IMP MCQs

1) From the language learning point of view, the benefit of 'process of negotiating the meaning' of a task the **Learners** make decisions about the learning materials they study and the ways in which they should study.

2) The **'making public'** works as a central process in cooperative learning and confirms its social and democratic nature.

3) In the process of **Collaboration,** the learner shows willingness to listen to others' ideas and suggestions, so that they can be discussed and integrated into further actions like decision making.

4) In 1988 Sharan and Shachar offered the **Cognitive** strategies used in collaborative learning discussions.

5) The learner's behavior of **'Silent Reading'** is considered as, **Non-verbal** behavior involved in non-verbal discourse strategies.

6) Completion of a task or answering a question is known as **collaboration**.

7) The learner's behavior of **silent reading** is considered as non-verbal behavior involved in non-verbal discourse strategies.

8) Good learners develop **intrinsic motivation** for learning; poor learners decline responsibility for learning and depend more on extrinsic rewards or ignore intrinsic and extrinsic rewards altogether.

9) A process in which two or more learners need to work **together** to achieve a common goal, usually the completion of a task or the answering of a question is known as Collaboration.

10) Repeating what was just read or said is counted under the **copying** category of 'Verbal Discourse Strategies Responses'.

11) Challenges to collaboration in a CALL context are problems that arise when the aim of the **Teacher** is to promote language learning at the computer.

12) Wegerif and Dawes (1998) summarize **EIGHT** challenges to learning in groups based on a study conducted with primary schoolchildren.

13) A process in which two or more learners need to work together to achieve a common goal, usually the completion of a task or the answering of a question is known **as Collaboration**.

14) Ellis (1997) notes that **classroom** settings are likely to be poor places for learners to acquire language compared to the world outside the classroom.

15) There are many benefits to collaboration in **CALL** and how collaboration promotes language learning through exposure to new language.

16) The greatest single benefit of **collaborative learning** at the computer is in the way in which it serves to reveal information, not just to the learners' collaborative partners, but also to the learners themselves.

17) An important activity in the classroom which encourages both social and thinking skills and mirrors the way in which learners often need to work in an academic setting is known as **Collaboration**.

18) Which of the following means can be used in both web-enhanced and blended classes to display work created by students as course projects? **Web medium/ media**

19) If the reader needs to search out statements, then the definitions _____ is very helpful technique. **Scanning**

20) The e-reading _____ allows readers to interact with the text through a range of applications and programs. **Software**

21) One of the biggest errors in attempting _____ courses is lack of clear directions about what will be accomplished in each mode and how to coordinate the two. **Blended**

22) The 'reading 'affect_____ the process of reading in the most significant fashion. **Purposes**.

23) One of the advantages of on-line texts is their **authenticity**.

24) Online chat _____can be used to conduct virtual office hours. **Software**

25) There is a multitude of _____that can provide students with information, simulations to consider, critique, analyze or discussion on any subject. **Sites**

26) Computers can present the text in a variety of ways apart from a plain _____ one form. **Printed**

27) Students from different institutions and even countries can connect via _____and may be able to work together using the same set of group collaboration tools. **Internet**

28) A human or computer-generated voice reads digital text aloud for users in _____ feature of different websites. **text-to-speech**

29) Many instructors found that scheduling the first small-group meeting for a 'face-to-face meeting week' greatly facilitates the rate at which groups form and establish_____. **Cooperation**

30) The two readily available online tools to most instructors are email and_____. **Chat**

31) To identify the simple facts presented in a written text is defined as_____ Skill. **Literal-Comprehension**

32) Students can be informed through _____ emails for continuing online activities in blended courses. **Weekly**

33) In the _____period of history, the main focus of foreign language learning was on **grammar.**

34) To control workload, a teacher should set strict _____for responding to emails and other online messages. **Parameters**

35) Many _____for ESL students have videos and corresponding transcripts which are free for classroom use. **Websites**

36) In **devising a participation** grade, be sure to define what participation means in the context of a face-to-face class meeting and an online discussion.

37) The students become familiarize with the language and content beforehand through the _____ activity. **Pre-listening**

38) Students should be referred to on campus so for checking their-------- skills before entering the online program. **Computer**

39) To identify the simple facts, present in a written test is defined as (literal comprehension)

40) The------- app is progressive and good at spanning concepts from basic level understanding to complex, collegiate-level pieces of writing. **Grammar**

41) Pairing the most able and less able student to share task is **peer-teaching approach**.

42) How many categories of action research? **Three [planning, acting and reflecting]**

43) PCC stands for? (Portland Community College)

44) Make judgments about the written text's content is defined for **(evaluative comprehension)**

45) Connect the text to other written passages and situations is defined for **(inferential comprehension)**

46) Which app is designed to help students improve paragraph formation, integration of idea, inference, and abstract thinking and expression? (story builder)

47) The reading strategy used to get an overall idea of the passage; he is most likely to use the strategy called **skimming**.

48) Communicative writing means the use of **orthography** in order to construct grammatically correct sentences which communicate a meaning to the reader.

49) Writing like listening involves a **writer (producer)** and a **reader (receiver).**

50) Writing involves interaction between the **writer (encoder)** and the **reader (decoder).**

51) **Determine action:** for the next semester, the teacher decides to repeat the experiment, but allow learners a choice of selecting their own partners or working alone.

52) To work with others for the same task is called **Collaboration.**

53) Edmodo has "the **largest global** teacher network."

54) **Hardware includes** devices, such **as e-readers and tablets, as well as smartphones, laptops, and even desktop computers that display digital text**.

55) Software includes a **range of applications and programs** that allow readers to interact with the text.

56) **Learning to write** well takes time and practice.

57) Educational technology was a feature of **30 of the 102 articles** (21 per cent).

58) Hyper means **non-linear** or random and media refers to information represented in many formats.

59) Affordances are the **visual clues** that an object gives to its use as well as what it is capable of doing in terms of both intended and unintended functions.

60) **Dogo** is a news website for kids, and provides them with a library of digital books and movies as well.

61) Technically, **No Red Ink** is an **interactive website**, but it is so functional and easy to navigate.

62) an **interface** is the aspects of a computer that allow the user to have **sensory interaction** with a program.

Subjective

What is E-Teaching = Electronic Teaching?

E-Teaching refers to teaching carried out through electronic / computer-mediated environments, especially online platforms, where instruction, communication, and assessment are delivered using technology.

Collaboration Between CALL and SLA?

CALL and SLA work together to help people learn a new language. SLA explains **how people learn a language**, like what helps them understand, practice, and improve. CALL uses

technology such as computers, apps, videos, and online tools to apply these ideas. CALL gives learners easy-to-understand lessons, chances to talk with others, and quick feedback on mistakes. It also lets students learn at their own speed. SLA helps CALL developers make better learning programs, and CALL helps SLA researchers' study how people learn. So, CALL and SLA support each other and make language learning easier and more effective.

What are Reading Skills? OR three reading-comprehension skills?

Reading skill refers to the ability to understand written text. When students comprehend or understand written text, and combine their understanding with prior knowledge, they are able to perform the following three reading-comprehension skills.

1) Identify simple facts presented in written text (literal comprehension)
2) Make judgments about the written text's content (evaluative comprehension)
3) Connect the text to other written passages and situations (inferential comprehension)

What are Three advantage of multimedia?

a. Hypertext and multimedia also help learners become more independent in learning a language.
b. When students use multimedia links to explore explanations and extra information, they rely less on the teacher as the only source of knowledge.
c. This reduces the teacher-centered nature of the classroom.
d. A good multimedia database of materials can also help young learners and second language learners who do not know how to use dictionaries or libraries for searching information.

Discuss the useful application that can be used by students and teachers for creating, sharing their own books? OR TECHNOLOGY TOOLS USED FOR DEVELOPING WRITING SKILLS?

here are **13 edtech tools** that every teacher and student to aid and enhance teaching and learning.

1) **Interactive Whiteboard**: The interactive whiteboard (IWB) was invented by Palo Alto Research Center (PARC) around 1990 as a tool to be used in the office for round-table discussions and small group meetings.

2) **Smart Typewriter**: The smart typewriter was developed as a tool for authors, writers, journalists, and other professionals to increase their daily productivity and word count.

3) **AutoDraw:** Create customized illustrations, icons, and visuals with a few drags of your mouse with AutoDraw. This application uses artificial intelligence to guess what you're

trying to draw and complete your illustration for you. You can save and download your work as a PNG file.

4) **Book Creator:** Use Book Creator to make, publish, and share your own book, complete with texts, images, audios, and videos. With this application, teachers and students can create interactive stories, instructional manuals, research journals, and multimedia-assisted reports.

5) **Creaza:** Here's a tool that teachers and students can use to create presentations that actively engage learners. Creaza allows users to make mind maps, diagrams, and cartoons, as well as add images, audios, and videos in their presentation.

6) **Edmodo:** Edmodo has "the largest global teacher network." It's a place akin to a digital classroom, where teachers, students, and even parents get to be involved in education.

7) **FlipGrid:** This tool is platform where teachers, students, and users discuss different topics through a short video. You create a "Grid" (a group or classroom) where you pose topics and questions and start the dialogue.

8) **Formative**: Formative is a great tool for individualized and real-time feedbacking between teacher and student. Teachers can create "formatives" (e.g., lessons, exercises, and assessments) and share them with students.

9) **illuminations:** Created by the National Council of Teachers of Mathematics (NCTM), Illuminations is a place where teachers can find lesson plans, classroom activities, and other resources that will enhance the teaching-learning process, all in line with common core standards.

10) **Newseumed:** Newseumed makes available numerous learning tools, including articles, videos, and activities, to broaden their knowledge about history, current events, and relevant issues. And they're all free.

11) **ProWritingAid:** Writing reports, book reviews, and projects are common place in school. ProWritingAid is a tool that helps students upgrade the quality of their writing assignments. The app is a "grammar guru, style editor, and writing mentor in one package."

12) **Quizalize:** Quizalize offers a fun and collaborative way to assess learning. This app allows teachers to create quizzes for students to test their subject knowledge. Teachers

can also add images and equations to make more varied questions, put explanations, categorize questions under subtopics, and set a time limit for quizzes.

13) **Write About:** Write About offers ways for learners to practice their writing skills by providing prompts and activities. Students can write about given topics, practice free and creative writing, start a journal, and make write-ups.

What are technological methods that are incorporated into the writing process? OR 7 Ways To Use Technology To Improve Your Writing Skill?

1) Feedback Mechanism Via Automated Systems
2) Technological Collaboration
3) Blog Writing
4) Writing Via Tablets
5) Publishing And Training
6) Supplementary Material
7) Meeting Threshold

What is Book Track Classroom?

BookTrack is an awesome, free tool that enhances both reading and writing by incorporating music. Students can create soundtracks for plays, poems, stories, or even their own creative writing, and share their creations with the world. Text and music both have the powerful ability to elicit an emotional reaction from the audience. With BookTrack, students can merge the two and bring a new dimension to the written word.

What is the Pedagogical Process?

The pedagogical process means the step-by-step way teachers teach and students learn. It includes everything that happens in teaching, from planning lessons to checking students' learning.

Main Steps of the Pedagogical Process:

- Planning
- Teaching
- Learning Activities
- Assessment
- Feedback

Skimming and Scanning with Examples?

Skimming:

Skimming means reading quickly to get the general idea or main point of a text. You do not read every word. **For Example:** A student skims a newspaper by reading only the headlines to understand the main news of the day.

Scanning:

Scanning means looking for specific information in a text. Again, you don't read everything. **For Example:** A student scans a result list to find his roll number.

Collaboration in language learning process?

Collaboration in the language learning process means learners work together in pairs or groups to practice a language. Students share ideas, help each other, and communicate while doing tasks such as discussions, role plays, or group projects. Through collaboration, learners get more chances to use the language, improve speaking and listening skills, and learn from their peers. It also increases confidence and motivation in learning a language.

Write five general problems of collaboration in language learning setting?

1) the lack of input from some collaborative group members
2) the inability of some teachers or learners to facilitate properly collaborative instruction to ensure the group remains on task
3) the fact that collaborative learning may not (in the view of some teachers) seem an economical use of time
4) teacher insecurity over unpredictable outcomes
5) Group work can create noise and discipline problems in the classroom
6) Learners may use their first language instead of the target language during group work.

using Smartphone language learning process? OR Students Smart Phones?

Today, every classroom has technology, even if there is no computer or projector. Most students carry technology in their pockets in the form of mobile phones. A smartphone works like a small computer. ESL teachers can use this free tool in teaching.

Teachers can ask students to use their phones to record speaking activities. One student can record another during a group discussion. A student can also record himself while reading a dialogue or answering questions. After recording, students watch their own videos. The teacher can give them a simple checklist to see their speaking skills. Students can judge their own performance honestly. The teacher should tell students that their self-assessment will not affect their grades.

What does Hoogeveen (1995) suggest about learners' responses to multimedia?

Hoogeveen (1995) suggests that learners' responses to multimedia interact in a complex way giving learners the feeling of experiencing information instead of simply acquiring it and improve:

- learning (retention, understanding, knowledge acquisition), but also
- the user-friendliness of user interfaces and thus man–machine interaction
- the entertainment value of systems (i.e. more fun)
- the impact of messages (e.g. during business presentations or com-mercials)

What does M. Hoogeveen suggest about quality multimedia and its effects?

M. Hoogeveen suggests that quality multimedia, featuring a high degree of interactivity, congruence (the degree to which different information types are used redundantly to express the same ideas) and visual references lead to:

i. A high level of stimulation of the senses, at least with regard to the auditory and visual perception systems
ii. A high level of involvement, attention, concentration
iii. Emotional arousal, e.g., fun; the word arousal is used in the psychophysiological sense of emotional, internal arousal, related to arousal of the nervous system
iv. Strong recognition effects, using mental reference models.

How to writing Skills use in Language learning process?

Good writing skills are essential for effective communication. The better you write, the more easily readers will understand you. Learning to write well takes time and practice.

Writing skills help students learn a language better because writing improves grammar, vocabulary, and thinking in the language. When students write, they practice using correct sentence structure and spelling. Writing also helps them organize ideas and express thoughts clearly. Teachers use writing activities like essays, letters, summaries, and journals to improve students' communication skills. Through writing, learners can also receive feedback and correct their mistakes, which makes their language stronger.

What is ProWritingAid?

Writing reports, book reviews, and projects are common place in school. ProWritingAid is a tool that helps students upgrade the quality of their writing assignments. The app is a "grammar guru, style editor, and writing mentor in one package." ProWritingAid is also useful for all professionals to improve their drafts and overall writing skills.

An Action Learning model (after McLean, 1995) features?

1) Conceptualization
2) Delineate teaching/ learning process

3) Identify inputs
4) Identify outcomes
5) Implementation
6) Measure outcomes
7) Identify comparison
8) Analyze comparison
9) Interpretation
10) Judge effectiveness
11) Judge cost benefit
12) Determine action

What is multimedia and its features?

Multimedia is a term that has essentially subsumed hypermedia, but the original difference was photographs). **OR** Multimedia means using more than one type of media (like text, images, sound, video, and animation) together to present information.

Features:

text, images, sound, video and/or animations, Interactivity and Hyperlinks.

Give examples of typical first assignments? OR A first assignment that requires students to demonstrate some familiarity with the software being used?

This might be combined with one of the icebreaking activities. Typical of such assignments (depending on the software features available) would be these:

■ Write a short self-introduction and post it in the discussion forum.

■ Take an orientation quiz using online testing.

■ Fill in the template of a basic web page or blog with some biographical data and an optional photo of yourself. Add a video clip or audio recording if you like.

Types of assignment?

- Information-soliciting Assignments
- Information-sharing Assignments
- Jigsaw Assignments
- Collaborative Assignments
- Pair / Peer-based Assignments
- Oral Assignment
- Written Assignment

Collaboration defines?

Collaboration means working together with other students in a group or pair. In language learning, students share ideas, help each other, and complete tasks together. When students collaborate, they practice speaking, listening, and writing in the target language. Collaboration also increases confidence and improves communication skills. It helps students learn faster because they can learn from their classmates.

Database and Search Engine?

A database is a collection of information that you can search and organize. You can find information by using simple rules like alphabetical order, or by using advanced searches like meaning-based searches. The information can be text, numbers, pictures, sounds, or other media.

For users, the **World Wide Web (WWW)** is like one big database. We search it using search engines like **Google**. In the past, search engines were managed by people like librarians. But because the web grew very fast, search engines now use computer programs. These programs find websites based on how often the search words appear, or by counting how many other websites link to them (like Google).

5 Technology Tools Used for Developing Reading Skills?

a. Wonderopolis
b. Dogo
c. Kahoot!
d. Whooo's Reading
e. Booktrack

Explain E-Reading Technology?

E-reading technology means the devices and software used to read digital text. This includes **e-readers, tablets, smartphones, laptops, and computers**, as well as **reading apps and programs**. These tools help students read digital books, articles, and other texts. The terms like **e-book, e-reader, tablet** are often confusing because technology changes very fast. Many devices and apps look similar, so it is hard to clearly separate them.

E-reading technology is useful in education because it can support reading skills, especially for young learners and students with disabilities. Features like **text-to-speech** (where the device reads the text aloud) and **highlighting words** help students improve reading and vocabulary. It can also provide practice, feedback, and interactive reading support. However, using e-reading technology in schools has challenges. Teachers need training and support to use these tools properly. Schools also need good internet, updated devices, and proper maintenance. Without training, many teachers use technology only for basic tasks and not for real learning.

Explain Posting Lectures Online?

Teachers often worry that students will not attend class if lectures are available online. Usually, lectures include important core material and extra complex details. The core material is the main part that students must learn. If this core material is posted online with helpful charts and links, students won't need to write everything in notes. They can focus on the difficult parts during class.

However, some students may still not come to class. The reason is that students learn in different ways. Some learn best by listening and taking notes, some by reading, and others by doing activities. So, online lecture notes help only some students. The real solution may be to change how teachers use classroom time. Teachers should rethink their face-to-face teaching methods and use class time for more discussion and deeper learning.

Write a note on Hypermedia?

Hypermedia is a system that combines different types of media such as **text, images, audio, video, and animation**, and connects them using **links**. These links allow users to move from one piece of information to another quickly. Hypermedia is commonly used on the Internet, especially in websites and online learning materials. It helps learners explore information in a flexible way and makes learning more interactive and interesting. Examples of hypermedia include websites, online encyclopedias, and interactive e-books**. For example**, a word or picture can have a link to a sound file that shows how to pronounce it. A video of a real-life situation, like shopping, can be linked to an animation that shows the same conversation in a simpler way. The animation can remove distracting parts and focus only on the important language. Another animation can show related information, such as how to use different money bills.

Explain Hypertext in 5 to 6 lines?

Hypertext is a text that contains links. These links allow readers to jump from one part of the text to another or to another page. When you click a link, it takes you to more information. Hypertext is used on websites and online documents. It helps readers find information quickly and easily. Hypertext is used to connect text to extra information like footnotes and notes. It can also link to many other types of information.

Bolter (1991) explains the significance of hypertext: 'Electronic text is the first text in which the elements of meaning, of structure, and of visual display are fundamentally unstable' (p. 31). By this he means that electronic texts are subject to rearrangement and reordering by the user beyond the traditional linear organization of books. This has many effects on making language-learning materials because the order of learning is usually fixed. Teachers often follow a set order based on research about which words and grammar are easier or harder.

Collins' points on the shift from traditional to computer-based learning?

1) a shift from whole class to small-group instruction

2) a shift from lecture and recitation to coaching
3) a shift from working with better students to working with weaker ones
4) a shift toward more engaged students
5) a shift from a competitive to a co-operative work structure
6) a shift from all students learning the same things to different students learning different things
7) a shift from the primacy of verbal thinking to the integration of visual and verbal thinking

What is E-mail? And its advantages?

E-mail is an electronic message sent from one computer to another. Email is the most used tool in the Internet; 'it's easy to use, it's cheap, fast and reliable'.

i. **Fast communication** – messages are delivered instantly.
ii. **Low cost** – sending email is free or very cheap.
iii. **Easy to send documents** – you can attach files, pictures, and documents.
iv. **Can be sent anytime** – 24/7 availability.
v. **Easy to store and search** – you can save emails and find them later.
vi. **Fast feedback** – people can reply quickly.
vii. **Record keeping** – email provides a written record of conversations.

Collaboration of learner and learning?

Collaboration of learner and learning means students work together with others during the learning process. In this method, learners help each other to understand the lesson, solve problems, and complete tasks. Students share ideas, discuss topics, and practice language skills in groups or pairs. This teamwork improves speaking, listening, and thinking skills. It also makes learning more interesting and helps students learn faster because they learn from each other.

CALL role in applied linguistic?

CALL (Computer Assisted Language Learning) is very important in applied linguistics because it helps improve language teaching and learning using technology. In applied linguistics, researchers study how languages are learned and taught. CALL provides tools like language learning apps, online courses, interactive exercises, and multimedia resources. These tools help learners practice listening, speaking, reading, and writing.

CALL also helps teachers design better lessons using computers and the internet. It supports language learning by giving instant feedback, allowing learners to work at their own speed, and providing real-life communication practice through online chats and video calls. In applied linguistics, CALL is used to research how technology affects language learning and how it can be improved.

What is Writing Prompts?

This app gives students ideas for writing fiction and nonfiction. It helps students practice writing short pieces. The app uses current events, pictures, colors, words, and random story ideas to inspire students. It has **600 writing prompts** that can be used online or offline. Students can use it anywhere to practice writing.

What is AutoDraw Application?

AutoDraw is an app that helps you draw pictures easily. You just start drawing with your mouse, and the app uses **artificial intelligence (AI)** to guess what you want to draw. It then completes your drawing for you. You can save your work and download it as a **PNG file**.

Teachers can use AutoDraw to make **visual guides and pictures** for lessons. These visuals help students understand concepts better and stay interested. Students can also use this app to practice creativity and make pictures for their presentations.

Explain McConnell's hypotheses?

McConnell (1994) suggests that cooperative learning serves to make public what individuals and group members know: This **'making public'** works as a central process in cooperative learning and confirms its social and democratic nature. It can be thought of along several dimensions: our learning is public when it is known to others and ourselves; it is blind when it is known to others but not ourselves; it is hidden when it is known to ourselves but not to others; and it is unconscious when it is not known to ourselves or to others (p. 16).

Behaviour known to others ↓ Unknown to others	Behaviour known to self → Behaviour unknown to self	
	Public	Blind
	Hidden	Unconscious

However, McConnell (1994) also points out that cooperative or collaborative learning depends largely upon a willingness to work in this way: 'if the group does not address its own learning and come to some initial, and over time ongoing, agreement about itself then it is likely to fragment and the members will essentially end up learning in isolation'

General social challenges to collaboration?

1) an unwillingness to engage in the activity
2) an unwillingness to accept the collaborative nature of the activity (i.e. pursuing individual or competitive goals)
3) an unwillingness to offer suggestions or explanations
4) an unwillingness to offer or accept justifications, clarifications, elaborations, criticism (i.e. groupthink) with supporting evidence or alternatives

5) the complexity of the program's content
6) the navigability of the program's interface
7) the difficulty of the program's model of instruction (behaviorist or constructivist)

Murillo (1991) responses four categories (paraphrased)?

Murillo (1991) found that responses could be divided into the following **four categories** (paraphrased):

i) **Copying:** repeating what was just read or said
ii) **Repeating:** repeating language from the screen
iii) **Managing:** dealing with the computer, the program and discussing progress made
iv) **Conferring:** offering or discussing solutions or paths to solutions; dis-agreeing, agreeing, suggesting, explaining, or thinking aloud; spelling; correcting themselves or each other and asking questions

Sharan and Shachar (1988) cognitive strategies?

1) Explain with evidence
2) Generalize
3) Offer a concrete example
4) Offer an unstructured idea
5) Organize ideas
6) Present a hypothesis or idea
7) Repeat
8) Repeat with expansion
9) Take a stand

What are the factors which impact on the opportunities for collaboration?

- learner characteristics may make the collaborating learners incompatible
- the goals/objectives of the program may discourage collaboration
- the pedagogical model may be overly behaviorist
- the methods of navigating the information (related to the structure and format) may be too obscure or difficult
- the content, or knowledge base, of the learning materials may discourage collaboration if it is too far above or too far beneath the level of the majority of the learners.

What is the Role of internet?

The role of internet in:

- Education & Knowledge
- Communication

- 💼 Business & Economy
- 🎮 Entertainment
- 🏥 Health & Public Services
- 🌐 Social & Cultural Impact

What is Quizalize application:

Quizalize offers a fun and collaborative way to assess learning. This app allows teachers to create quizzes for students to test their subject knowledge. Teachers can also add images and equations to make more varied questions, put explanations, categorize questions under subtopics, and set a time limit for quizzes. Quizalize also has a tool for teachers to keep track of students' results so they can provide immediate feedback. Students can answer the quizzes individually or form teams and compete against one another. The app has over 20,000 premade quizzes that users can answer for practice or for fun.

What is Skype and its benefits?

Skype application is increasingly used as an art of listening and speaking development process throughout the world today. Skype is an internet-based application that enables Voice over Internet Protocol (VoIP) calls (Jenks, n.d.). It has a useful user-interface that enables the users easy and effective use. Hampel et. al. (n.d.) assert that Skype and MSN Messenger increasingly create newer possibilities for the users. These softwares can also transmit video at the same time when the users speak to each other. So, this feature raises the level of interaction between practisers. Such level of interaction is also effective because of the highly useful features and userinterfaces of the applications. For the user-interface of MSN Messenger.

Benefits of Skype:

1) Free communication between Skype users worldwide
2) Video conferencing for meetings and classes
3) Remote work friendly (screen sharing & group calls)
4) Easy to use on mobile, tablet, and computer
5) Saves time and money compared to traditional calls

Avatar how they assist in second language learning?

An avatar is basically a digital character or representation of a person in a computer program, game, or virtual world.

- It can look like a human, animal, or cartoon.

- You use it to interact, communicate, or do activities in a virtual space.

Avatars assist second language learning by allowing learners to participate in virtual worlds where they interact through online personalities. these environments enable learners to interact as they would in the real world and provide opportunities for second-language instruction, especially in platforms like Second Life. Such environments place learners in target-language situations where they must respond to others' words and actions, supporting active language use and acquisition. Avatars act as interactive, adaptive, and non-judgmental tutors, providing personalized guidance, conversational practice, and cultural context—making second language learning more effective and engaging.

technology tools of speaking and listening skills? OR Modern technologies in education? OR Devices used for enhancing speaking skills

1) Communication lab
2) Speech recognition software
3) Internet
4) TELL (Technology Enhanced Language Learning)
5) Pod casting
6) Quick Link Pen
7) Quicktionary
8) VoiceThread + iPad
9) Go! Animate
10) Voki
11) AudioPal
12) Recordings and Transcripts
13) Native Speakers via Technology
14) Skype and/or FaceTime
15) Smart Phones

What are Communication Labs?

Communication Labs are special rooms or facilities designed to help students improve their communication skills, especially in speaking and listening. There are software programs that help students improve their speaking skills. By using these programs on computers, students can practice as much as they want and try to get better at speaking. Using headphones in the lab makes learning more interesting, so students want to repeat the practice many times instead of getting bored.

How learner collaborate in learning?

Learners collaborate in learning by working together, particularly in computer-based environments. learners naturally prefer to explore and work together due to social interaction.

Collaborative learning helps reveal ideas and information to others and to learners themselves, while cooperative learning makes individual and group knowledge public.

technical problem in online learning?

1) **Outdated browsers** – Students may not be able to view web pages properly if their browser is old or not updated.
2) **Missing plug-ins** – Some content or files may require plug-ins that students haven't installed.
3) **File compatibility issues** – Students using older versions of word-processing software may not be able to open documents created in newer versions without a plug-in.
4) **Lack of non-verbal communication cues** – Facial expressions, voice tone, body language, and eye contact are missing in online learning, which can make communication harder.
5) **Asynchronous communication delays** – Responses may come much later, unlike face-to-face classes where feedback is immediate.
6) **Feeling of isolation** – Students complete assignments alone at home, without the structure or immediate interaction of a classroom.
7) **Lack of immediate feedback** – The asynchronous nature means students may wait hours or days for responses.
8) **Need for proper preparation and tools** – Students may struggle if they are not given the necessary software, instructions, or guidance before starting.

What is American Wordspeller?

Spelling is very important for good writing. But if students don't know how to spell a word, they can't look it up in a dictionary. The American Wordspeller app helps with this. Students can type the first few letters of a word, and the app will suggest possible words based on how it sounds. This helps students find the correct word and gain confidence in spelling.

Note on Conceptualization?

Delineate Teaching/Learning Process: The teacher identifies a problem with using CALL (Computer-Assisted Language Learning) and presents it to a group of learners, for example, 14-year-old students from different language backgrounds learning English through an online messaging system. After discussing with colleagues and students, the teacher decides to use a peer-teaching approach, pairing stronger students with weaker ones to work on a task together.

Identify Inputs: The teacher assigns pairs based on students' abilities, matching stronger and weaker students. Other factors that might affect learning are also considered.

Identify Outcomes: The teacher expects students to learn faster, with more participation from weaker students. Since their common language is English, the teacher also hopes students will use English more often.

ELEMENTS OF AN ORIENTATION?

i. General introduction, including our expectations for online students
ii. Requirements for computer equipment and software (other than the platform being used)
iii. Computer skills needed
iv. Introduction to the course management software or other programs you will use to teach the class
v. A first assignment that requires students to demonstrate some familiarity with the software being used

Teachers Orientation?

Teacher orientation refers to preparing teachers to use computers and technology effectively in language teaching. teachers need proper training and familiarity with CALL so that they feel confident and comfortable. The teacher's role is transformed into that of a facilitator, and successful use of CALL largely depends on teachers' positive attitudes and willingness to adopt technology.

Three Advantages of the Internet and the Web for Developing Listening Skills?

- **Access to authentic language** – Students can listen to native speakers through online materials like radio, TV, or streaming audio/video, which helps develop native-like listening ability.
- **Opportunities for real interaction** – Students can engage in interactive listening with native speakers using audio input and webcams, simulating real-life conversations.
- **Ease of use and low cost** – Listening activities are easy to access online without complicated software, and using webcams or local servers avoids expensive long-distance communication costs.

Types of listening?

i. **Discriminative Listening** – Distinguishing sounds or visual cues, like hearing a "t" vs. a "d." It's the foundation for all other listening.

ii. **Listening for Comprehension** – Listening to understand and obtain information.

iii. **Therapeutic or Empathetic Listening** – Listening to show empathy and help the speaker work through a problem.

iv. **Critical Listening** – Listening to evaluate and make judgments about what is heard.

v. **Appreciative Listening** – Listening for enjoyment, like music or TV.

Orientation learning program?

An orientation learning program is designed to introduce students to the online learning environment. such programs help learners become familiar with technology, course expectations, and learning strategies, while also reducing anxiety and technical problems at the beginning of online courses. It explains the rules, procedures, and expectations.

Advantages of multimedia?

- Makes learning more interesting
- Improves understanding
- Supports different learning styles
- Encourages active learning
- Easy access to information
- Enhances retention

What is PlayPosit & EDpuzzle?

PlayPosit and Edpuzzle are tools that let teachers create interactive videos. Teachers can record their own videos or use existing videos, and add questions at certain points to see if students understand and to make them think more.These tools let teachers change the questions and content to match students' needs, so students can learn at their own speed. Teachers can also check answers during the video and give feedback or extra help based on what students need. They can be used in flipped or blended learning, where students learn at home with videos and use class time for discussion. Students can also make their own interactive videos with questions, not just teachers.

Explain Voki?

Voki (http://www.voki.com/) is a fun tool where students can use talking avatars. Students can create their own avatar, making it look like a historical character or themselves. They can use their own voice to practice language, improve vocabulary, and answer questions. Teachers can also use Voki to make homework or assignments, helping students practice listening skills and complete tasks. The Voki website has around **200 lesson plans** for using it in different subjects.

Example: A student can create a Voki avatar that looks like themselves or a famous person. They can record their own voice to say something in English. The teacher can ask questions, and the student answers using the avatar. This helps students practice speaking, listening, and vocabulary in a fun and easy way.

Explain Collaboration? OR Explain collaboration in the field of CALL?

Collaboration means two or more learners working together to achieve a common goal, such as completing a task or answering a question. In collaborative learning, students share ideas, listen to each other, discuss problems, and make decisions together. In the classroom, collaboration is important because it develops social skills and thinking skills. Through online platforms, students share ideas, discuss topics, complete tasks, and help each other in learning. Technology such as chat rooms, discussion forums, Google Docs, Zoom, and learning apps allows learners to communicate and cooperate easily. Collaboration in CALL improves students' language skills, critical thinking, and confidence because they learn from each other and practice language in real situations. It also reflects really academic and professional life, where people usually work in groups. From a language learning point of view, collaboration is very useful because learners talk about tasks, explain ideas, ask questions, and negotiate meaning. This discussion gives learners chances for comprehensible input and output, which helps them build vocabulary, language awareness, and communication skills. Collaboration is not just sitting together. True collaboration happens when learners discuss what to do, how to do it, and why to do it. They decide together which materials to use and how to solve problems. In this way, learners become semi-autonomous and take part in shaping their own learning. Researchers also point out that collaboration supports communicative learning, improves awareness about language and learning, and helps develop skills such as decision-making, coordination, adaptability, leadership, and communication. Overall, collaboration in CALL promotes interaction, negotiation of meaning, and language development, making learning more effective and socially meaningful.

Example: Two or more students sit at one computer and do an English task together. They talk to each other, ask the meaning of words, discuss answers, and decide together what to do. They share ideas and help each other. This working together is called collaboration.

Gaer's Types of Questions?

Gaer (1998) provides a useful type of article, a question and answer (Q&A) session, in which she asks and answers the following questions related to conducting software evaluations:

1) What types of software are available?
2) What kind of software is appropriate for adult ESL classrooms?
3) How do I select software for the classroom?
4) What kind of technical expertise do I need?
5) What do the students need to know about computers?
6) How do I coordinate the software with the curriculum?
7) How can I integrate the software into instruction?
8) How can I follow up the software with activities?
9) How do I prepare my students to use the specific software?

What is Quicktionary?

It is a pen-like device. It allows the reader to easily scan the word and get its definition and translation on its own LCD screen. Technology such as Enounce and Sound-Editor enable learners to adjust the speech rate of listening materials to assist their comprehension, and present spectrum of speech waves and visual depictions of mouth and tongue movement to ease the learning and refine pronunciation.

Write Non-verbal Discourse Strategies?

Non-verbal behaviors are actions without speaking, like **silent reading**. When learners are silent at a computer, it is hard to know what they are really doing or learning. Even if we can see what page they are looking at or how long they stay there, it does not truly show what they are thinking. They might be concentrating, or they might be daydreaming, browsing, or thinking about something else. Sometimes learners read in a **very low, mumbled voice**. They do this to show others that they are busy reading and do not want to be interrupted. It means: "Please wait, I am not ready yet." They may be reading carefully, or they may only be quickly looking over the text.

Wegerif and Dawes (1998) found three non-collaborative behaviors:

- One child controls the mouse alone.
- Other children agree with the dominant child without giving reasons.
- The group slowly chooses something without discussing other options.

Non-verbal actions like **pointing at the screen** are also very important for learning, but they are often ignored, especially in computer labs. If computers are placed far apart in small booths, students cannot easily point, share, or work together. This **bad classroom design** can stop students from collaborating properly.

Write Verbal Discourse Strategies?

Most collaborative and non-collaborative interactions happen through verbal communication, so they can be easily recorded and studied. There are different ways to classify social interactions on computers. Murillo (1991) divided these interactions into **four main types**.

1) **Copying:** repeating what was just read or said
2) **Repeating:** repeating language from the screen
3) **Managing:** dealing with the computer, the program and discussing progress made
4) **Conferring:** offering or discussing solutions or paths to solutions; dis-agreeing, agreeing, suggesting, explaining, or thinking aloud; spelling; correcting themselves or each other and asking questions

In many cases, Murillo's four categories simply define types of collaboration without examining their quality or the opportunities for SLA.

Write difference between web-enhanced courses and blended courses?

Web-enhanced: Web-enhanced courses are mainly taught face-to-face, but the internet is used only as a support tool. A broad category of courses with associated web sites or course management system classrooms that contain materials relevant to the course (perhaps a syllabus, a list of web-based resources, a course calendar, a reading list, lecture notes or video lectures, discussion board, and/or real-time online meeting functions and chat). Actual online activities may be required or optional. **For example:** Online videos are shared only for extra learning.

Blended: Courses in which both online and face-to-face instructional elements are required and complementary. A sizeable percentage of content is delivered online, there are required online student activities, and a significant portion of the student's grade is based on online activity. **For example:** Students attend lectures physically but submit quizzes and assignments online.

What is speech recognition software?

Speech recognition software helps students improve their speaking skills. It changes spoken words into text that a computer can understand. The software checks how accurately a student speaks and gives feedback, such as praise or a chance to try again. In this way, learners can know whether they are speaking correctly or not. As students improve, the software reduces support so they can practice more independently. It also evaluates grammar, pronunciation, and comprehension and shows correct forms. For example, if a student pronounces a word wrongly, the software immediately identifies the mistake and helps to correct it. This tool is especially useful for distance learners because they do not have a teacher to correct their speech, so the software helps them improve their speaking skills.

What are MS Word tools for improving writing?

MS Word offers some handy tools under its Tools menu which can be used for developing / improving writing skills. For example:

1) **Spelling and grammar checking** is one of the basic tools of a computer. When you use this option, a window appears showing the incorrect word or sentence and a list of suggested corrections. You can choose a suggestion by clicking "Change" or ignore it by clicking "Ignore".
2) The Thesaurus is another useful feature. It helps you find suitable words when you are unsure about a word in the text. To use it, you select a word in the document and open the Thesaurus option. The computer then shows alternative words, and you can replace the word with a better one.

3) By using a computer, you do not need to use a physical dictionary because meanings and correct words are available instantly. Computer-based spelling checkers also help you correct mistakes frequently and improve your vocabulary, as you see many related words on the screen.
4) Interactive dictionaries are also available on computers. When you type a word, the computer shows its meaning. Dictionaries are important resources in language learning and help students improve their writing skills.
5) Moreover, computers help learners learn synonyms and antonyms. By matching words from lists, students can easily understand similar and opposite meanings, which supports vocabulary development.

Usage of MSN Messenger for speaking skills?

MSN Messenger is an online communication tool that helps students improve their speaking skills. Through voice chat and video calls, learners can practice speaking English with friends, classmates, or native speakers. It provides a real-time environment where students can communicate freely, which increases their confidence and fluency. MSN Messenger also helps learners improve pronunciation, vocabulary, and conversational skills because they practice language in real situations. These software's can also transmit video at the same time when the users speak to each other. So, this feature raises the level of interaction between practices.

How using Technology can Help Develop Listening Skills?

- Radio
- Audio tapes
- Language Laboratory
- Video

What are Audio tapes? OR Audiotapes for listening skills?

Audiocassette players are one of the simplest and cheapest tools for providing listening practice to students in the classroom. Nowadays, most language course books come with audio cassettes, so cassette players have become an important tool in language teaching.

1) Extensive Listening Practice

Audiocassettes help students practice extensive listening, which means listening to long pieces of speech for general understanding. Students listen to different speakers and unfamiliar voices, which improves their overall comprehension skills. Without audiotapes, teachers cannot easily create real listening situations. With tapes, teachers can provide various listening contexts that help students understand spoken language better.

2) Intensive Listening Practice

Audiocassettes also support intensive listening. When a tape is played several times, students can focus on specific language points such as pronunciation, words, and grammar. Teachers usually replay the tape to help students understand details. However, some students may become too dependent on repeated listening. This habit is called the "play it again Sam" syndrome.

Explain The Listening process?

Listening is a process of 'receiving, attending to, and assigning meaning to aural stimuli'. It is how we understand spoken language. First, we hear the words, then we understand their meaning, next we interpret the message, and finally we respond. These three sub-processes (receiving, attending to, and assigning meaning) are important for listening in any language. However, in a second language (L2), especially for young adults learning their first foreign language, these steps work a little differently. Although listening in L1 (native language) and L2 may seem similar, understanding in L2 is more difficult and complex than in the native language.

The first challenge in teaching listening is helping learners understand the sounds of the language. To understand what they hear, listeners need to connect new information with what they already know. They focus on the meaning of the message rather than the exact words or sentence structure. In listening, the brain stores the main idea in a simpler form, keeping the gist rather than the exact original words.

Wolvin & Coakley and Weissenrieder's views on technology in listening?

According to Coakley and Wolvin, '[in general,] listening is a process of "receiving, attending to, and assigning meaning to aural stimuli"'. Wolvin pand Coakley (1997) suggest that technology can provide learners with exposure to a wide variety of listening inputs, including different voices, accents, and speaking styles, which may not be available in traditional classroom settings." They argue that technology allows learners to control the pace of listening, repeat input, and focus on specific segments, thereby enhancing comprehension."

Weissenrieder emphasizes that technology supports listening comprehension by allowing learners to interact with authentic materials and by encouraging active engagement with aural input rather than passive reception.

What are Verbal Strategies?

Verbal strategies involve the use of language-based techniques to aid listening comprehension. These strategies include asking for clarification, requesting repetition, paraphrasing what has been heard, and confirming understanding during interaction. By using verbal strategies, listeners actively participate in the listening process and negotiate meaning with the speaker rather than remaining passive recipients of information. **For Example:**

Paraphrasing: Using different words to explain the same idea. Example: Saying "I'm feeling tired" instead of "I'm exhausted."

What are verbal responses?

Verbal responses are spoken answers or reactions that a learner gives during communication or language activities. They show understanding, agreement, disagreement, or participation in a conversation or task. **For Example:**

- Saying **"**Yes, I understand" after a teacher's explanation.
- Answering a question like **"**My favorite subject is English."
- Giving feedback like "That's interesting!" during a discussion.

Action research stages?

Action research usually includes **three stages:**

1) **Planning:** The researcher identifies a teaching or learning problem and thinks of ways to solve it. They consult colleagues and students and make a flexible plan that can change based on feedback.
2) **Acting:** The researcher implements the planned changes. They measure the results using tools like questionnaires, learner logs, or informal discussions. The results are shared with colleagues or published.
3) **Reflecting:** The researcher evaluates how well the intervention solved the problem. They also consider how their own biases may have affected the results and stay open to unexpected findings.

What are Affordances and Misaffordances?

Affordances:

Affordances are visual clues that show how an object can be used, including both its intended and possible unintended uses. Affordances can be both obvious and learned. But an object can have both affordances and misaffordances. **For Example:** A chair is meant for sitting, and its size suggests comfort. But it can also be stood on or even used as a weapon—these are other affordances.

Misaffordances:

These are features that distract or prevent the object from being used as intended. **For example,** a chair that is poorly designed may be uncomfortable to sit on. Misaffordances are common in software programs where, for example, flashing words or pictures distract from the purpose of reading.

Define interface in pedagogy?

In pedagogical terms, an interface is the part of a computer that lets a person interact with a program using their senses. This is usually done through the **screen**, which can show different tools that are controlled by a **mouse**, **keyboard**, or **touch screen**. For example, you can **click buttons**, **turn dials**, **move sliders**, or drag images and text. Drop-down menus, like in Microsoft Windows, are a common tool used in interfaces.

Interfaces are very similar around the world because companies want to keep them standard and easy to use. But in some countries, like **China**, people often use **graphics tablets** to draw characters. The computer then suggests words based on the strokes and what it knows about common choices. For example, a symbol for water might suggest words related to liquids.

Explain use of computer as research?

Computers are very useful in research because they help researchers collect, store, and organize data efficiently. They make data analysis faster and more accurate using software like SPSS or Excel and can create graphs, charts, and tables to present results clearly. Computers also make it easy to search for information online, write research reports, and format references. In some fields, they can even simulate experiments that are difficult or unsafe to do in real life. Additionally, computers allow researchers to share findings and collaborate with others around the world.

Features of MS Word?

MS Word is a word processing program used to create and edit documents. It allows you to type, delete, and format text easily, such as changing fonts, sizes, and colors. You can insert images, tables, charts, and shapes into your documents. MS Word also provides spell check, grammar check, and auto-correct to make writing accurate. Other features include headers and footers, page numbers, bullet points, and paragraph alignment. It also allows you to save, print, and share documents in different formats.

What is the purpose of online readiness quizzes for students? OR how do online readiness quizzes gauge students' preparedness for online classes? OR Which qualities do these quizzes gauge in students?

Many institutions have short online quizzes or lists that allow students to judge their readiness for online classes. Some of the areas they seek to gauge are:

1) Whether students are proactive, self-disciplined, and well- organized;
2) Whether students are comfortable communicating entirely online without face-to-face meetings (for fully online courses)
3) Whether students have access to adequate computer equipment and software, and if not, whether they are willing to update their equipment.

What is Quick Link Pen?

The Quick Link Pen helps learners copy and store printed text or internet links and transfer them to a computer. It also lets the user look up word meanings using a built-in dictionary, making it very convenient. Recent tools in machine translation, like GO Translator and Bablefish, help translate text from one language to another quickly and easily.

Explain ThingLink?

ThingLink is a very simple and useful tool for storytelling. It lets students use one picture or video and turn it into an interactive story. Students can add clickable spots on the image that link to videos, audio, maps, text, or more pictures. Teachers can also use ThingLink to share learning materials in one place in a fun and interactive way.

By using ThingLink, students practice reading, writing, listening, and understanding in an online way. They choose helpful links to explain their topic better. **For example,** a map can show battles or history, or students can add music and art from a certain time. If they study an author, they can add facts about the author's life and books.

Collaborative learning benefits?

i. Students learn better by working together
ii. It improves communication skills
iii. Students share ideas and help each other
iv. It builds confidence
v. Students learn teamwork and cooperation
vi. Weak students get support from strong students
vii. Learning becomes more interesting and active

How teachers can support students before course?

Teachers can support students before a course by clearly explaining the course goals, rules, and expectations so students know what to expect. They can share the course outline and schedule, check students' prior knowledge, and provide simple introductory materials such as notes or videos. Teachers should also motivate students, answer their questions, and reduce their fear or stress. This early support helps students feel prepared, confident, and ready to learn.

student-orientation program issues?

Ideally, your institution should devise a student-orientation program that will take care of major issues such as these:

- Equipment and browser requirements;
- A general introduction to the software platform and its major features;
- Instructions and links for downloading necessary software plug-ins;
- Simple checklist explaining what students can expect in an online class

Orientation presentation by teachers?

An orientation presentation by teachers is a session conducted at the beginning of a course or program to introduce students to important information. During this presentation, teachers' welcome students, explain the course structure, outline learning objectives, and clarify rules and expectations. They also provide guidance on resources, assessments, and tips for success, helping students understand how to perform well and participate actively. The session usually ends with a question-and-answer segment, giving students a chance to clear any doubts and feel more confident about the course ahead.

Providing FAQs?

It is a list of common questions that people usually ask about a topic, along with clear answers. Teachers use FAQs to help students quickly understand difficult tasks, instructions, or rules without asking the teacher repeatedly. Look closely at your syllabus and check if any tasks you ask students to do need extra skills or special tools. For example, if an assignment involves downloading or uploading software, using a plug-in, or visiting a tricky website, try doing it yourself first. Write down any steps that might be confusing, because many students may not know them. If you don't give clear instructions, you could end up spending a lot of class time explaining.

Ways teachers provide FAQs?

- **Word Document or PDF** – A file listing questions and answers that students can download and read.
- **Web Page or Blog** – An online page where each question links to its answer, making it easy to navigate.
- **Printed Handout** – A paper version given in class for quick reference.
- **Email or Newsletter** – Sending FAQs to students via email so they can check anytime.
- **Interactive FAQ** – Using forums or Q&A boards where students can click questions to see answers.

Phases of progression?

i. Text only

ii. Text with monochrome images

iii. Colour graphics

iv. Icon-based menu systems

v. Sound

vi. Animation

vii. Video

viii. Networked communication (email, internet, WWW)

ix. Speech and handwriting recognition

x. Virtual reality

What is Science fiction and CALL?

Science fiction has often imagined how computers could be used in the future. It shows perfect ideas of learning without worrying about real-world technical limits. Many ideas that first appeared in science fiction later helped inspire real computer technologies.

One method used in science fiction is to break ideas down to their basic meanings and then mix them in new and surprising ways. The writer William Gibson introduced the word **"cyberspace"** in his 1984 novel *Neuromancer*. He described cyberspace as a shared imaginary space and as a visual way of showing data, such as text, media, and images. In simple terms, cyberspace is the digital space where people interact online. Whenever people communicate or work in online or virtual environments, they are operating in cyberspace

Use of computer in education?

Computers play an important role in education today. They help teachers and students in many ways. Computers make learning more interesting through videos, images, and interactive lessons. Students can use computers to search information, prepare assignments, and improve their skills. Teachers use computers to prepare lectures, presentations, and tests. Online learning platforms allow students to attend classes from home. Computers also help in distance learning and virtual classrooms. Overall, computers make education faster, easier, and more effective by improving access to knowledge and enhancing learning experiences.

Practical Challenges to E-reading Technology Use?

- Lack of devices
- Internet problems
- Eye strain
- Distractions
- Software problems
- Battery issues

What are Wonderopolis?

Children are naturally curious, and **Wonderopolis** uses this curiosity through a child-friendly educational website. It provides non-fiction articles that answer interesting questions. Students can choose topics such as technology, science, arts, and culture. After reading, students can take

quizzes to check their understanding. There is also a vocabulary list to help them understand difficult words.

Online quiz explanation?

An online quiz is a set of questions given on the internet to test a student's knowledge. Students answer the questions using a computer, tablet, or mobile phone. After submitting the quiz, results are often shown immediately. Online quizzes help students check their understanding, improve learning, and identify weak areas. Teachers use online quizzes to assess students quickly and save time.

Natural situation in SLA?

A natural situation in SLA means learning a second language in a real-life environment without formal classroom teaching. Learners acquire the language by listening, speaking, and interacting naturally with others, such as with family, friends, or native speakers. In this situation, language is learned naturally through daily communication, not through grammar rules or textbooks. This helps learners develop fluency and correct pronunciation over time.

Enlist 5 non-verbal behaviors

1) Eye contact
2) Facial expressions
3) Gestures
4) Posture
5) Body movements

Reading skills and enhancement?

Reading skills are the abilities that help a person understand written text. These include recognizing words, understanding meanings, finding main ideas, and interpreting information.

Enhancement of reading skills means improving these abilities. Reading skills can be improved by regular reading, practicing skimming and scanning, building vocabulary, and using reading strategies such as predicting and summarizing. Using digital tools, online articles, and quizzes also helps make reading more effective and interesting.

different reading strategies?

- **First,** before reading, the reader should think about the purpose for which he is going to digest the text.
- **Second**, the reader should look at the title, headings, pictures, or any other visual cues accompanying the text.
- **Third,** the reader is advised to read the introduction and conclusion, or to read the first line in every paragraph, and only then the whole text.

- **Fourth,** the entire reading should be scanned to look for the most important parts to focus on during detailed reading.
- **Fifth,** the reader should take notes as he reads.
- **Sixth,** when the reader has problems with understanding a passage, he should stop and reread it once more.
- **Seventh,** long texts ought to be divided, as the longer the reader works with the text, the less he can focus on it entirely.
- **Finally,** the reader ought to retell difficult material in his own words, and possibly answer the questions concerning the contents of the text.

Explain three workload-controlled counseling?

1) Set clear rules for replying to emails and online messages. Tell students about these rules in the syllabus and in class. Let them know that you may not reply immediately to every email and that common questions may be answered in class instead.
2) Clearly explain which types of problems you will respond to, such as personal issues or difficulties understanding the subject. Avoid answering administrative questions like exam dates or homework details, as this information is already available in the syllabus or can be discussed in class or online sessions.
3) Make it a rule that you will not reply to emails if the main issue is not clearly written in the subject line. This saves time because you do not need to read the whole email to understand the problem. It also makes it easier to forward the email to a teaching assistant or helper when needed.
4) If a question is useful for all students, respond by sending one email to the whole class, posting an announcement in the online classroom, or creating a Frequently Asked Questions (FAQ) page on the website.

advantages of hypertext?

- Hypertext allows easy movement from one topic to another through links.
- It helps readers find information quickly and easily.
- Hypertext supports non-linear reading, so users can read according to their interest.
- It improves understanding by connecting related information.
- It makes learning more interactive and engaging.
- Hypertext saves time by providing direct access to additional resources.

What is Sentence Builder?

Sentence Builder is an educational app for elementary students and won the 2010 IEAR Language Arts App of the Year award. The app uses a fun, game-like design to help students learn how to make correct sentences, including simple, compound, and complex sentences. It

provides audio support, tracks student progress, and also includes a "teen" version for older students or those who need extra help in English Language Arts (ELA).

What is Story Builder?

Story Builder is an app made by the same company as Sentence Builder and won Huffington Post's 2011 Best Reading App award. It helps students improve paragraph writing, connecting ideas, making inferences, and expressing abstract thoughts. The app uses audio clips to support learning, including for students with special needs. It also has a talk-to-text feature, so students can speak their ideas and see them turned into paragraphs, which is very helpful for students who find writing difficult.

Explain Simultaneity?

The "linking" feature in computer software allows students to access different types of information at the same time during a listening activity, depending on the computer's speed and capacity.

For example, a student can watch a video and read its transcript on the same screen. They can also click buttons to:

- See the transcript while watching the video,
- Watch the video while reading the transcript, or
- Look up the meanings of key words in a dictionary.

This makes learning more interactive and convenient.

How a teacher should know about students having computer equipment and software before starting of the course?

Before starting a course, a teacher should check whether students have access to computers and necessary software. This can be done by:

- **Survey or questionnaire:** Ask students about the type of computer, internet access, and software they have.
- **Class discussion:** Talk to students in the first class about what technology they can use.
- **Online forms:** Use tools like Google Forms to collect information about students' devices and software.
- **School records:** Check if the school provides laptops, tablets, or required software.

This helps the teacher plan lessons that all students can participate in and avoids problems later.

What things teacher keep in mind before posting lecture online?

Before posting a lecture online, a teacher should make sure the content is clear, well-organized, and accurate. The lecture should be in a file format that works on different devices and software. Teachers should also consider accessibility, such as adding captions or transcripts for students with special needs. Privacy and copyright issues must be kept in mind, avoiding personal student information or copyrighted materials without permission. The lecture should be concise and engaging, and the teacher should give clear instructions on how students should use it.

What is Dogo?

Dogo is a news website for kids that also has digital books and movies. Students can read stories in kid-friendly categories like social studies, sports, "did you know," and more. It helps students explore different topics and discover what they enjoy reading. Dogo is not only fun for students but also useful for teachers. Teachers can create assignments, add books, news stories, and movies, and keep students engaged using a social learning dashboard.

according to David Harding for teaching L2 reading skills in which natural order language activities should taught?

A similar division is also suggested by David Harding who writes that "The natural order in which language activities should be taught is;

(i) Aural comprehension
(ii) Oral expression
(iii) Reading comprehension
(iv) Expression in writing

The Role of Commercial Publishers?

CALL (Computer-Assisted Language Learning) is different from other language teaching areas because most learning materials are made by software companies, not teachers or universities. In normal textbooks, teachers and publishers work together, and materials follow school rules. But in CALL, there are fewer materials, they are expensive to make, and the market is smaller. Some publishers make simple interactive CDs or websites with audio, transcripts, or quizzes. There are also podcasts where students can listen and read the text at the same time. In general, CALL changes more because of new technology than because of teaching ideas.

Remember me in your precious prayers
