Turn-it-in is a software used to detect _____ in any writing content.

Select the correct option

☐	Quality
☐	Objectivity
☒	Plagiarism
☐	Quantity

plagiarism

Plagiarism using materials from the WWW is also common but tools such as those found at www.plagiarism.org can be of some help to teachers who suspect their students of failing to acknowledge what they have borrowed.

Example: Dealing with plagiarism

The WWW presents unparalleled opportunities for plagiarizing materials but it also presents some defence. The simplest tool a teacher has to check for plagiarism is to type a string of suspect text into a search engine and see whether it leads to one or more websites from which the suspect text may have been taken.

126

Turnitin <http://writecheck.turnitin.com> – This website essentially automates the above process but additionally, each document that is submitted for plagiarism checking is added to the database. Some teachers shift responsibility for checking for plagiarism by requiring all students to self-check their work with a program such as Turnitin before submitting it.

Empirical Evaluation of CALL

Empirical evaluation offers a methodology **for making systematic** hypotheses about the benefits to be attained through CALL tasks. As hypotheses, they stand in need of support through empirical data, because as L2 research has shown, 'students are often doing something very different from what [language teachers] assume they are doing' (Hosenfeld, 1976: 123). In other words, it is necessary to identify the observable data that provide evidence of CALL qualities.

92

Evidence for CALL Qualities

The limitations of the study of learning outcomes have been well-rehearsed in the literature on educational technology (R. E. Clark, 1985; Papert, 1987) as well as in that on CALL (e.g., Dunkel-Schetter, 1987; 1989; Dunkel-Schetter, 1991; Dunkel-Schetter, 1993; Dunkel-Schetter, 1995; Dunkel-Schetter, 1997; Dunkel-Schetter, 1999; Dunkel-Schetter, 2001; Dunkel-Schetter, 2003; Dunkel-Schetter, 2005; Dunkel-Schetter, 2007; Dunkel-Schetter, 2009; Dunkel-Schetter, 2011; Dunkel-Schetter, 2013; Dunkel-Schetter, 2015; Dunkel-Schetter, 2017; Dunkel-Schetter, 2019; Dunkel-Schetter, 2021; Dunkel-Schetter, 2023).

Question # 8 of 10 (Start time: 01:58:57 PM, 28 November 2023)

☐	TEFL

ALLP

latest technology. Materials created only a few years ago on one version of an operating system may not function properly or at all on the latest versions. Other problems centre around developing new CALL programs, including a lack of funds, expertise and authoring programs.

8.5.1 Lack of Funds

The previously mentioned Athena Language-Learning Project (ALLP) project was singular in attracting funding in excess of US\$70 million. Few commercial organizations spend even a fraction of this amount on software development and non-commercial programs are written on far smaller budgets or, more commonly, on no budget at all. Instead, many teachers create software with their own time and resources. In such cases, authors may act conservatively as they are wary of not achieving a return on their investment of time and money.

However, since the ALLP was set up many of the costs of producing quality multimedia have been dramatically reduced. For example, computers have become exponentially more powerful while costs have continued to drop. Now authoring tools and related programs for the creation of

←

together in front

×

<

>

Storyboard

The storyboard activity Jones and Fortescue (1987) described was used by a group of student who sat **together in front** of a computer screen in a computer lab. 'The text is entirely oblite and the learners can see only the title (Superstition), a mass of blobs, a reference to various i features and an invitation to guess a word' (1987: 37). The activity is therefore a guessing game, which is set up as a storyboard containing a text on superstition. The learners work collaboratively through oral conversation to determine what, when, and how they will input words into the game. The conversation among the learners may or may not be conducted in the target language, and the learners are free to take their time producing the language used in the reconstruction.

The language of the task is likely to shift variously from the meaning of the text, the meanings associated with making guesses and arguing about gaming strategy to the forms of the language of the text. The task therefore offers some opportunity for attention to linguistic form, but the

Question # 5 of 10 (Start time: 01:56:58 PM, 28 November 2023)

The ability to choose a means that different learners are not all constrained to learn the same materials in the same way but may answers and solutions to questions and problems.

Select the correct option

☐	results
☐	teacher
☒	path of learning
☐	examination

[Click to Save Answer & Move to Next Question](#)

choose a path

As already mentioned, traditional materials tend to follow a set scope and sequence that lay down the paths and principles of learning and this is the general route followed by most computer-based learning materials that are, in some cases, adaptations of existing textbooks. However, a strength – and a weakness – of some computer-based materials is their lack of a clearly determined scope and sequence. Instead, they allow individual learners to pursue links which they perceive as being both useful and interesting. This ability to **choose a path** of learning means that different learners are not all constrained to learn the same materials in the same way but may instead find new answers and solutions to questions and problems.

112

A now common example of this method of learning is a teacher-assigned task that asks learners to use resources on the WWW. The ever-growing WWW consists of billions of individual pages that learners can enter using search engines and links. But learners using the WWW who lack clear direction and proper research and critical thinking skills can often become muddled, distracted and lost in the enormous sea of information.

Question # 3 of 10 (Start time: 01:55:44 PM, 28 November 2023)

Chun and Brandl (1992) described a micro-world activity designed for beginning learners of _____ language.

Select the correct option

☐	English
☐	Chinese
☐	Urdu
☐	German

Click to

chun

setting. More-over, the fact that this activity was used each week meant that it was not necessary to spend a lot of time teaching students to use the software relative to the time they spent engaging in the learning activity.

Micro-world

88

Chun and Brandl (1992) described a micro-world activity designed for beginning learners of German: 'The functional goal of this situation is [for the learner] to locate objects in a room and to differentiate between stationary physical location vs. the action or motion involved in placing an object somewhere' (Chun & Brandl, 1992: 260). The task begins by asking the learner to imagine he or she is living in the year 2101 with a robot, who likes to keep the room neat, for a roommate. For the purposes of the task, the student is designated as an untidy person whose things are scattered all over the room. The robot cannot find anything, so he begins to ask

ENG517 - Computer Assisted Language Learning (Quiz No 2)

Question # 1 of 10 (Start time: 01:54:28 PM, 28 November 2023)

CALL tasks should have a _____ articulated purpose.

Select the correct option

☒	clearly
☐	ambiguous
☐	vague
☐	abstract

tasks should

CALL should be evaluated through two perspectives: judgmental analysis of software and planned tasks, and empirical analysis of learners' performance.	methodologies for both types of analyses are needed
Criteria for CALL task quality should come from theory and research on instructed SLA.	CALL evaluators need to keep up with and make links to research on instructed SLA.
Criteria should be applied in view of the purpose of the task.	CALL tasks should have a clearly articulated purpose.
Language learning potential should be the central criterion in evaluation of CALL.	Language learning should be one aspect of the purpose of CALL tasks.

81

Evaluation as an Argument

Investigations of pedagogical L2 tasks (e.g., Doughty & Williams, 1998; Crookes & Gass, 1993a; 1993b; Skehan, 1998) demonstrate the complex of factors to be considered in designing appropriate tasks for learners. As a consequence, the outcome of task evaluation for any L2 tasks including those for CALL cannot be a categorical decision about effectiveness. Instead, an evaluation has to result in an argument indicating in what ways a particular CALL task is

Question # 10 of 10 (Start time: 01:49:55 PM, 28 November 2023)

The criterion of _____ indicates the need to develop learners' willingness to communicate but it also extends beyond the conditions believed important for acquisition.

Select the correct option

☐	validity
☐	precision
☐	judgement
☐	authenticity

Click to Save Answer

Willingness to communicate

occur during tasks involving reading and writing when learners use the written language purposefully for constructing and interpreting meaning.

Authenticity

The criterion of authenticity indicates the need to develop learners' willingness to communicate but it also extends beyond the conditions believed important for acquisition. Authenticity refers to the degree of correspondence between an L2 learning task and tasks that the learner is likely to encounter outside the classroom. The choice of pedagogical tasks that learners see as relevant to their language use beyond the classroom should help to engage learners' interest and therefore their willingness to participate. Moreover, current theory of communicative language ability (Bachman, 1990; Bachman & Palmer, 1996) defines it as situation specific, implying that development of ability in language for particular purposes requires practice in using language for those purposes.

84

Positive Impact

Question # 9 of 10 (Start time: 01:48:55 PM, 28 November 2023)

If CALL software packages are to be properly evaluated and matched with learning needs, they need to be classified by .

Select the correct option

☐	students
☒	teachers
☐	administrator
☐	computer expert

Click to Save Answer & Mo

software package

view of the classroom teacher, knowing the model of instruction can help moderate their own and the learners' expectations of the software program's organization and tasks.

The model of learning featured in a particular CALL software package is seldom stated, and software packages sold as so-called learning games are often simply highly behaviourist tutorials. If CALL **software packages** are to be properly evaluated and matched with learning needs, they need to be classified by teachers. One way for teachers to do so is by collecting reviews of software from professional publications such as Computer-Assisted Language Learning.

Another, more personalized, way to classify materials is through the creation of in-house reviews, similar to book reviews, which outline key aspects of the program. For example, one might evaluate where a program fits into Chandler's locus of control and suggest how and why a learner might use a particular software program. In a school setting, these reviews might include the

Question # 8 of 10 (Start time: 01:48:05 PM, 28 November 2023)

Even for learners working on _____ on a CALL program, if the program assumes certain roles through the design of it opportunities for participation can be denied the learner.

Select the correct option

☐	leaving
☐	abandoning
☐	dropping
☐	their own

Click to Save Answer & M

on their own

depend more on extrinsic rewards or ignore intrinsic and extrinsic rewards altogether. Associated with motivation in collaborative situations is the determining of roles for the participants.

A range of different roles is available to learners in a collaborative situation: for example, a leader, a teacher, a follower, a facilitator, a devil's advocate and so on. It is not always necessary for learners to articulate these roles openly and, in fact, the roles of each learner may change over the course of a few turns of conversation. However, when one learner takes a role that excludes the other from collaborative participation, problems may develop in motivation and participation. Even for learners working **on their own** on a CALL program, if the program assumes certain roles through the design of its interface, opportunities for participation can be denied the learner.

8.7.2 Determining the working process

Many learners have difficulty in determining the working process. In an intensive study of 20

8.5.1 Lack of Funds

The previously mentioned Athena Language-Learning Project (ALLP) project was singular in attracting funding in excess of US\$70 million. Few commercial organizations spend even a fraction of this amount on software development and non-commercial programs are written on far smaller budgets or, more commonly, on no budget at all. Instead, many teachers create software with their own time and resources. In such cases, authors may act conservatively as they are of not achieving a return on their investment of time and money.

119

However, since the ALLP was set up many of the costs of producing quality multimedia have been dramatically reduced. For example, computers have become exponentially more powerful while costs have continued to drop. Now authoring tools and related programs for the creation of graphics, animation and video, which were previously developed from scratch, are commercially available at reasonable prices. However, in an endless cycle, a parallel consumer (e.g. learner) demand for greater sophistication in learning materials usually follows each new capability of these authoring programs so underfunded developers may find it difficult to interest learners.

Question # 6 of 10 (Start time: 01:46:45 PM, 28 November 2023)

Park's (1994) study investigating use of _____multimedia through think-aloud data identified revealing thoughts of vocabulary that I don't know.

Select the correct option

☒	ESL
☐	Psychology
☐	Geography
☐	Sociology

Click to Save A

park

inappropriate. These observations of behaviors can be added to by introspective methods requiring learners to think aloud as they work. For example, Park's (1994) study investigating use of ESL multimedia through think-aloud data (Ericsson & Simon, 1984) identified revealing thoughts such as 'I think I have a lot of vocabulary that I don't know' (1994: 147). This statement was made while the learner was clicking on one of the words in the input.

Researchers examining process data containing the language that learners produced in CMC tasks have evaluated its linguistic difficulty relative to learners' level of ability. For example, Kern (1995) examined the linguistic characteristics of his students' language in a computer-assisted classroom discussion on family heritage and customs. His analysis of the data concluded that students' language output in the computer-assisted discussion was of an overall greater

to attract much interest beyond the art world. A pioneer in this field is Michael Joyce who, in 1987, developed the first example, publishing it in 1991. Examples of his work are found at: <http://www.eastgate.com/people/Joyce.html>.

8.7.1 Determining expertise, motivation and roles

When making use of a CALL program, learners need to determine what they know and what they do not know. Learners who take the time to determine what they know about a task and the way of approaching it, if only to acknowledge that they know nothing, are better positioned to engage in an investigation than learners who do not bother to determine their expertise or, in a collaborative situation, misrepresent their expertise to the other learner.

Of course, misrepresenting one's expertise can be an innocent error and one's collaborative partners might also mistakenly bestow one with expertise, but the failure to clear up, or take responsibility for, any such misunderstanding can result in the wrong things being learned and the key learning objectives not being addressed amounts to the same problem.

evaluation developed by analogy to principles for evaluation of language assessments as described in Chapter. Even though the purpose of language testing is different than that of instructional tasks, at a general level, perspectives on evaluation of assessment tasks are also applicable to CALL tasks. Table 3.2 summarizes these principles.

Table 1. Summary of principles for evaluating CALL

Principle	Implication
Evaluation of CALL is a situation-Specific argument.	CALL developers need to be familiar with criteria for evaluation which should be applied relative to a Particular context.

80

← criterion of au × < >

the clearest example being communication tasks as defined by Pica, Kanagy, and Falodun (1993). Their primary defining feature is that they require learners to use the target language to accomplish something such as making a decision on an issue, or exchanging information to accomplish a goal. Such tasks differ from form-based tasks which might have learners filling in correct verb tenses in a written list of sentences, or changing declarative statements to yes/no questions in an oral drill. Meaning focus is not limited to oral communication tasks, but also can occur during tasks involving reading and writing when learners use the written language purposefully for constructing and interpreting meaning.

Authenticity

84

The **criterion of authenticity** indicates the need to develop learners' willingness to communicate but it also extends beyond the conditions believed important for acquisition. Authenticity refers to the degree of correspondence between an L2 learning task and tasks that the learner is likely to encounter outside the classroom. The choice of pedagogical tasks that learners see as relevant to their language use beyond the classroom should help to engage learners' interest and therefore their willingness to participate. Moreover, current theory of communicative language ability (Bachman, 1990; Bachman & Palmer, 1996) defines it as situation specific, implying that development of ability in language for particular purposes requires practice in using language for those purposes.

Positive Impact

The positive impact of a CALL task refers to its effects beyond its language learning potential. The significance of this quality has been pointed out for assessment tasks (e.g., Bachman & Palmer, 1996), but it is equally important for learning tasks. Ideally classroom language learning tasks teach more than language; they should help learners develop their metacognitive strategies (Oxford, 1990) in a way that will allow them to develop their accountability for their learning in the classroom as well as to learn beyond the classroom. They should engage learners' interest in the target culture in a way that will help develop their willingness to seek out opportunities to

for making

**Topic No: 29****Empirical evaluation of CALL; Evidence for CALL Qualities; Language Learning Potential; Focus on Form; Modified interaction; Modified output**

92

Empirical Evaluation of CALL

Empirical evaluation offers a methodology **for making** systematic hypotheses about the benefits to be attained through CALL tasks. As hypotheses, they stand in need of support through empirical data, because as L2 research has shown, 'students are often doing something very different from what [language teachers] assume they are doing' (Hosenfeld, 1976: 123). In other words, it is necessary to identify the observable data that provide evidence of CALL qualities.
