ENG518 Final Subjective

Compiled By Nimma Malik

2K25

Q#01: Three types of case study?

1) **Illustrative Case Studies**

Typically utilizing one or two instances

2) **Exploratory (or pilot) Case Studies**

for large scale studies

3) **Cumulative Case Studies**

aggregate information from several sites

4) **Critical Instance Case Studies**

Unique cases

Q#02: What is In-text citation?

An **in-text citation** is a way to credit the original source of information within the body of your writing. It briefly identifies the source by including the **author's last name and year of publication (APA)** or the **author's name and page number (MLA)**, depending on the citation style used.

Why Use In-Text Citations?

- ✔ To avoid plagiarism
- ✔ To give credit to the original author
- ✔ To support arguments with credible sources

Q#03: Use computer software for research study?

- ❖ Data Collection & Organization
- ❖ Statistical Analysis
- ❖ Referencing & Citation
- ❖ Writing & Formatting
- ❖ Plagiarism Checking
- ❖ Visualization
- ❖ Literature review management

Q#04: Components of research proposal?

- ➢ The problem and statement of the problem
- ➢ The review of literature or theoretical framework of the study
- ➢ The hypotheses and objectives
- ➢ The methodology and procedure of the study
- ➢ Educational implications or significance of the problem
- ➢ Definitions, assumptions and delimitations
- ➢ A tentative structure of the report
- ➢ Bibliography
- ➢ Time frame

Q#05: What are the tips for best research design?

A well-structured research design ensures accuracy, reliability, and meaningful results. Here are key tips to create an effective research design:

- ➢ Clearly Define Your Research Problem & Objectives
- ➢ Choose the Right Research Methodology
- ➢ Select an Appropriate Sampling Strategy
- ➢ Ensure Data Collection is Reliable & Valid

- Consider Ethical Considerations
- Plan for Data Analysis
- Minimize Bias and Errors
- Maintain Flexibility

Q#06: What is literature review for reference?

A **literature review for reference** refers to a section in a research paper, thesis, or academic work that surveys existing studies, books, articles, and other scholarly sources relevant to a specific topic. It provides an overview, synthesis, and critical evaluation of prior research to establish the foundation for a new study.

Components of a Literature Review:

- Introduction
- Method
- Results
- Discussion.

Q#07: How we add comments in note?

Adding comments in a note depends on the format and platform you're using. Here are a few common ways:

- Handwritten Notes
- Digital Notes (MS Word, Google Docs, etc.)
- PDF Files
- Note-Taking Apps (OneNote, Evernote, Notion, etc.)

Q#08: What are the Steps of case study?

Essential steps required to be taken

- Status of the situation or unit of attention
- Collection of data, examination and history
- Diagnosis and identification of casual factors
- Adjustment, treatment and therapy (treatment)
- Follow up program

Q#09: define Plot and setting

Plot:

The plot is the general background of the story line or literary work that presents the sequence of events in which the characters in possible conflict are involved.

The plot is typically structured into the following elements:

- Exposition
- Rising Action
- Falling Action
- Climax

Setting:

The setting is the time frame or place in which the work takes place.

It includes:

- Physical Location
- Environment
- Time Period

Q#10: What are the Steps of survey method?

Before starting survey research, one should;

- Know what exactly do you want?
- Determine the target population
- Choose the mode of data (Direct + mail + phone + personal interview)
- Select the sample
- Prepare instrument
- Write any memo or letter?
- Train the interviewers
- Recheck carefully before you start your research

Q#11: Describe the importance of a literature review.

A **literature review** is an important part of research because it helps you understand what has already been studied about a topic. It provides background information, identifies gaps in knowledge, and ensures that your work is not just repeating what others have done. By reviewing previous studies, you can build a strong foundation for your research, choose the best methods, and support your ideas with existing knowledge. It also helps combine different viewpoints, showing patterns and differences in past studies. Most importantly, a literature review justifies why your research is needed and makes your work more credible.

Q#12: Types of In-text citation

- **Parenthetical Citation**
- Narrative Citation
- Direct Quote Citation

Q#13: Characteristics of action research?

Action Research is a process in which participants examine their own **educational practice** systematically and carefully, using the techniques of research.

Characteristics:

- Practical and Problem-Solving Oriented
- Collaborative
- Reflective
- Cyclical Process
- Flexible and Adaptive
- Data-Driven
- Improves Practice

Q#14: Major components of a literary work?

- Setting
- Plot
- Characters
- Structure
- Style
- Atmosphere
- Theme
- Conflict
- Tone

Q#15: write Use an asterisk in the research work??

- Footnotes and Explanations
- Indicating Missing Information
- Highlighting Important Points
- Mathematical and Statistical Use
- Wildcard in Searches

Q#16: conclusion conveys the larger significance of your study explain

The **conclusion** of a research study is important because it highlights the **larger significance** of your work.

- An overview of the study
- Overview of the findings
- Relation of findings
- Attention to limitations
- Possible applications
- Future possibilities

Q#17: Three sampling technique of Qualitative research?

In qualitative research, sampling techniques focus on selecting participants who can provide in-depth and meaningful insights into the phenomenon being studied. Three common sampling techniques are:

1) Purposive Sampling
2) Snowball Sampling
3) Convenience Sampling

Each technique has its strengths and limitations, and the choice of technique depends on the research question, objectives, and context.

Q#18: Explain Framework analysis.

- **Familiarization:** Transcribing & reading the data
- **Identifying a thematic framework**: Initial coding framework which is developed both from a priori issues and from emergent issues
- **Coding**: Using numerical or textual codes to identify specific piece of data which correspond to different themes
- **Charting:** Charts created using headings from thematic framework (can be thematic or by case)
- **Mapping and interpretation**: Searching for patterns, associations, concepts and explanations in the data

Q#19: Suggestions for a survey method project?

- Be sure about the nature of the project and gather sufficient demographic information
- Determine whether your study is cross sectional or longitudinal
- It should be directly associated with the people's opinions
- Be sure of the survey nature
- Keep yourself aware of limitations - human biases

- Descriptive or normative study and tools?
- Follow up studies and tools

Q#20: purposes of literature review?

- To provide a theoretical framework for the study.
- To identify research gaps and unresolved questions.
- To assess the methodologies used in prior studies.
- To establish the context for the new research and demonstrate its relevance.
- To summarize existing research findings.
- Avoiding Duplication
- Enhancing Credibility

Q#21: Five types of qualitative data analysis?

1) **Content analysis:**

• Content analysis is the procedure for the categorization of verbal or behavioral data for the purpose of classification, summarization and tabulation.

• The content can be analyzed on two levels – Descriptive: What is the data? – Interpretative: what was meant by the data?

2) **Narrative analysis:**

• Narratives are transcribed experiences

• Every interview/observation has narrative aspect-the researcher has to sort-out and reflect up on them, enhance them, and present them in a revised shape to the reader

• The core activity in narrative analysis is to reformulate stories presented by people in different contexts and based on their different experiences

3) **Discourse analysis:**

• A method of analyzing a naturally occurring talk (spoken interaction) and all types of written texts

• Focus on ordinary people method of producing and making sense of everyday social life: How language is used in everyday situations?

• Sometimes people express themselves in a simple and straightforward way

• Sometimes people express themselves vaguely and indirectly

• Analyst must refer to the context when interpreting the message as the same phenomenon can be described in a number of different ways depending on context.

4) **Framework analysis:**

- **Familiarization:** Transcribing & reading the data
- **Identifying a thematic framework**: Initial coding framework which is developed both from a priori issues and from emergent issues
- **Coding**: Using numerical or textual codes to identify specific piece of data which correspond to different themes
- **Charting:** Charts created using headings from thematic framework (can be thematic or by case)
- **Mapping and interpretation**: Searching for patterns, associations, concepts and explanations in the data

5) **Thematic Analysis**:

Identifies, analyzes, and reports patterns (themes) within the data. It is flexible and widely used in various qualitative studies.

- Example: Analyzing interview transcripts to find recurring themes about student motivation in online learning.

Q#22: An outline of a proposed research work?

- Useful basis for the evaluation of project and guidelines for researcher
- For an academic degree or a funding agency
- A clear and concise statement of the problem
- The hypothesis involved
- A recognition of the significance of the problem
- Definitions of the important terms
- Assumptions and limitations
- A brief survey of related literature
- An analysis of proposed research producers
- Time schedule involved

Q#23: How can a researcher use quotations appropriately? explain

Using **quotations appropriately** in research is essential for maintaining credibility, supporting arguments, and ensuring ethical writing. Here's how a researcher can use them effectively:

- Use Quotations to Support Key Points
- Keep Quotations Concise
- Integrate Quotations Smoothly

- Use Block Quotes for Longer Excerpts
- Provide Proper Citations
- Paraphrase When Possible
- Avoid Overusing Quotations

Q#24: main points of MLA formatting?

The **Modern Language Association (MLA)** provides a method for source documentation that is used in **most humanity courses**.

Book Citation in MLA:

Book citation in MLA generally requires an author name, work title, publication city, publisher, year published, and an identification of the publication medium, such as print.

Modern Language Association

• To be fair and ethical, you must cite anything you borrow from

• MLA recommends a system of in-text citations

1) The source is introduced by a signal phrase that names its author.
2) The material being cited is followed by a page number in parentheses.
3) At the end of the paper, a list of works cited (arranged alphabetically by authors' last names) gives complete publication information about the source.

Q#25: MLA Handbook for Writers?

- Use quotations appropriately
- Limit your quotations
- Use the ellipsis mark and brackets
- Set off long quotations if more than 4 lines, indent 1")
- Use signal phrases

Q#26: Describe the historical biographical approach.

Biographical criticism is a form of literary criticism which analyzes a writer's biography to show the relationship between the author's life and their works of literature. Biographical criticism is often associated with historical-biographical criticism, a critical method that "sees a literary work chiefly, if not exclusively, as a reflection of its author's life and times".

Q#27: Purposes of Action research?

- Problem-Solving and Improvement
- Enhancing professional development

- Generate Knowledge and Theory
- Promoting Change and Innovation
- Foster Critical Reflection and Learning
- Address Social and Community Issues

Q#28: Steps of action research?

- Selection of problem
- Formulation of Hypotheses
- Design of research (sampling and methodology)
- Collection of data (administration of tool and scoring)
- Analysis of data (use of statistics)
- Formulation of conclusions

Q#29: Five decisions a researcher has to take before planning an experiment?

- Define the 'treatments'
- Selection or exact definition of the population to be investigated
- Selection of a criterion
- Identification of the factors to be controlled and the level or levels at which each is to be controlled
- Final restatement of the problem
- Selection of a specific experimental design

Q#30: Define the concept of Practitioners research?

Practitioners' (teachers') research

- The process by which practitioners attempt to study their problems
- Guide, correct and evaluate their decision and actions
- Studying problem by part-owners
- To take decision for improving their current practices
- E.g. constructive change in school
- Origin: human organization theory
- Task and relationship centered
- Capacity to solve problems and take decisions

Q#31: Three major purposes of writing literature review?

- To Provide Context and Background
- To Support the Theoretical and Methodological Framework

- Provides a Theoretical Framework for the Research
- Demonstrates Familiarity with the Topic

Q#32: Genre criticism?

- Traditional way of approaching a piece of literature
- Athenian citizens knew what they were going to see in a play by Sophocles
- Homer (Iliad and Odyssey)
- The conventions of epic
- Mock epic (Pope)
- Examples: pure type, mixed, innovative or unique composition – a new kind
- The Age of Earthquake

Q#33: Purpose of reading?

- Reading for Information and Learning
- Reading for Enjoyment and Entertainment
- Reading for Critical Analysis and Evaluation
- Reading for Personal Growth

Q#34: Three acts of plagiarism?

Three acts are plagiarism:

(1) failing to cite quotations and borrowed ideas

(2) failing to enclose borrowed language in quotation marks, and

(3) failing to put **summaries and paraphrases** in your own words

• Sources are cited for two reasons:

(a) tell your readers about the sources of info

(b) to **give credit** to the authors from whom you take it.

Q#35: Advantages and disadvantages of HBM?

- **Advantages:** works well for some which are obviously political or biographical in nature.
- Places allusions in their proper classical, political, or biblical background.
- **Disadvantages:** "the intentional fallacy"
- Tends to reduce art to the level of biography and make it relative (to the times) rather than universal.

- Example: life and times of Marvell - to understand the context of the poem

Q#36: Advantages and disadvantages of historical research?

- Great deal towards education
- Avoiding the mistakes of the past
- Applying lessons from the past to current problems
- Using the past to make predictions about the present
- Understanding present practices and policies in light of the past
- Examining trends across time
- Scientific research growing

Q#37: Use of computer software in qualitative studies and its advantages?

- Transcribing data
- Writing/editing the data
- Easy storage of data
- Coding data (keywords or tags)
- Search and retrieval of data
- Data linking of related text
- Writing/editing memos about the data
- Display of selected reduced data
- Graphic mapping
- Preparing reports

Q#38: Characteristics of survey method?

- Mostly large cases
- Mostly cross-sectional study
- No characteristics of individuals
- Involves clearly defined problem
- Requires experts imaginative planning
- Involves definite objectives
- Careful analysis and interpretation
- Logical and skillful reporting
- Surveys vary greatly in complexity
- Not developing scientific principles
- Useful to the solution of local problems
- Advancement of knowledge
- Penetrating insight

- Suggests the course of future developments
- Present trends and problems
- Fashioning many new tools

Q#39: Objectives of qualitative sampling?

In qualitative research, sampling is purposeful and designed to provide rich, in-depth insights. The key objectives of qualitative sampling include:

- To Capture Diversity and Depth
- To Select Information-Rich Cases
- To Allow Flexibility in Data Collection
- To Develop a Deeper Understanding of the Phenomenon
- To Enhance Credibility and Transferability
- Achieving Theoretical Saturation

Q#40: Sources of historical data?

Two major categories: documents and remains

1) **Documents**
   - Official records
   - Institutional records
   - Personal documents
   - Newspapers, periodicals, journals
   - Literary material
   - Catalogue, syllabus, prospectus

2) **Remains**
   - Building, furniture and equipment
   - Library and their furniture
   - Photographs and other records.
   - Forms of degree, diploma, certificate, records, registers
   - Text-books, exercise-books, maps, drawings.
   - Written material

Q#41: Terms used in qualitative data analysis?

1) **Theory:** A set of interrelated concepts, definitions and propositions that presents a systematic view of events or situations by specifying relations among variables
2) **Themes:** idea categories that emerge from grouping of lower-level data points

3) **Characteristic:** a single item or event in a text, similar to an individual response to a variable or indicator in quantitative research. It is the smallest unit of analysis
4) **Coding:** the process of attaching labels to lines of text so that the researcher can group and compare similar or related pieces of information
5) **Coding sorts:** compilation of similarly coded blocks of text from different sources in to a single file or report
6) **Indexing:** process that generates a word list comprising all the substantive words and their location within the texts entered in to a program

Q#42: Importance of foregrounding of writer's voice while conducting research

In academic research, **foregrounding the writer's voice** means ensuring that the researcher's critical thinking, analysis, and perspective remain central, rather than being overshadowed by existing literature. Here's why it is important:

- Establishes Credibility and Authority
- Establishes Originality and Contribution
- Prevents Over-Reliance on Sources
- Ensures Coherence and Argument Development
- Facilitates Critical Reflection
- Enhances Academic Credibility

Q#43: Objectives of conducting literature discussion?

A **literature discussion** helps researchers understand what has already been studied on a topic.

Here are its key objectives:

1) To Analyze and Synthesize Existing Knowledge
2) To Identify Research Gaps
3) To Develop a Theoretical and Conceptual Framework
4) To Evaluate and Critique Existing Studies
5) To Justify Research Questions and Methodology
6) To Establish the Researcher's Voice and Perspective

Q#44: Various types of errors possible?

1) **Chance Error**
   - **Individual differences**
   - Sampling errors

- Measurement errors

2) Systematic errors

- Researcher's bias
- Hawthorne effect

3) Avoid errors

- Maximize variance (IV)
- Control variance (EV)
- Minimize error (random)

Q#45: What is sampling technique?

A **sampling technique** is the method used to select individuals or groups from a larger population for research. It helps researchers gather data efficiently without studying the entire population. Sampling techniques are divided into **two main types**:

- Probability Sampling
- Non-Probability Sampling

Q#46: Three note taking strategies to use in research?

- Annotation
- Concept Mapping
- Summarization
- The Outline Method

Q#47: What are Details that are needed for citation?

OR

What are the essential points to make good citation with five discussions

- Author's or editor's or organization's full names
- Title of article, book or chapter (if each chapter has a different author)
- Name of the book, journal or periodical
- Version or edition
- Name of publisher
- Year of publication
- Place of publication **(for books only**)
- Volume and issue numbers (**for journals only)**
- Page numbers (for articles and chapters only)

Q#48: Historical criticism: two ways to approach?

1) **Old Historicism:** looks at the time in which a piece was written to determine how it was interpreted by its contemporaries.
2) **New Historicism:** demonstrates how a literary work reflects ideas and attitudes of the time in which it was written.

Q#49: Define Literature review?

A **literature review** is a detailed analysis and summary of existing research on a specific topic. It involves reviewing books, journal articles, reports, and other scholarly sources to understand what has already been studied. A literature review helps identify key theories, research gaps, and trends while providing a foundation for new research. It does not just summarize past studies but also critically evaluates them to show how they relate to the current research question.

Q#50: Discussion section of literature review?

A. Give an overview of major results of your review.
B. Compare/contrast the results between studies.
C. Provide possible reasons for any differences.
D. Relate results to any theoretical issues you mentioned in the introduction.
E. Compare with past reviews if any exist.
F. Explain any difference in findings with past reviews.
G. Offer application of findings toward future research.

Q#51: Case study definition

A case study is a research methodology that has commonly used **in social sciences**. A case study is a research strategy and an empirical inquiry that investigates a phenomenon within its real-life context. Case studies are based on an in-depth investigation of a single individual, group or event to explore the causes of underlying principles

Q#52: Types of articles?

- Research Articles
- Review Articles
- Theoretical Articles
- Case Study Articles
- Methodological Articles
- News and Journalistic Articles
- Professional and Business Articles
- Creative and Lifestyle Articles

Q#53: Criteria for evaluating proposal or synopsis?

A synopsis is a brief summary that gives audiences an idea of what a composition is about. It provides an overview of the storyline or main points and other defining factors of the work, which may include style, genre, persons or characters of note, setting, and so on.

- Significance of the proposed research
- Contextual, practical and national level significance
- Quality of the proposed research project
- Relation to previous work
- Likelihood of success
- Adequacy of design, methodology and tools etc.
- Qualification of the researcher?
- Facilities available?
- Reasonableness of the budget and anticipated results?
- Realistic timeframe?

Q#54: What things authors consider when writing a literature review?

When writing a **literature review**, authors consider several key factors to ensure clarity, relevance, and depth. Here are some important aspects:

- Research Question or Objective
- Scope and Coverage
- Organization and Structure
- Search Strategy
- Critical Analysis, Not Just Summary
- Writing Style and Clarity
- Theoretical Framework
- Methodological Considerations
- Avoiding Plagiarism
- Linking to Research Questions
- Referencing and Citation

Q#55: tools used for relevant source to develop literature review?

When developing a **literature review**, researchers use various tools to find, organize, and analyze relevant sources. Here are some commonly used tools:

- Research Databases (Finding Sources)
- Reference Management Tools (Organizing Sources & Citations)
- Note-Taking & Annotation Tools (Analyzing Sources)
- Plagiarism & Writing Assistance Tools
- Concept Mapping Tools (Structuring Ideas & Theories)

Q#56: Types of variables?

EM functioning around variables:

- Variable – subject to change – different value
- IV: manipulated
- DV: observed/response
- Mediator Variable (MV): special IV - modifying
- Control Variable (CV): neutralized controlled
- Intervening: All can't be controlled

Q#57: experimental method?

The word experimental research has a range of definitions. ′ The experimental method is a systematic and scientific approach to research in which the researcher manipulates one or more variables, and controls and measures any change in other variables. In the strict sense, experimental research is what we call a true experiment. ′ This is an experiment where the researcher manipulates one variable, and control/randomizes the rest of the variables. It has a control group, the subjects have been randomly assigned between the groups, and the researcher only tests one effect at a time.

Q#58: Designing experimental studies?

Experimental method: sophisticated way of research

- Plan a strategy for investigation (determine the variables)
- Study should be valid, objective, accurate and economically
- Experimental design sets up a framework
- Adequate tests to test the relations among variables
- Assign the active variables:
- An active variable is a variable that is manipulated by the investigator. It's designed to shine light on some part of a question or problem, and its usefulness comes in the way it can be controlled by a researcher. Because of that, an active variable changes in a well-defined and carefully manipulated way over the course of an experiment.
- Specify the statistical tools and analysis
- Determine the controlling experimental variables
- The need for precision – 'true study

Q#59: Procedures in experimental method?

Basic principles of experimental design:

1) **Randomization:**

- Valid estimate
- Experimental error
- Minimize bias
- Independence of variances

2) **Replication:**
   - Repeated treatment
   - Increase precision
   - Estimate + reduces error

3) **Local Control:**
   - Homogenous groups
   - Size + shape (S+G errors)

Q#60: Note on CMS?

CMS stands for the **Chicago Manual of Style**.

It is a style of formatting written works that is most widely **used in publishing**.

Book Citation in CMS:

Book citation in MLA generally requires an author name, work title, publication city, publisher and publication year.

♣ Required by many history and humanities instructors

♣ Consult your advisor

♣ CMS citations consist of superscript numbers in the text

♣ To be fair and ethical, you must cite anything you borrow from

♣ Notes with corresponding numbers

♣ Given at the foot of the page (footnotes) or at the end of the paper (endnotes).

Q#61: Types of Experimental Design?

There are two basic types of research design:

- ✓ True experiments
- ✓ Quasi-experiments

The purpose of both is to examine the cause of certain phenomena.
