1. The sequence of merge sort algorithm is:
 - a. Divide Combine-Conquer
 - b. Conquer-Divide-Combine
 - c. Divide-Conquer-Combine Page 27
 - d. Combine-Divide-Conquer
2. In _____ Knapsack Problem, limitation is that an item can either be put in the bag or not. Fractional items are not allowed.
 - a. 0
 - b. 1
 - c. 0/1 Page 91
 - d. Fractional
3. In Selection algorithm, we assume pivot selection takes theta _____ running time.
 - a. n Page - 36
 - b. n^2
 - c. n^3
 - d. $\log(n)$
4. In Heap Sort algorithm (using max heap), when every time maximum elements removed from top _____.
 - a. We call merge Sort Algorithm
 - b. it becomes Order n^2 Algorithm
 - c. Divide and Conquer strategy helps us
 - d. We are left with a hole Page – 41
5. If matrix A of dimension $p \times q$ is multiply with matrix B of dimension $q \times r$, then each entry in resultant matrix takes _____ time.
 - a. $O(q)$ Page - 84
 - b. $O(1)$
 - c. $O(p \times q)$
 - d. $O(q \times r)$

AL-JUNAID INSTITUTE OF GROUP

AL-JUNAID TECH INSTITUTE

6. _____ is a method of solving a problem in which we check all possible solutions to the problem to find the solution we need.
- a. Plane-Sweep Algorithm
 - b. Sorting Algorithm
 - c. Brute-Force Algorithm google
 - d. Greedy approach
7. The worst case running time of Quick sort algorithm ____.
- a. Cannot be quadratic
 - b. Is quadratic
 - c. Is always Exponential
 - d. Is linear
8. In max heap (for Heap Sort algorithm), when every time maximum element is removed from top we replace it with _____ leaf in the tree.
- a. second last
 - b. Last Page -41
 - c. First
 - d. Any
9. Quick sort algorithm was developed by -
- a. AlferdAho
 - b. Sedgewick
 - c. John Vincent Atanasoff
 - d. Tony Hoare – Google wikipedia
10. If Matrix-A has dimensions "3x2" and Matrix-B has dimensions "2x3", then multiplication of Matrix-A and Matrix-B will result a new Matrix-C having dimensions.
- a. 3x2
 - b. 2x3
 - c. 2x2
 - d. 3x3 <http://www.calcul.com/show/calculator/matrix-multiplication>
11. For comparison-based sorting algorithms, it is possible to sort more efficiently than Omega $n \log(n)$ time.
- a. Always
 - b. Not P-54
 - c. Sometimes

AL-JUNAID TECH INSTITUTE

d. Sometimes not

12. Dynamic Programming approach is usually useful in solving optimization problems.

a. True

b. False

13. In Sorting the key value or attribute _____ from an ordered domain.

a. Must be page 39

b. Not always

c. May be

d. Occasionally

14. Result of asymptotical analysis of $n(n-3)$ and $4n*n$ is that _____

a. $n(n-1)$ is asymptotically Less

b. $n(n-1)$ is asymptotically Greater

c. Both are asymptotically Not equivalent

d. Both are asymptotically Equivalent page 23 ($4n*n = 4n^2$)

15. Floor and ceiling are _____ to calculate while analyzing algorithms a. Very easy

b. Usually considered difficult P-31

c. 3rd Option is missing

d. 4th Option is missing

16. _____ of reference is an important fact of current processor technology.

a. Defining

b. Assigning

c. Formality

d. Locality P-8

17. In max-heap, largest element is stored at root node. Where is the smallest element stored?

a. Right Node

b. Leaf Node

c. Middle Node

d. Left Node

AL-JUNAID TECH INSTITUTE

18. In average-case time analysis of Quick sort algorithm, the most balanced case for partition is when we divide the list of elements into _.

- a. Equal no. of pieces as of input elements
- b. Single piece exactly
- c. Two nearly equal pieces
- d. Three nearly equal pieces

19. Which of the following is calculated with Big O notation?

- a. Medium bounds
- b. Upper bounds Page - 25
- c. Lower bounds
- d. Both upper and lower bounds

20. Edit distance algorithm based on _____ strategy

- a. Greedy
- b. Dynamic Programming Page - 81
- c. Divide and Conquer
- d. Searching

21. In Heapsort Algorithm, total time taken by heapify procedure is _____

- a. $O(\log n)$ Page-43
- b. $O(\log^2 n)$
- c. $O(n \log n)$
- d. $O(n^2 \log n)$

22. Al-Khwarizmi was a/an _____

- a. Artist
- b. Mathematician P-7
- c. Astronomer
- d. Khalifah

23. When matrix A of 5×3 is multiply with metric B of 3×4 then the number of multiplication required is: Not found exactly

- a. 15
- b. 12
- c. 36
- d. 60 Not Found exactly but as per formula at page 84,

AL-JUNAID TECH INSTITUTE

24. Pseudo code of algorithms are to be read by _____.

- a. People Page -12
- b. RAM
- c. Computer
- d. Compiler

25. The sieve technique is a special case, where the number of sub-problems is Just

- _____
- a. 1 P-34
 - b. 2
 - c. 3
 - d. 4

26. When a recursive algorithm revisits the same problem over and over again, we say that the optimization problem has _____ sub-problems.

- a. Overlapping – Google Search
- b. Over costing
- c. Optimized
- d. Three

27. Sieve technique is very important special case of Divide-and-Conquer strategy.

- a. True P-34
- b. False

28. In order to say anything meaningful about our algorithms, it will be important for us to settle on a _____.

- a. Java Program
- b. C++ Program
- c. Pseudo program
- d. Mathematical model of computation P-10

29. Merge sort is based on _____.

- a. Brute-force
- b. Plan-sweep
- c. Axis-sweep
- d. Divide and Conquer P-27

AL-JUNAID TECH INSTITUTE

30. What time does Merge Sort algorithm take in order to sort an array of 'n' numbers?

- a. (n)
- b. (log n)
- c. (n²)

d. (n log n) Google Search

31. In Heap Sort algorithm, the first step is to _____.

a. Call Build-Heap procedure Page - 46

- b. Sort the array in descending order
- c. Call Heapify procedure
- d. Find the number of input elements

32. The definition of theta-notation relies on proving _____ asymptotic bound.

- a. One
- b. Lower
- c. Upper

d. Both lower & upper Page - 25

33. In merge sort algorithm, to merge two lists of size n/2 to a list of size n, takes _____ time.

a. Theta (n) Page - 32

- b. Theta log(n)
- c. Theta log₂(n)
- d. Theta n log(n)

34. We can make _____ recursive calls in Fibonacci Sequence.

- a. Infinite
- b. Finite google**
- c. Only one
- d. Zero

35. Following is NOT the application of Edit Distance problem.

- a. Speech recognition
- b. Spelling Correction

c. Ascending Sort Page - 76

d. Computational Molecular Biology

AL-JUNAID TECH INSTITUTE

36. In plane sweep approach, a vertical line is swept across the 2d-plane and structure is used for holding the maximal points lying to the left of the sweep line.

- a. Array
- b. Queue
- c. Stack
- d. Tree

Page - 18

37. When a heapify procedure is applied to the root node to restore the heap, then at each level, the comparison performed takes time:

- a. It will take $(\log n)$.
- b. It can not be predicted
- c. It will take $O(1)$.
- d. Time will vary according to the nature of input data.

Page - 43

38. _____ time is the maximum running time over all legal inputs.

- a. Worst-case
- b. Average-case
- c. Best-case
- d. Good-case

Page - 13

39. Efficient algorithm requires less computational...

- a. Memory
- b. Running Time
- c. Memory and Running Time
- d. Energy

Page - 9

40. For average-case time analysis of Quick sort algorithm, Pivot selection is on average basis from _____

- a. half of the input values
- b. all possible random values
- c. Pivot is input separately
- d. values greater than 5

Page - 50

41. Selection algorithm takes theta _____

- a. (n^2)
- b. (n)
- c. $\log(n)$
- d. $n \log(n)$

Page - 37

AL-JUNAID TECH INSTITUTE

42. Recurrence can be described in terms of a tree.

a. Yes Page - 31

b. No

43. Time complexity of Dynamic Programming based algorithm for computing the minimum cost of Chain Matrix Multiplication is _____

a. Log n

b. n

c. n^2 (n square)

d. n^3 (n cube) Page -90

44. The Iteration method is used for _____

a. Comparing sorting algorithms only

b. Solving Recurrence relations Page 31

c. Merging elements in Merge sort

d. Dividing elements in Merge sort

45. In 3-Dimensional space, a point P has _____ coordinate(s).

a. (X, Y)

b. (X, 0)

c. (0, Y)

d. (X, Y, Z)

46. Chain matrix multiplication problem can be solved through _____ strategy.

a. Dynamic programming Page - 85

b. Greedy

c. Divide and conquer

d. Sorting

47. Merge sort have running time....running time of Heap sort. Not found exactly

a. Greater than

b. Less than Google

c. Equal to

d. Different than

48. Median is not useful measure of central tendency of given input set especially when the distribution of values is highly skewed.

a. True

b. False Page – 34

AL-JUNAID TECH INSTITUTE

49. We do not need to mathematically prove that for comparison-based sorting algorithms always takes Omega $n \log(n)$ time.
- a. True Google & VU Tech (pg 46 not very clear)
 - b. False
50. The Omega-notation allows us to state only the asymptotic _____ bounds.
- a. Middle
 - b. Lower Page 25
 - c. Upper
 - d. Both lower & upper
51. Both lower & upper Sorting can be in _____
- a. Increasing order only
 - b. Decreasing order only
 - c. Both Increasing and Decreasing order GOOGLR Search
 - d. Random order
52. Radix sort performs sorting the numbers _____ digit (s) at a time.
- a. One Page - 71
 - b. Two
 - c. Three
 - d. All
53. Quicksort is a/an _____ and _____ sorting algorithm.
- a. Not in place, not stable one
 - b. In place , not stable one Page - 54
 - c. In place , stable one
 - d. Not in place , stable one
54. Consider three matrices X,Y,Z of dimensions 1×2 , 2×3 , 3×4 respectively. The number of multiplications of (XY) Z is:
- a. 18 As per lecture slides
 - b. 32
 - c. 24
 - d. 30
55. In Fibonacci Sequence, unnecessary repetitions do not exist at all.
- a. True
 - b. False Page – 74

AL-JUNAID TECH INSTITUTE

56. It is not a Fibonacci sequence . 1,1,1,2,3,5,8,13,21,34,55,.....

a. True

Page - 73

b. False

57. Heap sort is a/ an _____ and _____ sorting algorithm.

a. Not in place, not stable one

b. In place , not stable one

Page - 54

c. In place , stable one

d. Not in place , stable one

58. Identify the True Statement

a. The knapsack problem does not belong to the domain of optimization problems.

b. The knapsack problem belongs to the domain of optimization problems.

Page - 91

c. The Knapsack problem cannot be solved by using dynamic programming

d. The knapsack problem is optimally solved by using brute force algorithm.

59. In Dynamic Programming, our approach is to _____

a. Develop the solution in a top-down fashion

b. Express the problem non-recursively

c. Build the solution in a bottom-up fashion

Page - 75

d. Input several sub-problems simultaneously

60. Counting sort is suitable to sort the elements in range 1 to K;

a. K is large

b. K is small

Page - 57

c. K may be large or small

d. None

61. We can multiply two matrices A and B only when they are compatible which means

a. Number of columns in A must be equal to number of rows in B.
it seems Correct as per page 84

b. Number of rows and columns do not matter

AL-JUNAID TECH INSTITUTE

- c. Number of columns in A must be equal to number of columns in B
d. Number of rows in A must be equal to number of rows in B
62. Matrix multiplication is a (n) _____ operation.
a. Commutative
b. Associative Page 85
c. Neither commutative nor associative
d. Commutative but not associative
63. In Dynamic Programming approach, solution is modified / changed
a. Always once
b. At each stage google and wikipedia
c. Only for specific problems
d. At 4th stage only
64. In Knapsack problem, the goal is to put items in the Knapsack such that the value of the items is _____ subject to weight limit of knapsack.
a. Minimized
b. Decreased
c. Maximized Page - 91
d. None of the given options
65. An in-place sorting algorithm is one that _____ uses additional array for storage.
a. Always
b. Permanently
c. Does not Page - 54
d. Sometime
66. Memoization is a part of Dynamic Programming Strategy.
a. True Page - 74
b. False
67. If matrix A of dimension 2×4 is multiply with matrix B of dimension 4×3 , then the dimension of resultant matrix is Not found exactly
a. 2×4
b. 4×3
c. 3×4
d. 2×3 It seems correct as per second last Para of page 84

AL-JUNAID TECH INSTITUTE

68. In Dynamic Programming approach, we do not store the solution to each sub-problem in case if it reappears.

a. True

b. False

Page - 75

69. Dynamic Programming is a problem-solving approach in which____

a. Problem is solved in Zero time

b. Solution is developed only at final stage

c. Both are correct

d. Both are incorrect

google

70. In Fibonacci sequence, each term is calculated by____ previous__ terms.

a. Subtracting, Two

b. Adding, Three

c. Adding, Two

Page - 73

d. Multiplying, Two

71. Selection sort is not an in-place sorting algorithm.

a. True

Page - 54

b. False

72. If there are $\theta(n^2)$ entries in edit distance matrix then the total running time is:

a. $\theta(n)$

b. $\theta(1)$

c. $\theta(n^2)$

Page - 84

d. $\theta(n \log n)$

73. The only way to convert a string of i characters into the empty string is with i deletions, represented as

a. $E(0,j) = j$

b. $E(i,j) = 1$

c. $E(0,i) = j$

d. $E(i,0) = i$

Page - 78

74. Dynamic programming formulation of the matrix chain multiplication problem will store the solutions of each sub problem in an

a. Array

b. Table

Page - 86

c. Variable

d. class

AL-JUNAID TECH INSTITUTE

75. We can use the optimal substructure property to devise a formulation of the edit distance problem.
- a. Selective
 - b. Optimum
 - c. Iterative
 - d. Recursive Page - 78
76. Sorting is performed on the basis of _____.
- a. Computational resources
 - b. Asymptotic notation
 - c. Summation
 - d. Some key value of attribute page- 39
77. In Heap Sort algorithm, we call Build-heap procedure _____.
- a. Only once page 46
 - b. Twice
 - c. Thrice
 - d. As many times as we need
78. Radix sort is not a non-comparative integer sorting algorithm.
- a. True Google Search
 - b. False
79. In the statement “output P[1].x, P[1].y”, the number of times elements of P are accessed is _____.
- a. 1
 - b. 2 page 14
 - c. 3
 - d. 4
80. The main purpose of mathematical analysis is measuring the _____ required by the algorithm.
- a. Space
 - b. Execution time P-13
 - c. Inputs & outputs
 - d. Execution time and memory

AL-JUNAID TECH INSTITUTE

81. _____ provides us more accurate result when input values are not closer with each other
- a. Average
 - b. Median** P-34
 - c. Mode
 - d. Mean
82. The process of _____ ends when you are left with such tiny pieces remaining that it is trivial to solve them.
- a. Brute-force
 - b. Plan-sweep
 - c. Divide and Conquer** P-27
 - d. Axis-sweep
83. _____ overcomes the limitations of _____ by working as per positional notations of numbers.
- a. Counting sort, Radix sort
 - b. Radix sort, Counting sort** P-71
84. Memorization is a part of Dynamic Programming strategy.
- a. True** P-74
 - b. False
85. Rank of an element can be defined as _____.
- a. One minus the number of elements that are smaller
 - b. Two plus the number of elements that are greater
 - c. One plus the number of elements that are smaller** P-34
 - d. Two minus the number of elements that are smaller
86. If the time complexity of an algorithm is given by $O(1)$, then its time complexity would be
- a. Polynomial
 - b. Exponential
 - c. Constant** - Wikipedia
 - d. Average
87. Quick sort is a recursive algorithm.
- a. True** Wikipedia ; Google
 - b. False

AL-JUNAID TECH INSTITUTE

88. The asymptotic growth of $n(n+1)/2$ is:

- a. $O(n^2)$ As the n^2 term has the largest contribution, the Big-O complexity is $O(n^2)$
- b. $O(n)$
- c. $O(n+2)$
- d. $O(n \log n)$

89. Approach of solving geometric problems by sweeping a line across the plane is called _____ sweep.

- a. Line
- b. Plane Page 18
- c. Cube
- d. Box

90. As per algorithm of Dynamic Programming, we need to store

- a. First sub-problem only
- b. Best solution only
- c. Intermediate sub-problems Pg:75
- d. Final solution only

91. In Sieve technique, we solve the problem

- a. In recursive manner Pg:34
- b. Non recursively
- c. Using Merge Sort algorithm
- d. Using Brute force technique

92. One of the limitation in 0/1 knapsack is that an item can either be _____ in the bag or not.

- a. Use
- b. Put Pg:91
- c. Move
- d. Store

93. Which one is not passed as parameter in Quick sort algorithm?

- a. End of the array
- b. Middle of the array
- c. Array (containing input elements) Google
- d. Start of the array

AL-JUNAID TECH INSTITUTE

94. In the analysis of Selection algorithm, we get the convergent _____
- a. Harmonic
 - b. Linear
 - c. Arithmetic
 - d. Geometric Pg:37
95. A Random Access Machine (RAM) is an idealized machine with random access memory.
- a. Infinite large Pg:10
 - b. 512 MB
 - c. 256 MB
 - d. 2 GBs
96. While analyzing Selection algorithm, we make a number of passes, in fact it could be as many as
- a. $n(n+1)$
 - b. $\log(n)$ Pg:37
 - c. $n/3$
 - d. $n/4$
97. In Random Access Machine (RAM), instructions are executed in
- a. Parallel
 - b. Batch
 - c. One by One Pg:10
 - d. Multiple times
98. In selection problem, the rank of an element will be its _____ position
- a. First
 - b. final Pg:34
 - c. Second last
 - d. Last
99. The worst-case running time of Merge sort is _____ in order to sort an array of n elements.
- a. $O(\log n)$
 - b. $O(n)$
 - c. $O(n \log n)$ page 40 and google
 - d. $O(n)$

AL-JUNAID TECH INSTITUTE

100. $f(n)$ and $g(n)$ are asymptotically equivalent. This means that they have essentially the same _____.
a. Results
b. Variables
c. Size
d. Growth rates P:23
101. An algorithm is a mathematical entity. Which is independent of _____.
a. Programming language
b. Machine and Programming language
c. Compiler and Programming language
d. Programming language Compiler and Machine P:07
102. In Quick sort algorithm, Pivots form _____.
a. Stack
b. Queue
c. Binary Search Tree P:49
d. Graph
103. Counting sort is suitable for sorting the elements within range 1 to P. where
a. P is large
b. P is small P:57
c. P is very large
d. P is undetermined
104. In asymptotical analysis of $n^{(5/2)-3}$, as n becomes large, the dominant (fastest growing) term is some constant times
a. n_1
b. n
c. $n+1$
d. $n*n$ P:23
105. ____ Items are not allowed in the 0/1 knapsack. a. Lighter
b. Fractional P:91
c. Whole
d. Weighty

AL-JUNAID TECH INSTITUTE

106. Fibonacci Sequence was named on _____, a famous mathematician in 12th Century.
- a. Fred Brooks
 - b. Grady Booch
 - c. Leonardo Pisano P-73
 - d. Edgar F. Codd
107. In Heap Sort algorithm, we build _____ for ascending sort.
- a. Max heap P-41
 - b. Min heap
108. Bubble sort is not an in-place sorting algorithm.
- a. True
 - b. False P-54
109. In partition algorithm, the subarray _____ has elements which are greater than pivot element x.
- a. $A[p..r]$
 - b. $A[p..q-1]$
 - c. $A[q]$
 - d. $A[q+1..r]$ P-46
110. In Heap Sort algorithm, if heap property is violated
- a. We call Build heap procedure P-43
 - b. We call Heapify procedure
 - c. We ignore
 - d. Heap property can never be violated
111. _____ is not a characteristic of Random Access Machine.
- a. Single-Processor P-10
 - b. Assigning a value to a variable
 - c. Locality of reference
 - d. Executing an arithmetic instruction
112. The only way to convert an empty string into a string of j characters is by doing j insertions, represented as _____
- a. $E(i,j) = 1$
 - b. $E(l,0) = l$
 - c. $E(0,j) = j$ page 78
 - d. $E(1,j) = j$

AL-JUNAID TECH INSTITUTE

113. In Selection problem, the Sieve technique works in _____.
a. Non-recursive manner
b. Constant time
c. Phases page 34
d. One complete go
114. Algorithm is a sequence of computational steps that ---- the input into output.
a. Merge
b. Assign
c. Transform page 7
d. Integrate
115. If p_j dominates p_i and p_i dominates p_h then p_j also dominates p_h , it means dominance relation is
a. Transitive page 18
b. Non Transitive
c. Equation
d. Symbolic
116. To find maximal points in brute-force algorithm each point of the space is compared against _____ of that space.
a. One other point
b. All other points page 11
c. Few other points
d. Most of the other points
117. In the following code the statement "cout<<j;" executes ---- times. for (j=1; j<=5; j = j+2)
cout<<j;
a. 5 times
b. 2 times
c. 3 times
d. 0 times

AL-JUNAID TECH INSTITUTE

118. In merge sort algorithm, we split the array around the _____ index q. a. Entering
b. Mid page 17
c. Exiting
d. Summing
119. In Selection problem, the Sieve technique _____.
a. Add some more input items each time
b. Do not work recursively
c. Do not uses Divide and Conquer approach
d. Eliminates undesired data items each time
120. Consider three matrices X, Y, Z of dimensions 1×2 , 2×3 , 3×4 respectively. The number of multiplications of $X(YZ)$ is .
a. 16
b. 32
c. 26
d. 32 page 84
121. In Heap Sort algorithm, the total running time for Heapify procedure is _____
a. Theta ($\log n$)
b. Order ($\log n$)
c. Omega ($\log n$)
d. $O(1)$ i.e. Constant time
122. The sieve technique works where we have to find _____ items(s) from a large input.
a. Single page 34
b. Two
c. Three
d. Similar
123. In Dynamic Programming based solution of Knapsack Problem, if we decide to take an object i , then we gain _____
a. W(Total Weight of Knapsack)
b. V (Total Value of all items)
c. v_i (Value of object i) page 93
d. None of the given option

AL-JUNAID TECH INSTITUTE

124. While Sorting, the order domain means for any two input elements x and y _____ satisfies only.

- a. $x < y$ page 39
- b. $x > y$
- c. $x = y$
- d. All of the above

125. For solving Selection problem, we introduced Sieve technique due to _____

- a. Using Decrease and Conquer strategy page 34
- b. Avoiding to sort all input data
- c. Eliminating Rank of an element
- d. Using Brute-force approach

126. _____ is one of the few problems, where provable lower bounds exist on how fast we can sort.

- a. Searching
- b. Sorting page 38
- c. Both Searching & sorting
- d. Growing

127. In plane sweep approach, a vertical line is swept across the 2d-plane from _____.

- a. Right to Left
- b. Left to Right page 18
- c. Top to Bottom
- d. Bottom to top

128. In generating Fibonacci sequence, we can avoid unnecessary repetitions by _____ process.

- a. Tokenization
- b. Memorization page 43
- c. Randomization
- d. Memorization

129. For _____ values of n , any algorithm is fast enough.

- a. Small page 14
- b. Medium
- c. Large
- d. Infinity

AL-JUNAID TECH INSTITUTE

130. Dynamic programming comprises of _____.
a. Recursion only
b. Repetition only
c. Recursion with Repetition
d. No Repetition but Recursion page 75
131. The function $f(n) = n(\log n + 1)/2$ is asymptotically equal to $n \log n$. Here Lower Bound means function $f(n)$ grows asymptotically at ____ as fast as $n \log n$.
a. Least page 23
b. Normal
c. Most
d. At
132. Counting sort has time complexity.
a. $O(n+k)$
b. $O(n)$ page 58
c. $O(k)$
d. $O(n \log n)$
133. Due to left complete nature of binary tree, the heap can be stored in
a. Array page 40
b. Structures
c. Link List
d. Stack
134. Single item from a larger set of _____.
a. Constant
b. Pointers
c. Phases
d. n items page 34
135. In the clique cover problem, for two vertices to be in the same group, they must be _____ each other.
a. Apart from
b. Far from
c. Near to
d. Adjacent to page 76

AL-JUNAID TECH INSTITUTE

136. How much time merge sort takes for an array of numbers?

- a. $T(n^2)$
- b. $T(n)$
- c. $T(\log n)$
- d. $T(n \log n)$ page 40

137. In in-place sorting algorithm is one that uses arrays for storage.

- a. No additional array page 54
- b. An additional array
- c. Both of above may be true according to algorithm
- d. More than 3 arrays of one dimension

138. Brute-force algorithm for 2D-Maxima is operated by comparing _____ pairs of points.

- a. Two
- b. Some
- c. Most
- d. All page 18

139. While Sorting, the ordered domain means for any two input elements x and y _____ satisfies only.

- a. $x > y$
- b. $x < y$
- c. $x = y$
- d. All of the above page 38

140. Quick sort is.

- a. Stable & in place
- b. Not stable but in place page 54
- c. Stable but not in place
- d. Some time stable & some times in place

141. Which may be a stable sort?

- a. Merger
- b. Insertion
- c. Both above page 54
- d. None of the above

AL-JUNAID TECH INSTITUTE

142. For the Sieve Technique we take time.

- a. $T(nk)$ page 34
- b. $IT(n / 3)$
- c. n^2
- d. $n/3$

143. Continuation sort is suitable to sort the elements in range 1 to k.

- a. K is Large
- b. K is not known
- c. K may be small or large
- d. K is small page 54

144. Asymptotic growth rate of the function is taken over _____ case running time. .

- a. Best
- b. Worst page 14
- c. Average
- d. Normal

145. The sieve technique is a special case, where the number of sub problems is just.

- a. 5
- b. Many
- c. 1 page 34
- d. Few

146. In Quick sort, we don't have the control over the sizes of recursive calls.

- a. True page 49
- b. False
- c. Less information to decide
- d. Either true or false

147. Before sweeping a vertical line in plane sweep approach, in start sorting of the points is done in increasing order of their _____ coordinates. .

- a. X page 18
- b. Y
- c. Z
- d. X, Y

AL-JUNAID TECH INSTITUTE

148. Random access machine or RAM is a/an.
- a. Machine build by Al-Khwarizmi
 - b. Mechanical machine
 - c. Mathematical model page 10
 - d. Electronics machine
149. The Huffman codes provide a method of encoding data inefficiently when coded using ASCII standard.
- a. True
 - b. False page 99
150. A heap is a left-complete binary tree that confirms to the ____.
- a. increasing order only
 - b. decreasing order only
 - c. heap order page 40
 - d. log n order
151. If we associate (x, y) integers pair to cars where x is the speed of the car and y is the negation of the price. High y value for a car means a ____ car.
- a. Fast
 - b. Slow
 - c. Expensive
 - d. Cheap
152. Which one of the following sorting algorithms is the fastest?
- a. Merge sort
 - b. Quick sort
 - c. Insertion sort
 - d. Heap sort
153. Quick sort algorithm divide the entire array into ____ sub arrays.
- a. 2
 - b. 3
 - c. 4
 - d. 5
154. In brute force algorithm, we measure running time $T(n)$ based on ____.
- a. Average-case time and best-case time
 - b. Worst-case time and average-case time page 46
 - c. Worst-case time and best-case time
 - d. Best-case time and starting-case time

AL-JUNAID TECH INSTITUTE

155. For 2D Maxima problem. Plane Sweep algorithm first of all _____.
a. Sorts all points
b. Delete some points
c. Output the elements
d. Pushes all points on stack
156. There are _____ entries in the Edit Distance Matrix
a. $\Theta(n)$
b. $\Theta(n^2)$ page 84
c. $\Theta(n+2)$
d. $\Theta(n + 100)$
157. Which symbol is used for Omega notation?
a. (O)
b. (o)
c. (Ω)
d. (@)
158. Selection sort is a _____ sorting algorithm
a. In-place page 54
b. Not In-Place
c. Stable
d. in-partition
159. In Dynamic Programming based solution of knapsack problem, to compute entries of 'V', we will imply a(n) _____ approach.
a. Subjective
b. Inductive
c. Brute Force
d. Combination
160. We do not need to prove comparison-based sorting algorithms by mathematically. It always takes _____ time.
a. Big Oh $n \log(n)$
b. Omega $n \log(n)$ NOT SURE
c. Omega $n(n^2)$
d. Theta $n \log(n)$

AL-JUNAID TECH INSTITUTE

161. Merge sort is a/an _____ and _____ sorting algorithm
- a. Not in-place, not stable one
 - b. In-place, not stable one
 - c. In-place, stable one
 - d. Not in-place, stable one page 54
162. Cubic function will _____ a quadratic function.
- a. Prove
 - b. be equal to
 - c. overtake Page 25
 - d. find
163. Insertion sort is a _____ sorting algorithm
- a. Unstable
 - b. In-place Page 54
 - c. Not In-Place
 - d. in-partition
164. To check whether a function grows faster or slower than the other function, we use some asymptotic notations, which is _____.
- a. Big-oh notation
 - b. Theta notation
 - c. Omega notation
 - d. All of the given
165. Asymptotic growth of $8n^2 + 2n - 3$ is:
- a. $\Theta(n^2 + n)$
 - b. $\Theta(n^2)$ page 14
 - c. $\Theta(8n^2)$
 - d. $\Theta(8n^2 + 2n)$
166. In the analysis of algorithms, _____ plays an important role.
- a. text analysis
 - b. time
 - c. growth rate
 - d. money

AL-JUNAID TECH INSTITUTE

167. In inductive approach of knapsack problem, we consider 2 cases, _____

Or _____.

- a. Median, Mode
- b. Recursive, Iterative

c. Leave object, Take object page 93

d. Sequentially. Parallel

168. Random Access Machine (RAM) can execute _____ instructions

- a. only logical
- b. parallel
- c. only arithmetic

d. logical and arithmetic

169. Using _____ algorithm, efficiency is not given much importance

- a. Greedy
- b. Merge sort

c. Processing as there is no algorithm by this name

d. Brute Force

170. Bubble sort takes theta _____ in the worst case

a. (n²) page 39

- b. (n)
- c. log(n)
- d. nlog(n)

171. If matrix A of dimension $p \times q$ is multiply with matrix B of dimension $q \times r$, then dimension of resultant matrix is:

a. $p \times q$

b. $p \times r$ page 84

c. $q \times r$

d. $r \times p$

172. Dynamic Programing algorithms often use some kind of _____ to store the results of intermediate sub-problems

a. table (Page 75)

- b. variable
- c. stack
- d. loop

AL-JUNAID TECH INSTITUTE

173. _____ is in-place sorting algorithm.
- a. Bubble sort (Page 54)
 - b. Merge sort
 - c. Linear search
 - d. Binary Search
174. Which one of the following problems can be solved using dynamic problem?
- a. Bubble sort problem
 - b. Matrix chain multiplication problem page 85
 - c. Greedy search problem
 - d. Fractional knapsack problem
175. In chain matrix multiplication, solutions of the sub-problems are stored in a _____.
- a. Array
 - b. Table page 86
 - c. Tree
 - d. Link list
176. What is the average running time of a quick sort algorithm?
- a. $O(n^2)$
 - b. $O(n)$
 - c. $O(n \log n)$ (Page 49)
 - d. $O(\log n)$
177. Sorting Algorithms having O _____ running time are considered to be slow ones.
- a. (n)
 - b. (n^2) (Page 39)
 - c. $(n \log(n))$
 - d. $(\log(n))$
178. While solving Selection problem, in Sieve technique we partition input data _____.
- a. In increasing order
 - b. In decreasing order
 - c. According to Pivot
 - d. Randomly

AL-JUNAID TECH INSTITUTE

179. _____ is the process of avoiding unnecessary repetitions by writing down the results of recursive calls and looking them up again if we need them later.
- a. Loop
 - b. Memoization page 74
 - c. Recursion
 - d. Function
180. In average-case time the probability of seeing input is denoted by _____.
- a. $p\{I\}$
 - b. $p[I]$
 - c. $p\langle i \rangle$
 - d. $p(i)$ page 13
181. While applying the Sieve technique to selection sort, how to choose a pivot element.
- a. Through mean
 - b. Linear
 - c. Randomly page 35
 - d. Sequentially
182. Number of _____ of the pseudo code are counted to measure the running time.
- a. Inputs
 - b. Outputs
 - c. Steps page 13
 - d. Pages
183. Developing a dynamic programming algorithm generally involves _____ separate steps.
- a. One
 - b. Two page 75
 - c. Three
 - d. Four
184. $8n^2 + 2n + 3$ will exceed $c28(n)$, no matter how large we make _____.
- a. n
 - b. $2n$
 - c. $c2$ page 25
 - d. this quadratic equation

AL-JUNAID TECH INSTITUTE

185. The running time of quick sort algorithm _____.
a. Is impossible to compute
b. Has nothing to do with pivot selection
c. Is Random upon each execution
d. Greatly influenced by the selection of pivot page 49
186. _____ involves breaking up the problem into sub problems whose solutions can be combined to solve the global problem.
a. Complexity Theory
b. Dynamic programming solution
c. Divide and Conquer Strategy page 34
d. Greedy Algorithms
187. In _____ we have to find rank of an element from given input.
a. Merge sort algorithm
b. Selection problem page 34
c. Brute force technique
d. Plane Sweep algorithm
188. How many steps are involved to design the dynamic programming strategy?
a. 2
b. 3
c. 1
d. 4 page 92
189. In Bucket sort, if there are duplicates then each bin can be replaced by a
a. Stack
b. Linked list page 69
c. Hash table
d. Heap
190. In merge sort algorithm, we split the array _____ to find index q.
a. from start
b. midway page 28
c. from end
d. both from start or end

AL-JUNAID TECH INSTITUTE

191. Find the maximum value of the items which can carry using knapsack Knapsack weight capacity = 50.

Item Weight Value

11070

22020

33080

470 200

a. 280

b. 100

c. 90

d. 200

192. In 2-d maxima problem a point p is said to be dominated by point q if

_____.

a. $p.x \leq q.x$

b. $p.x \leq q.x$ and $p.y \leq q.y$ page 17

c. $p.y \leq q.y$

d. $p.x \geq q.x$ and $p.y \geq q.y$

193. Sorting can be in _____.

a. Increasing order only

b. Decreasing order only

c. Both increasing and decreasing order

d. Random order

194. Recurrence can be described in terms of _____.

a. Array

b. Linear

c. Tree page 31

d. Graph

195. The brute-force algorithm for 2D-Maxima runs in order $O(__)$ time.

a. n

b. $n(\log n)$

c. $n*n$ page 18

d. n^3

AL-JUNAID TECH INSTITUTE

196. In plane sweep approach of solving geometric problems, a _____ is swept across the plane.
- a. Line page 18
 - b. Plane
 - c. Cube
 - d. Box
197. Which of the following is calculated with Big Omega notation?
- a. Medium bounds
 - b. Upper bounds
 - c. Lower bounds Page - 25
 - d. Both upper and lower bounds
198. _____ is always based on divide and conquer strategy.
- a. Bubble sort
 - b. Selection sort
 - c. Pigeon sort
 - d. Quick sort page 46
199. If a matrix has three rows and two columns, then dimensions of matrix will be:
- a. 3x2
 - b. 2x3
 - c. 3x3
 - d. 2x2
200. Asymptotic notations are used to describe _____ of an algorithm.
- a. Length
 - b. running time google
 - c. size
 - d. compile time
201. Catalan numbers are related the number of different _____ on 'n' nodes.
- a. Arrays
 - b. linked lists
 - c. binary trees page 85
 - d. functions

AL-JUNAID TECH INSTITUTE

202. Applying the sieve technique to selection problem, _____ element is picked from array.
- a. Output
 - b. Total
 - c. Input
 - d. Pivot page 35
203. Dynamic Programming approach is usually useful in solving _____ problems.
- a. Normal
 - b. Optimization google
 - c. Array
 - d. Loop
204. In recursive formulation of knapsack Problem: $V[0, j] = \underline{\hspace{2cm}}$ for $j \geq 0$
- a. -1
 - b. 0 page 93
 - c. 1
 - d. 2
205. _____ is a linear time sorting algorithm.
- a. Merge sort
 - b. Radix sort page 71
 - c. Quick sort
 - d. Bubble sort
206. Quick sort is one of the _____ sorting algorithm.
- a. Fastest page 19
 - b. Slowest
 - c. Major
 - d. Average
207. The time assumed for each basic operation to execute on RAM model of computation is _____.
- a. Infinite
 - b. Continuous
 - c. Constant page 10
 - d. Variable

AL-JUNAID TECH INSTITUTE

208. In Sieve Technique, we know the item of interest. a. True
b. False page 34
209. While analyzing algorithms, _____ and _____ usually considered difficult to calculate.
a. Finite, Infinite
b. Floor, ceiling google
c. Row, Column
d. Graph, Tree
210. While analysis of the brute-force maxima algorithm, an array sorted in the reverse order is the type of _____ case input.
a. Best
b. Worst page 14
c. Somewhat bad
d. Average
211. _____ is not useful measure of central tendency of given input set especially when the distribution of values is highly skewed.
a. Mean
b. Mode
c. Average
d. Median page 34
212. In asymptotical analysis of $n(n-3)$ and $4n*n$, as n becomes large, the dominant (fastest growing) term is some constant times _____.
a. $n+1$
b. $n-1$
c. n
d. $n*n$ page 23
213. In addition to passing in the array itself to Merge Sort algorithm, we will pass in other arguments which are indices.
a. Two P-38
b. Three
c. Four
d. Five

AL-JUNAID TECH INSTITUTE

214. In 2d-maximal problem, a point is said to be if it is not dominated by any other point in that space.
- a. Member
 - b. Minimal
 - c. Maximal P-11
 - d. Joint
215. Counting sort assumes that the numbers to be sorted are in the range _____.
- a. K to n where n is large
 - b. 1 to k where k is small (P-57)
 - c. K to n where k is small
 - d. k to n where n is small
216. Insertion sort is an efficient algorithm for sorting a _____ number of elements
- a. Large P-39
 - b. Small
 - c. Extra large
 - d. Medium
217. If the indices passed to merge sort algorithm are _____ then this means that there is only one element to sort.
- a. Small page 28
 - b. Large
 - c. Equal
 - d. Not Equal
218. In Knapsack Problem, each item must be entirely accepted or rejected, is called _____ problem.
- a. Fractional
 - b. 0-1 P-92
 - c. Linear
 - d. Optimal

AL-JUNAID TECH INSTITUTE

219. If the time complexity of an algorithm is $O(n)$. then it is called _____ time complexity.

a. Linear Wikipedia

b. Constant

c. Average

d. Exponential

220. In the case of _____ analysis does not depend upon on the distribution of input.

a. Merge sort

b. Quick sort P-50

c. Insertion sort

d. Heap sort

221. We can use the _____ Property to devise a recursive formulation of the edit distance problem.

a. Small substructure

b. Algorithmic

c. Real

d. Optimal substructure page 78

222. The following sequence is called _____

1,2,3,5,8,13,21,34,55,.....

a. Optimize sequence

b. Fibonacci sequence page 73

c. Optimal sequence

d. Overlapping sequence

223. Which one sorting algorithm is best suited to sort an array of 2 million elements?

a. Bubble sort

b. Insert sort

c. Merge sort

d. Quick sort

e. Ridx Sort page 71

AL-JUNAID TECH INSTITUTE

224. We can improve the performance of quick sort if we could be able to __,_____.
a. Skip input elements somehow
b. Select two or more pivots page 34
c. Skip any sub-array completely
d. Eliminate recursive calls
225. The problem with the brute-force algorithm is that it uses _____ in pruning out de
a. Worst-case time
b. No intelligence page 18
c. Outside looping
d. Artificial intelligence
226. In chain matrix multiplication, the order of the matrices _____.
a. Can be changed
b. Can not be changed page 85
c. is equal
d. is reverse
227. In quick sort algorithm, we choose pivot _____.
a. Always the smallest element
b. Greater than 5
c. Randomly page 35
d. Less than 5
228. In Heap Sort algorithm. Heapify procedure is _____ in nature.
a. Recursive
b. Non-Recursive page 43
c. Fast
d. Slow
229. When matrix A of 5×3 is multiplied with matrix B of 3×4 then the number of multiplications required will be _____.
a. 15
b. 12
c. 36
d. 60

AL-JUNAID TECH INSTITUTE

230. An algorithm is said to be correct if for every _____ instance, it halts with the correct _____.

a. Input, Output page 13

b. Design, Analysis

c. Value, Key

d. Key, Analysis

231. In chain matrix multiplication, table is filled _____ to find the multiplication of matrix.

a. row wise

b. column wise

c. diagonally

d. bottom-to-up page 86

232. If we have an equation $8n^2 + 7f \cdot n + 5f + 6$ then is large, _____ term will be muchxxxxxxxthe n term and will dominate the running time.

a. $f \cdot g(n)$

b. $g(n) * 2$

c. $n * 2$ page 23

d. $f(n)$

233. For quick sort algorithm. Partitioning takes theta _____.

a. (n)

b. $\log(n)$

c. $n \log(n)$

d. $n^2 \log(n)$

234. In Heap Sort algorithm, the maximum levels an element can move upward is _____

a. Theta $(\log n)$ page 43

b. Big-ch $(\log n)$

c. Omega $(\log n)$

d. $O(1)$ i.e. Constant time

235. _____ programming is essentially recursion without repetition.

a. Fast

b. Dynamic page 75

c. Array

AL-JUNAID TECH INSTITUTE

d. $n (\log n)$

236. In heap sort algorithm, the total running time for heavily procedure is _.

- Big-oh($\log n$)

- $O(1)$ i.e. Constant time
- Theta ($\log n$)
- Omega ($\log n$)

237. Quick sort algorithm is required a lot of comparison in the _____ condition.

- Worse case

- Best and average case
- Average case
- Best case

238. In heap sort algorithm (using max heap). When every time maximum element is removed from top.

- Divide and conquer strategy helps us

- We are left with a lot

- We call merge sort algorithm
- It becomes order n^2 algorithm

239. In average-case time analysis of quick sort algorithm, The most balanced case for partition is where we divide the list of element into _____

- Three nearly equal pieces
- Single piece exactly

- Two nearly piece

- Equal no. of piece as of input element

240. Consider three matrices X,Y,Z dimensions $1 \times 2.2 \times 3 \times 4$ respectively. The number of multiplication of (XYZ) is:

- 32

AL-JUNAID TECH INSTITUTE

- 30
- 24
- 18

241. Quicksort is a/an _____ and _____ sorting algorithm.

• In-place, not stable one

- Not in-place, stable one
- In-place, stable one
- Not in-place, not stable one

242. _____ items are not allowed in the 0/1 knapack.

- Lighter
- Whole
- Weighty
- Fractional

243. The main purpose of mathematical analysis is measuring the _____ required by the algorithm.

- Space
- Execution time and memory

- Input & output
- Execution time

244. Execution time of an algorithm can be measured by _____.

- Divide and conquer approach
- Both brute force and divide and conquer approach
- Mathematical analysis

- Brute force approach

245. Quick sort is based on _____ strategy.

- Graph theory
- Divide-and-conquer
- Dynamic programming
- Greedy approach

AL-JUNAID TECH INSTITUTE

246. A sorting algorithm is called as _____ if duplicate element remain in the same relative position after sorting.

- $O(n)$ algorithm

- Stable

- Parallel
- Complex

247. Which one sorting algorithm is best suited to sort an array of 2 million elements?

- Insert sort

- Quick sort

- Merge sort
- Bubble sort

248. We can use the _____ property to devise a recursive formulation of the edit distance problem.

- Algorithm
- Small substructure
- Optimal substructure

- Real

249. While sorting. The ordered domain means for any two input elements x and y _____ satisfies only.

- All of the above

- $x > y$
- $x < y$
- $x = y$

250. $8n^2 + 2n - 3$ will eventually exceed $c_2 \cdot (n)$ no matter how large we make _____.

- $2n$
- n
- this equation

AL-JUNAID TECH INSTITUTE

- c2

251. _____ is a method of solving a problem in which we check all possible solution to the problem to find the solution we need.

- Sorting algorithm
- Greedy approach
- Plane-sweep algorithm
- Brute-force algorithm

252. In quick sort algorithm, provost form _____.

- Graph
- Stack
- Binary search tree
- Queue

253. In asymptotical analysis of $n(n-3)$ and $4n*n$, as n becomes large, the dominant (fastest growing) term is some constant time _____

- $n+1$
- $n*n$
- n
- $n-1$

254. If Matrix-A has dimensions " 3×2 " and Matrix-B has dimensions " 2×3 ", then multiplication of Matrix -A and Matrix-B will result a new Matrix-C having dimensions

- 2×3
- 2×2
- 3×2
- 3×3

255. Boolean operation is a _____ operation on an idealized RAM model of computation.

- Advance
- Normal

AL-JUNAID TECH INSTITUTE

- Basic

- Starting

256. There are _____ entries in the Edit Distance Matrix.

- $\Theta(n^2)$

- $\Theta(n+100)$
- $\Theta(n)$
- $\Theta(n+2)$

257. Counting sort is suitable for sorting the elements within range 1 to P. where _____

- P is undetermined

- P is small

- P is very large
- P is large

258. Suppose we have 4 matrices A,B,C,D. what is correct expansion of $m[1,2]$ in chain matrix multiplication?

- $m[1,2] = m[1,1] + m[2,2] + p_0 \cdot p_1 \cdot p_3$
- $m[1,2] = m[1,1] + m[2,2] + p_0 \cdot p_1 \cdot p_3$
- $m[1,2] = m[1,1] + m[2,2] + p_0 \cdot p_1 \cdot p_3$
- $m[1,2] = m[1,1] + m[2,2] + p_0 \cdot p_1 \cdot p_3$

259. Which one is not passed as parameter in Quick Sort algorithm?

- Array (containing input elements)

- Middle of the array

- Start of the array
- End of the array

260. In asymptotical analysis of $n^*(5+2)^{-3}$. As n becomes large, the dominant (fastest growing) term is some constant times _____

- $n+1$
- $n*n$
- n

AL-JUNAID TECH INSTITUTE

- n_1

261. For _____ values of n , any algorithm is fast enough.

- Medium

- **Small**

- Infinity

- Large

262. Dynamic programming algorithms often use some kind of _____ to store the result of intermediate sub-problems.

- Stack

- Loop

- **Table**

- Variable

263. In selection problem, the Sieve technique works in _____

- One complete go

- Constant time

- Non-recursive manner

- **Phases**

264. In heap Sort algorithm, the maximum levels an element can move upward is _____.

- **Theta ($\log n$)**

- $O(1)$ i.e. Constant time

- Omega ($\log n$)

- Big-oh ($\log n$)

265. While analysis of the brute-force maxima algorithm, an array started in the reverse order is the type of _____ case input.

- **Worst**

- Best

- Somewhat

- Average

AL-JUNAID TECH INSTITUTE

266. What type of instructions Random Access Machine (RAM) can execute?

- ▶ Algebraic and logic
- ▶ Geometric and arithmetic
- ▶ Arithmetic and logic (Page 10)
- ▶ Parallel and recursive

267. For Chain Matrix Multiplication we can not use divide and conquer approach because,

- ▶ We do not know the optimum k (Page 86)
- ▶ We use divide and conquer for sorting only
- ▶ We can easily perform it in linear time
- ▶ Size of data is not given

268. What is the total time to heapify?

- ▶ $O(\log n)$ (Page 43)
- ▶ $O(n \log n)$
- ▶ $O(n^2 \log n)$
- ▶ $O(\log^2 n)$

269. _____ is a graphical representation of an algorithm

- ▶ notation
- ▶ notation
- ▶ Flowchart
- ▶ Asymptotic notation

270. A RAM is an idealized machine with _____ random-access memory.

- ▶ 256MB
- ▶ 512MB
- ▶ an infinitely large (Page 10)
- ▶ 100GB

271. What type of instructions Random Access Machine (RAM) can execute? Choose best answer

- ▶ Algebraic and logic
- ▶ Geometric and arithmetic
- ▶ Arithmetic and logic
- ▶ Parallel and recursive

272. What is the solution to the recurrence $T(n) = T(n/2) + n$.

- ▶ $O(\log n)$
- ▶ $O(n)$ (Page 37)
- ▶ $O(n \log n)$
- ▶ $O(n^2)$
