certificate in Language Teaching to Adults (CELTA)

ICT — Information and Communication Technology

TOEFL (Test of English as a Foreign Language)

Content and Language Integrated Learning (CLIL)

IMP MCQs

1) In the opinion of Dubin and Olshtain (1986), which area is central to the concept of a communicative curriculum? A) Cognitively based language learning B) Humanistic approach in education C) Sociolinguistics **D) All the given options**

2) Which of the following syllabuses offers a specific realization of communicative language teaching? **Task-based syllabuses.**

3) Which of the following approaches has strong links with experiential learning, humanistic psychology, and task-based language teaching? **Learner-centeredness**.

4) Which of the following syllabuses deals with the content of language teaching as a collection of specific abilities? **"Skill-based syllabus".**

5) Which of the following approaches focuses on curriculum development instead of human development? **Subject-centered Design**.

6) Which of the following approaches offers teachers an opportunity to revitalize their education and training programs? **Competency-based approaches**.

7) Which of the following models is linear in nature, starting from objectives and ending with evaluation**? Tyler's and Wheeler's Models**.

8) Which of the following models asserts that everything influences everything else in the curriculum? **Kerr's Model**.

9) Which of the following syllabuses is organized around the content rather than around a linguistic syllabus? **Content-based instruction**.

10) Mastery Decisions is another tool to make **informed** judgment about the evaluation of the program.

11) Who wrote the article **"Mastery Decisions in Program Evaluation' (Thom Hudson).**

12) The materials represent plans for teaching but they do not represent the process of _____itself. **Teaching**.

13) Which of the following approaches deals with the format and presentation part of the curriculum design process at first? **Focused opportunistic**.

14) **A single course book** does not meet the diverse needs of the learners in the class.

15) In which of the following design, curriculum development starts with the selection of teaching activities, techniques and methods**? Central.**

16) Which of the following should be readily available for the learners before starting the course? **Course book**.

17) In which of the following models of curriculum design, one phase must be completed before the next phase can begin? **Waterfall**.

18) In which of the following approaches the potential for mismatch is great because different people performing different curricular functions? **The specialist approach**.

19) Which of the following design begins with classroom processes and methodology? **Central design**.

20) **Backward design** starts from a **specification of learning outcomes** and decisions on methodology and syllabus are developed from the learning outcomes.

21) **Forward design** starts with **syllabus planning, moves to methodology**, and is followed by assessment of learning outcomes.

22) Which of the following can offer pedagogical purpose to meet in language classroom? **Materials**.

23) An evaluation form designed for course book evaluation should be reliable, _____ and practical. **Valid**.

24) Which of the following analysis has revealed the importance of units beyond the level of vocabulary**? Corpus analysis**.

25) Which of the following takes most responsibility for content, sequencing and goals in curriculum design? **Curriculum designer**.

26) The syllabus or learning input is an outcome of _____and learning. **Teaching.**

27) Which of the following is a source of information and support for teachers? **Preplanned material**.

28) In which of the following models of curriculum design, evaluation is distinguished from assessment? **Graves.**

29) The audiolingual method, the audio-visual method and the structural situational method have already been cited as examples of **forward design** methods.

30) In language teaching, **input** refers to the linguistic content of a course.

31) A curriculum design that misses important parts and does not deal with parts in a principled way is **Poor / weak.**

32) **Materials** obviously reflect the writers' views of language and learning, and teachers.

33) Which of the following models allows a concentrated focus on one aspect with possible high-quality improvements in a course? **Focused opportunistic.**

34) In language classroom maximum time should spent on focusing and using **second language**.

35) Which of the following models of curriculum design does not include principles, monitoring and assessment, and evaluation? **Murdoch's.**

36) In which of the following design, there is no need for clearly defined outcomes or objectives? **Central Design.**

37) Before implementing the curriculum, teachers need to be clear about such **theoretical** concepts.

38) **Summative evaluation** is concerned with determining the effectiveness of a program, its efficiency, and to some extent with its acceptability.

39) Which of the following is a deliberate attempt to bring about certain kinds of interaction in the classroom? **Teaching materials**.

40) **The learners** are critical element in the entire process of curriculum implementation.

41) Designing a balance between **units** is not straightforward.

42) The idea of a negotiated syllabus raises questions about the role **of the teacher** and the role of the commercially produced text book.

43) Which of the following reduces the power of the pupil over what, when and how he receives his knowledge? **Strong Frame**.

44) **Hidden curriculum** operates not only in classroom but also in various school domains such as in school assemblies.

45) **the hidden curriculum** can cause mismatches in the process of teaching and learning.

46) Which of the following is the final stage in the curriculum development process? **Classroom implementation**.

47) Materials contribute to learners' affective and _____development. **Cognitive**.

48) Which of the following has changed the direction from language teaching to language learning? **Cognitivism**.

49) Negotiation of _____has direct effects on goals. **assessment and evaluation**

50) It is important that teachers **use task**-based language teaching techniques.

51) Which of the following eras paved the way for audiolingualism and cognitivism? **Method.**

52) Which of the following syllabuses focuses on how syllabus is made instead what should be in it? **Negotiated Syllabus**.

53) Which of the following plays a vital role in terms of evaluating language learning tasks? **Teachers.**

54) Materials may; however, serve as a vehicle for several different types of **content**.

55) The procedure of negotiated _____is not straight forward. **Syllabus**

56) Which of the following syllabuses does not start from the first day of class? **Negotiated Syllabus**.

57) Which of the following needs to adjust according to the needs, situations and hidden agendas? **Teaching**.

58) Language Syllabus encompassing both **structural** and functional aspects of the language.

59) Which of the following term refers to posing question to the students to assess what they have learned? **Uptake.**

60) Before 1970, language teaching was **method** driven.

61) Which of the following is a threat to the successful implementation of the official curriculum? **Hidden curriculum**.

62) **Material** actually demonstrates learner's needs.

63) In which of the following syllabuses some aspects are negotiated while others are left under the control of the teacher? **Negotiated Syllabus**.

64) Which of the following involves at the implementation stage of materials? **(teachers, course designers, and learners)**

65) The organization of the materials contributes towards forming the **students'**.

66) FLT **(Foreign Language Teaching).**

67) **A task** was defined as an activity which required learners to arrive at an outcome from the given information through the process of thought.

68) Material designer ensures a coherent connection between lessons and **syllabus.**

69) The main focus of material design is the **outcome**.

70) Definition of the **hidden curriculum** can be everything carried out by the teacher and the learner that is not planned or required by the official curriculum in a language classroom.

71) The term **'input'** refers to the exposure of the language given to the students in the classroom through various sources, either written or spoken.

72) **'New or unusual'** the material is, depends very much on each individual's own **experience.**

73) **Teachers** convey **"socially-approved knowledge"** unconsciously or without intending it.

74) Who is at the center of writing-last and storyline solution approach? **Learners.**

75) An evaluation can focus on the process of **learning and teaching** and it can focus on the product or result of learning and teaching.

76) learning as a process of **observable changes** in behavior which could be measured.

77) Which of the following revolves around learners' individual needs, experiences, selfreflection and critical thinking? **Learner-Centeredness**.

78) Along with formative/summative and short term/long term, a third distinction is **process/product** (Long, 1984).

79) Curricular innovation is a **complex** phenomenon.

80) As teacher cognition is **not static**, changing beliefs is possible.

81) teacher cognition – are **"the hidden side of teaching**"

82) The language should be realistic and **authentic**.

83) Most of the features in Kerr's model resemble those in **Wheeler's and Tyler's** models.

84) A **valid test** measures what it is supposed to measure.

85) Syllabuses offer a specific realization of communicative language teaching and differs from the previously proposed syllabuses **task-based**.

86) Material designers need to ensure that the **exercises** are presented in a manner that shows coherent connection between various lessons.

87) Curriculum designers and teachers can draw on a bank of existing materials from which they select the most appropriate material for the course. **(TRUE)**

88) **Targets and deadlines** help some people to get themselves in gear, but for others they can be stressful and de-motivating.

SUBJECTIVE

Drawbacks of Content Based Syllabus?

1) **Ellis (2003) believes** that content-based courses might not result in learners achieving high levels of grammatical and sociolinguistic accuracy.
2) **Brown (2007) argues** that teachers can be easily deterred by the demands of content knowledge and discouraged by the amount of preparation they must do. Furthermore, they do not feel that they are qualified to teach content area.
3) **Short (1993) mentions** that the difficulty with assessment centers on isolating the language features from the content objectives in order that one do not adversely influence the other.

Write a note on Negotiated syllabus? Also, T/F…….

A negotiated syllabus involves the teacher and the learners working together to make decisions at many levels of the curriculum design process. Negotiated syllabus is also called "process syllabus". The word process in the term 'process syllabus' indicates that the important feature of this type of syllabus is that it focuses on how the syllabus is **made rather than what should be in it**.

OR

A negotiated syllabus is one in which teachers and students jointly decide the course content, activities, materials, and sometimes assessment. Class did not start with a negotiated syllabus from the very first day of class.

Example:

At the start of an English class, the teacher asks students what they find difficult. Students say they want more speaking practice and presentation skills. The teacher then plans lessons based on these needs.
So, what to learn and how to learn is decided by both teacher and students.

Advantages of preparing materials in a program?

- Relevance to learners' needs
- Develop expertise
- Reputation
- Flexibility

Experiential practices and awareness-raising practices for teacher training?

Ellis (1986) distinguishes between experiential practices for teacher training and awareness-raising practices for teacher training. **Experiential practices** involve actual teaching, either real or simulated. In this Teachers learn by doing**.** Focus is on experience and practice, not on theory first. **For Example,** A trainee teaches a short lesson and later reflects on it.

Awareness-raising practices involve conscious understanding of principles, techniques and issues. Teachers learn by understanding how language and teaching work. Focus is on theory, rules, and analysis. **For Example**: A trainer explains how learners acquire grammar and discusses teaching strategies.

Classroom implementation? OR Three strategies of classroom implementation?

Classroom implementation is the final stage in the curriculum development process and also the most important because ultimately, learning acts determine curriculum outcomes. Before 1970, language teaching was method driven, and therefore it was also known as method era. But with the arrival of audiolingualism and cognitivism, it moved towards communicative language teaching and the shift occurred from language teaching to language learning. In this regard, there are **three categories** of classroom implementation:

1) **Teaching strategies:** Although it originates from method debate, but it looks at concrete classroom activities. What strategies are being employed by teachers? There is need to adjust teaching strategy according to the students' desire.
2) **Timing strategies:** It is under the direct control of the teacher. It happens within the premises of the classroom.
3) **Social or interpersonal strategies**.

Write 2 stages of material design process?

1) **Development Stage**: Creating or adapting content and activities.
2) **Evaluation Stage**: Assessing the effectiveness of materials in the classroom.

Two limitations of short-term evaluation?

- Quality of teaching cannot be validly evaluated
- Learner achievement cannot be validly evaluated

Long-term and Short-term Evaluation?

Short-term Evaluation:

- Conducted over a short period (a few days)
- Cannot validly evaluate some important features like quality of teaching and learner achievement

Long-term Evaluation

- Conducted over a longer period of time

- More suitable for evaluating important features such as teaching quality and learner achievement
- Most economically done when planned as part of curriculum design

Short-term assessment – two purposes?

- To see if the learners are making progress on a daily or weekly basis
- To provide feedback to the teacher and the learners

Explain Different steps of backward design?

Backward design starts with a careful statement of the desired results or outcomes: appropriate teaching activities and content are derived from the results of learning. This is a well-established tradition in curriculum design in general education, and in recent years has re-emerged as a prominent curriculum development approach in language teaching. It was sometimes described as an 'ends-means' approach, as seen in the work of Tyler (1949) and Taba (1962), who viewed instruction as the specification of ends as a pre-requite to devising the means to reach them. The process consists of seven steps:

- Step 1: diagnosis of needs
- Step 2: formulation of objectives
- Step 3: selection of content
- Step 4: organization of content
- Step 5: selection of learning experiences
- Step 6: organization of learning experiences
- Step 7: determination of what to evaluate and of the ways of doing it

drawbacks of preparing materials?

- Cost
- Quality
- Training
- Time-saving

Describe Three curriculum approaches? OR which statement is correct?

1) **Forward design** starts with syllabus planning, moves to methodology, and is followed by assessment of learning outcomes. Resolving issues of syllabus content and sequencing are essential starting points with forward design, which has been the major tradition in language curriculum development.
2) **Central design** begins with classroom processes and methodology. Issues of syllabus and learning outcomes are not specified in detail in advance and are addressed as the

curriculum is implemented. Many of the innovative methods of the 1980s and 90s reflect central design.

3) **Backward design** starts from a specification of learning outcomes and decisions on methodology and syllabus are developed from the learning outcomes.

Murdoch's Model? Also, T/F

Principles, monitoring and assessment, and evaluation are **not included** in Murdoch's Model (2010). These are possible weaknesses of his model. However, in his discussion of his model, it is clear that he intends that principles should be considered when dealing with several of the parts of his model. There are numerous other models of curriculum design and it is interesting to compare them to see where their strengths and weaknesses lie.

3 true/false related to material design process?

Material design is defined by Pardo and Tellez (2009) as: "It includes adaptation, creation of learning and teaching exercises; a task, an activity, a lesson, a unit or a module composed of several units." The main focus of material design is the outcome, i.e., how material affects learner's perceptions and perspective? It is important to keep in mind that how actual student will react to the material. It is further important to see that how material actually demonstrates learner's needs. The six areas that are examined under this notion are:

1) General or subject knowledge
2) View of what knowledge is and how it is acquired
3) View of what is involved in language learning
4) Role relations
5) Cognitive abilities
6) Values and attitudes presented in the material

3 components of forward design?

- Syllabus planning (Input)
- Methodology (Process)
- Assessment of learning outcomes (Output)

What are the input forms of the understanding component in a workshop?

The input data (the content) of the understanding component of a workshop can come in several forms:

I. Talks and lectures
II. Set reading
III. Discussions

Statements: identify and label curriculum models?

Graves Model:

Monitoring and assessment and evaluation in the Language Curriculum Design model are included in one part of the Graves Model (2000) i.e. designing an assessment plan. In her book, Graves distinguishes evaluation from assessment, but deals with both in the same chapter. Clearly, there is a great deal of similarity between the two models. When looking at other models of curriculum design, it is worth doing such a comparison to see where the similarities and differences lie.

Murdoch's Model:

Principles, monitoring and assessment, and evaluation are not included in Murdoch's Model (2010). These are possible weaknesses of his model. However, in his discussion of his model, it is clear that he intends that principles should be considered when dealing with several of the parts of his model. There are numerous other models of curriculum design and it is interesting to compare them to see where their strengths and weaknesses lie.

"Waterfall" Model:

Tessmer and Wedman (1990) describe this view as a "waterfall" model, where one stage of curriculum design (for example environment analysis) is done thoroughly and then the next stage of needs analysis is done thoroughly and so on. It is in the same way as the flow of water fills one container in a stepped-down series and then flows over to fill the next. If this does happen, it is probably rare. Most curriculum design occurs under constraints that make it almost impossible for a waterfall model to occur. For example, in many English courses the teacher does not know who the learners will be until the first day of class. Needs analysis before the course begins is thus virtually impossible. The teacher needs to come prepared for the first class and so deciding on the content, format and presentation of the material may be a first step. The decisions made for the first day may have to be revised after meeting the learners.

disadvantages of written tests?

- Students complain about the results and often ask for another chance
- Students tend to cheat a lot, which produces warped results
- Students may not understand the instructions, which becomes evident only at the marking stage

Major types of monitoring and assessment?

1) Placement assessment
2) Observation of learning
3) Short-term achievement assessment

4) Diagnostic assessment
5) Achievement assessment
6) Proficiency assessment

Explain Diagnostic vs. achievement assessment?

Achievement Assessment:

Achievement assessment measures both the achievement of learners during a course and the effectiveness of the course. Achievement assessment is a very important element in curriculum design. It not only provides important feedback for teachers, learners and curriculum designers, but also can affect teaching and learning in that the tests motivate and guide learning. Achievement tests have the following characteristics:

- They are based on material taught in the course.
- Learners usually know what kinds of questions will be asked and what material will be covered.
- They are criterion referenced. That means that there will be a standard or criterion set which will indicate whether learners have achieved enough to be given a pass for the course. So, the learners are not assessed in relation to each other, but in relation to a pre-determined criterion.

Achievement tests may be mastery tests. In a mastery test, a high criterion is set. The pass grade for example may be 80 per cent or 90 per cent. Learners can be given repeated opportunities to study the material and sit the tests until they reach the criterion of mastery. Mastery achievement tests usually focus on a small area of knowledge so that learners are clear about what has to be learned and so that they can set themselves a series of short-term goals to eventually cover the area of knowledge.

Diagnostic Assessment:

Diagnostic assessment is used to find the gaps and weaknesses in learners' knowledge so that something can be done about them. More positively, it is used to find what learners know well so that time is not wasted on teaching that. Diagnostic assessment is thus a very important part of needs analysis, both before a course begins and during the course. The findings of diagnostic assessment are used to determine what goes into a course. **The vocabulary levels test** (Schmitt, 2002) is an example of a diagnostic test. This test helps a teacher decide whether learners should be focusing on high-frequency vocabulary, academic vocabulary or low-frequency vocabulary. Learner self-assessment is another possible form of diagnostic assessment. One effect of diagnostic assessment can be to help learners set personal goals for a course.

ELT Curriculum: Objectives Model?

The clearest definition of behavioral objectives has three essential characteristics:

- They must unambiguously describe the behavior to be performed.
- They must describe the conditions under which the performance will be expected to occur.
- They must state a standard of acceptable performance (the criterion).

The attraction of the model is that it provides:

1) **Clarity of goals:** The objectives of learning programme are clear to both the teacher and the learners, which facilitates the selection of learning materials and activities.
2) **Ease of evaluation:** Where there are clearly specified objectives, the success of the learners and of the programme can easily and accurately be evaluated to the extent that the objectives have been fulfilled.
3) **Accountability:** In both formal and business sectors, the model provides clear methods for needs identification, establishing learning purpose and providing measurable "products" of the educational programme.

Six scales of Stoller?

Stoller suggests six scales for describing the size of the change, the best size being in the middle area of each scale. The scales are

I. Explicitness
II. Visibility
III. Originality
IV. compatibility with past practices
V. difficulty/complexity
VI. flexibility

Hedge – 5 points on hidden curriculum?

1) Hidden curriculum refers to the unintended learning that takes place in classrooms.
2) Teachers play a major role in transmitting the hidden curriculum
3) Learners also contribute to the hidden curriculum through their responses and behavior
4) Language teachers must cope with the hidden curriculum consciously
5) Hidden agendas influence program implementation and learner roles

Two approaches of classroom research?

- Policy specifications
- Theoretical approach

Benefits of short in-service training?

I. Helps bring about curriculum change.
II. Involves teachers in planning and implementation
III. Helps teachers adjust their beliefs
IV. Encourages problem solving and real classroom experience
V. Sets realistic and manageable goals

factors of hidden curriculum?

1) Teacher behavior and classroom practices
2) Learners' perceptions and responses
3) Teaching materials
4) Unintended social learning
5) Hidden agendas of teachers and learners

Characteristics of hidden curriculum?

I. It is implicit and not formally stated.
II. It focuses on social learning
III. It shapes attitudes, values, and expectations
IV. It is learned unintentionally
V. It influences roles and power relations

Who introduced hidden curriculum and when?

The concept of the hidden curriculum was introduced by **Jackson in 1968**.

Five Steps Involved in Understanding the Hidden Curriculums?

Step 1: Uncover, discuss, and analyze it

Step 2: Teacher self-examination and reflection

Step 3: Informal discussion with students

Step 4: Teacher training and open-mindedness

Step 5: Ongoing evaluation system

Describe traditional unit structure?

Traditional unit structure employed quiet an **orthodox approach** towards the structure of course units.

- Presentation
- Controlled exploitation
- Free exploitation

- Synthesis

Criteria for the selection of lexical items?

1) **Frequency:** By using language corpora, syllabus designer lists the most frequent expressions in the language.
2) **Teachability:** The selected most frequent words will be piloted and the words which are difficult to manage in the classroom will be discarded.
3) **Authenticity:** The lexical items selected in the Lexical Syllabus are taken from authentic texts produced by language users in their everyday lives.
4) **Coverage:** This syllabus tries to select lexical items which are generic and are not context-specific
5) **Similarity:** Where possible, lexical syllabus takes advantage of cognates or similar terms shared by both languages. For example, the terms "mother" and "father" are similar in all Indo-European languages

What are the requirements for a negotiated syllabus?

Breen (1987) describes the decisions to be negotiated in a negotiated (process) syllabus and the materials needed to make it work.

1) **Negotiation Procedure:**

Negotiation means discussing and agreeing on course matters. How will the negotiation be carried out? When will it be done? How often will it be done? Who has the responsibility for organizing it? Who has the responsibility for checking that what is negotiated and is negotiation actually done?

2) **Course Planning: Participation**

This explains **who works with whom** during learning. Who will work with whom? The range of answers to this question includes individual work, pair work, groups working with the teacher, and the teacher working with the whole class.

3) **Course Planning: Procedure**

This explains **what activities will be used in class**. What kinds of activity will be worked on? The range of answers is many and may include role play, information gap tasks, guided writing, extensive reading, and oral drills. Additional decisions include how long each activity will be worked on; how it will be worked on and how the results of the activity will be assessed?

T/F from Language Program Evaluation: Significances?

According to Richards (2001), evaluation is a "**systematic gathering** of information for the purpose of making decisions. It is a systematic determination of a subject's merit, worth and

significance that is ensured by setting certain criteria containing a set of standards. The significance of the evaluation of a language program can be seen in terms of improving language curriculum design. It also helps to look at the worth of the program, its procedures and product. It helps in accessing the effectiveness and efficacy of a language program. Program evaluation is like an internal audit in which you can see the weaknesses and strengths of a program. It helps to look at the course continually with the notion of improvement and for this purpose there is a never-ending needs analysis going on to ensure improvement.

What does Stern mean by the metaphor 'failing to notice the wood for the trees' in classroom research?

On the ground of this issue, Stern projects a very metaphorical comparison that teacher as researcher has this inability that 'we fail to notice the wood for the trees. According to Stern, we do see trees, but we do not distinguish between trees and wood. The problem is that we look at classroom discourse but we overlook the significance of broader issues that take place outside of the classroom. Stern has made a very interesting point that audiolingualism and cognitivism have changed the direction from language teaching to language learning. In the paradigm shift from language teaching to learning, instead of looking at language learning from the perspective of a method, much more focus is being paid to the learning process.

What are the types of situational syllabus? OR Difference between concrete situation and Mythical Situation?

Alexander (1976) differentiates **three types** of the situational syllabus based on type of information:

1) **Limbo Situation**: In this type, the information of the specific setting is of little importance, for example, the topic of introducing someone at the setting of a dialogue taking place at the stadium. It can be said that the setting is considered irrelevant, i.e. unimportant, because the main important thing is the language focus.
2) **Concrete Situation**: The information is about the specific and concrete setting and the language associated with it, for example, the topic of ordering a meal at a restaurant.
3) **Mythical Situation**: The information depends on fictional story line, frequently with a fictional cast character in a fictional place.

Name two philosophers who were against the focused opportunistic approach?

Tessmer and Richey (1997) warn against this approach, focusing too much on only **one part** of curriculum design is not efficient. If a lot of effort is spent on improving just one aspect, it may be **wasted**, because the results might not be useful for the other parts of the curriculum that are not fully developed.

What is involved in Standard ii of the national curriculums of English language under category of reading and thinking skills?

All students will read and analyze literary text to seek information, ideas, enjoyment, and to relate their own experiences to those of common humanity as depicted in literature.

Benchmark I: Analyze and evaluate short stories, poems, essays and one-act plays; relate how texts affect their lives and connect the texts to contemporary / historical ideas and issues across cultures.

The Standard 1 involves linguistic and conceptual purposes that might be interpreted as what Wallace (2003) calls critical purposes of reading, whereas Standard 2 is more related to the cultural purpose of the texts. Within each standard, these purposes are mingled and cannot be neatly distinguished from each other which might not be possible even in a purely critically designed course either.

To promote awareness of **globalization and multiculturalism**, the NCEL states that all students should develop **ethical and social values** needed in a multicultural and civilized society. The NCEL also says that the syllabus should help students **analyze and evaluate** short stories, poems, essays, and one-act plays, connect texts with their own lives, and link them to historical and current issues across cultures.

However, Asghar (2013) points out that these goals were **not fully achieved**. This happened due to several reasons related to classroom conditions and curriculum design. According to Asghar (2013), the textbook used for this purpose includes texts that do not match students' real-life situations. In addition, the language and themes of some texts are either too easy or too difficult for learners. Therefore, teaching methods should allow students to study the material at a level that suits their abilities and helps achieve NCEL goals.

What is involved in Standard 1 of the national curriculums of English language under category of reading and thinking skills?

The NCEL under the category of "Reading and Thinking Skills" gives two standards, and each standard is explained through benchmarking.

All students will search for, discover and understand a variety of text types through tasks which require multiple reading and thinking strategies for comprehension, fluency and enjoyment.

Benchmark I: Evaluate patterns of text organization, and function of various devices used within and beyond a paragraph in a text.

Benchmark II: Analyze, synthesize and evaluate events, issues, ideas and viewpoints, applying reading comprehension and thinking strategies.

Benchmark III: Analyze and synthesize information from a visual cue or a graphic organizer to summarize while highlighting the key areas and main trends.

Benchmark IV: Gather, analyze, evaluate and synthesize information to use for variety of purposes including a research project using various aids and study skills.

Three approaches of language program evaluation?

1) **Product oriented:** This approach focuses on the goals and objectives of a curriculum that match with the instruction objectives.
2) **Process oriented:** It deals with the LCD change, innovation and improvement in implementing the curriculum.
3) **Static characteristic:** It deals with looking at the perspective of external agency. It looks at the institute in terms of its overall standing and ranking.
4) **Decision facilitation**: It is a cyclic process that continuously gathers information about needs, environment and situation analysis.

Three dimensions of language program evaluation?

I. Formative vs Summative

Formative assessment is done during learning to check students' progress. *Summative assessment* is done at the end of a unit or year to check how well students have learned the topic.

II. Process vs Product

Product focuses on what goals are achieved in the course. *Process* focuses on how those goals are achieved, including teaching methods and classroom activities.

III. Quantitative vs Qualitative

Quantitative evaluation uses numbers and data, such as questionnaires or tests. *Qualitative evaluation* uses general observation and descriptions of learning.

2 purposes of short-term achievement assessment?

Short-term achievement assessment looks at the product of activities or a small set of activities.

- The purpose of this assessment is to see if the learners are making progress on a daily or weekly basis.
- It provides feedback to the teacher and the learners.

- Short-term assessment can also have motivational purposes, to make learners do required work and to give them feelings of achievement through success on the tests.

strategies used for interactive language through internet?

There are various strategies that can be used by English language teachers to incorporate internet in students' learning. Teachers can make their students learn all **four skills** (listening, speaking, reading and writing practice) through various templates.

1) Video conferencing:

For interactive language teaching, we have one template of video conferencing through which we can expose our learners to native speaking style.

2) Digital text (e-books):

Language learning can also develop through digital text, where we have digital version of printed books.

3) Talking texts (audio-supported texts):

Students can even listen to these books and improve their listening skills as well as enhance their reading skills. Talking texts can enhance the listening proficiency of a listener.

4) Listening to intonation patterns:

Students can pay attention to the intonation pattern of the text.

What types of materials can be included in a materials bank for course planning? Also, T/F OR What type of materials can be introduced in the existing resources for curriculum?

Curriculum designers and teachers can draw on a bank of existing materials from which they select the most appropriate material for the course. Such a bank could include:

(1) copies of activities prepared by themselves or other teachers for other courses or for previous deliveries of the course,

(2) published supplementary materials such as graded readers, grammar activity books, conversation texts, speed reading courses and so on,

(3) clippings from newspapers or magazines, recordings from the radio or TV or photocopied material from texts or course books. The curriculum designer or teacher chooses the bits and puts them together to make a course. The curriculum designer or teacher thus takes most responsibility for content, sequencing and goals.

ENG-519

Valid reasons for the failure of change in syllabus?

I. Lack of teacher involvement
II. Lack of proper training
III. Mismatch between theory and classroom reality
IV. Resistance to change
V. Lack of resources and support

What is Focused Opportunistic Approach?

In a focused opportunistic approach, the format and presentation part of the curriculum design process is typically done first. First, materials are collected or prepared to teach the course. Then, each time the course is taught again, one part of the curriculum design is improved carefully. Because of this, a proper needs analysis may not be done until the course has been taught three or four times. Tessmer and Richey (1997) warn against this approach, focusing too much on only **one part** of curriculum design is not efficient. If a lot of effort is spent on improving just one aspect, it may be **wasted**, because the results might not be useful for the other parts of the curriculum that are not fully developed. The attractiveness of this model is that it allows a concentrated focus with possible **high-quality improvements** in a course. For example, if during one presentation of a course, assessment was focused on or there was a careful need analysis done, then the improvements could be done well.

Explain Content Model? Also, label this statement…….?

The central focus of the curriculum in this model is the content of **what is to be learned** by, or transmitted to the learner. **In the Classical Humanist tradition,** the content is a valued cultural heritage, the understanding of which contributes to the overall intellectual development of the learner and from the point of view of epistemological objectivism. The content is knowledge which has been identified and agreed to be universal, unchanging and absolute. This model has been the dominant philosophy underlying the history of the Western educational system for centuries, derived from theories of knowledge going back to Aristotle and Plato.

However, **as Kelly (1989) points out** the model is **inadequate** as the basis for curriculum design because it is unable to cope with discussion of the wider purposes of education, and does not take into account the abilities or problems of the individual learner or the complexities of the learning process itself.

Stages of change?

1) Make sure that the change is really needed
2) Plan the type of change so that it is not too great and not too small
3) Make sure that enough people see that the kind of change is possible
4) Use a wide range of change strategies

5) Be prepared for the change to take a long time

Explain Process Model? Also, label each statement….....**?**

The purpose of education from the point of view of the process model is to enable the individual to progress towards self-fulfillment. It is concerned with the development of understanding learning process, and not just the passive reception of knowledge or the acquisition of specific skill. The goals of education are not defined in terms of particular ends or products, but in terms of the process and procedures by which the individual develops understanding and awareness and creates possibilities for future learning. Content is based on principles derived from research into learning development, and the overall purpose of the educational process is to formulate the objectives related to the procedural principles.

The analysis by **Clark and White (2007)** shows that language teaching has not been entirely isolated from the educational mainstream, but has been influenced by philosophical trends and broad educational developments.

Possible negative aspects of preplanned materials?

1) Each group of students is unique so pre-made material cannot meet the needs of another group of students.
2) Text books reduce teachers' role.
3) There are cultural prejudices.
4) Some materials fail to present appropriate and realistic language examples.
5) The teacher will follow material exclusively and not pay attention to student's needs.

Possible positive aspects of preplanned materials?

I. Source of information and support
II. Suggestions for teachers
III. An agent of change
IV. Convenient method of structuring the learning systems
V. Collaboration among teachers

Five parts of performance objectives which are present by (Brown, 1995)?

A performance objective is a statement consisting of five parts (Brown, 1995):

1) Who should achieve the objective? (the subject)
2) What the person should be able to do? (the performance)
3) Under what conditions the performance should occur? (the conditions)
4) How the performance will be tested? (the measure)
5) What level of performance must be reached? (the criterion)

Describe functional/notional syllabus?

A functional-notional syllabus is based on learning to **recognize and express** the communicative functions of language and the concepts and ideas it expresses. In other words, this kind of syllabus is based more on the purposes for which language is used and on the meanings the speaker wanted to express than on the forms used to express them. A Functional/Notional Syllabus is a type of language syllabus that focuses on **what learners can do with language** rather than grammar rules. Hedge (2000) highlights how the 'communicative revolution' in the 1970s urged educators to go beyond structural analysis of language provided by linguists and start to consider what 'communicative ability' in a language entailed. It became apparent that developing such ability required a different view of language.

Example:

Teaching how to **ask for directions** (function) using ideas of **place and distance** (notions).

Criteria for the selection of syllabus units?

- Frequency
- usefulness,
- simplicity,
- learnability
- authenticity.

What is Structural Syllabus?

Krahnke (1987) considers the structural syllabus as the most familiar syllabus type. It has a long history, and a major portion of language teaching has been carried out using some form of it. The structural syllabus is based on a theory of language that assumes that the grammatical or structural aspects of language form are the most basic or useful. He further holds that a structural (or formal) syllabus is one in which the content of language teaching is a collection of the forms and structure (usually grammatical) of the language being taught.

Types of Evaluation? OR purposes for evaluation?

- Formative Evaluation
- Illuminative Evaluation
- Summative Evaluation
- Process Evaluation
- Product Evaluation

Who introduces Hidden syllabus and when?

Johnson in 1989 used the term 'hidden syllabus'.

ENG-519

Domains of Kerr's Model?

Kerr divided the domains into four areas:

- Objectives
- Knowledge
- Evaluation
- School learning experiences

Objectives of Kerr's model?

- Affective
- Cognitive
- Psychomotor

Name two things in which material designers are interested?

1) What sort of activities are likely to promote effective performance and learning in language classroom?

2) How such activities might be constrained or elaborated, and organized in terms of a plausible course?

strategies of materials?

- Adding
- Deleting
- Modifying's
- Simplifying
- Reordering

Three ways of monitoring use of materials in classrooms?

- Classroom observation
- Teacher feedback
- Learner feedback
- Checklists and evaluation forms
- Analysis of learners' performance

four questions that should be asked when observing learning activities?

1) What is the learning goal of the activity?
2) What are the learning conditions that would lead to the achievement of this goal?
3) What are the observable signs that these learning conditions are occurring?

4) What are the design features of the activity that set up the learning conditions or that need to be changed to set up the learning conditions?

What questions should teachers decide on when designing curriculum?

I. What educational purposes should the school seek to attain?
II. What educational experiences can be provided that are likely to attain these purposes?
III. How can these educational experiences be effectively organized?
IV. How can we determine whether these purposes are being attained?

Write approaches used in Pakistani National Curriculum?

1) Product-based approach
2) Knowledge-based approach
3) Skills-based approach
4) Language use approach
5) Language analysis (grammar-focused) approach
6) Discrete approach with integrated skill teaching
7) Accuracy and fluency-based approach

Explain Spiral Model? OR Bruner's hypothesized stages? identify from statements.....OR Stages of human cognition?

The spiral curriculum is predicated on cognitive theory advanced by Jerome Bruner (1960), who wrote "we begin with the hypothesis that any subject can be taught in some intellectually honest form to any child at any stage of development." In other words, even the most complex material, if properly structured and presented, can be understood by very young children. Bruner hypothesized that human cognition occurred in **three relatively discreet stages**:

1) Enactive, or actually manipulating and interacting with objects,

2) Iconic, or manipulating images of the objects or phenomena,

3) Symbolic, or the manipulation of representations of the actual objects or phenomena.

Key features of the spiral curriculum based on Bruner's work are:

- The student revisits a topic, theme or subject several times throughout their school career.
- The complexity of the topic or theme increases with each revisit.
- New learning has a relationship with old learning and is put in context with the old information

Elements of inner circle of curriculum design?

- goals,
- content,
- presentation
- assessment and evaluation

Goals for evaluation of class?

1) To measure mastery of objectives
2) To judge the effectiveness of the course
3) To identify problems in teaching methods and materials
4) To improve the course and classroom practices
5) To assess learner achievement and progress

Which skill is ignored in Pakistani curriculum, and which one is crucial?

The Pakistani curriculum ignores listening comprehension, while oral/speaking skills are crucial, particularly for success in the job market.

What are examples of forward design methods?

The audiolingual method, the audio-visual method and the structural situational method have already been cited as examples of forward design methods. More recent examples include Communicative Language Teaching (CLT) and content-based teaching/CLIL.

From which theories is the content model derived?

This model has been the dominant philosophy underlying the history of the Western educational system for centuries, derived from theories of knowledge going back to Aristotle and Plato (Classical Humanist tradition / epistemological objectivism).

distinguish between two major purposes for language program evaluation? OR What is accountability-oriented and development-oriented evaluation? OR Weir and Roberts – purposes of evaluation?

Weir and Roberts (1994) distinguish between two major purposes for language program evaluation; one is program accountability and other one is program development. **Accountability-oriented evaluation** refers to the systematic collection of information to determine whether an educational program has achieved its objectives and to hold those responsible accountable for its outcomes. It is used mainly for reporting to authorities and for decision-making about programs.

On the other hand, **development-oriented evaluation** is designed to improve the quality of a program as it is being implemented. It may involve staffs who are involved in the program as well as others who are not and may have a teacher development focus.

Tailoring the Evaluation to fit the Context?

Tailoring the evaluation process is not an easy task. It requires certain principles that an evaluator should know. A typical evaluation exercise is to take decision about tools which can be used for the process like questionnaire, interview sample or textual analysis. It is important to know about the evaluator (teacher, administrator or some external agent). It is important to analyze that how large the sample is? Who gathered the information? How the sample is chosen? What sort of design is to be picked (qualitative or quantitative)? What are the aims of the program?

Selecting and developing the instruments involves administering the test. The timing is important; it should be given when students are prepared for the evaluation and aware of the difficulty level. Marking the test according to the contextual needs is also important. Moreover, monitoring the instructions is an important factor in tailoring the information.

Breen (1987) rationale of the formal syllabus?

1) The first argument is that it is well established and it is informed by a long tradition of linguistic analysis.
2) The second major justification for the formal syllabus is that it presents learners with a subject matter which is systematic and rule-governed. When we learn something new, we can begin to see patterns and regularities within it and that will reduce the 'learning load' it (i.e. new learning) demands of us.
3) A third justification for the formal syllabus is that because the linguistic system is analyzable in certain ways, these analytical categories or schemas can be incorporated in a plan for teaching the system, and further it may be that the same analytical categories or schemas make it easier for the learner to uncover how the new language works.

Key issues in evaluating students' performance?

There are some key issues in discussing students' performance for evaluating a language program. These key issues are epistemological, ethical and technical in nature.

Epistemological issues are related to: What students have achieved? How to assess their cognation level and knowledge about language and processes of language learning?

The second concern is **ethical** which refers to *how results will be used*. In order to evaluate a program, the question of ethics is very important to keep in mind. We need to ensure that while making decisions about ethics, there should be an element of confidentiality.

Technical concerns are like a cut of point if mastery is achieved. The test score has its usefulness; it is to inform us whether the course is running smooth or we need to take mastery decisions in order to evaluate the program.

What different forms can diagnostic assessment take?

Diagnostic assessment can take other forms. These include analysis of language use such as written compositions, reading tasks, spoken performance, and observation of learner performance such as the process of writing, notetaking, and conversational activity. Technological advances can facilitate such analysis; for example, the potential of vocabulary profiles based on samples of student writing to provide valid, reliable and cost-effective diagnosis.

Sequence the activity in class (Walls)?

- Presentation
- Controlled exploitation
- Free exploitation
- Synthesis

What are practical ways teachers check the validity of a test?

The most practical ways for a teacher or curriculum designer to check the validity of a test are to look at its face validity and content validity.

Face validity is how much a test looks like it measures what it is supposed to measure. Face validity simply means that if the test is called a reading test, does it look like a reading test? If it is called a vocabulary test, does it look like a vocabulary test? There is nothing very scientific about deciding on face validity, but face validity is important because it reflects how the learners and perhaps their parents, and other teachers will react to the test.

Content validity is a type of validity used in research, testing, and assessment to ensure that a test, questionnaire, or measurement tool fully represents the construct it is intended to measure. For example, if you want to measure "English reading comprehension," a content-valid test will include vocabulary, grammar, inference, and main idea questions, rather than just vocabulary.

How do teachers cope with hidden curriculum?

teachers cope with hidden curriculum by:

- Uncovering, discussing, and analyzing it
- Practicing self-examination and reflection
- Holding informal discussions with students
- Taking part in continuous in-service training
- Using a scientific, ongoing evaluation system to detect and solve mismatches

Breen and Littlejohn (2000) point out four major factors affecting feedback through assessment explain?

1) The extent to which students are aware of the criteria being used.
2) The relative emphasis given to what they have achieved as compared with what they have failed to achieve.
3) The coincidence between what the feedback focuses upon and what the students themselves have recognized as particularly difficult for them.
4) Whether or not they believe they can act on the basis of the feedback in a way that solves a recognized problem.

Kiely and Rea-Dickens (2006) make a useful three-way scope distinction?

- large-scale evaluations which "tend to focus on major educational innovations with significant financial backing with an underlying agenda"
- teacher-led evaluations
- management-led evaluations.

Three instruments that can reshape evaluation process?

Warwick B. Elley (1981) projects that it is important to select and develop instruments in order to reshape the evaluation process. The instruments are:

- questionnaires
- ethnographic studies
- structured
- semi-structured interviews
- textual data

Key issues in performance objectives?

I. Not all-important outcomes can be written in precise behavioral terms

II. Over-emphasis leads to focus son only measurable outcomes

III. Neglect of intellectual, affective, and creative learning

IV. Restriction of teachers' professional freedom

V. Risk of mechanical, rigid teaching

5 traditional examples of instructional practices to assess students?

1) true-false types
2) matching

3) comprehension questions
4) filling in charts
5) summaries
6) comparisons
7) reactions to the texts
8) comments.

By and large, they depend on the approach, the type of materials and texts, and the students' level of proficiency.

What are Factors to consider in material design?

In designing materials, a number of factors need to be taken into account. These include the learners' needs, interests, age and level of proficiency, the objectives of the course, the learning context, and the roles of teachers and learners. Material designers also need to consider the content, sequencing, format, methodology, and the kinds of activities and tasks to be included.

Kennedy three major approaches to change?

I. **Power–coercive**, where change is achieved through authority, rules and top-down pressure.
II. **Rational–empirical**, where change is achieved through explaining, justifying and showing the reasons why the change is good and necessary.
III. **Normative–re-educative**, where change is achieved through discussion, involvement and negotiation. In the short term, power–coercive involves less time than rational–empirical which involves less time than normative–re-educative.

What changes occur when the audience gets bored?

When the audience gets bored, changes occur in the sender's message, the way it is presented, the channel selected, and even in the feedback process. The speaker may change the tone, speed, examples, or activities in order to regain attention.

Merits of skill-based syllabus?

Richards (2001) claims made in support of skills-based syllabuses are:

1) They focus on behaviour or performance.
2) They teach skills that can transfer to many other situations.
3) They identify teachable and learnable units.
4) Skills-based syllabuses have the advantage of focusing on performance in relation to specific tasks and therefore provide a practical framework for designing courses and teaching materials.

5) Krahanke thinks that (1987) skill-based content is most useful when learners need to master specific types of language use, either exclusively or as part of broader competency.

Why are attempts to implement curriculum changes often unsuccessful? (Give reasons.)

Attempts to implement curriculum changes are often unsuccessful because teachers may not understand the philosophy and principles underlying the proposed changes, they may not be adequately trained to implement them, and they may not be convinced of the value of the innovation. Lack of resources, insufficient time, large classes, and the absence of administrative and institutional support further hinder effective implementation. Moreover, when changes are imposed from the top without involving teachers, resistance is likely to occur, leading to failure of curriculum innovations.

What does H. H. Stern (1983) say about the classroom as a dynamic entity?

H.H. Stern (1983) looks at classroom as a dynamic entity where much more is going on than the expectation. He draws teachers' attention towards a very interesting and insightful aspect, which should be made an integral part of language curriculum design process. He projects that we as teachers often focus only on what actually takes place in the classroom, and tend to overlook the significance of broader issues that do take place outside the realms of the classroom.

On the ground of this issue, Stern projects a very metaphorical comparison that teacher as researcher has this inability that 'we fail to notice the wood for the trees. According to Stern, we do see trees, but we do not distinguish between trees and wood. The problem is that we look at classroom discourse but we overlook the significance of broader issues that take place outside of the classroom.

Stern has made a very interesting point that audiolingualism and cognitivism have changed the direction from language teaching to language learning. In the paradigm shift from language teaching to learning, instead of looking at language learning from the perspective of a method, much more focus is being paid to the learning process.

Who stressed importance of illuminative evaluation?

Stenhouse (1975) stressed the importance of "illuminative evaluation" where evaluation helps those involved understand what is going on in the programme, and this necessarily requires teachers to be active programme evaluators.

Role of learner in curriculum implementation?

- Learners actively participate in classroom activities and engage with the content.
- They provide feedback to teachers about what helps them learn and what doesn't.

- ❖ Learners take responsibility for their own learning, practicing skills and applying knowledge.
- ❖ They interact with peers, contributing to group work, discussions, and collaborative learning.
- ❖ Their interests, needs, and responses can influence how the curriculum is delivered and adapted.

Smith (2000) on negotiating assessment?

Smith (2000) describes a very effective way of negotiating assessment. The assessment is seen as including not only the results of tests and assigned tasks, but also participation in class, homework, and class projects The idea of a negotiated syllabus raises questions about the role of the teacher and the role of the commercially produced text book (Richards, 1993).

What is Validity of test?

Validity of a test means how well a test measures what it is supposed to measure.

Example: If an English-speaking test sonly has grammar questions, it is not valid for speaking skills.

Breen and Littlejohn (2000) list situations where a negotiated syllabus is almost unavoidable? OR Situations where negotiated syllabus is unavoidable?

1) Where the teacher and students have different backgrounds.
2) Where time is short and the most useful choices must be made.
3) Where there is a very diverse group of students and there is a need to find common ground.
4) Where initial needs analysis is not possible. Where there is no course book.
5) Where the students' past experiences must be part of the course.
6) Where the course is open-ended and exploratory

Internet-based syllabus?

An Internet-based syllabus is one which makes extensive use of the Internet as a resource for learning. It integrates online materials, websites, e-mail, discussion forums, and other web-based tools into language teaching in order to promote interaction, autonomy and authentic language use. In an Internet-based syllabus, learners are encouraged to search for information, communicate with others, and complete tasks using online resources. The teacher's role changes from information-giver to facilitator, guide and organizer of learning activities.

Advantages of negotiated syllabus?

- It responds to the learners' "wants" and needs.

- Involving learners increases motivation, satisfaction, and commitment to the course.
- The course becomes the learners' course rather than just the teachers.
- The negotiation process itself is beneficial, especially if carried out in English, as it provides meaningful, language-focused activity.
- It helps learners understand the goals of language-learning activities.
- This understanding can make learners more effective and independent.

Stern's (1983) four-dimensional model?

Stern (1983) proposes a four-dimensional model in which he integrates four major areas or "syllabi":

1) **Language Syllabus** encompassing both structural and functional aspects of the language
2) **Communicative/Experiential Syllabus** which specifies "fields of experience" for project-based language activities;
3) **the Culture Syllabus** that contains topics and applications for the development of socio-cultural knowledge and awareness. A cultural syllabus often addresses the non-verbal as well as the verbal components of language and how these may be incorporated into language lessons by teachers.
4) **a general language education dimension**, which relates language learning to broader educational aims and learner development.

General capabilities of WWW??

The World Wide Web has a number of general capabilities.

a) the universal availability of authentic materials
b) the communication capabilities through networking
c) the multimedia capabilities
d) the nonlinear (hypermedia) structure of the information.

It provides access to a vast amount of information in the form of text, graphics, audio and video. It allows users to navigate information easily through hypertext links. The WWW also supports communication through e-mail, discussion groups and chat, and enables the sharing and publishing of information on a global scale. The WWW has brought the world to the fingertips of each learner. Applying the WWW to **foreign language teaching** also provides the opportunity to meet the standards in several ways (Walz, 1998): "Competence in more than one language and culture enables people to gain access to additional bodies of knowledge; … all students learn in a variety of ways and settings; … language and culture education incorporate effective technologies; and using the web is consistent with learning theories about learning to read authentic materials".

What is Corpus analysis?

Corpus analysis means using large collections of written or spoken texts stored on computers to study language. It helps us see how often words and grammar are used, which words often go together, and how people really use language. **Corpus analysis** has revealed the importance of **units beyond the level of vocabulary** (e.g. phrases, multiword units and collocations) and provides information that can be used to update or replace the earlier generations of lists that have been used in syllabus design.

How to Monitoring the Use of Materials?

The use of materials in classrooms can be monitored through a variety of procedures such as observation of classes, teacher and learner questionnaires, interviews, feedback from teachers and students, and analysis of learners' performance and products. Monitoring provides information on how materials are actually used and whether they are achieving their intended purposes.

three areas that are central to the concept of a communicative curriculum?

In the opinion of Dubin and Olshtain (1986), three areas are central to the concept of a communicative curriculum:

I. Sociolinguistics
II. Cognitively based view of language learning
III. Humanistic approach in education

Common teaching methods used in classrooms?

Some of the common teaching methods used in classrooms are the lecture method, discussion method, demonstration method, project method, problem-solving method, task-based learning, communicative language teaching, grammar translation method, direct method and activity-based teaching. Teachers usually combine these methods according to the nature of the subject matter, objectives of teaching, and learners' needs.

What is Role of internet in language learning?

- Access to authentic materials
- Practice and exercises
- Communication
- Self-paced learning
- Feedback

outlines wider possibilities for 'real content' in Cook's materials??

ii) another academic subject
iii) students-contributed content
iv) language itself
v) literature
vi) culture
vii) interesting facts

Use of materials in learning?

Materials play an important role in learning. They provide the main source of language input for learners and act as a basis for classroom activities. Materials help to present new language, reinforce learning, provide practice, and promote interaction. They also support teachers by offering a structure for lessons and guidance in teaching.

Five steps of necessity layer?

1) Decide on the most severe environmental constraint on the course and how it will affect the curriculum design.
2) Decide on the most urgent necessity that learners have to meet at the end of the course.
3) Make a short list of items to cover.
4) Decide on a simple lesson format that will make use of available material.
5) Gather the material for the course.
6) Decide on a simple form of assessment

Significance of Needs Analysis within Backward Design Approach?

Needs Analysis (identifying learning outcomes or objectives) is often seen to depend upon a systematic analysis of the learners' communicative needs. It emerged in the 1960s as a part of the systems approach to curriculum development – an aspect of the prevalent philosophy of educational accountability from which the use of objectives was also derived (Stufflebeam, 1985).

Informal needs assessment deals with the informal negotiation that takes place between class teachers and students in the form of chats with either individual students, groups of students or the whole class in order to select a focus for the class. It is a necessary component of information retrieval on students' learning needs and should be recorded. It can subsequently be used as input for aims and objective setting and for devising course outlines (Shaw and Dowsett, 1986).

The steps involved are:

- Identify learner's communicative needs.

- Develop statements of learning objectives.
- Identify linguistic content and skills needed to attain the objectives.
- Prepare course plans.
- Select materials and teaching methods.

What is Subject-centered Design?

In this system, the **focus is on the curriculum**, not on students' overall development. Experts decide what all students should learn at each grade. Teachers are told what to teach and how to teach it. The goal is to make all students the same, following a "core curriculum." There is a lot of testing that often feels meaningless. Teachers have large classes, so they cannot know each student well. Parents are only involved to help with homework. Teachers focus on what students cannot do. Students must do homework assigned by the teacher and are not encouraged to ask questions. Learning is mainly for passing tests, so it is shallow and short-term.

Formative vs summative evaluation?

Formative Evaluation:

- Done during the course
- Purpose: improve learning and teaching
- Gives feedback, not final results
- Low-stakes (quizzes, class activities, homework)

Example: Weekly quizzes to check understanding.

Summative Evaluation:

- Done at the end of a course
- Purpose: judge final achievement
- Gives final grades or results
- High-stakes (final exams, term tests)

Example: Final English exam at the end of the semester.

Two movements on empowerment in the context of learner's centeredness?

The philosophy of learner-centeredness has strong links with:

1) experiential learning
2) humanistic psychology

3) task-based language teaching.

What is Learner-centered curriculum?

Learner-centered curriculum is a type of curriculum that focuses on the needs, interests, abilities, and learning styles of the students rather than just following a fixed syllabus or teacher instructions. Learner-centered curriculum will allow students to participate more fully in the arrangement of their own learning experiences in such a way thsat two key objectives are realized. One, students will participate in the shaping of curriculum thereby addressing the imperatives of many contextual issues that include a new situational/personal culture. Two, student involvement is arranged so that students engage in meta-learning i.e. providing them the opportunity to learn about design and construction of purposeful learning activities.

Describe skill-based syllabus?

A skill-based syllabus focuses on teaching specific language abilities that help in using the language. It groups linguistic competencies like pronunciation, vocabulary, grammar, and discourse into general skills such as listening for the main idea, writing paragraphs, or giving oral presentations. The main goal is to learn the specific language skill, and a secondary goal may be to develop overall language competence. A skill is a way of using language that combines structure and function but is independent of particular situations (Krahnke, 1987).

What is the status of critical thinking in the context of Pakistani educational context?

In Pakistan, mainstream schools still lack critical thinking because classrooms use traditional, conservative teaching methods. Private schools are improving, but generally, students do not get chances to think independently. According to Asghar and Al-Bargi (2014), at college and university level, critical thinking is important to help students take ownership of their learning and become independent learners. Education focuses mostly on memorizing facts rather than analyzing, evaluating, or questioning. Teachers and exams often reward rote learning instead of independent thinking.

Disadvantages of negotiated syllabus?

The disadvantages of a negotiated syllabus are of **two major types**.

1) Learners may be reluctant to negotiate or let classmates negotiate, feeling the teacher should guide the course.
2) Learners may not know enough options, leading to unimaginative or limited choices.
3) Teachers may feel that their power and status are reduced.
4) Learners may find it difficult to reach agreement on what to do.
5) A fully negotiated syllabus requires significant teacher skill and time to access and prepare resources.
6) When multiple teachers handle similar classes, coordinating can be challenging.

ENG-519

Role of teacher in hidden curriculum?

1) Teachers model values and behaviors through their own actions and attitudes
2) They reinforce social norms and expectations in the classroom, even if not explicitly stated.
3) Teachers influence student attitudes, discipline, and work habits through routines and classroom management.
4) They shape students' interpersonal skills by encouraging cooperation, competition, or respect.
5) Teachers can either support positive hidden learning (like honesty, responsibility) or unintentionally transmit negative messages (like bias or inequality).
6) They mediate the formal curriculum by choosing what to emphasize and how to interact with students.

What is Placement assessment?

Placement assessment is a type of test given before instruction begins to determine a learner's current level of knowledge or skill. Placement assessment is used to decide what level of the course a learner should enter, what class the learner should join, and whether the learner should join the course at all. Placement assessment usually occurs under environment constraints. It often has to be done just before a course begins. The results have to be available quickly. The learners are largely unknown and may be confused about the course they wish to do. The learners may not perform their best on a placement test because they are unfamiliar with some of the test formats.

Example: An English placement test is given to decide whether a student should join beginner, intermediate, or advanced level.

two key decisions before taking decisions about material design?

a) choosing input resources
b) selecting exercise

Purposes of Progress tests?

- **Motivating students to study:** Tests can encourage some students to work harder, but for others they can cause stress. Teachers should present tests in a way that keeps a good balance.

- **Setting a standard level for the class:** Tests help decide if a student should move to a higher or lower level that suits their ability. The test results can be used as proof for this decision.

- **Finding gaps in teaching or materials:** Tests show what the teacher or course is missing and what needs improvement. However, teachers should be careful not to teach only for the test instead of teaching real English.

What is Illuminative Evaluation?

Illuminative Evaluation is a type of evaluation that focuses on understanding what actually happens in the classroom, rather than just measuring results. This refers to evaluation that seeks to find out how different aspects of the program work or are being implemented. It seeks to provide a deeper understanding of the processes of teaching and learning that occur in the program, without necessarily seeking to change the course in any way as a result.

Example:

- Observing English classes and talking to students to see how they feel about the course and materials.
- A teacher is teaching a reading course that includes many skills like skimming, scanning, reading for detail, critical reading, and vocabulary. All skills are taught regularly. The teacher wants to know what students think the main purpose of the course is. So, students fill out short questionnaires at different times during the course. Sometimes, students understand the purpose of activities or lessons differently. After thinking about this, the teacher realizes that students' views of the course depend on what they are most interested in or what they feel they need help with at that time.

What is Teacher cognition?

Teacher cognition refers to teachers' beliefs, knowledge, and personal experiences that influence what they do in the classroom. It is called the **"hidden side of teaching"** because these mental processes are not directly visible, but they strongly affect how and what teachers teach, not just the curriculum.

Key issues that student's performance in language learning?

1) Lack of motivation
2) Limited exposure
3) Poor teaching methods
4) Insufficient resources
5) Large class size

What is Tyler's model?

The model **is linear in nature**, starting from objectives and ending with evaluation. In this model, evaluation is terminal. It is important to note that:

- Objectives form the basis for the selection and organization of learning experiences.

- Objectives form the basis for assessing the curriculum.
- Objectives are derived from the learner, contemporary life and subject specialist.
- Evaluation is a process by which one matches the initial expectation with the outcomes

Enlist the ways by which mastery testing helps the teacher?

- It helps the teacher assess students and their learning properly.
- It ensures that every learner gets the chance to learn well, which is the teacher's responsibility.
- It brings dramatic improvements in teaching.
- It provides important feedback for teachers about learning progress.
- It motivates and guides teaching through the washback effect.
- Mastery of an area is rewarding and motivating for the teacher.

Enlist two purposes of the oral report involved of program evaluation?

The written report will usually be accompanied by an oral report. This oral report has two purposes:

- To make sure the written report is clearly understood.
- To say things that could not be put tactfully in writing.

The freeman 2002 how do "Complex mental lives" of teacher affected their teaching?

1) What teachers do in the classroom is determined by what they believe.
2) Teaching is not just transmitting curriculum content to learners.
3) Teachers decide what to teach and how to teach based on their mental processes.
4) These mental lives are called teacher cognition.
5) Teacher cognition is the "hidden side of teaching."
6) It is shaped by teachers' knowledge, beliefs, and personal histories.
7) These factors influence classroom decisions and practices.

What question are asked in learning outcomes?

I. "Do the materials extend the learner's 'general' or 'specialist' knowledge?"
II. "What view of knowledge do the materials present?"
III. "Do the materials develop the learners' understanding of what is involved in language learning?"
IV. "How do the materials structure the teacher-learner relationship?"
V. "Do the materials develop the learners' general cognitive abilities?"
VI. "What social values and attitudes do the materials present?"

Evaluation according to Brown?

A more elaborate and comprehensive definition is presented by Brown (1995). Brown's focus of attention is on a specific type of curriculum that is being evaluated. Thus, evaluation might be defined as "the systematic collection and analysis of all relevant information necessary to promote the importance of the curriculum and to assess its effectiveness within the context of the particular institutions involved".

Steps of communicative competence?

a) Grammatical competence (correct use of grammar and vocabulary)
b) Sociolinguistic competence (language use according to social context)
c) Discourse competence (linking sentences to make meaning)
d) Strategic competence (handling communication problems)

According to Kennedy can motivate people for curriculum change to?

According to **Kennedy**, people can be motivated for curriculum change through several key ways. **Authority support** provides confidence and legitimacy to the change process. A **shared vision** helps teachers and stakeholders feel united toward common educational goals. **Explanation and justification of change** reduce resistance by clarifying why the change is necessary. **Discussion, involvement, and negotiation** allow individuals to share concerns and contribute ideas. When people feel heard and supported, they are more willing to accept and implement curriculum change.

Why curriculum change fails?

- Teachers are not properly trained to implement the new curriculum
- Lack of resources (books, materials, technology)
- Poor planning and rushed implementation
- Resistance to change from teachers or institutions
- Mismatch between curriculum goals and classroom reality
- Little monitoring and support during implementation

Remember me in Your precious prayers

And best of Luck!
