies of the affective domain are receiving, responding, valuing, organizing, and being characterized by a value.

What does the psychomotor domain of learning stress upon?

Answer: The psychomotor domain of learning stresses muscular or motor skills that require neuro-muscular coordination.

How many levels are there in the psychomotor domain?

Answer: There are six levels in the psychomotor domain.

What are the six levels of the psychomotor domain?

Answer: The six levels of the psychomotor domain are reflex movements, fundamental movements, perceptual abilities, physical abilities, skilled movements, and non-discursive communication.

What does the framework for examining instructional objectives provide?

Answer: The framework for examining instructional objectives provides a structure for assessing the objectives.

How many domains should every lesson have objectives in?

Answer: Every lesson should have objectives in all three domains.

Should objectives within each domain be at the same level?

Answer: Objectives within each domain can be at different levels.

What are the different levels within the cognitive domain?

Answer: The different levels within the cognitive domain are knowledge, comprehension, application, analysis, synthesis, and evaluation.

What are the different levels within the affective domain?

Answer: The different levels within the affective domain are receiving, responding, valuing, organizing, and being characterized by a value.

What are the different levels within the psychomotor domain?

Answer: The different levels within the psychomotor domain are reflex movements, fundamental movements, perceptual abilities, physical abilities, skilled movements, and non-discursive communication.

Lecture # 44

What are the two types of curriculum designs mentioned in the paragraph?

Answer: The two types of curriculum designs mentioned are subject-centered/discipline-based and student/learner-centered.

What does the subject-centered/discipline-based curriculum design focus on?

Answer: The subject-centered/discipline-based curriculum design focuses on separate subject orientations without integration or shared skills with other curriculum areas.

Whose view does the subject-centered curriculum design reflect?

Answer: The subject-centered curriculum design reflects Bruner's view.

According to Bruner, what are subjects made up of?

Answer: According to Bruner, subjects are made up of concepts, generalizations, and facts.

What does the student/learner-centered curriculum design focus on?

Answer: The student/learner-centered curriculum design focuses on the developmental level, needs, and interests of the students.

What role does knowledge of child growth and development play in curriculum design?

Answer: Knowledge of child growth and development plays an important role in curriculum design.

What does Morrison state about what happens to children in school?

Answer: Morrison states that what happens to children in school is dependent on what they are taught, how they are taught, and the activities they participate in.

According to Morrison, what should be appropriate to children's level of development?

Answer: According to Morrison, activities should be appropriate to children's physical, emotional, social, and cognitive level of development.

What does the broad fields curriculum design focus on?

Answer: The broad fields curriculum design focuses on related disciplines treated as one field of study, such as social studies.

Give an example of a subject that falls under the broad fields curriculum design.

Answer: An example is social studies.

What is the main characteristic of the problem-solving curriculum design?

Answer: The problem-solving curriculum design is organized around activities and projects that engage individuals or groups of students to seek solutions to various problems.

What does the problem-solving curriculum design provide a context for?

Answer: The problem-solving curriculum design provides a context for thinking about and identifying the problem, posing options, making decisions, and developing action plans.

What is the main characteristic of the thematic/integrated curriculum design?

Answer: The thematic/integrated curriculum design is organized around a topic or theme and involves content and skills from various subjects.

How is an integrated curriculum described in the paragraph?

An integrated curriculum is described as one in which the lines separating subject matter areas are erased, and it utilizes a conceptual or life-problem-oriented approach to organization.

Is it common to use only one curriculum design exclusively?

No, it is very rare to use only one curriculum design exclusively.

What do teachers often do in practice regarding curriculum designs?

Answer: In practice, teachers often use a number of designs simultaneously, depending on the unit or lesson objectives, mission, and philosophy of the school.

What factors determine the choice of curriculum designs used by teachers?

Answer: The choice of curriculum designs used by teachers is determined by unit or lesson objectives, mission, and the philosophy of the school.

Can different curriculum designs be used for different units or lessons?

Answer: Yes, different curriculum designs can be used for different units or lessons.

What is the importance of curriculum design in education?

Curriculum design plays a crucial role in organizing learning objectives for teaching and learning.

What should be considered when designing curriculum activities for students?

When designing curriculum activities for students, their developmental level, needs, and interests should be taken into account.

Lecture # 45

What are the two steps involved in operationalizing the curriculum development process?

The two steps involved are planning for teaching and learning and implementing the plan.

What are the components of planning for teaching and learning?

The components include determining prior knowledge and skills, establishing learning outcomes, and reviewing appropriate resources and materials.

What does planning the curriculum involve?

Planning the curriculum involves reviewing sources of curriculum, organizing content, identifying and sequencing learning tasks, selecting assignments, defining classroom management, and assessment procedures.

What is Step 2 in the operationalizing process?

Answer: Step 2 is implementing the plan.

How are curriculum plans implemented?

Answer: Curriculum plans can be implemented as parts of a unit or as daily lessons.

What are the activities involved in implementing the plan?

The activities involved in implementing the plan include teaching lessons, using teaching strategies and activities, modeling and providing input, and monitoring student progress.

How do some educationists view the relationship between curriculum and teaching?

Answer: Some educationists view "curriculum" as outcomes and "teaching" as the means to attain those outcomes.

Are curriculum and teaching mutually exclusive?

No, curriculum and teaching are interdependent, not mutually exclusive.

What is Step 3 in the operationalizing process?

Step 3 is assessing teaching and learning.

What are the types of assessments conducted in Step 3?

Answer: The types of assessments conducted are formative and summative assessments.

What is the purpose of assessment in the curriculum development process?

The purpose of assessment is to determine what students know about the content and the level of their skills in various tasks.

What should be done if students show low performance in assessments?

If students show low performance, the curriculum development process requires modification of the plan and re-teaching of concepts with different strategies.

What does the process of curriculum development involve?

The process of curriculum development involves all the basic principles explored in the course and is specific to a particular school, grade level, and class.

What is the importance of reviewing appropriate resources and materials in planning?

Reviewing appropriate resources and materials in planning ensures that the necessary materials are available to support teaching and learning.

How is curriculum planning related to the concept of rehearsal?

Curriculum planning can be seen as a rehearsal for what will take place during teaching, where teachers organize and prepare for the instructional process.

What is the role of classroom management in planning the curriculum?

Defining classroom management in the planning process helps establish strategies and guidelines for maintaining an effective and organized learning environment.

What is the purpose of monitoring student progress during implementation?

Monitoring student progress allows teachers to track and assess student learning, identify areas of improvement, and provide additional support if needed.

What is the difference between formative and summative assessments?

Formative assessments are conducted during the learning process to provide feedback and guide instruction, while summative assessments are conducted at the end of a unit or course to evaluate student achievement.

How does assessment data contribute to the curriculum development process?

Analysis of student performance data helps in understanding student strengths and weaknesses, informing instructional decisions, and making necessary adjustments to the curriculum plan.

What does the statement "curriculum and teaching create a whole that is greater than the sum of their parts" imply?

The statement implies that curriculum and teaching are interconnected and work together synergistically to enhance the overall learning experience and outcomes for students.
