CS605 - Software Engineering-II

Quiz No. 01

Feb 06, 2021 (6:00PM)

Total Marks: 10

Status: Open

1. if:

E = Errors found before shipment

D = Errors found during operation

Then Defect Removal Efficiency (DRE) is equal to:

ANS: - $DRE = E / (E+D)$

2. _____ a statistical technique is used to develop an overall indication of improvement in software quality.

ANS: - Error Index

3. The two objectives of a _____ are to identify problem areas within the work product and a checklist of action items.

ANS: - Formal Technical Reviews

4. _____ states that 80% of the defects can be traced to 20% of its causes.

ANS: - Pareto Principle

5. Work products used to track errors is/are _____ during software development.

ANS: - Requirements specification, design document and source code

6. BCWP refers to:

ANS: - Budgeted cost of work performed so far

7. Milestone represents:

ANS: - The defined target which you need to achieve

8. Earned Value Analysis (EVA) is a _____ technique for assessing the progress of a project.

ANS: - Quantitative

9. FTR is a quality control activity performed by software engineers, it stands for:

ANS: - Formal Technical Review

10. BCWS is a term used in Earned Value Analysis it stands for_____.

ANS: - Budgeted Cost of Work Schedule

Question No: 1

_____ is defined as the probability of failure free operation of a computer program in a specified environment for a specified time.

► **Software Reliability**

- Software Usability
- Software Integrity
- Software Efficiency

Question No: 2

Schedule Performance Index SPI) is equal to

► **BCWP / BCWS**

- $BCWP * BCWS$
- $BCWP + BCWS$
- $BCWP - BCWS$

Question No: 3

The two objectives of a _____ are to identify problem areas within the work product and a checklist of action items.

► **Review Issue List**

- Formal Technical Reviews
- Informal Technical Reviews
- Testing

Question No: 4

It is noted that a/an _____ review can be worse than no review at all

► **Uncontrolled**

- Controlled
- Intermediate
- Normal

Question No: 5

The Review participants SHOULD NOT be focused on _____.

► **Weaknesses of the developer**

- Time Lines
- Review agenda

- ▶ Work product

Question No: 6

The progress on a project at any given point in time can be calculated by:

▶ Adding all the BCWS till that point for all tasks

- ▶ Multiplying all the BCWS till That point for all task
- ▶ Adding BCWS and EVA for all task still that point
- ▶ Dividing all the BCWS till That point for al tasks

Question No: 7

Milestone represents:

▶ The defined target which you need to achieve

- ▶ A predictable risk that may hit the project
- ▶ An unpredictable risk that may project
- ▶ The Loss that organization may suffer due to risk

Question No: 8

If an error related to requirements is identified in testing phase, error will be considered an error of _____ phase.

▶ Requirement

- ▶ Design
- ▶ Code
- ▶ Testing

Question No: 9

_____ involves rework, repair, and failure mode analysis of the product.

▶ Internal Failure Cost

- ▶ External Failure Cost
- ▶ Appraisal Cost
- ▶ Prevention Cost

Question No: 10

If:

E = Errors found before shipment

D = Errors found during operation

Then Defect Removal Efficiency (DRE) is equal to:

► $DRE = E / (E+D)$

► $DRE = E * (E+D)$

► $DRE = E + (E+D)$

► $DRE = E - (E+D)$

"CS605 Quiz No. 1"(2)

Multiple Choice Question

6 February 2021

Question No: 1

BCWS is term used in Eamed Value Analysis it stands for _____.

► **Budgeted Cost of Work Schedule**

► Budgeted Cost of Whole System

► Beginning Cost of Whole System

► None of the given options

Question No: 2

_____ states that 80% of the defects can be traced to 20% of its causes.

► **Pareto Principle**

► Fred Brooks Principle

► Kraul Principle

► D.Streeter Principle

Question No: 3

The basis principle for a review is that the focus should be on the _____..

▶ **Product and not the producer**

- ▶ producer and not the Product
- ▶ Profit to be gained
- ▶ Presentation Slide

Question No: 4

Many defect identified in few components at design level testing/review, a software development team should _____.

▶ **Allocate good and extra resources at coding level to review these components thoroughly**

- ▶ Good achievement by designing team
- ▶ No need to allocated further resources at coding level to review these components
- ▶ Mission accomplished once good number of error/flaws identified level

Question No: 5

Milestone represents:

▶ **The defined target which you need to achieve**

- ▶ A predicable risk that may hit the project
- ▶ A unpredictable risk that may hit the project
- ▶ The Loss that organization may suffer due to risk

Question No: 6

_____ a statistical technique is used to develop an overall indication of improvement in software quality.

▶ **Error index**

- ▶ Pareto Principle
- ▶ Quality Assurance
- ▶ Cost of Quality

Question No: 7

A model where Some errors are passed through to the next stem undebated such errors are said to have been_____.

▶ **Amplified**

- ▶ Reduced
- ▶ Neutralized
- ▶ Multiplexed

Question No: 8

Earned Value Analysis (EVA) is a _____ technique for assessing the progress of a project.

▶ **Quantitative**

- ▶ Subjective
- ▶ Qualitative
- ▶ Descriptive

Question No: 9

It is noted that a/an _____ review can be worse than no review at all.

▶ **Uncontrolled**

- ▶ Controlled
- ▶ Intermediate
- ▶ Normal

Question No: 10

FTR is a quality control activity performed by software engineers.it stands for:

▶ **Formal Technical Review**

- ▶ Formatted Technical Review
- ▶ Feasibility of Technical Requirement
- ▶ Fetched Technical Requirement

"CS605 Quiz No. 2"

Multiple Choice Question

12 February 2021

Question No: 1

Legacy system migration however is a _____ task and there are a number of risks involved that need to be mitigated.

► **Crucial**

- Simple
- Straight-forward
- Easy

Question No: 2

An Engineering Change Order (ECO) defines the change be made, its constraints and _____.

► **Criteria for Review and Audit**

- Removal of Change Request
- Approval by change control Board (CCB)
- Approval by Change Control Authority (CCA)

Question No: 3

A system is considered to be a legacy system if it has been in operation for _____ years. A legacy system has many components.

► **Many**

- Less then seven
- More than two
- Less than ten

Question No: 4

A major issue in requirements engineering is the rate at which requirements change once the requirements phase has "officially" _____.

▶ **Ended**

- ▶ Approved
- ▶ Deleted
- ▶ Started

Question No: 5

The implemented requirement has been _____ through the selected approach, such as testing or inspection.

▶ **Verified**

- ▶ Deleted
- ▶ Approved
- ▶ Ignored

Question No: 6

According to a standish Group report, lack _____ is responsible for 13% of all project failures,

▶ **User input**

- ▶ Output
- ▶ Resources
- ▶ Development Plan

Question No: 7

_____ is a quality assurance process used to reduce defects by avoiding or correcting mistakes in early design and development phases.

▶ **Poka-Yoke**

- ▶ Software Testing
- ▶ Software Change management
- ▶ Defect Removal

Question No: 8

According to Clemm, _____ allows the user to specify alternative forms of the system the selection of a appropriate versions.

► **Configuration Management**

- Process Management
- Quality Management
- Cost Management

Question No: 9

_____ is the probability that a program is operating according to requirements at a given point in time.

► **Availability**

- Reliability
- Usability
- Security

Question No: 10

_____ enhance the product feature set by replacing a product with a newer version of the same product.

► **Upgrade**

- Re-Engineering
- Update
- Deployment

"CS605 Quiz No. 2"(2)

Multiple Choice Question

12 February 2021

Question No: 1

The equation to find out the Availability of software is:

► **Availability = (MTTF / MTBF) x 100**

- Availability = (MTTF / MTBF) / 100

- ▶ Availability = $(MTTF + MTBF) / 100$
- ▶ Availability = $(MTTF - MTBF) / 100$

Question No: 2 (rep)

According to a standish Group report, lack _____ is responsible for 13% of all project failures.

▶ User input

- ▶ Output
- ▶ Resources
- ▶ Development Plan

Question No: 3

The software reengineering is a _____ activity.

▶ Non-trivial

- ▶ Code
- ▶ Out dated
- ▶ Document

Question No: 4

A Software Requirement Specification (SRS) is traced if the _____ of requirements is clear.

▶ Origin

- ▶ Quality
- ▶ Standard
- ▶ Grammar

Question No: 5 (rep)

The implemented requirement has been _____ through the selected approach, such as testing or inspection.

▶ Verified

- ▶ Deleted

- ▶ Approved
- ▶ Ignored

Question No: 6 (rep)

A major issue in requirements engineering is the rate at which requirements change once the requirements phase has "officially" _____.

▶ **Ended**

- ▶ Approved
- ▶ Deleted
- ▶ Started

Question No: 7

_____ are used by the development as a staging mechanism for functionality including regular builds.

▶ **Internal releases**

- ▶ External releases
- ▶ Major releases
- ▶ Feature releases

Question No: 8

_____ are mechanisms that lead to prudential quality problem before it occur or its rapid detection it introduced.

▶ **Mistake-Proofing**

- ▶ Mistake-Profiling
- ▶ Mistake-Provoking
- ▶ Mismanagement-Proofing

Question No: 9

Version Control discusses about:

▶ **How does an Organization control changes before and after installation released to a customer.**

- ▶ How the resources will be assigned to tasks in work breakdown structure (WBS).
- ▶ How the test cases will be executed before deploying each release.

- ▶ How many feature will be included in software.

Question No: 10 (rep)

_____ is the probability that a program is operating according to requirements at a given point in time.

▶ **Availability**

- ▶ Reliability
- ▶ Usability
- ▶ Security

"CS605 Quiz No. 2"(3)

Multiple Choice Question

12 February 2021

Question No: 1 (rep)

A major issue in requirements engineering is the rate at which requirements change once the requirements phase has "officially" _____.

▶ **Ended**

- ▶ Approved
- ▶ Deleted
- ▶ Started

Question No: 2 (rep)

_____ is a quality assurance process used to reduce defects by avoiding or correcting mistakes in early design and development phases.

▶ **Poka-Yoke**

- ▶ Software Testing
- ▶ Software Change management
- ▶ Defect Removal

Question No: 3 (rep)

_____ are mechanisms that lead to prudential quality problem before it occur or its rapid detection it introduced.

► **Mistake-Proofing**

- Mistake-Profiling
- Mistake-Provoking
- Mismanagement-Proofing

Question No: 4

Which of the following is NOT one the tasks includes in Software Configuration Management.

► **Test Case development**

- Version Control
- Configuration Auditing
- Change Control

Question No: 5 (rep)

An Engineering Change Order (ECO) defines the change be made, its constraints and _____.

► **Criteria for Review and Audit**

- Removal of Change Request
- Approval by change control Board (CCB)
- Approval by Change Control Authority (CCA)

Question No: 6 (rep)

According to a standish Group report, lack _____ is responsible for 13% of all project failures,

► **User input**

- Output
- Resources
- Development Plan

Question No: 7 (rep)

The software reengineering is a _____ activity.

► **Non-trivial**

- Code
- Out dated
- Document

Question No: 8

_____ error are most costly to fix.

► **Requirement**

- Design
- Implementation
- Testing

Question No: 9 (rep)

The equation to find out the Availability of software is:

► **Availability = (MTTF / MTBF) x 100**

- Availability = (MTTF / MTBF) / 10
- Availability = (MTTF + MTBF) / 10
- Availability = (MTTF - MTBF) / 100

Question No: 10

_____ analysis is the first step in the reengineering process.

► **Inventory**

- Code
- Database
- Document

Sr.	MCQS	ANSWERS
-----	------	---------

No		
1	Detect per function point is a_____	Metric
2	Which statement is correct?	The greater the dependency between the component is greater is coupling
3	_____ technique was initially developed for manufacturing processes in the 1920s by Walter Shewart.	Control chart
4	Hardware/software tools. People and reusable software components are considered as _____ for an organization.	Resources
5	In_____ there is both vertical and horizontal communication.	Controlled Decentralized(CD)
6	Requirements are sometimes filled with defects, normally known as _____ requirements.	Toxic requirements
7	A process model defines a task set which comprises of SE work task, milestone and_____	Deliverables
8	_____ activity is performed throughout software production.	Quality assurance
9	The major activity related to software construction are:	Requirement gathering, design development, coding, and testing

10	Estimation of the _____ is a prerequisite of all sorts of estimate, including, resources, time, and budget.	Software scope
11	Which of the following is not a software measure?	Defects per function point
12	Capability maturity model (CMM) has _____ levels.	5
13	_____ is the ability to encourage the people to create and feel creative.	Innovation
14	_____ model is a haphazard type of software development activity.	Build and fix
15	A _____ entity is the one which have any _____ in the problem domain without some other entity.	Strong, role
16	The conceptual interface between the 'internal' application and the 'external' user world is known as _____	Application boundary
17	Every project has a defined number of staff members. As time allocation occurs, project manager must ensure that no more than the allocated number of _____ has been scheduled at any given time.	People
18	SEI stands for _____	Software Engineering Institute
19	We need to employ some statistical techniques and plot the results _____. These are known as	Graphically

	statistical control techniques.	
20	Software Project Planning is an activity carried out by the_____.	Project Manager
21	_____ is an object oriented model.	Fountain
22	Files are the logical files that are the customer understands and must be maintained by the system.	Internal
23	In measuring process by using a control chart, if the gap between the defect reported and defect fixed is increasing.	The product is in unusable condition
24	_____ is fundamental or providing mechanisms for objects evaluation of any process or activity.	
25	_____ lifecycle models appreciate the need for iteration within and between phases.	Object-Oriented
26	_____ of a product can be measured if we can measure its non-functional properties i.e. maintainability, integrity, and usability, etc.	Quality
27	_____ dimension of Spiral model represented the cumulative cost to date	Radial
28	MOI model of leadership stands for.	Motivation, Organization, Innovation

29	The important feature of extreme programming is the concept of _____	Pair programming
30	If the gap between reported and defects fixed is decreasing then it means that the product is in _____ condition.	Stable
31	After building the decision tree, the following formula is used to find the expected cost for an option. Choose the correct formula:	Expected cost=?(path probability) ⁱ *(estimated path cost)
32	Extent to which access to software or data by unauthorized persons can be controlled, called _____	Integrity
33	By default, every organization is working at _____	Level 1
34	Caper jhons is a famous researcher in the field of _____ who made a company named Software Productivity Research.	Software engineering
35	In Capability maturity model (CMM) ,_____ performs optimaization.	Level 5
36	Continuous process improvement is enabled by _____ feedback from the _____.	Qualitative, process
37	_____ can be the reason of project failure.	Miscommunication

38	The _____ model of software development is a useful approach when a customer cannot define requirements clearly.	Prototyping
39	Capability maturity model (CMM) is used to judge the _____ level of an organization.	Maturity
40	A _____ provides a quantitative value of some attribute of a process or a product.	Measure
41	In controlled centralized structure communication between team leader and the member is_____.	Vertical
42	Effective software project management focuses on the 4 P's. These are	People, product, process, project
43	Software _____ relates individual software measures to provide a normalized view.	Metric
44	Each process defines certain deliverables known as the_____.	Work products
45	FAST is a team-oriented approach to requirement gathering, the team FAST stands for:	Facilitated Application Specification Techniques
46	_____ is fundamental for providing mechanisms for objective evaluation of any process or activity.	Measurement

47	A PM has to first come up with the schedule and then monitor the _____ of the project to ensure that things are happening according to the schedule. It would not be out of place to quote Fred Brooks at this point. He says "Project fall behind schedule _____ at a time".	Progress, one day
48	Certain reusable software component was to be developed by a/an _____ having no knowledge of its internal design standards.	Third-party
49	The amount of "computing resources" required by a program to perform its function is called _____.	Efficiency
50	FTR stands for:	Formal Technical Review
52	_____ engineering for software is a process for analyzing a program in an effort to create a representation of the program at a higher level abstraction than the source code.	Reserve
53	A _____ provides a quantitative value of some attribute of a process or a product.	Measure
54	A major issue in requirements engineering is the rate at which requirements change once the requirements phase has "officially" _____.	ENDED
55	We need to employ some statistical techniques and plot the results _____. These are known as	Graphically

	statistical control techniques.	
56	Effort required to test a program to ensure that it performs its intended function _____.	Testability
57	Milestone represents:	The defined target which you need to achieve
58	Configuration Auditing deals with:	Ensuring that the changes have been implemented properly
59	A system is considered to be a legacy system if it has been in operation for _____ years. A legacy system has many components.	Many
60	Which of the following is incorrect?	Most faults are introduced during the coding phase
61	When more than one users interpret the same requirement in different ways then we can say that the requirement is:	Ambiguous
62	The amount of “computing resources”, required by a program to perform its function is _____.	Efficiency
63	Configuration Status Reporting (CSR) reports on	What happened?Who did it?When did it happen?All of the given
64	In context of moving range and individual control charts, UNPL stands for:	Upper Natural Process Limit

65	For a software the total number of requirements are equal to _____.	Functional requirements + non functional requirements
66	_____ engineering does not simply create a modern equivalent of an older program, rather new user and technology requirements are integrated into the reengineering effort.	Forward
67	Quality can be measured if we measure the _____ of the product.	correctnessmaintainabilityintegrity and usabilityAll of the given options
68	If an error related to requirements is identified in testing phase, this error will be considered as an error of _____ phase.	Requirements
69	Quality cost may be divided into costs associated with:	Moving range control charts and Individual control charts
70	Extent to which access to software or data by unauthorized persons can be controlled, is called _____.	Integrity
71	_____ is one of the techniques used during severe deadline pressure.	Time Boxing
72	Defects per function points is a _____.	Metric
73	BAC stands for	Budget at Completion
74	CPM stands for:	Critical Path Model

75	In context of “Individual control chart”, if a single metrics value lies outside UNPL, it means that:	Process is out of control
76	Which of the following is not TRUE about “Error Tracking”?	During “Error Tracking”, we may also need the historical data from similar projects.
77	Identify the most appropriate statement:	The quality of the software specification is of extreme importance.
78	BCWP refers to:	Budgeted cost of work performed so far
79	SQA is an umbrella activity in which following activities are performed EXCEPT	Inspection
80	BCWS for a task i will be equal to:	Effort (person-days etc) for task i
81	Schedule Performance Index (SPI) is equal to	BCWP/BCWS
82	BCWS stands for:	Budgeted Cost of Work Schedule
83	Critical path defines:	The chain of tasks that determines the duration of the project.
84	The boundary time defines the following parameter(s) for a project:	The latest time for task initiation before the minimum project completion time is delayed The earliest finish The latest finish All of the given
85	The equation to find out the Availability of software is:	$\text{Availability} = (\text{MTTF} / \text{MTBF}) \times 100$

84	_____ technique was initially developed for manufacturing processes in the 1920's by Walter Shewart.	Control Chart
85	The software reengineering is a _____ activity.	Non-Trival
86	In order to use the PERT and CPM, which one of the following is NOT required?	Teams communication mode details.
87	Defect removal efficiency is calculated as: Where E = errors found before delivery D = errors found after delivery (typically within the first year of operation)	$DRE = E/(E+D)$
88	The extent to which a program can be reused in other applications is called _____	Reusability
89	MTTF is the abbreviation of	Mean time to failure
90	_____ is the measure of how many defects are removed by the quality assurance processes before the product is shipped for operation.	Defect removal efficiency
91	Effort required transferring the program from one hardware and/or software system environment to another.	Portability
92	Effort required to couple one system to another	Interoperability

93	Effort required to test a program to ensure that it performs its intended function	Testability
94	Effort required to locate and fix an error in a program	Maintainability
95	Effort required to modify an operational program	Flexibility
96	The extent to which a program satisfies its specifications and fulfills the customer's mission objectives	Correctness
97	The extent to which a program can be expected to perform its intended function with required precision.	Reliability
98	The amount of computing resources required by a program to perform its function	Efficiency
99	Extent to which access to software or data by unauthorized persons can be controlled.	Integrity
100	Effort required to learn, operate, prepare input, and interpret output of a program	Usability
101	_____ is one of the techniques to prepare project schedule once we have defined "task network"	Program evaluation and review techniques (PERT)
102	Earned Value Analysis (EVA) is a _____ technique for assessing the	Quantitative

	progress of a project.	
103	The more you refine the tasks, the more you can:	Estimate task with accuracy Conclude about scope with accuracy Schedule the project with accuracy All of the given
104	Quality assurance helps management in providing the necessary data about:	Product Quality
105	The progress on a project at any given point in time can be calculated by:	Adding all the BCWS till that point for all tasks
106	Defining a “Task Network” helps in defining:	Sequence in which activities will be performed
107	Mean Time Between Failure (MTBF) can be calculated by:	$MTBF = MTTF + MTTR$
108	_____ engineering requires application of SE principles, methods, and concepts to re-create an existing application.	Forward
109	Following are effective guidelines for Review EXCEPT	Tone should be high and strict
110	Which of the following is NOT an example of Software Configuration Item (SCI):	Integration Plan
111	Detect per function point is a_____	Metric
112	Which statement is correct?	The greater the dependency between the component is greater is coupling

113	_____ technique was initially developed for manufacturing processes in the 1920s by Walter Shewart.	Control chart
114	Hardware/software tools. People and reusable software components are considered as _____ for an organization.	Resources
115	In _____ there is both vertical and horizaontal communication.	Controlled Decentralized(CD)
116	Requirements are sometimes filled with defects, normally known as _____ requirements.	Toxic requirements
117	A process model defines a task set which comprises of SE work task, milestone and _____	Deliverables
118	_____ activity is performed throughout software production.	Quality assurance
119	The major activity related to software construction are:	Requirement gathering, design development, coding, and testing
120	Estimation of the _____ is a prerequisite of all sorts o estimate, including, resources, time, and budget.	Software scope
121	Which of the following is not a software measure?	Defeats per function point
122	Capability maturity model (CMM)	5

	has_____ levels.	
123	_____ is the ability to encourage the people to create and feel creative.	Innovation
124	_____ model is a haphazard type of software development activity.	Build and fix
125	A_____ entity is the one which have any _____ in the problem domain without some other entity.	Strong, role
126	The conceptual interface between the 'internal' application and the 'external' user world is known as_____	Application boundary
127	Every project has a defined number of staff members. As time allocation occurs, project manager must ensure that no more than the allocated number of _____ has been scheduled at any given time.	People
128	SEI stands for_____	Software Engineering Institute
129	We need to employ some statistical techniques and plot the results_____. These are known as statistical control techniques.	Graphically
130	Software Project Planning is an activity carried out by the_____.	Project Manager
131	_____ is an object oriented model.	Fountain

132	Files are the logical files that are the customer understands and must be maintained by the system.	Internal
133	In measuring process by using a control chart, if the gap between the defect reported and defect fixed is increasing.	The product is in unusable condition
134	_____ is fundamental or providing mechanisms for objects evaluation of any process or activity.	
135	_____ lifecycle models appreciate the need for iteration within and between phases.	Object-Oriented
136	_____ of a product can be measured if we can measure its non-functional properties i.e. maintainability, integrity, and usability, etc.	Quality
137	_____ dimension of Spiral model represented the cumulative cost to date	Radial
138	MOI model of leadership stands for.	Motivation, Organization, Innovation
139	The important feature of extreme programming is the concept of _____	Pair programming
140	If the gap between reported and defects fixed is decreasing then it means that the product is in _____ condition.	Stable

141	After building the decision tree, the following formula is used to find the expected cost for an option. Choose the correct formula:	Expected cost=?(path probability) ⁱ *(estimated path cost)
142	Extent to which access to software or data by unauthorized persons can be controlled, called _____	Integrity
143	By default, every organization is working at_____	Level 1
144	Caper jhons is a famous researcher in the field of _____ who made a company named Software Productivity Research.	Software engineering
145	In Capability maturity model (CMM) ,_____ performs optimaization.	Level 5
146	Continuous process improvement is enabled by_____feedback from the _____.	Qualitative, process
147	_____ can be the reason of project failure.	Miscommunication
148	The _____model of software development is a useful approach when a customer cannot define requirements clearly.	Prototyping
149	Capability maturity model (CMM) is used to judge the_____level of an organization.	Maturity

150	A _____ provides a quantitative value of some attribute of a process or a product.	Measure
151	In controlled centralized structure communication between team leader and the member is_____.	Vertical
152	Effective software project management focuses on the 4 P's. These are	People, product, process, project
153	Software _____ relates individual software measures to provide a normalized view.	Metric
154	Each process defines certain deliverables known as the_____.	Work products
155	FAST is a team-oriented approach to requirement gathering, the team FAST stands for:	Facilitated Application Specification Techniques
156	_____ is fundamental for providing mechanisms for objective evaluation of any process or activity.	Measurement
157	A PM has to first come up with the schedule and then monitor the_____ of the project to ensure that things are happening according to the schedule. It would not be out of place to quote Fred Brooks at this point. He says" Project fall behind schedule _____ at a time".	Progress, one day
158	Certain reusable software component was to be developed by a/an _____ having no knowledge of its internal	Third-party

	design standards.	
159	The amount of “computing resources” required by a program to perform its function is called_____.	Efficiency

Q#1

Effective software project management focusses on the four P's. These are:

- A) People, Product, Process, Problem
- B) People, Product, Process, Project (page29)
- C) People, Passion, Process, Project
- D) People, Passion, Planning, Project

Q#2

The _____ model of software development is a useful approach when a customer cannot define requirements clearly.

Prototyping

Q#3

_____ model is very sensitive to the risk.

Spiral (Page 21)

- Waterfall
- Incremental
- RAD

Q#4

SEI stands for _____

Q#5

: _____ help in finding the matrix to be stable or unstable.

A) Control chart (page 75)

B) Directed Graph

B) Cyclic chart

B) Base Line Graph

Q#6

_____ model is developed keeping i

Spiral (Page 20)

RAD

Incremental

Synchronize and Stabilize

Q#7

An external interface file is a

user identifiable group of logically related

data or control information referenced

by the application

EIF pg#42

Item

ILF

Object

Q#8

Vision phase in a software process focuses on _____.

What

Why (Page 14)

) How

Change

Q\$9

_____model is developed keeping in mind the element of risk in the development of software

Spiral (Page 20)

RAD

Incremental

Synchronize and Stabilize

Q#10

In software development _____ is performed at the end of each phase.

Verification (Page 26)

Validation

Q#11

The size of software can be measure by using

Functional point pg 65

Q#12

Capability maturity model (CMM) is used to judge the__level of an organization.

Maturity

Q#13

In measuring process by using a control chart, if the gap between the defect reported and defect fixed is increasing.

The product is in unusable

Condition pg 78

Q#14

The_____model of software development is a useful approach when a custome requirements clearly.

Prototyping [click here for detail](#)

Water fall

RAD

Build and Fix

Q#16

In _____ team organization, there is no permanent leader rather there are task coordinators.

Controlled Decentralized

Democratic Decentralized (Page 32)

Controlled Centralized

Synchronous paradigm

Q#17

_____ model is adopted by Microsoft

RAD

Build and Fix

Spiral

Synchronize and Stabilize (Page 19)

Q#18

In case some software, it is extremely easy to operate with intuitive interface conforming to most excellent GUI practices of the industry. It needs very little training -----

Q#19

Less than one hour click here for detail

Less than two hour

Less than five hour

Less than ten hour

Q#20

After passing through all the stages of the software development when we deploy the new system at the user side that stage is called _____

Integration

Development

Installation

Status quo (Page 11)

Q#21

_____ activity is performed throughout software production

Select correct option:

Maintenance

Development

Analysis

Quality Assurance (Page 25)

Q#22

_____model is developed keeping in mind the element of risk in the development of software

Spiral (Page 20)

RAD
Incremental
Synchronize and Stabilize

Q#24

.....**is the smallest unit of activity that is meaningful to the user.**

Elementary Process Identification Rules pg#52

Q#26

.....**model adopted by Microsoft.**

Synchronize and Stabilize Model pg#19

Q#28

Requirements are sometimes filled with defects, normally known as

_____requirements.

Toxic requirements

Q#29

_____model is a haphazard type of software development activity.

Water fall
Incremental
Prototyping
Build and Fix

Q#30

Capability maturity model (CMM) is used to judge the_____model of an organization.

Efficiency
Performance
Productivity

Maturity (Page 12)

Q#31

Mature organization are system oriented and they ensure.....

Quality

Stability

performance

Q#32

Can be a reason of a project failure

Requirement

Q#33

The extent to which a program satisfies its specifications and fulfills the customer's mission

objectives is_____.

- A) Integrity
- B) Reliability
- C) Correctness (page67)
- D) None fo given

Q#34

_____phase in a software process focuses on change.

Vision

Maintenance (Page 14)

Definition

Development

Q#35

Software project management primarily deals with metrics related to productivity and

quality. Pg#65

Efficiency

Reliability

Q#36

is another object-oriented lifecycle model.

Fountain model pg#23

Spiral model

Waterfall model

Q#37

analysis is a mechanism to measure the size of software.

Q#38

In measuring Software Process Quality by using control charts, if the gap between the defects reported and defects fixed is increasing, then it means

The product is in unstable condition. (Page 78)

The product is ready for shipment
The product is in stable condition.
None of the above

Q#39

In_____model user feedback is received very quickly because product is delivered in small versions. Waterfall

Spiral

incremental (Page 18)

object oriented

Q#40

Software process and product quality are controlled at_____. level 1
initial level

level-4 (Page 12)

level-3

Q#41

Capability Maturity Model (CMM) has_____levels. 4

5 (Page 12)

3

2

Q#42

If a software developer is going to develop software for a nuclear reactor which factor(s) will be more important?

cost

both b and c (Page 6)

1. A law diminishing that to continue after a certain level of performance has been reached will result in a decline in effectiveness. This law is known as :
 - a. Law of Diminishing returns HO page 6
 - b. Law of effectiveness
 - c. Law of Saturation
 - d. Law of Marketing returns
2. Build and Fix model is a _____ type of software development activity.
 - a. Mathematical
 - b. Perfect
 - c. Haphazard (haphazard mean: lacking any obvious principle of organization.)
 - d. Planned
3. In _____ a team is structured along a traditional hierarchy of authority
 - a. closed paradigm HO page 32
 - b. synchronous paradigm
 - c. random paradigm
 - d. open paradigm
4. MTTC is the abbreviation of
 - a. measured time to change
 - b. mean time to collaborate
 - c. mean time

to change

- d. measure time to cope
- 5. The rapid application development model is
 - a. Another name for component-based development.
 - b. A useful approach when a customer cannot define requirements clearly
 - c. **A high speed adaptation of the linear sequential model. HO page 19**
 - c. All of the given
- 6. When a software is delivered to a client and then client reports the bug in it then that bug is termed as
 - a. **Error** My Point of View
 - b. Defect
 - c. Mistake
 - d. Fault
- 7. A redesigned business process must be prototyped before it is fully integrated into the business.
 - a. **True**
 - b. False
- 8. The only reason for an estimate to be unreliable is lack of experience related to the application on the part of the estimator.
 - a. **true**
 - b. false
- 9. A consideration of software scope must include an evaluation of all external Interfaces.
 - a. **true**
 - b. false
- 10. If an error related to requirements is identified in

testing phase, so this error will be considered as an error in

p

hase.

- Design
 - Code
 - Requirement
 - Testing
- My POINT of VIEW

11. There could be multiple GUIs to satisfy one requirement
 - a. False
 - b. True
12. Following are the benefits of conducting review **except**
 - a. Help on Finding the Size of the Project
 - b. Helps in Verifying the Quality of Product
 - c. Help in Identifying Where improvements is required
 - d. Helps in Identifying the bugs in the Work

Product My Point of view
13. Usually the performance of the organization change over-night.
 - a. True
 - b. False
14. Which one of the following describes the data and control to be processed, Function, performance, constraints, interfaces, and reliability?
 - a. . Product Quality
 - b. . Software scope estimation
 - c. . Resources requirements
 - d. . Time requirements
17. Reliability of a software is a
 - a. . functional requirement

- b. non-functional requirement
 - c. . Design Requirement
 - d. . None of the given
18. The formal methods model of software development makes use of mathematical Methods to
- a. define the specification for computer-based systems
 - b. develop defect free computer-based systems
 - c. verify the correctness of computer- based systems
 - d. all of the given my Point of View
19. Water fall model is a document driven model. a.
- True
- b. False
20. Spiral model has _____ dimensions.
- a. 2 HO page 20
 - b. 3
 - c. 4
 - d. None of the above
21. The _____ model of software development is a good approach when core product is required quickly.
- a. Incremental HO page 18
 - b. Linear Sequential
 - c. Prototyping
 - d. None of the above
22. In _____ team organization, there is no permanent leader rather there are task coordinators.

- a. Controlled Decentralized
 - b. Democratic Decentralized HO page 32
 - c. Controlled Centralized
 - d. Synchronous paradigm
23. In software development _____ is performed at the end of each phase. a. Verification HO page 25
- b. Validation
24. _____ paradigm, structures a team loosely and depends on individual initiative of the team members
- a. Closed
 - b. Random HO page 32
 - c. Open
 - d. Synchronous
25. Unrealistic deadline is NOT one of the reasons of project failure.
- a. True
 - b. False
26. is an Object Oriented model.
- a. Spiral
 - b. Water fall
 - c. Incremental
 - d. Fountain HO page 23
27. Vision phase in a software process focuses on .
- a. What
 - b. Why HO page 14
 - c. How
 - d. Change
28. Rapid application development is another form of _____.
- a. Incremental model HO page 19
 - b. Prototyping model
 - c. Linear Sequential model

- d. None of the above
29. _____Phase in a software process focuses on change.
- a. Vision
 - b. Maintenance HO page 14
 - c. Definition
 - d. Development
30. The _____model of software development is a useful approach when a customer cannot define requirements clearly.
- a. Prototyping HO page 17
 - b. Water fall
 - c. RAD
 - d. Build and Fix
31. _____Model has a major drawback in that the delivered product may not fulfill the customer's requirements.
- a. Water fall HO page 17
 - b. Build and Fix
 - c. Prototyping
 - d. Integrated water fall and prototyping
32. MOI model of leadership stands for
- a. Motivation , Operationalize ,Integration
 - b. Misunderstanding , Object, Ideas
 - c. Motivation , Organization , Innovation HO page 30
 - d. Miscommunication , Organization, Invention
33. The _____model is used to overcome issues related to understanding and capturing of user requirements.
- a. Rapid Prototyping HO page 17
 - b. Water fall
 - c. Build and Fix
 - d. None of the above
34. activity is performed throughout software production
- a. Maintenance

- b. Development
- c. Analysis

d. **Quality Assurance** **My Point of View**

35. In _____ model the product is developed without any proper design and specifications.
- a. Water fall
 - b. **Build and Fix** HO page 14
 - c. Prototyping
 - d. None of the above
36. software project management focuses on the four P's: These are
- a. People , Product , Process , Problem
 - b. **People , Product , Process , Project** HO page 29
 - c. People , Passion , Process , Project
 - d. People , Passion , Planning , Project
37. : The _____ dimension in rational unified process model represents the dynamic aspect of the process.
- a. **Horizontal** HO page 24
 - b. Angular
 - c. Vertical
 - d. Regular
38. _____ model is developed keeping in mind the element of risk in the development of software
- a. **Spiral** HO page 20
 - b. RAD
 - c. Incremental
 - d. Synchronize and Stabilize
39. _____ model is adopted by Microsoft
- a. RAD
 - b. Build and Fix
 - c. Spiral
 - d. **Synchronize and Stabilize** HO page 19
40. _____ teams generate more and better solutions than individuals and are most useful for

complex problems

- a. Decentralized HO page 32
- b. Centralized
- c. Synchronize and Stabilize

41. The important feature of extreme programming is the concept of.

- a. Feedback
- b. Risk assessment
- c. Pair programming HO page 23
- d. Requirement elicitation

42. Determination of theis a pre-requisite of all sorts of estimates, including, resources, time, and budget.

- a. software scope HO page 80
- b. software Risk
- c. software Quality
- d. software Management

43. When more than one user interpret the same requirement in different ways then we can say that the requirements are

- a. Complete
- b. Incomplete
- c. Ambiguous My Point of View
- d. Incorrect

44. The extent to which a program satisfies its specifications and fulfills the customer's mission objectives is

- a. Integrity
- b. Reliability
- c. Correctness HO page 67
- d. None of given

45. Several entities are always created----- and deleted together then this is a strong indication that they should be grouped into -----logical file/files.

- a. Together, Single HO page 48
- b. Together, Multiple
- c. Together, Double
- d. All of the given

46. In case some software, it is extremely easy to operate with intuitive interface conforming to most excellent GUI practices of the industry. It needs very little training -----
- a. Less than one hour
 - b. Less than two hour My Point of View
 - c. Less than five hour
 - d. Less than ten hour
47. Metrics to assess the quality of the analysis models and the corresponding software specification were proposed.....
- a. in 1993- 1999.
 - b. Ricardo in 1993
 - c. Davis in 1990
 - d. Davis in 1993 HO page 71
48. Function/Test matrix is a type of
- a. Interim Test report
 - b. Final test report
 - c. Project status report My Point of View
 - d. Management report
49. The higher the Error Index, the higher will be the Defect Removal Efficiency
- a. True
 - b. False
50. help in finding the matrix to be stable or unstable
- a. Control chart HO page 75
 - b. Directed Graph
 - c. Cyclic chart
 - d. Base line graph
51. This chart is then used to develop the individual control chart is called statistical control techniques.
- a. No My Point of View

- b. Yes
52. In measuring Software Process Quality by using control charts, if the gap between the defects reported and defects fixed is increasing, then it means
- a. The product is in unstable condition HO page 78.
 - b. The product is ready for shipment
 - c. The product is in stable condition.
 - d. None of the above
53. A -----entity is the one which have any ----- in the problem domain without some other entity.
- a. Strong, Role*
 - b. All of the given
 - c. Weak, Function
 - d. None of the Given HO page 47
54. give you a better insight into the state of te process or product. a. Metrics HO page 66
- b. Exceptions
 - c. Errors
 - d. Threats
55. The most important objective of any engineering activity is to produce high quality product with limited resources and-

- a. Time HO page 66
 - b. Persons
 - c. Cost
 - d. Metrics
56. The extent to which a program satisfies its specification and fulfills the customer's mission objectives is said to be achieving the
- a. Correctness HO page 67
 - b. Reliability

- c. Efficiency
 - d. Usability
57. ILF is a ----- identifiable group of logically control in formations ----- the boundary the application.
- a. user, within HO page 42
 - b. user, without
 - c. All of the given
 - d. user, along
58.technique was initially developed for manufacturing processes in the 1920's by Walter Shewart.
- a. Upper Control Line
 - b. Control chart Ho page 75
 - c. CMP
 - d. Quality
59. Integrity means that the software should
- a. . help the users to enjoy usability
 - b. . none of the given
 - c. withstand the attack from a hacker HO page 67
 - d. . help the hacker to hack the system
60. In function point analysis technique EO stands for
- a. . Export operation
 - b. . Export output
 - c. External output HO page 49
 - d. . None of these
61. Which of these software characteristics are used to determine the scope of a software project?
- a. . context, Lines of code, function
 - b. . context, function, communication
 - c. . information objectives, function, HO
 - e. . communications requirements, performance, information objectives
62. In _____ a team is structured loosely and depends on individual initiative of the team members
- a. random paradigm HO page 32
 - b. . closed paradigm
 - c. . synchronous paradigm

d. . open paradigm

63. _____ is the first stage of waterfall lifecycle model

a. Requirement definition Ho page 15

b. . Operation

c. . Unit testing

d. . Implementation

64. _____ is not the part of software development loop.

a. . Status Quo

b. . Problem definition

c. . Technical development

d. Task set HO page 10

65. _____ is not the management part of software development activities.

a. Coding HO page 7

b. . Configuration Management

c. . Quality Assurance

d. . Project planning

66. The level 1 of CMM is known as

a. Managed

b. Defined

c. Initial HO page 12

d. Repeatable

67. According to DeMarco a good Project Manger

a. should be very nervous

b. should be very strict in official matters

c. Should not ignore any mistake from his team members.

d. should have a big heart and should ignore small mistakes

HO

page31

68. Product and process decomposition occurs simultaneously as the project plan evolves

a. True My Point of View

- b. False
69. The best project team organizational model to use when tackling extremely difficult problems is the
- a. chief programmer team model
 - b. democratic decentralized model HO page 32
 - c. controlled decentralized model
 - d. controlled centralized model
70. Which factor is the least important when choosing the organizational structure for a software team?
- a. degree of communication desired
 - b. predicted size of the resulting program
 - c. Rigidity of the Delivery Date
 - d. Size of the Project Budget My Point of View
71. The Spiral model of software development is of iterative nature
- a. true
 - b. false
72. _____ is data that influences an elementary process of the application being counted.
- a. Elementary Process
 - b. External Query
 - c. External Output
 - d. Control Information HO page 43
73. An entity which defines many-to-many relationship between two or more entities is called
- a. Associative Entity Type HO page 47
 - b. Attributive Entity Type
 - c. Entity Subtype
 - d. None of these

74. From the following listed software development Model, which one is an object oriented model
- Classical life cycle model
 - Fountain model HO page 23 Conceptual
 - Spiral model
 - Waterfall model
75. The prototyping model of software development is
- a reasonable approach when requirements are well defined.
 - a useful approach when a customer cannot define requirements clearly.
 - the best approach to use for projects with large development teams.
 - a risky model that rarely produces a meaningful product.
76. _____ is a team organization where there is no permanent leader and task coordinators are appointed for short duration. Decisions on problems and approach are made by group consensus and communication among team is horizontal.
- Democratic decentralized (DD) Ho page 32
 - Controlled decentralized (CD)
 - Synchronous paradigm (SP)
 - Controlled centralized (CC)
77. A _____ is a user recognizable subgroup of data elements within an ILF or EIF
- Record element type (RET) HO page 46
 - Data Element Type
 - External Input
 - External Query
92.subgroups are those that the user has the option of using one or none of the subgroups during an elementary process. a
- Optional HO page 46
- . Mandatory b.
- . None of the above c.
- . RET d.
93. In the software development life cycle, soon the defect is

detected will results in

a. increase
in cost of
software

b. decrease
in
software
cost

c. both a and b are correct

94. During the construction of software, defects can be prevented from being injected in software with the help of

a. proper education and training of software engineers
b. use of formal methods
c. use of
appropriate tools
for testing

d. all of the
given option are
correct

95. Incomplete requirements gathering can result in the _____ of the project

a. Failure HO page 29

b. reusability

c. success

d. easy maintenance

96. The root causes of project failure are

a. lack of user input

b. incomplete requirement and specification

c. creeping requirement

d. all of the given options HO page 29

97. The template for organizing SRS given by American Department of Defense and

a. large and complex projects

My Point of View

NASA should be used for

b. small project

c. medium size projects

d. none of the given

98. Configuration Management can be used while the project is in the

phase

a. Testing

b. Development

c. Maintenance

d. All of the given

HO page 9

99. Extent to which access to software or data by unauthorized persons can be controlled, is called

a. None of given

b. Efficiency

c. Reliability

d. Integrity

HO page 67

100. By default every organization is working at

a. level 1

HO page 12

b. level 0

c. level 3

d. level 4

101. Caper Jones is famous researcher in the field of _____ wh

o made a company named Software Productivity Research

a. Biology

b. Chemistry

c. Mathematics

d. Software Engineering

HO page 7

102. In Capability Maturity Model (CMM),__performs optimization.
- a.level 1
 - b.level 2
 - c.level 3
 - d.level 5 HO page 12
103. A PM has to first come up with the schedule and then monitor the of the project to ensure that things are happening according to the schedule. It would not be out of place to quote Fred Brooks at this point. He says, "Projects fall behind schedule _____at a time."
- a.Schedule, Two day
 - b.Schedule, Two day
 - c.Progress, Three day
 - d.Progress, One day HO page 92
104. Continuous process improvement is enabled by _____feedback from the_____
- a.analytical, user
 - b.mathematical, user
 - c.logical, process
 - d.qualitative, process HO page 12
105. _____can be a reason of project failure.
- a.Realistic deadline
 - b.Requirement
 - c.Miscommunication HO page 29
 - d.Small project size
106. The_____model of software development is a useful approach when a customer cannot define requirements clearly. a. Prototyping HO page 17
- b. Water fall
 - c. RAD
 - d. Build and Fix
107. Defects per function points is a__-

- a. Measure
 - b. Metric HO page 65
 - c. Quality attribute
 - d. Process
108. A_____provides a quantitative value of some attribute of a process or a product.
- a. Metric
 - b. Measure HO page 65
 - c. Function point
 - d. Plan
 - e. Maintenance
 - f. Development
 - g. Analysis
 - h. Quality Assurance HO page 25
109. _____is an object-oriented lifecycle model.
- a. Spiral model
 - b. Extreme programming
 - c. Waterfall model
 - d. Fountain model HO page 23
110. In controlled centralized structure communication between team leader and the members is_____ -
- a. horizontal
 - b. linear
 - c. vertical HO page 32
 - d. circular
111. Effective software project management focuses on the four P's: These are_____
- a. People, Product , Process , Problem
 - b. People, Product , Process , Project HO page 29
 - c. People, Passion , Process , Project
 - d. People, Passion, Planning, Project
112. Software____relates individual software measures to provide a normalized view.

- a. Measure
- b. Metric HO page 65
- c. Plan
- d. Attribute

113. ____ is the ability to encourage people to create and feel creative.

- a. Organization
- b. Motivation
- c. Innovation HO page 30
- d. Managerial Identity

114. In ____ there is both vertical and horizontal communication.

- a. Controlled decentralized (CD) HO page 32
- b. Democratic decentralized (DD)
- c. Controlled centralized (CC)
- d. Synchronous paradigm (SP)

115. The amount of "computing resources" required by a program to perform its function is called __

- a. Efficiency HO page 67
- b. Integrity
- c. Reliability
- d. Portability

116. Which statement is correct?

- a. Coupling does not depend on interdependency between components
- b. The greater the dependency between the components the lesser is coupling
- c. The lesser the dependency between the components the greater is coupling
- d. The greater the dependency between the components the greater is coupling My Point of View

117. Requirements are sometimes full with defects, normally known as _____ requirements.

- a. Functional requirements
- b. Non-Functional requirements
- c. Toxic Requirements
- d. System requirements

My Point of view

118. The major activities related to software construction are:

- a. Requirement gathering, design development, coding and testing (pg8)
- b. installation and training
- c. quality assurance, configuration and planning
- d. implementation and management

119. Which of the following is not a software measure?

- a. No. of defects

b. Defects per function point

My Point of View

- c. Lines of Code
- d. Non Function points

120. Capability Maturity Model (CMM) has _____ levels

- a. 4.

b. 5

H O page 12

- c. 3

- d. 2

121. _____ model is a haphazard type of software development activity.

- a. Water fall
- b. Incremental
- c. Prototyping
- d. Build and Fix (haphazard mean: lacking any obvious principle of organization.)

122. The conceptual interface between the 'internal application and the external' user world is known as-

- a. Count Data Functions

b. Application Boundary

HO page 42

- c. Development count
- d. Control Information

123. ----- files are the logical files that the customer understands and must be maintained by the system.

- a. Raw
- b. External
- c. Logical
- d. Internal HO page 42

124. _____ Lifecycle models appreciate the need for iteration within and between phases.

- a. Object-Oriented HO page 23
- b. Spiral Model
- c. Extreme Programming
- d. Rapid Application Development

125. _____ dimension of Spiral model represents the cumulative cost to date

- a. Radial HO Page 20
- b. Angular
- c. Horizontal
- d. Circular

126. ____ - files are the logical files that the customer understands and must be maintained by the system.

- a. Raw
- b. External
- c. Logical
- d. Internal HO page 42

127. _____ Lifecycle models appreciate the need for iteration within and between phases.

- a. Object-Oriented HO page 23
- b. Spiral Model
- c. Extreme Programming
- d. Rapid Application Development

128. _____ dimension of Spiral model represents the cumulative cost to date

- a. Radial HO Page 20

- e. Angular
 - f. Horizontal
 - g. Circular
129. In _____ team organization, there is no permanent leader rather there are task coordinators
- a. Democratic decentralized HO page 32
 - b. Controlled decentralized
 - c. Synchronous paradigm
 - d. Controlled centralized
130. Caper Jones divided software related activities into _____ different categories.
- a. 35
 - b. 40
 - c. 20
 - d. 25 HO page 7
131. Software Process and product quality are controlled at _____
- a. Level 1
 - b. Initial level
 - c. Level 4 HO page 12
 - d. Level 3
93. The conceptual interface between the 'internal' application and the 'external' user world is known as _____
- a. Count data Function
 - b. Application Boundary HO page 42
 - c. Development Count
 - d. Control Information
94. Capability Maturity Model (CMM) is used to judge the _____ level of an organization
- a. Efficiency
 - b. Performance
 - c. Productivity
 - d. Maturity HO page 12

95. In _____ model user feedback is received very quickly because product is delivered in small version
- a. Waterfall
 - b. Spiral
 - c. **Incremental** HO page 18
 - d. Object oriented
96. The primary difference between an internal logical file and an external interface file is that _____ is not maintained by the application being counted
- a. ILF
 - b. RET
 - c. DET
 - d. **EIF** HO page 42
97. Once the higher management has devised the mitigate strategy , the project must be monitored for this _____
- a. Particular Task
 - b. Particular Requirement
98. MOI model of leadership was developed by _____
- c. Newton
 - d. **Weinberg** My Point of View
 - e. Don Carlos
 - f. Edison
132. Empirical models are statistical models and are based upon _____
- a. **Historic data** HO page 81
 - b. Control data
 - c. Current data

d. Statistical

133. The ____ dimension in rational unified process model represents the dynamic aspect of the process.

- a. Horizontal Ho page 24
- b. Angular
- c. Vertical
- d. Regular

134. In the context of statistical models, COCOMO stands for:

- a. Computer Company Model
- b. Commutative Conduct Model
- c. Constructive Cost Model HO page 81
- d. Conductive Cold Model

135. _____ is necessary to learn from the mistakes and for the improvement of the process continuously

- a. Risk analysis
- b. Good decision
- c. Improvement
- d. Postmortem analysis HO page 35

136. _____ is the ability to encourage technical people to produce to their best.

- a. Improvement
- b. Motivation HO page 30
- c. Innovation
- d. Creation

137. Which of the following is a Software Metric?

- a. No. of defects
- b. Lines of Code
- c. Defects per function point HO page 65
- d. No. of function points

138. Construction activities are directly related to the _____ of the software.

a. installation

b. risk analysis

c. development HO page 8

d. debugging

139. The size of software can be measured by using _

a. No. of Items

b. No. of classes

c. Functional points HO page 65

d. No. of methods

140. Defect

removal

efficiency is

calculated

as Where

E = errors found before delivery

D-errors found after delivery (typically within the first year of Operation)

a. $DRE = E \times E.D$)

b. $DRE = E - D$

c. $DRE = E.DE$

d. $DRE = E/(E+D)$ HO page 69

141. Reel has defined __ steps process to improve the chances of success.

a. 3

b. 4

c. 5 HO page 35

d. 8

142. If an employee

number which

appears twice in an

ILF/EIF, count the

DET _____

- a. twice
- b. thrice

c. once HO page 45

d. null

143. After passing through all the stages of the software development when we deploy the new system at the user side that stage is called _____

- a. Integration
- b. Development
- c. installation

d. Status quo HO page 10

144. _____ Model is very

a. Spiral HO Page 21

sensitive to the risk

- b. Waterfall
- c. Incremental
- d. RAD

145. Barry Boehm has suggested a systematic approach to project management which is known as

a. W5HH Principal HO page 35

- b. W3HH Principal
- c. WHH Principal
- d. 5W5HH Principle

146. A mock up application is developed in _____ model to get user feedback

- a. Waterfall
- b. Objected oriented

c. Fountain

d. Rapid prototyping HO page 17

147. Software has very close relationship with ____

a. Biology

b. Physics

c. Chemistry

d. Economics HO page 5

148. LOC is heavily dependent on the -----

a. No of document pages

b. No of objects

c. No of GUIs

d. Programming Style HO page 37

149. Software engineering is the set of ____ and ____ to develop software

a. Classes, Objects

b. Languages, processes

c. Processes, tools HO page 4

d. Tools, objects

150. Which of the following is not software metric?

a. Defects per function point

b. No of test cases per function points My Point of View

c. No of defects

d. No of errors per thousand lines of code

151. If a software developer is going to develop software for a nuclear reactor which factor(s) will be more important?

a. Cost effective

b. Performance

c. Reliability

d. Performance and reliability HO page 6

152. If an experience user has to take an extensive training of software before use and he/she still finds difficulty to use it, we can say there may be issues related to the

a. Usability My Point of View

b. Portability

c. Correctness

d. Reliability

153. Spiral model was first proposed by

a. McCabe

b. Barry Boehm HO page 20

c. Robert Cazeman

d. William Smith

154. An _____ is the smallest unit of activity that is meaningful to the user(s)

a. Function Point

b. Elementary Process HO page 43

c. Adjustment factor

d. Data count

155. W5HH principal consists of seven ____

a. Answers

b. Questions PG 35

c. Points

d. Steps

156. After passing through all the stages of the software development when we deploy the new system at the user side that stage is called

a. Integration

b. Development

c. installation

d. Status quo HO page 10

157. _____ of a product can be measured if we can measure its non-functional properties i.e. maintainability, integrity and

a. Quality HO

usability

page 68

b. Quantity

c. Price

d. Size
