TOEFL (Test of English as a Foreign Language)

Content and Language Integrated Learning (CLIL)

IMP MCQs

1. **Vocabulary** is one of the most obvious components of language and one of the first things applied linguists turned their attention to.

2. **Register analysis** studies the language of such fields as **journalism, medicine, or law for distinctive patterns of occurrence of vocabulary, verb forms, noun phrases, and tense usage**.

3. **Syllabus design** is the process of developing a syllabus.

4. **Bobbitt (1990),** who was one of the **founders of curriculum theory**, advocated this view of the curriculum.

5. CBLT first emerged in the **United States in the 1970s (IMP)**

6. Thus, these core issues to vocabulary selection led to the emergence of **lexical** syllabus.

7. **Curriculum** includes all those activities which engage children and adults in the school.

8. **Two** aspects of selection received primary attention in the first few decades of the 20th century. These are **Vocabulary selection and Grammar selection.**

9. **Cultural pluralism** leads to the bilingual education in some parts of the world.

10. **Meaning-focused input** involves having the opportunity to learn from **listening and speaking**

11. Words that cover or include the meanings of other words may also be useful. For example, seat might be taught because it includes the meanings of stool, bench, and chair. **(Coverage)**

12. **vocabulary selection** laid the foundations for syllabus design in language teaching.

13. Language Curriculum Design has undergone many changes and the reason is the quest for the best **method.**

14. **Developing materials** can help develop expertise among staff, giving them a greater understanding of the characteristics of **effective materials.**

15. **'Curriculum studies'** deals with the planning of instruction and the study of how curriculum plans are implemented.

16. **Situation analysis** is an analysis of factors in the context of a planned or present curriculum project that is made in order to assess their political, social, economic, or institutional situation.

17. **Textbooks** can provide support for teachers.

18. Academic rationalism is sometimes used to justify the inclusion of certain **foreign languages** in school curricula, where they are taught not as tools for communication but as an aspect of social studies.

19. The approach that emphasizes first on those teaching structures that are similar to the native language called **linguistic distance**.

20. the **ESP approach** in language teaching drew on **register analysis and discourse analysis** to determine the linguistic characteristics of different disciplines such as medicine, engineering, or science.

21. Meaning focused input should involve learner in **conversation**.

22. The procedures of **vocabulary selection** led to the compilation of a basic vocabulary (now called a **lexical syllabus**).

23. The term **'curriculum studies'** refers to a very broad field of inquiry that deals with **what happens in schools and other educational institutions.**

24. **Linguistics** was a source of theories about the organization and structure of language.

25. **English for General Purposes** (EGP).

26. The first step in the curriculum development process is often **Needs analysis**.

27. **Discourse analysis** examines the communicative contexts that affect language use.

28. The need for a **systematic approach** to selecting grammar for teaching purposes was also a priority for applied linguists from the 1920s.

29. **Learners** are the **key participants** in curriculum project.

30. **The Munby model** describes the kind of information needed to develop a **profile of the learner's communicative needs**.

31. There are **two types** of units of progression.

32. **vocabulary and grammar** are the main **building blocks** of language development.

33. The notion of LCD, began in the **1960s**.

34. Witte (2006) see for a description of **seven stages** of "cultural progression"

35. syllabus design that emerged in the **first part of the twentieth century**.

36. The acronym EGP stands for **English for general purpose**

37. **vocabulary selection** laid the foundations for syllabus design in language teaching.

38. Curriculum development process is seen as a combination of needs analysis, goal setting, format and presentation, principles, and syllabus design. **(TRUE)**

39. In order to understand institutional factors of situation analysis, it is important to understand the position of **the target** language.

40. Need is not a thing that exists and might be encountered ready-made on the street. **(Porcher 1977)**

41. **English for Specific Purposes (ESP)** approach (1970s) draws on register and discourse analysis to determine the linguistic features of different disciplines.

42. In 1920s to 1950s, there was a pursuit going on to find out systematic approach to teach grammar.

43. The concept of '**spoken colloquial English'** is one largely based upon a **structural description** of written English and without reference to **functional uses** and roles.

44. The acronym EFL stands for **English as Foreign Language**.

45. **Syllabus Designing** gradation of grammatical syllabus is concerned with grouping and sequencing.

46. The procedures of **vocabulary selection** led to the compilation of a basic vocabulary (now called a lexical syllabus).

47. In 1970 what began? A) situation analysis B) need Analysis **C)communicative approach**

48. **Linguistic distance approach** first emphasizes on teaching structures that are similar to the native language.

49. Language curriculum development process focuses on planning, delivery, management and assessment of language **teaching** and learning.

50. One of the limitations of **the method** era (1960s) was 'to what extent the teaching methods addressed learners' needs.

51. **Teacher** is a key factor in the successful implementation of curriculum changes.

52. **Syllabus** acts as a guide for teachers and learners while providing some goals to be attained.

53. Definition of sub-skills: **All of the given**

54. The acronym CLT stands for **Communicative Language Teaching.**

55. **Objectives** of a curriculum are specific and descriptive as compared to **aims**.

56. Once a course has been planned and organized, it has to be described in terms of **scope and sequence plan**

57. Which of the following syllabuses is based on a specification of the competency's learners are expected to master? **Competency based**

58. Curriculum development process is seen as a combination of **needs analysis, goal setting, format and presentation, principles, syllabus design, methodology, approaches to curriculum, professional development**

59. Which of the following depends on subject-matter knowledge, the learners' proficiency levels and their views on second language learning and teaching? **content selection**

60. Language programs and commercial materials typically distinguish between elementary, **intermediate** and advanced levels.

61. The principle of integrative motivation of curriculum design focuses on the role of the teacher to integrate activities that are **interesting** for learners.

62. **Authentic materials** refer to the use in teaching of **texts, photographs, video selections, and other teaching resources** that were not specially prepared for pedagogical purposes.

63. Which of the following are general statements of the goals of a program? **Aims**.

64. Which of the following should be feasible and describe outcomes that are attainable in the time available during a course? **Objectives.**

65. Which of the following is the starting point in course development in curriculum design? **course rationale**.

66. The principle of time on task emphasis that teachers should spent maximum time using and focusing on the **second/ Target** language.

67. A syllabus is seen as a specification of the content of **a course of instruction**

68. Which of the following principle of language curriculum design deals with language-focused learning in the sound system, vocabulary, grammar and discourse areas? **Deliberate Learning**

69. Twenty principles have been divided into **three** groups.

70. **CLT** was a response to changes in the field of linguistics in **the 1970s**

71. Which of the following principle of language curriculum design aims to give the learner ready access to what is already known? **Fluency**

72. Which of the following is/are based on a social and economic efficiency model of curriculum design? **Competency-Based Language Teaching.**

73. Which of the following types of motivation comes from the learner rather from the outside reward? **Intrinsic.**

74. **grammar translation method** is **still alive** in some parts of the world.

75. Which of the following ideologies stresses the economic needs of society as a justification for the teaching of English? **Socioeconomic**

76. Which of the following syllabuses is built around texts and samples of extended discourse? **Text-based syllabus**

77. Which of the following is a self-contained learning sequence that has its own goals and objectives? **An instructional block**

78. meaning-focused input; language focused learning, meaning-focused output and fluency development are related to **four strand** principle.

79. Which of the following principle of language curriculum design projects that students should be exposed to remarkable input of receptive activity in both listening and reading? **Comprehensible input**

80. Which of the following revolves around learners' individual needs, experiences, self-reflection and critical thinking? **Learner-Centeredness**

81. Which of the following emphasizes teaching language through literature and exposing students to the native culture? **academic rationalization**

82. Which of the following is NOT an objective scientific enterprise but a judgment calls in curriculum design? **Goal.**

83. Which of the following led the rise of bilingualism in language teaching? **Cultural Pluralism**

84. Curriculum development is a more comprehensive process than **syllabus design**

85. Principles of language curriculum design helps to evaluate existing course and can be used for **teacher / professional** development.

86. Which of the following is concerned with the breadth and depth of the coverage of items in the course? **Scope and sequence**

87. Which of the following require more detailed planning while planning the course structure? **Developing instructional blocks**

88. Which of the following principle of language curriculum design analyzes that how well a language program caters various needs of the learners? **Ongoing Needs and Environment Analysis**

89. **Self-study involves** a study of a program's practices and values as part of the process of **self-evaluation** and review.

90. Which of the following syllabuses identifies the situations in which the learner will use the language and the typical communicative acts used in that setting? **situational syllabus**

91. The acronym CBLT stands for **Competency-Based Language Teaching**

92. Cunningsworth (1995) proposes **four criteria** for evaluating textbooks.

93. **Created materials refer** to textbooks and other specially developed instructional resources.

94. **A focus on the meaning** of the message is a large quantity of input.

95. **Long and Crookes (1993)** call units of progression as “units of **analysis**”

96. Disadvantages of material development are **Cost, Quality and training**.

97. Advantages of material development are **Relevance, Develop expertise, Flexibility and Reputation.**

98. **Ellis (2003)** proposes a **modular approach** for task-based language courses.

SUBJECTIVE

Write three issues about content that are faced when we study. English spoken language?

1) Content ignores real communicative needs
2) Content is not interesting or relevant for learners
3) Lack of Practice-Based Content
4) Content based on written English, not spoken English

Fill in the blanks.

1) The first group of principles deals with **content and sequencing**.
2) The second group of principles deals with **format and presentation**.
3) The third group of principles deals with **monitoring and assessment.**

Curriculum development Focus?

Curriculum development focuses on determining what knowledge, skills, and values students learn in schools; what experiences should be provided to bring about intended learning outcomes; and how teaching and learning in schools or educational systems can be planned, measured, and evaluated. Language curriculum development refers to the field of applied linguistics that addresses these issues. It familiarizes us with an interrelated set of processes that focuses on designing, revising, implementing, and evaluating language programs.

This focuses on defining two key terms: 1) language curriculum design (LCD) and 2) syllabus design.

True false (linguistic distance, frequency waly topic sa)

See Relevant Topics.

Types of units of progression?

It is Used to grade learner progress and organize curriculum content.

1) Definite series (e.g., vocabulary levels, grammar sequences)
2) Fields of knowledge (e.g., topics, discourse types)

Criticism of Tollefson on CBLT?

Tollefson argues that Competency-Based Language Teaching (CBLT) has a conservative, maintenance-oriented nature, meaning it focuses on keeping the existing social order instead of empowering learners or improving their lives. Because of this limitation, it may discourage meaningful educational or social change.

1) Narrow Focus on Measurable Skills
2) Promotes Inequality
3) Reduction of Teacher Autonomy

What are the various factors to ensure the transparency of the system?

1) Regular meetings
2) Transparent admin system
3) Shared decision making
4) Clear guidance for staff
5) Feedback on program aspects
6) Regular communication
7) Informal gatherings

Origizational factors of institute that affect quality of teaching? OR What are the factors that affect the quality of teaching in a program?

1) **Size and staff structure:**

The size of a school and its administrative structure influence many aspects of a teacher's work. Working in an institute with a staff of five teachers is very different from working in one with a staff of one hundred. In the former case, the teachers are likely to be a closely knit team whose members know each other well. In the latter case, teachers may work more independently and may not feel that their individual contribution is crucial to the success of the program.

2) **Equipment:**

Schools vary greatly in the amount they have invested in equipment and technology. Some schools make extensive investments in such things as computers, cassette/CD players, video recorders, overhead transparency (OHT) machines, and photocopiers, recognizing that these are essential tools for teachers and can have a positive effect on teaching staff.

3) **Support staff:**

Adequate support staff can also help teachers. In this context these questions are very important to ask: Is there secretarial or administrative staff to help with typing, time-tabling, duplicating, and administration? If not, what percentage of teachers' time is spent on non-instructional chores and at what cost?

4) **Teacher resource room:**

Teachers need access to a good range of current ESL textbooks, resource books, materials, and magazines located in a resource room or similar facility in order to update their professional knowledge and get new ideas to feed into their teaching.

True / False questions on ESP, situational analysis, register analysis, Discourse Analysis and culture pluralism?

culture pluralism **(Topic-063)**

register analysis, Discourse Analysis **(Topic-015)**

ENG519

ESP, situational analysis **(Topic-014)**

Two movements on empowerment in the context of learner's centeredness?

The philosophy of learner-centeredness has strong links with:

1) experiential learning
2) humanistic psychology
3) task-based language teaching.

This approach places the learner at the center of the pedagogic process and sees education not as a matter of receiving information but of intelligent inquiry and thought.

A **learner-centered curriculum** lets students take an active part in planning their own learning. It achieves two main goals:

1) **Students help shape the curriculum**, so their needs, interests, and personal situations are considered.

2) **Students learn how learning works** (meta-learning). They get a chance to understand how to design and organize useful learning tasks.

Woodward and Lindstromberg two ways of planning a lesson?

1) "block" lesson (where the lesson has a set format and is a separate block largely complete within itself)
2) "threads" (activities that run through a series of lessons. Threads are activities that can be used again and again with minimal planning and only small changes)

3 forms of printed and non-printed materials?

(a) printed materials such as books, workbooks, worksheets, or readers

(b) non- print materials such as cassette or audio materials, videos, or computer-based materials

(**c) materials that comprise print and non-print sources** such as self-access materials and materials on the Internet. In addition, materials that are not designed for instructional use such as magazines, newspapers, and TV materials may also play a role in the curriculum.

Explain Approaches to Gradation? Also Fill in the blanks

The following approaches to gradation are possible:

1) **Linguistic distance: T/F**

This approach emphasizes first on those teaching structures that are similar to the native language. This is because the elements that are similar the learners' native language will be simple for them and the ones that are different will be difficult.

2) Intrinsic difficulty:

This principle argues that simple structures should be taught before the complex ones and this is the commonest criterion used to justify the sequence of grammatical items in a syllabus.

3) Communicative need:

Some structures will be needed early and cannot be postponed despite their difficulty (such as the simple past in English) since it is difficult to avoid making reference to past events for very long in a course.

4) Frequency:

The frequency of occurrence of structures and grammatical items in the target language may also affect the order in which they appear in a syllabus, although as we noted, this sort of little information is available to syllabus planners. Frequency may also compete with other criteria. The present continuous is not one of the most frequent verb forms in English but it is often introduced early in a language course because it is relatively easy to demonstrate and practice in a classroom context.

Elley's factors?

1) Homogeneity of the Population in terms of skills, attitudes, or knowledge.
2) Need to Study Subgroups within the sample (e.g., sex, language group).
3) Size of the Target Population / Need for Specialized Advice
4) Sources of information available for the study

Five Criteria for Word List?

1) Teach-ability
2) Similarity
3) Availability
4) Coverage
5) Defining power

Diff statements Which are given and we identify principles name from twenty principles

……

What are the categories that Cunningsworth (1995) presents a checklist for textbook evaluation and selection organized?

1) Aims and approaches
2) Design and organization
3) Language content
4) Skills
5) Topic
6) Methodology
7) Teachers' books
8) Practical considerations

How Environmental Factors Contribute to Courses to Meet Local Requirements?

Environment analysis involves looking at the local and wider situation to make sure that the course will fit and meet the local requirements. There is considerable research data on many of the important environment factors including class size, motivation, learners of mixed proficiency, and special purpose goals. Good environment analysis draws on both analysis of the environment and application of previous research and theory. In some models of curriculum design, environment analysis is included in needs analysis.

Define Sampling?

Sampling involves asking a portion of the potential population instead of the total population and seeks to create a sample that is representative of the total population. Sampling is the process of selecting a small group of people (a sample) from a larger population so that the sample represents the whole population. Researchers use sampling to study the characteristics, opinions, or behaviors of the larger group without having to collect data from everyone.

Labeling he communicative, cooperative and process approach? OR Explain Teaching Models? Also Fill in the blanks……

- **The communicative approach:** The focus of teaching is on authentic communication, extensive use of pair and group activities that involve negotiation of meaning and information sharing. Fluency is a priority.
- **The cooperative learning model**: Students work in cooperative learning situations and are encouraged to work together on common tasks and to coordinate their efforts to complete tasks. Rewards systems are group-oriented rather than individual-oriented.
- **The process approach:** In writing classes, students take part in activities that develop their understanding of writing as a process. Different stages in the writing process (planning, generating ideas, drafting, reviewing, revising, editing) form the focus of teaching.

three types of the situational syllabus?

Alexander (1976) differentiates three types of the situational syllabus based on type of information:

1) Limbo Situation
2) Concrete Situation
3) Mythical Situation

Types of syllabi labeling?

1) Structural Syllabus (focuses on teaching **grammar and language structures)**.
2) Situational Syllabus (Organized around **real-life situations** for language use)
3) Functional/Notional Syllabus (Focuses on **language functions and meanings**.)
4) Skill-based Syllabus (Develops specific **language skills** (listening, speaking, reading, writing))
5) Content Based Syllabus (Teaches language through **subject matter or topics**)
6) Task-Based Syllabus (Uses **tasks and activities** as the main unit of learning)
7) Lexical and Cultural Syllabus (Focuses on **vocabulary and cultural elements**)
8) Cultural syllabus (Emphasizes **cultural knowledge and awareness** in language learning)

eight broad categories of non-language outcomes in their teaching (Jackson 1993)?

1) Social, psychological, and emotional support in the new living environment
2) Confidence
3) Motivation
4) Cultural understanding
5) Knowledge of the Australian community context
6) Learning about learning
7) Clarification of goals
8) Access and entry into employment, further study, and community life

Need analysis trues false

LCD (Language Curriculum Design?

Language Curriculum Design (LCD) is the systematic process of planning, organizing, implementing, and evaluating a language course. It includes all the steps needed to make a course effective, such as:

- Environment analysis
- Needs analysis
- Setting goals and objectives

- Selecting and sequencing content
- Testing and assessment
- Materials design
- Teaching methods
- Evaluation

Fill in the blank thi ESP waly topic, true false thy

Topic-014: The Role of English for ESP

The statements which are given and identify the name of different Organizational Factors……?

Group names of Twenty principles? Or Three major divisions of twenty principles?

Grouped under:

1) Content and sequencing
2) Format and presentation
3) Monitoring and assessment

major factors that are investigating in curriculum development? OR Major Constraints of Curriculum Development?

1) time available
2) cultural background
3) the effect of the first language on language learning and special purposes.
4) Learners' Needs and objectives
5) Learner factors
6) institutional policies
7) Teacher expertise
8) Teaching Methods
9) Resources and Materials

10) Assessment and Evaluation

Adequate staff true false……

Fluency and Time on Task principles?

Fluency:

A language course should provide activities aimed at increasing the fluency with which the learners can use the language they already know, both receptively and productively. Fluency is a part of the skill goal of language learning. Fluency activities do not aim to teach new language items but aim to give the learner ready access to what is already known. The importance of fluency in language use is highlighted in first-language research on the relationship between vocabulary learning and reading comprehension.

Time on Task:

As much time as possible should be spent on using and focusing on the second language. This principle is based on the research finding that one of the best indicators of how much will be learned is how long the learners spend on appropriate learning activities. The more time learners spend on language learning, the more they learn. The principle gains some support from the correlation between lengths of time spent living in a country where the foreign language is spoken and proficiency in the language.

Environment factors name?

1) class size
2) motivation
3) learners of mixed proficiency
4) special purpose goals
5) Political/Administrative Environment
6) Socio-Cultural Environment
7) Institutional Environment

T/F from topic CBLT

Topic-068: Competency-Based Program Outcomes and the Nature of Competencies

Names of four strands of the 'principle of four strands.'??

A course should include a roughly even balance of the four strands of

1) meaning-focused input
2) language-focused learning
3) meaning-focused output

4) fluency activities.

This principle is concerned with the relative amount of time given to the four main strands of a language course – meaning-focused input; language focused learning, meaning-focused output and fluency development.

Fil in the blanks thi Vocabulary or Grammar waly topic sy……

Names of Bloom's cognitive activity 6 levels?

Bloom divides cognitive activity into six levels of increasing complexity:

(1) knowledge
(2) comprehension
(3) application
(4) analysis
(5) synthesis
(6) evaluation.

These levels have often been applied to the construction of reading comprehension activities.

Selecting correct dimensions from six given options?

Topic-025: Teacher Factors

Two dimensions of needs analysis? OR one two from Munby?

The Munby model describes the kind of information needed to develop a profile of **the learner's communicative needs**.

1) The procedures used to specify the target-level communicative competence of the student
2) Procedures for turning the information into a syllabus.

When and where CBLT emerged?

Competency-Based Language Teaching (CBLT) first emerged in the United States in the 1970s and was widely adopted in vocationally oriented education and in adult ESL programs.

True false (motivation topic related thy)……

Which information might be revealed through applying the Munby model?

1) **Personal:** Who the employees are, their age, nationalities, sex, educational background, work experience.

2) **Purpose:** The kinds of outcomes expected such as the types of communicative skills the clients need to develop.
3) **Setting:** The type of restaurant in which the employees work and the kinds of customers who use the restaurant.
4) **Interactional:** The role and relationships such as waiter/waitress to variables customer, waiter/waitress to restaurant manager.
5) **Medium/ mode:** Whether spoken or written, face to face and channel dialects or both formal and casual styles.
6) **Target level:** Whether basic, intermediate, or advanced level.
7) **Anticipated:** For example, greetings, taking requests, clarifying communicative Information, describing menu items.
8) **Key:** For example, unhurriedly, quietly, politely.

According to Mrowicki (1986), what steps are involved in developing a competency-based curriculum for a refugee language program aimed at preparing learners for employment?

The process included:

1) Reviewing existing curricula, resource materials, and textbooks
2) Needs analysis (interviews, observations, survey of employers)
3) Identifying topics for a survival curriculum
4) Identifying competencies for each of the topics
5) Grouping competencies into instructional units

Twenty Principles (TRUE/FALSE) ……..

List of function by Van Ek Alexander.... List the six headings?

1) Imparting and seeking factual information
2) Expressing and finding out intellectual attitudes
3) Expressing and finding out emotional attitudes
4) Expressing and finding out moral attitudes
5) Getting things done (suasion)
6) Socializing

Environment analysis?

It is the process of examining all the external factors that can influence the design, development, and implementation of a curriculum. It helps curriculum designers understand the context in which the course will operate so that the curriculum fits local needs and conditions.

The steps in environment analysis can be as follows:

Step 1: Brainstorm and then systematically consider the range of environment factors that will affect the course.

Step 2: Choose the most important factors (not more than five) and rank them, putting the most important first.

Step 3: Decide what information you need to fully take account of the factor. The information can come from investigation of the environment and from research and theory.

Step 4: Consider the effects of each factor on the design of the course.

Step 5: Go through steps 1, 2, 3, and 4 again.

What is Needs Analysis?

Needs Analysis is the process of identifying and understanding the language needs, problems, and requirements of a particular group of learners. It helps curriculum designers determine what learners need to learn, why they need it, and how the course should be designed to meet those needs.

Purpose:
To collect information that guides decisions about objectives, content, teaching methods, and assessment in curriculum development.

Fill in the blank from (reference point, quality assurance, organizational) OR

Which factors are related to quality assurance in an institution

Quality assurance:

Quality assurance refers to systems a school has in place to ensure the quality of its practices. For example, how does one ensure that the best staff is employed? Is there a transparent recruitment process or is staff recruitment made through personal networks? What process is in place to select and review textbooks? Are textbooks chosen by teachers on the basis of quality and relevance or because of other factors? What systems are in place to ensure that test and other forms of assessment are sound and fair? Are grades sometimes adjusted up or down by the administration based on unknown criteria? Factors **relevant to creating a culture** of quality assurance in an institution are as follows:

1) A formulated policy on quality assurance has been articulated and is familiar to all staff.
2) Reasonable and acceptable standards have been determined for all aspects of quality, such as employment, publicity, materials, facilities, and teachers' dress codes.
3) Systems in place to ensure that quality are regularly assessed and corrections are made where necessary.

4) A reward system is in place to ensure that those who attain high quality in their work are recognized.

Reference point:

A useful format for articulating a school's sense of mission is in the form of a mission statement. Such a statement should be developed collectively by those who have a commitment to the success of the institution. Once it is developed, a mission statement can serve as a reference point to assess proposals for new initiatives or programs within an institution and to provide a basis for evaluation of its performance over time.

Instructional analysis?

Instructional analysis is a systematic process used to break down a learning goal into smaller, teachable components. It helps teachers understand exactly what learners need to know, do, and understand in order to achieve the final learning outcome.

Purpose:

- Ensures instruction is logical, clear, and achievable.
- Helps create effective lesson plans.
- Prevents gaps in teaching.
- Aligns learning objectives, teaching methods, and assessments.

Environmental constraints?

Environmental constraints are factors in the teaching environment that limit or shape how a course can be designed. These include time limits, cultural background, L1 influence, class size, motivation, and special-purpose needs.

In 1977 what are the concepts of Porcher in needs??

“Need is not a thing that exists and might be encountered ready-made on the street. It is a thing that is constructed, the center of conceptual networks and the product of a number of epistemological choices (which are not innocent themselves, of course).

Three Tasks of foreign language learning process?

Research on the proportion of time the teacher uses the foreign language in the classroom shows that

1) teachers have an inaccurate idea of how much information they give in the foreign language and how much in the first language

2) learners are not worried to have all the lessons completely in the foreign language
3) if there is a policy to maximize the use of the foreign language and if teachers receive some training on how to do this then teachers can devote all of the class time to the foreign language without using the first language.

What is The Influence of Communicative Language Teaching (CLT)? T/F

CLT was a response to changes in the field of linguistics in the 1970s. It was also a response to the need for new approaches to language teaching in Europe as a result of initiative by groups such as the Council of Europe. Linguistics moved away from a focus on grammar as the core component of language abilities to a consideration of how language is used by speakers in different contexts of communication. The capacity to use language appropriately in communication based on the setting, the roles of the participants and the nature of the transaction was referred to as communicative competence. Applied linguists sought to apply this notion to language teaching. As a grammatical syllabus is based on the notion of grammatical competence (the knowledge people have of a language that underlies their capacities to produce and recognize sentences in the language), therefore, a different type of syllabus would be needed to teach communicative competence. What would such a syllabus look like? An important book in 1976 by Wilkins (who was one of the members of a committee set up by theCouncil of Europe that formulated the Threshold Level) sought to answer this.

Explain Difference between register and discourse analysis?

Register analysis refers to the variation of language according to the situation, purpose, and audience including factors such as field, tenor, and mode. Register analysis studies the language of such fields as journalism, medicine, or law for distinctive patterns of occurrence of vocabulary, verb forms, noun phrases, and tense usage. It focuses on how people choose different vocabulary, grammar, and tone depending on context—such as formal, informal, academic, or conversational settings. For example, the language used in a classroom, a job interview, or a casual chat with friends will each have a different register. In simple words, register is about the style of language used in a particular context.

Discourse Analysis studies how language is structured and used in longer stretches of communication. Discourse analysis examines the communicative contexts that affect language use. Discourse analysis helps understand how people construct meaning, maintain interaction, and achieve communication goals. It focuses on the overall structure and function of spoken or written texts.

For example, in social transactions, the relationship between the discourse and the speakers and listeners. For example, it looks at how the choice of verb tenses or other grammatical features affect the structure of the discourse.

True false related to self-Study

Topic-111: Self-Study of the Program

five steps of research?

1) Formulating
2) Investigating
3) Analyzing
4) drawing conclusions
5) reporting results

Describes Aims and Objectives.

Aim refers to a statement of a **general change** that a program seeks to bring about in learners. Aims statements reflect the ideology of the curriculum and show how the curriculum will seek to realize it. Aims are very general statements of the goals of a program. They can be interpreted in many different ways**. For example**, consider the following aim statement:

"Students will learn how to write effective business letters for use in the hotel and tourism industries"

The purposes of aim statements are:

- To provide a clear definition of the purposes of a program.
- To provide guidelines for teachers, learners, and material writers.
- To help provide a focus for instruction.
- To describe important and realizable changes in learning.

Objectives are more specific and descriptive when compared **to aims.** Objectives have various characteristics. They help to describe learning outcomes, and give clear directions to teacher and students about a particular activity. An objective refers to a statement of specific changes a program seeks to bring about and results from an analysis of the aim into its different components. Objectives should **be feasible**, and should describe outcomes that are attainable in the time available during a course. **For example**,

"Students will be able to follow an argument, theme, or thesis of a lecture"

The advantages of describing the aims of a course in terms of objectives are:

- They facilitate planning
- They provide measurable outcomes
- They are prescriptive

What are Curriculum development strategies?

1) **Content-based strategy** – organizing around grammar, vocabulary, functions, themes.
2) **Process-based strategy** – organizing around learning activities, methods, and procedures.
3) **Needs-based strategy** – designing according to learners' needs identified through needs analysis.
4) **Task-based strategy** – organizing around real-world tasks learners must perform.
5) **Competency-based strategy** – organizing around specific skills or competencies required in a context.

What is the Role of English for ESP?

In contrast to students learning English for general purposes for whom mastery of the language for its own sake or in order to pass a general examination is the primary goal, the ESP student is usually studying English in order to carry out a particular role such as that of a foreign student in an Englishmedium university, a flight attendant, a mechanic, or a doctor. Jupp and Hodlin (1975) describe the traditional pre-ESP response to this situation in the 1950s citing the example of a country that needs to teach foreign languages to key personnel dealing with trade or foreign business. Trainees are released for four hours daily for a year. Two language laboratories are equipped with materials and the trainees follow a state-of-the-art audiovisual course in **"spoken colloquial English**" based on selection and gradation by structural criteria with some additional situational language. However, the course takes no account of functional communicative needs or the-learner's own immediate situation. The English setting is largely a matter of an English family and some English surroundings; there is certainly no attempt to teach the English 'rules of use' in terms of situations and relationships. The concept of 'spoken colloquial English' is one largely based upon a structural description of written English and without reference to **functional uses** and roles (Jupp and Hodlin 1975).

Three main phases of Task-Based Learning (TBL)?

Willis (1996) describes the task-based learning framework as consisting of three phases:

1) **Pre-task** → prepare & introduce
2) **The task cycle** → do task
3) **Language focus** → reflect & correct

Why a survey is a useful resource for conducting needs analysis?

A survey is useful for conducting needs analysis because it helps **gather information** from a wide range of learners through questionnaires, which provide direct data about their problems, needs, and language skills. Surveys help gather data about learners' **backgrounds, goals,**

difficulties, preferences, and expectations in a systematic way. They provide **quantifiable and comparable** results, making it easier to identify patterns and priorities. Surveys are also **cost-effective, easy to administer**, and enable learners to respond **honestly and independently**, which improves the accuracy of the needs analysis.

Communication Competence as a "house" with a fresh metaphorical structure?

Communicative competence is like a house. The **foundation** is **linguistic competence**, which gives strength. The **walls** are **sociolinguistic competence**, making language appropriate. The **rooms** and layout show **discourse competence**, keeping ideas organized. The **roof** is **strategic competence**, protecting communication and fixing problems.

Explain 4 strands principle?

A course should include a roughly even balance of the **four strands of meaning-focused input, language-focused learning, meaning-focused output and fluency activities**.

This principle is concerned with the relative amount of time given to the four main strands of a language course – meaning-focused input; language focused learning, meaning-focused output and fluency development.

The rough rule of thumb is that on average equal time should be given to each of these four strands in the total language experience of the learner. That means that time in class and out of class can be considered if, during these times, the learner is gaining appropriate language activity that can be classified as fitting into these strands. For example, if a learner is doing a lot of graded reading outside class time and is gaining truly comprehensible input outside of class time, this would mean that the time allocation for meaning-focused input could be met outside class and so the time in class could be given to language focused learning, meaning-focused output and fluency development.

True/False topic "Project Factors"……..

Topic-023: Project Factors

Explain Fluency Principle?

A language course should provide activities aimed at increasing the fluency with which the learners can use the language they **already know**, both receptively and productively.

Fluency is a part of the skill goal of language learning. Fluency activities do not aim to teach new language items but aim to give the learner ready access to what is already known.

Fluency is important because **pre-teaching vocabulary alone is not sufficient**; learners must **retrieve these meanings quickly and fluently**. Many learners of English as a foreign language experience difficulty in using knowledge fluently. Fluency is often contrasted with **accuracy** and

helps make consciously studied material available for less conscious use. Fluency activities, such as speaking in pairs with repeated timed talks, encourage learners to process a large quantity of language and bring aspects of language under control, helping them **reach a high level of performance**.

Curriculum design focus name?

1) **Subject-Centered Curriculum** – Focuses on content/subjects to be taught (e.g., Math, Science).
2) **Learner-Centered Curriculum** – Focuses on learners' needs, experiences, and interests.
3) **Problem-Centered Curriculum** – Focuses on real-life problems and application of knowledge.

Abbreviations Of ESL and NNES?

ESL: English as a Second Language

NNES: Non-Native English Speaker

Which members are involved in representing a project?

Curriculum projects are typically produced by a team of people. Members of the team may be specialists who are hired specifically for the purpose; they may be classroom teachers who are seconded to the project for a fixed period of time. The project may be carried out by teachers and other staff of a teaching institution as a part of their regular duties. Projects are completed under different constraints of time, resources, and personnel. Each of these variables can have a significant impact on a project. There should be sufficient members in the project to do the job and they should represent a balance of skills and expertise. Some projects are generously resourced while others operate on a shoestring budget. The time frame for a project needs to be carefully planned.

Three-point PPP?

1. Presentation

- The teacher **introduces** the new language item (grammar/vocabulary).

2. Practice

- Students **practice** the language through controlled activities.

3. Production

- Students **use** the language freely in real-life or creative tasks.

PPP = Presentation → Practice → Production

Project factor need to be considered in situational analysis?

The following project factors need to be considered:

- Who constitutes the project group and how are they selected?
- What are the management and other responsibilities of the team?
- How are goals and procedures determined?
- Who reviews the progress of the project and performance of its members?
- /What experience do members of the team have?
- How do members of the team regard each other?
- What resources do they have available and what budget to acquire the needed resources?
- What is the time frame of the project? Is it realistic, or is more or less time needed?

The units of progression?

The units of progression in a course are the items that are used to grade the progress of the course. For example, if the starting point of a course was language items, and, in particular, vocabulary, the units of progression would be words, and at a broader level, word frequency levels which are similar to those used in grading the levels of simplified readers. Similarly, the academic word list is presented in ten sub lists ranging from the most frequent to the least frequent (Coxhead, 2000). If the starting point of a course was topics, then the units of progression would also be topics with progress through the course being marked by an increasing number of topics covered. Long and Crookes (1993) call units of progression as **"units of analysis"** and argue that the choice of the unit of analysis should be one of the starting points of curriculum design.

What is Syllabus design?

Syllabus design is the process of developing a syllabus. syllabus design that emerged in the first part of the twentieth century. Syllabus design is the process of planning and organizing the content, goals, and activities of a course so that learners can achieve the desired outcomes. It involves deciding what topics to cover, how they'll be sequenced, what teaching methods and materials will be used, and how learning will be assessed.

feedback of communicative theory?

Positive Feedback:

- Focus on real communication
- Learner-centered
- Improves communicative competence

Critical Feedback (Limitations / Weaknesses):

- Weak grammar focus
- Teacher training needed
- Assessment challenges

T/F about Cultural Pluralism……..

Topic-063: The Ideology of the Curriculum Social Constructionism and Cultural Pluralism

Enlist three criticisms of use of objectives in curriculum design?

- Objectives trivialize teaching and are product-oriented.
- Objectives are unsuited to many aspects of language use.
- Objectives need not to be limited to observable outcomes.
- Objectives turn teaching into a technology. It is argued that objectives are linked to an efficiency view of education.
- Objectives can be written in domains such as critical thinking and literary thinking but will focus on the experiences the curriculum will provide rather than specific learning outcomes

Mission statement?

A mission statement is a brief, clear statement that explains an organization's purpose, goals, and main activities. a mission statement can serve as a reference point to assess proposals for new initiatives or programs within an institution and to provide a basis for evaluation of its performance over time.

Example: For providing high-quality education that prepares students for lifelong learning and responsible citizenship.

Teacher Factors?

Teacher is a key factor in the successful implementation of curriculum changes. Exceptional teachers can often compensate for the poor-quality resources and materials they have to work from. But inadequately trained teachers may not be able to make effective use of teaching materials, no matter how well they are designed. In any institution, teachers may vary according to the **following dimensions**:

- Language proficiency
- Teaching experience

- Skill and expertise
- Training and qualifications
- Morale and motivation
- Teaching style
- Beliefs and principles

Differentiate between needs and situational analysis?

Needs Analysis:

Needs analysis, emerged in the **1960s.** Needs analysis refers to the process of gathering information about the learners' needs. It identifies what learners know, what they do not know, and what they need to learn. Good needs analysis involves asking the right questions and finding the answers in the most effective way. Needs analysis also allows teachers to understand learners' preferences and learning styles.

A needs analysis may be conducted for a variety of **different users**. For example, in conducting a needs analysis to help revise the secondary school English curriculum in a country, the end users include:

1) Curriculum officers in the ministry of education who may wish to use the information to evaluate the adequacy of existing syllabus, curriculum, and materials.
2) Teachers who will teach from the new curriculum.
3) Learners who will be taught from the curriculum.
4) Writers who are preparing new textbooks.
5) Testing personnel who are involved in developing end-of-school assessments.
6) Staff of tertiary institutions who are interested in knowing what the expected level of the existing students will be and what problems they face.

There are **several issues** in needs analysis that have been the focus of continuing debate. Three are as follows:

- Common core and specialized language
- Narrow focus – wide focus
- Critical needs analysis

Situational Analysis:

Situational analysis focuses on the **context and environment** in which a language course will be implemented. It examines institutional policies, administrative support, available resources, teacher qualifications, class size, and physical facilities. It assesses political, social, economic, or institutional situation This analysis also considers social and cultural factors that may influence learning. Situational analysis helps identify any constraints or opportunities that might affect teaching. It ensures the curriculum fits the **real conditions** of the school or institution. By

understanding the situation, teachers can make practical decisions about methods, materials, and assessment.

Enlist 5 names of ongoing teacher support?

1) Orientation
2) Adequate materials
3) Course guides
4) Division of responsibilities
5) Further training
6) Teaching release
7) Mentors
8) Feedback
9) Rewards

name of approaches which laid the foundation for syllabus design?

1) **Vocabulary Selection:** It focused on selecting the most useful and frequent words for teaching.

2) **Grammar Selection:** It focused on choosing essential grammatical structures for language teaching.

What is the Target Population? OR Five groups of people in target population?

The target population in a needs analysis refers to the people about whom information will be collected. Typically, in language programs there will be language learners or potential language learners, but others are also often involved depending on whether they can provide information useful in meeting the purposes of the needs analysis. In determining the target population, an important issue is that of sampling. **For example,** in conducting a needs analysis to determine the focus of an English program in public secondary schools in an EFL context, the target population might include:

- teachers
- students
- academics
- employers
- vocational training specialists
- parents

What is the Method suggested for reliable need analysis? OR features of valid and reliable needs in LCD?

Needs analysis is a kind of assessment and thus can be evaluated by considering its reliability, validity and practicality. **Reliable needs analysis** involves using well-thought-out, standardized tools that are applied systematically. Instead of observing people performing tasks that learners will have to do after the course, it is better to systematize the observation by using a checklist or by recording and apply standardized analysis procedures. **Triangulation i**s the recommended method for reliable needs analysis because it cross-checks data from different instruments.

Valid needs analysis involves looking at what is relevant and important. Consideration of the type of need that is being looked at and the type of information that is being gathered is important. Before needs analysis begins, it may be necessary to do a ranking activity to decide what type of need should get priority in the needs analysis investigation. The worst decision would be to let practicality dominate by deciding to investigate what is easiest to investigate.

With small-scale needs analysis result?

With small-scale needs analysis result such as that carried out by a single teacher on his or her class, the audience might consist of the teacher, other teachers, and the program coordinator. It is Less reliable than large-scale analysis.

In cases of large-scale needs analysis, there will be multiple audiences for the results of a needs analysis. Determining the likely audiences is an important first step in planning a needs analysis in order to ensure that the information they need is obtained and that the needs analysis will have the impact it is designed to have.

List the major language teaching methods along with their periods of dominance? OR Five early teaching methods?

1) Grammar Translation Method (1800-1900)
2) Direct Method (1890-1930)
3) Structural Method (1930-1960)
4) Reading Method (1920-1950)
5) Audiolingual Method (1950-1970)
6) Situational Method (1950-1970)
7) Communicative Approach (1970-present)

Cunningsworth (1995) Criteria for textbook evaluation?

Cunningsworth (1995) proposes **four criteria** for evaluating textbooks, particularly course books:

1) They should correspond to learners' needs. They should match the aims and objectives of the language learning program.

2) They should reflect the uses (present or future) that learners will make of the language. Textbooks should be chosen that will help equip students to use language effectively for their own purposes.
3) They should take account of students' needs as learners and should facilitate their learning processes, without dogmatically imposing a rigid method.
4) They should have a clear role as a support for learning. Like teachers, they mediate between the target language and the learner.

Significance of situation analysis in curriculum design?

1) Identifies the context
2) Matches curriculum to learners' needs
3) **Informs resource allocation**
4) Guides realistic goal-setting
5) Anticipates challenges
6) Improves effectiveness

Briefly explain Learning outcomes?

Learning outcomes are the specific knowledge, skills, attitudes, or competencies that learners are expected to achieve by the end of a course or lesson. Learning outcomes are described as objectives. They describe **what learners should be able to do, know, or value** after instruction. Learning outcomes are measurable and observable, guiding both teaching and assessment. They help ensure that curriculum objectives are translated into concrete results, making learning focused and purposeful.

Explain the historical background and development of Communicative Language Teaching (CLT)? Also T/F from that topic.

CLT was a response to changes in the field of linguistics **in the 1970s**. It was also a response to the need for new approaches to language teaching in Europe as a result of initiative by groups such as the Council of Europe. Linguistics moved away from a focus on grammar as the core component of language abilities to a consideration of how language is used by speakers in different contexts of communication. The capacity to use language appropriately in communication based on the setting, the roles of the participants and the nature of the transaction was referred to as communicative competence. Applied linguists sought to apply this notion to language teaching. As a grammatical syllabus is based on the notion of grammatical competence (the knowledge people have of a language that underlies their capacities to produce and recognize sentences in the language), therefore, a different type of syllabus would be needed to teach communicative competence. What would such a syllabus look like? An important book in 1976 by Wilkins (who was one of the members of a committee set up by theCouncil of Europe that formulated the Threshold Level) sought to answer this.

3 objectives of curriculum design?

The objectives of curriculum design are to clearly define what learners are expected to achieve by the end of a course. They guide **what to teach, how to teach, and how to assess learning**. Objectives ensure that the curriculum is **focused, relevant, and achievable**, aligning teaching methods, materials, and assessments with learners' needs. They help in developing knowledge, skills, and attitudes systematically and provide a framework for evaluating the effectiveness of the curriculum.

According to Cunningsworth (1995) describe the role of materials (particularly course books)?

Cunningsworth (1995) summarizes the role of materials (particularly course books) in language teaching as:

1) A resource for presentation materials (spoken and written)
2) A source of activities for learner practice and communicative interaction
3) A reference source for learners on grammar, vocabulary, pronunciation, and so on
4) A source of stimulation and ideas for classroom activities
5) A syllabus (where they reflect learning objectives that have already been determined)
6) A support for less experienced teachers who have yet to gain in confidence

What was the goal of EGP (English for General Purposes)?

- To develop learners' **overall English language proficiency**.
- To enable learners to use English effectively in **general, every day, academic, and social contexts**, rather than for a specific profession or field.

How feedback is related to communicative approach?

- Feedback in CLT is focused on **meaning and communication**, not just grammatical accuracy.
- It helps learners **notice errors** while maintaining fluency in real communication.
- Teachers provide feedback in a supportive, interactive way to encourage improvement without interrupting communication.
- It **reinforces** communicative competence by guiding learners on how to use language appropriately in different contexts.

What is Simplicity and centrality?

Simplicity – The curriculum should present content in a clear, straightforward manner so that learners can easily understand and follow it. Complex ideas should be broken down into manageable parts.

Centrality – The curriculum should focus on core, essential elements of the subject or language, ensuring that the main concepts and skills are prioritized over less important material.

Five types/ categories/ forms of ideas that course content can take?

1) Grammar (e.g. using the present tense in descriptions)
2) Functions (e.g. describing likes and dislikes)
3) Topics (e.g. writing about world issues)
4) Skills (e.g. developing topic sentences)
5) Processes (e.g. using prewriting strategies)
6) Texts (e.g. writing a business letter)

What are the Criteria for the selection of syllabus units?

1) Frequency
2) Usefulness
3) Simplicity
4) learnability
5) authenticity.

Fill in the banks from the good internal communication topic……

Topic-103: Organizational Factors: Good Internal Communications

Audiences of need analysis result?

- Curriculum planners
- Teachers
- Administrators
- Material developers

PPP approach on language learning?

The PPP approach begins with **Presentation**, where the teacher introduces a new language item (structure, function, or vocabulary). Next is **Practice**, in which learners perform controlled activities to use the new language accurately (such as drills or guided exercises). Finally, in the **Production** stage, learners use the language more freely in communicative tasks, applying what they have learned in real or realistic situations.

What are three major ways of defining subskills? Explain.

There are **three** major ways of defining subskills.

1) **One is** to look at the range of activities covered by a skill such as speaking and to use these as a starting point for defining subskills. For example, speaking can be divided **into interactional speaking and transactional speaking** (Brown, 1978). Transactional speaking can be divided into monologue, dialogue, etc.

2) **Another way** is to look at the skill as a process and to divide it into the parts of the process. This is a typical way of approaching writing, dividing the writing process into parts. One possible division of the process is: (1) having a model of the reader, (2) having writing goals, (3) gathering ideas, (4) organizing ideas, (5) turning ideas into written text, (6) reviewing what has just been written, and (7) editing the written text. Process divisions can be applied in other skills.

3) A **third way** of dividing up a skill is to use **levels of cognitive activity**. The most well-known approach of this kind can be found in what is popularly known as Bloom's taxonomy. Bloom divides cognitive activity into **six levels** of increasing complexity: (1) knowledge, (2) comprehension, (3) application, (4) analysis, (5) synthesis, (6) evaluation. These levels have often been applied to the construction of reading comprehension activities.

What is Learning Style Principle?

"There should be opportunity for learners to work with the learning material in ways that most suit their individual learning style". Learners approach activities in a variety of ways depending on their personality, their previous learning experience, their expectations of how they will be tested on what they learn, and their view of the nature of the learning task.

Not all learners will feel comfortable with the same way of learning, and learners may learn more effectively if they can choose a style of learning that most suits them. The following list suggests some of the choices that could be made available:

1) **Group size**: learning individually or with other learners
2) **Speed and intensity:** learning at a slow, thoughtful pace or at a fast and intensive pace
3) **Medium:** learning through aural input or written input
4) **Representation of information:** learning through language or through pictorial or diagrammatic representation
5) **Mental process:** learning holistically or through analysis
6) **Understanding:** learning through doing or through understanding
7) **Use of first language:** learning through translation or through the second language

8) **Source of control:** learning through activities planned and provided by the teacher or through self-access and negotiated procedures.

What is Text-based syllabus?

It is built **around texts and samples of extended discourse**. A text-based syllabus is a type of integrated syllabus because it combines elements of different types of syllabuses. This approach starts with the texts which are identified for a specific context or which have been identified by students. A text-based syllabus is a type of syllabus in which **authentic or pedagogic texts** are used as the main organizing units of teaching. Learning activities, language features, skills, and tasks are all built around whole texts such as Stories / Narratives, dialogues / Conversations, reports, letters, or articles (Examples). The focus is on helping learners understand, interpret, and produce **complete, meaningful texts**, rather than isolated grammar points. It is commonly linked with **genre-based approaches**.

Methods of Data collection?

1) Questionnaires
2) Interviews
3) Observation
4) Tests
5) Consultation with teachers/experts

2 Instructional Blocks?

An instructional block is a self-contained learning sequence that has its own goals and objectives and that also reflects the overall objectives for the course.

1) **Planning by modules:** The course is organized into self-contained topic-based modules with specific objectives.
2) **Planning by units:** The course is structured into lesson units that build progression and coherence.

Explain fluency development strand?

The fourth strand of a course is a fluency development strand. Fluency involves making the best use of what is already known. Thus, the fluency development strand of a course does not involve the learning of new language features, but involves becoming fluent with features that the learners have already met before. The conditions for the fluency development strand are:

1) easy, familiar material
2) a focus on communicating messages

3) some pressure to perform at a faster speed
4) plenty of opportunities for fluency practice.

There needs to be fluency practice in each of the four skills of listening, speaking, reading and writing. **Listening fluency** practice can involve listening to stories, taking part in interactive activities, and listening to lectures on familiar material. **Speaking fluency** activities can involve repeated speaking where learners deliver the same talk several times to different listeners. **Reading fluency** activities should involve a speed-reading course within a controlled vocabulary. **Writing fluency activities** involve the learners in writing about things where they bring a lot of previous knowledge. A very useful activity in this strand is ten-minute writing.

Linked skills activities are very effective for fluency development in all of the skills of listening, speaking, reading and writing. A linked skills activity involves learners working on the same material while moving through a series of changes, for example, from listening to the material, to talking about it, and then to writing about it.

What is ten-minute writing Activity?

In this activity, two or three times a week, the teacher gets the learners to write under timed conditions that are for exactly ten minutes. The teacher does not mark any of the errors in the writing but comments on the content of the writing perhaps suggesting what the learners should write more about next time. The learners record the number of words per minute they have written on a graph. Their goal is to increase the number of words per minute written. Other writing fluency activities include linked skills activities.

Defines of Situation, environmental, needs analysis, aims and objectives were given without specifications and we have to write the defines with their headings…….

See relevant topics

What is Lexical syllabus?

A lexical syllabus organizes language learning around **vocabulary and lexical items** rather than grammar or functions. It focuses on teaching words, phrases, and collocations that learners need to understand and use in real communication. One of the most important lexical syllabuses in language teaching was Michael West's **A General Service List of English Words (1953),** which contains a list of some **2,000 words**. It identifies a target vocabulary to be taught, normally arranged according to levels such as the first 500, 1,000, 1,500, 2,000 words. Vocabulary syllabuses were among the first types of syllabuses to be developed in language teaching.

What is Situational syllabus?

A situational syllabus identifies the situations in which the learner will use the language and the typical communicative acts and language used in that setting. A Situational Syllabus is an

approach that "takes situations as the organizing principle for a language course and organizes teaching content around every day or social contexts such as at the bank, at the market, or in the classroom". This approach helps learners **use language practically and meaningfully** in specific social contexts. The syllabus is built on real-world environments and routine interactions rather than isolated grammar topics. This helps learners connect language learning with practical usage in familiar circumstances.

Characteristics of effective curriculum design?

1) Planned and Organized
2) Purposeful / Goal-Oriented.
3) Inclusive of Learning Experiences.
4) Flexible.
5) Continuous and Dynamic.
6) Evaluative
7) result of long-term effort

What are three likely questions that come to mind When thinking about curriculum?

- What are the aims and objectives of the curriculum?
- What content and learning experiences should be included?
- How will the curriculum be implemented and assessed?

What are the Factors that affect quality teaching?

1) Monitoring
2) Collecting information
3) Formal and informal tools
4) Observation
5) Peer feedback
6) Identification and resolution of problems
7) Shared planning
8) Course planning
9) Materials
10) Lesson planning
11) Documentation

What is Competence-based analysis?

Competence-Based Analysis is a method used in curriculum development to identify the **specific competencies (skills, knowledge, attitudes, and abilities)** that learners must develop in order to perform effectively in a particular field or profession. It focuses on defining clear, measurable

learning outcomes and shaping curriculum content, teaching methods, and assessment around performance-based skills. This analysis ensures practical relevance and prepares learners to successfully carry out real-world tasks.

Difference between authentic and created material?

Authentic Materials:

Materials that are not designed for teaching but are taken **from real-life sources**. It is Used to expose learners to natural, real-life language.

Examples:

- Newspapers
- Magazines
- TV/radio programs
- Real advertisements
- Tickets, menus, brochures
- Websites, social media posts

Created Materials:

Materials that are **specially designed for teaching** and for classroom use. It is Used to teach specific language points or skills.

Examples:

- Textbook
- Worksheets
- Grammar exercises
- Simplified reading passages
- Practice activities made by teachers

Created materials may be superior to authentic materials because they are generally built around a graded syllabus and hence provide a systematic coverage of teaching items.

What is Motivation?

Motivation refers to the **internal drive or desire that encourages** learners to engage in learning and persist in acquiring a language. It determines how much effort and time learners are willing to invest in learning tasks. Motivation can be:

- **Intrinsic** – coming from the learner's personal interest or enjoyment in learning.
- **Extrinsic** – coming from external rewards or pressures, such as grades, approval, or job requirements.

Explain Integrative Motivation?

"The course should be presented so that the learners have the most favorable attitudes to the language, users of the language, use of the language, the teacher's skill in teaching the language and their chances of success in learning the language". Among the range of motivation factors, the two that have received the most attention from researchers are **integrative motivation and instrumental motivation**. While the interests of researchers have not always had immediate relevance to teachers, Dörnyei (2001) addresses the question of how teachers can motivate learners and suggests that motivational teaching practice has four principal aspects:

- Creating basic motivational conditions
- Generating initial student motivation
- Maintaining and promoting motivation
- Encouraging positive retrospective self-evaluation.

six areas of basic teaching skill?

1) Language awareness
2) The learner, the teacher, and the teaching/learning context
3) Planning for effective teaching of adult learners of English
4) Classroom management and teaching skills
5) Resources and materials for teaching
6) Professional development

Advantages of building a material-development-component in a program?

1) **Relevance:** Materials can be produced that are directly relevant to students' institutional needs and that reflect local content, issues, and concerns.
2) **Develop expertise:** Developing materials can help develop expertise among staff, giving them a greater understanding of the characteristics of effective materials.
3) **Reputation:** Institutionally developed materials may enhance the reputation of the institution by demonstrating its commitment to providing materials developed specifically for its students.
4) **Flexibility:** Materials produced within the institution can be revised or adapted as needed, giving them greater flexibility than a commercial course book.

Disadvantages of building a material-development-component in a program?

- **Cost:** Quality materials take time to produce and adequate staff, time as well as resources need to be allocated to such a project.

- **Quality:** Teacher-made materials will not normally have the same standard of design and production as commercial materials and hence may not present the same image as commercial materials.
- **Training**: To prepare teachers for material writing projects, adequate training should be provided. Material writing is a specialized skill and potential materials writers need the opportunity to develop the necessary skills. Workshops can be developed for this purpose. The creation of writing teams that contain a balance of relevant expertise can also be useful.

Modular approach for task-based language courses?

Ellis (2003) proposes a modular approach for task-based language courses. In his proposal there are two unconnected modules. At beginner levels the sole focus is on a communicative, meaning-focused module. From intermediate level onwards, attention is also given to a language- (or code-) focused module, with the intention of **"drawing attention to form in order to destabilize learners' interlanguage"** (Ellis, 2003) and thus avoiding fossilization of language errors. This approach suggests a way to deal with the concerns mentioned above about a lack of attention to accuracy in some task-based language courses.

Difficulties in curriculum development?

- Lack of sequence
- Economic problems
- Political interference
- Inadequate evaluation
- Disapproval of society

Goals of English for Specific Purposes (ESP)?

- To save time by focusing only on required content
- To increase learner motivation
- To improve effective and appropriate communication
- To meet learners' specific language needs

Fluency Features?

1) Pausing
2) Reduced hesitation
3) Smooth speech rate
4) Connected speech
5) Automaticity
6) Rhythm and intonation flow
7) Natural speed and timing

What are Syllabi?

Syllabi is plural of syllabus. A syllabus is a plan of a course that lists the topics to be taught, goals of the course, and how students will be assessed.

Meta-Functions / Macro-Functions of Language (Halliday)?

Michael Halliday identified **three main meta-functions (also called macro-functions)** of language.

1) **Ideational:** Expresses ideas, experiences, and information.
2) **Interpersonal:** Manages social interactions and expresses attitudes.
3) **Textual:** Organizes language to make communication coherent.

Effects of Language Teaching Methods?

- Cognitive Effects
- Communicative Effects
- Cultural and Social Effects
- Practical Classroom Effects

two key decisions which researcher needs to take?

a) choosing input resources
b) selecting exercise

format and presentation Principle?

These principles are concerned with what actually happens in the classroom and during the learning. Most practically, they relate to the kinds of activities used in the course and the ways in which learners' process the course material. It is in this aspect of curriculum design that teachers may have their greatest influence on the course.

Enlist any five procedures of need analysis in context of language curriculum design (LCD)?

1) Development of a pilot student and staff questionnaire
2) Review of questionnaires by colleagues
3) Piloting of questionnaires
4) Selection of staff and student subjects
5) Developing a schedule for collecting data
6) Literature survey
7) Administration of questionnaires

What is Exercises that develop "top-down" listening?

1) Listen to a part of a conversation and infer the topic being discussed.
2) Look at pictures and then listen to conversations about the pictures and match them with the pictures. Listen to conversations and identify the setting.
3) Read a list of key points to be covered in a talk and then number them in sequence while listening to the talk.
4) Read information about a topic, then listen to a talk on the topic and check whether the information was mentioned or not.
5) Read one side of a telephone conversation and guess the speaker's responses then listen to more conversation.
6) Look at pictures of people speaking and guess what they might be saying or doing then listen to their actual conversations.
7) Complete a story then listen to how the story was really ended
8) Guess what news headlines might refer to, and then listen to news broadcasts about the events referred to
