MGT504 FINAL TERM PAPER SHARED BY STUDENT

Mgt 504

20/8/2016 8.00 am

Mcq's were conceptual ...difficult they

1. What is feedback and feed forward
2. What is culture
3. Organizational decision making process stages
4. Goal incompatibility
5. Explicit and implicit knowledge with example
6. Does Employees learn organizational ethics? with example
7. There are techniques can be used by an organization to successfully implement the change.
8. four approaches/models to organizational decision making process

i hope it helps ...remember me in prayers

lesson 19-45

final-term-papers-fall-2015

MCQ's were very difficult.

Subjective was

1. What is innovation? 3

Organizational innovation, in contrast, is the adoption of an idea or behavior that is new to the organization's industry, market, or general environment. The first organization to introduce a new product is considered the innovator, and organizations that copy are considered to adopt changes.

2. Describe culture?3

Culture is the set of values, guiding beliefs, understandings, and ways of thinking that is shared by members of an organization and taught to new members as correct. It represents the unwritten, felling part of the organization.

3. Describe is organizational Politics?3

The organization theory perspective views politics as described in the second definition as a normal decision making process. Politics is simply the activity through which power is exercised in the resolution of conflicts and uncertainty.

4. One was related to inter group conflict?3

Inter- groups conflict can be defined as the behavior that occurs among organizational groups when participants identify with one group and perceive that other groups may block their group's goal achievement or expectations. Conflict means that groups clash directly, that they are in fundamental opposition.

5. **5.** There was a question like change requires coordination. if you make change in one part than you have to change the other part as well. Do you agree or not with this quote? 5

a change in one often means a change in another. A new product may require changes in the production technology, or a change in structure may require new employee skills.

6. Which strategy will be appropriate for defender? Something like that? 5

This chapter is not included

7. One question was related to management science approach?5

Management science can accurately and quickly solve problems that have too many explicit variables for human processing. This system is at its best when applied to problems that are analyzable, are measurable, and can be structured in a logical way.

8. Compare incremental and Carnegie model?5

The Carnegie description of coalition building is especially relevant for the **problem identification stage**. When issues are ambiguous, or if managers disagree about problem severity, discussion, negotiation, and coalition building are needed. Once agreement is reached about the problem to be tackled, the organization can move toward a solution.

The incremental process model tends to **emphasize the steps used to reach a solution.** After managers agree on a problem, the step – by – step process is a way of trying various solutions to see what will work. When problem solution is unclear, a trial – and error solution may be designed.

9. **9.** What is organizational Politics, What activities are involved in Politics?5

organizational politics involves activities to acquire, develop, and use power and other resources **to obtain the preferred outcome when there is uncertainty** or disagreement about choices.

Structural re-organizations strike at the heart of power and authority relationship, Re-organizations such as change responsibilities and tasks, which also affects the underlying power base from strategic contingencies. **Organizational changes** such as hiring new executives, promotions, and transfers have great political significance, particularly at top organizational levels where uncertainty is high and networks of trusts, cooperation, and communication among executives are important.

The third area of political activity is **resource allocation.** Resource allocation decision encompass all resources required for organizational performance, including salaries, operating budgets, employees, office facilities, equipment, use of the company airplane, and so forth.

13, 2015 at 11:52pm

I am done with my MGT504 final term paper 2015.

MCQs were totally conceptual some were easy and some were bit challenging.

Rest of the short and long term questions were like:

- what is the organisation culture?

Culture is the set of values, guiding beliefs, understandings, and ways of thinking that is shared by members of an organization and taught to new members as correct. It represents the unwritten, felling part of the organization.

- what is the technology change?

Technology changes are changes in an **organization's production process**, including its knowledge and skill base, that enable distinctive competence. These changes are deigned to make production more efficient or to produce greater volume. Changes in technology involve the techniques for making products or services. They include work methods, equipment, and work flow.

- Describe CARNEGIE and GARBAGE CAN MODEL?

Carnegie model applies when there is dissension about organizational problems. When groups within the organization disagree, or when the organization is in conflict with constituencies (government regulators, suppliers, unions), bar gaining and negotiation are required When an entire organization is characterized by high uncertainty regarding both problems and solutions, as in e corporations and learning organizations, elements of the garbage can model will appear.

- Define Power?

power is often described as a personal characteristic, and a frequent topic is how one person can influence or dominate another person.

- One question on Corporate culture.

Corporate Culture: Companies throughout the United States and Canada are discovering that employee's commitment is a vital component of organization success. Excellent companies manage to harness employee's energy and enthusiasm. They do so by;

• Creating a climate of Trust
• Sharing information
• Encouraging productivity through people
• Taking a long - term view
• Valuing adaptation and learning

- One question was like to write the major differences between GLOBAL PRODUCT DIVISION STRUCTURE Vs GLOBAL GEOGRAPHIC DIVISION STRUCTURE.

GLOBAL PRODUCT DIVISION STRUCTURE

In a global product structure, the product division takes responsibility for global operations in their specific product area. Each product division can organize for international operations as it seas fit. Each division manager is responsible for planning, organizing, and controlling all functions for the production and distribution of its products for any market around the world.

GLOBAL GEOGRAPHIC DIVISION STRUCTURE

A worldwide regional organization divides that world into regions, each of which reports to the CEO, each region has full control of functional activities in its geographical area. Companies that use this global geographic structure tend to have mature product lines and stable technologies.

- One question on RATIONAL APPROACH

The rational approach to individual decision making stresses the need for **systematic analysis of a problem followed by choice and implementation in a logical step – by step sequence**. The rational approach was developed to guide individual decision making because many managers were observed to be unsystematic and arbitrary in their approach to organizational decisions. Although the rational model is an " ideal " not fully achievable in the real world of uncertainty, complexity, and rapid change highlighted in example, the model does help managers think about decision more clearly and rationally.

- One question was like: how an organisation can survive? What do you suggest for the organisation survival?

Accept that Constant and Fast Change is the New Normal
Leverage the Possibilities of Big Data

Constant Innovation

Agility

Face Disruption Head On

Dont remember all qz but a few of them are :

Qz were ,
transformational & transactional leaders (3)

Transformational leaders are characterized by the ability to bring about change, innovation, and entrepreneurship. Transformational leaders motivate followers to not just follow them personally but to believe in the vision of corporate transformation, to recognize the need for revitalization, to sign on for the new vision, and to help institutionalize a new organizational process.

transactional leadership is a style of **leadership** in which **leaders** promote compliance by followers through both rewards and punishments.

IT & change in organization (3)

many organizations are responding to global forces by adopting self-directed teams and horizontal structures that enhance communication and collaboration, streamlining supply and distribution channels, and overcoming barriers of time and place through e- commerce.

Organic mechanistic structure ko environement kesee affect krta hai (5)

The flexibility of an organic organization is attributed to people's freedom to crate and introduce new ideas. Organic organization encourages a bottom – up innovation process. Ideas bubble up from middle - and lower – level employees because they have the freedom to propose ides and to experiment. A mechanistic structure, on the other hand, stifles innovation with its emphasis on rules and regulations, but it is often the best structure for efficiently producing routine product, the challenge for organizations is to create both organic and mechanistic condition within organizations to achieve both innovation and efficiency. To achieve both aspects of technological change, many organizations use the ambidextrous approach.

Carnegie n maanagement science differe (3)

Management science can accurately and quickly solve problems that have too many explicit variables for human processing. This system is at its best when applied to problems that are analyzable, are measurable, and can be structured in a logical way.

The Carnegie description of coalition building is especially relevant for the problem identification stage. When issues are ambiguous, or if managers disagree about problem severity, discussion, negotiation, and coalition building are needed. Once agreement is reached about the problem to be tackled, the organization can move toward a solution.

satisficing (5)

Satisficing mean organization accept a "satisfactory" rather than a maximum level of performance, enabling them to achieve several goals simultaneously. In decision making, the coalition will accept a solution that is perceived as satisfactory to all coalition members. Second, managers are concerned with immediate problems and short-run solutions.

Structure ka aik aur q tha confusing sa,

Organizational Politics (3)

why change is not liked at all levels(5)

people change as "the most perplexing, annoying, distressing, and confusing part" of reengineering. Managers may confront powerful emotions as employees react to rapid, massive change with fear or anger,

& 55 or 56 mcqz were there involving lectures related to change,Models ,rational incremental,politics,power mostly...

1. **Why Organization intends 2to be Global. (5 Marks)**
   The tendency of **investment funds** and businesses to move beyond domestic and national markets to other markets around the globe, thereby increasing the interconnectedness of different markets. Globalization has had the effect of markedly increasing not only international trade, but also cultural exchange.

An organization intends to be global for the following reasons:

1. Companies are moving towards the developing countries to acquire labor force. This obviously caters to employment and income generation to the people in the host country. Also, the migration of people, which has become easier has led to better jobs opportunities.

2. The onset of international trade has given rise to intense competition in the markets. No longer does one find limited number of commodities available. A particular commodity may fetch hundreds of options with different prices. The product quality has been enhanced so as to retain the customers. Today the customers may compromise with the price range but not with the quality of the product. Low or poor quality can adversely affect consumer satisfaction.

   Globalization has brought in fierce competition in the markets. Since there are varied products to select from, the producer can sustain only when the product is competitively priced. There is every possibility that a customer may switch over to another producer if the product is priced unreasonably high

2. Differentiate individual verses Organizational Power. (5 Marks)

Organizational power is often called formal power. Companies typically have an organizational chart that lists the relationship and ranks of positions within the company.

The chart details the lines of authority and responsibilities of various positions, and outlines the formal power structure of the company.
Individual power is often called informal power.The most powerful person in your department is not necessarily your manager.

3. Discuss relationship between Bounded institutional... (5 Marks)

4. In which situation an Organization must not adopt Horizontal Structure? (5 Marks)

Horizontal organizations are less efficient, taking more time and resources to make decisions. Workers in horizontal organizations have to learn more skills, which can increase job stress or make the job more interesting, depending on the employee.

A weakness of the horizontal structure is that it can harm rather than help organizational performance unless managers carefully determine which core processes are critical for bringing value to customers. Because of the cross-functional nature of work, a horizontal structure can limit in depth knowledge a skill development unless measures are taken to give employees opportunities to maintain and build technical expertise can limit in depth skill development.

5. How will you Differentiate between Contextual and Structural dimensions of Organization. (3 Marks)

1. Structural dimensions provide labels to describe the internal characteristics of an organization.
2. They create a basis for measuring and comparing organizations.
3. Contextual dimensions, characterize the whole organizations, including its size, technology, environment, and goals.
4. They describe the organizational setting that influences and shapes the structural dimensions.

6. What is organizational Politics, What activities are involved in Politics? (3 Marks)

Organizational politics are informal, unofficial, and sometimes behind-the-scenes efforts to sell ideas, influence an organization, increase power, or achieve other targeted objectives.

Politics is simply the activity through which power is exercised in the resolution of conflicts and uncertainty.

1. To acquire the preferred outcome when there is uncertainty or disagreement about choices.
2. Develop the preferred outcome when there is uncertainty or disagreement about choices.
3. To use power and other resources to obtain the preferred outcome when there is uncertainty or disagreement about choices.

7.What are key factors for success of new product?

1. **Meet a genuine consumer need.**.
2. **Product performance measures up.**

3. **Strong price-value relationship.**
   4. Carefully targeted advertising.
   5. Effective distribution channels.

8. What is high velocity environment, how decisions are made in this environment?

Fast, successful choices were well integrated with other decisions and the overall strategic direction of the company.

During a major decision, successful companies began immediately to build multiple alternatives; implantation may run in parallel before finally settling on a final choice.

20-july-2013

1. what is bounded rationality?

The point of the rational approach is that manager should try to use systematic procedures to arrive at good decisions. When organizations are facing little competition and are dealing with well – understood issues, manager generally use rational procedures to make decisions.

2. Describe between strong and weak culture?

strong culture provides clear expectations for employees about their jobs, behavior and dress. There should also be a clear cut chain of command.

A weak organizational culture is one in which employees are not clear with what their goals are. A weak culture is evident when most employees have varied opinions about the organization's mission and values.

3. Why organization be globe?

repeated

4. Briefly define multi domestic?

The term multi-domestic has been used to describe a set of strategies used by companies that operate in more than one country at a time. As smaller businesses expand their operations into markets overseas, they will naturally tend to act differently than their larger competitors, many of them choosing a multi-domestic strategy.

5. One case study was given and asked about that which decision model will be used and logically define it?
6. Differentiate between transformational and transactional leader?

repeated

7. When intergroup conflict exists in an organization? What are the levels of intergroup conflict?

Intergroup conflict exists in the organization due to

1. When employee perceive themselves as part of an identifiable group or department.
2. When there is an observable group difference of some form. Groups may be located on different floors of the building, members may have gone to different school, or members may work in different departments.

3. When there is frustration. Frustration means that if one group achieves its goals, the other will not; it will be blocked. Frustration need not be server and only needs to be anticipated to set off inter-group conflict.

Levels of inter group conflict:

Inter-group conflict within organization can occur

1. horizontally – across departments –
2. Vertically – between different levels of the organization.

8. How can you say that an entity is an organization?

. The primary similarity between an organization and entity is that each is capable of taking on the other's characteristics. An organization can become another company's affiliate, just as an affiliate may integrate itself into another company and become part of the organization.

MGT504 Current Final Term Papers Spring 2011 (15 to 26 July 2011) my MGT504 paper contains 46 MCQs

1. what is ERP?

Enterprise resource planning (ERP) is business process management software that allows an organization to use a system of integrated applications to manage the business and automate many back office functions related to technology, services and human resources.

2. codes of ethics are valuable for organization or not?

Code of ethics is a guide of principles designed to help professionals conduct business honestly and with integrity. A code of ethics document may outline the mission and values of the business or organization

3. elaborate the power

repeated

4. describe some of the advantages of management approch system

Management science techniques have been used to correctly solve problems. Management science can accurately and quickly solve problems that have too many explicit variables for human processing.

5. what information you as a student use

6. change resist the fear of loss of power & status. explain your ans with logical reasoning.

Leaders should expect to encounter resistance as they attempt to take the organization through the three stages of the change commitment process.

Managers and employees may fear the loss of power and status or even their jobs. In these cases, implementation should be careful and incremental, and all employees should be involved as closely as possible in the change process.

7. what is satificing? elaborate with example

repeated

9. when is political activity used

Politics is a mechanism for arriving at consensus when uncertainty is high and there is disagreement over goals or problem priorities.

10. how boundary spanning

This component means each department involved with new products has excellent linkage with relevant sectors in the external environment. It is used in new product success
