

Bt101

MID TERM QUIZ 2022

WARRIOR GROUP OF ZOOLOGISTS

Sir Arslan

QUIZ NO 1

1. Animals useto make organic molecules. **chemical bond energy**
2. In homeostasis iscritical factor. **Water**
3. Which of the following order is correct? **Individual. population, community, ecosystem**
4.pyramids are usually, but not always. upright. **Pyramid of numbers**
5. Population sizeabove carrying capacity **Decreases**
6.consists of distinct biological communities. **biome**
7. Inat either limit. one or more essential functions cease. **tolerance Range**
8. According to first law of thermodynamics.... is neither created nor destroyed in the biosphere **Energy**
9. Food chain only follows 4 direct, pathway of one animal at a time. **Linear**
10. 1- Oxygen made stable-----of atmosphere. **15%**
11. The resemblance of-----species to another for protective or aggressive purposes. **One**
12. In troposphere drop in vapour pressure is due to ----- **Gravity**
13. Temperature increased due to absorption of Sun's ultraviolet radiation by the - **Ozone layer**
14. Atmosphere holds around 12900 cubic km of ----- at any given time. **Water**
15. Ionosphere produced in ----- --. **Thermosphere**
16. 12-50 km layer of atmosphere is----- --. **stratosphere**
17. Oxygen was produced ----- billion year ago. **2.5**
18. 9- In aposematism advertisement of signals includes -- Color, Odour, Sound **All of above**
19. 10- Polar aurora is observed due to entry of solar ----- **Winds**
20. The rate that new organic matter is made by means of individual growth and reproduction in All the herbivores is ----- **Secondary productivity**
21. The Liberat chemical-bond energy for metabolic use in glycolysis, Krebs's cycle and electron transport chain **Heterotrophs**
22. Which of these Introduced to Hawaii in the late 1800's. **Asian Tiger Mosquito**
23. There is No limit to number of in Mullerian mimicry **species participating**

GRAND QUIZE

1. The rate that new organic matter is made by means of individual growth and reproduction in all the herbivores is ----- **Secondary Productivity**
2. The Liberat chemical-bond energy for metabolic use in glycolysis, Krebs's cycle and electron transport chain **Heterotrophs**
3. Which of these Introduced to Hawaii in the late 1800's. **Asian Tiger Mosquito**
4. There is No limit to number of in **Mullerian** mimicry species participating
5. Negative Phototactic movement occurs in ----- **Earthworms**
6. oscillations are produced by interactions between populations of at least different species **Two**
7. Mutualistic gut flora e.g. cellulose digesting ----- **Bacteria**
8. Removal of apex predator in environment called ----- **Cascade Effect**
9. analogous structures are the product of ----- **Convergent Evolution**
10. Use of DDT was Banned in US in ----- **1972**
11. According to concept 'Fossils resemble but are not exactly the same as modern species Theory of **Uniformitarianism**
12. At either limit, one or more essential functions cease **Tolerance range**

13. They Synthesis of the organic compounds of their bodies from inorganic precursors ..**Autotrophs**
14. It Occurs when uptake from the water is greater than excretion **Bioconcentration**
15. Prokaryotic microbes can synthesize and nitrate from N₂ in the.....Atmosphere.. **ammonia**
16. Arctic fox changes from brown or grey in the to white in the Winte**summer**
17. the water that goes into the atmosphere is than it was on Earth.**cleaner**
18. Pathogens is the source of pollutions.....**Non Point source**
19. Temperature of the troposphere with altitude.....**decreases**
20. ----- is an early freshwater reptile found as fossils from the early Permian period.....**Mesosaurus**
21. Mutualism Long-term relationship between individuals of species**different**
22. There is limited number of feeding or trophic levels in ----- **Food Chain**
23. Which off the following pyramids is formed only in aquatic ecosystem.....**Pyramid of inverted biomass**
24. ---- is loss of feature due to loss of its value in changed environment **Vestigiality**
25. They Release digestive enzymes by their hyphae... **Fungi**
26. Ecologists support concept of communities.....**individualistic**
27. Distribution and concentration of variable varies in ----- **space and time**
28. troposphere contains of the atmosphere's mass.....**75%**
29. Koalas are the example of ----- **Folivores**
30. Insects, frog, turtle undergo ----- **Aestivation**
31. One of the major disruptions is loss of habitat. **Extinction**
32. Layers of atmosphere increases with in some regions **altitude**
33. Variability in Net Primary Productivity Wetlands and tropical rain forests is --- **2000 g/m²/ year**
34. Mercury bioaccumulates in the of top predators of the open ocean.....**muscles**
35. Different colors of Mullerian mimicry depend on and visibility.....**location**
36. Volcanic eruptions release into the atmosphere.....**sulfur**
37. Which of the following is not the characteristic of Eutrophic lake.....**Good light penetration**
38. Atmosphere is.....nitrogen by volume.....**78%**
39. ----- are strongly affected by light pollution.....**Reptiles**
40. Who was proposed the law of use and disuse.....**LAMARCK**
41. Land fill is the example of ----- **Point source pollution**
42. ----- enables animals to survive periods of reduced food availability. **Torpor**
43. Adult human body contains of water by weight. **60%**
44. ----- was Father of geology and stratigraphy **Nicolas Steno**
45. In nitrogen cycle Immobilization is the opposite of ----- **mineralization**
46. Cascade Effect leads to increase in their species. **prey**
47. Flies and have outlandish proboscises **moths**
48. Food chain only follows a direct, pathway of one animal at a time. **linear**
49. Which of the following has low algal growth **Oligotrophic lake**
50. a specific functional role and place of an organism called its ----- **niche**
51. In mesosphere Lower boundary is to 65 kilometres **50**
52. The atmosphere provides Protective shield against radiation and -----**cosmic rays**
53. Thermosphere Known as ----- **ionosphere**
54. It Represent tiny portion of the complexity of real ecosystems **Food Web**
55. Each trophic level has its own secondary productivity heterotroph
56. In interspecific counter-illumination eliminate ----- **light**
57. In crypsis Animals habitually press their bodies to the ----- **ground**
58. ----- competition, occurs between two species to use the same resources **Interspecific**
59. The process of through plant leaves is called transpiration **evaporation**
60. ---- is the amount of chemical energy as biomass that primary **Gross primary**
61. producers create in a given length of time. production (**GPP**)
62. Hibernation occur which of the following animals**Rodents**
63. There are types of herbivory depending upon different feeding habits. **Eight**
64. They obtain energy by means of inorganic oxidation reactions **Chemoautotrophs**
65. Existence of shared ancestry between a pair of structures, or **genes**,
66. in different taxa occur in **Divergent evolution**
67. Mimicry resemblance of one to another for protective or aggressive purposes **Species**
68. Which of the following factor are the major reason of invasion of Species**Human activities**
69. Motion dazzling is protection without ----- **Hiding**
70. Bacteria are use to remove organic matter dissolved in water (ODW) in the process of conventional sewage treatment **Secondary**
71. Species Invest more heavily in fewer offspring **k-selected**
72. In water cycle Rate of synthesis and breakdown is--. **Equal**
73. Mesosphere called as “ ”. **near space**
74. Animals use to make organic molecules chemical **bond energy**
75. Which Microparasites: reproduce inside host **Bacteria**
76. Asian Tiger Mosquito Can be a vector for a virus for disease. **West Nile**
77. Polar aurora is observed due to entry of solar----- **Winds**
78. ----- is key element in survival of life. **Atmosphere**

79. Weismann made the important distinction between -----cells and ---- cells. **Germ, somatic**
80. Which of the following species is hunted for its fur? **Passenger pigeon**
81. The process of carbon cycle is sometimes called ----- **carbon fixation**
82. Intraspecific interaction Follows logistic growth curve **Population**
83. Friction with atmospheric gases them long before they reach the ground.in atmosphere **Destroys**
84. ----- bacteria perform Denitrification **Facultative anaerobic**
85. In Third Atmosphere Inflow and outflow of CO₂ from continental carbonate stores **Large**
86. A rapidly changes its color. **Chameloen**
87. There are Lower mortality in adults in survivorship curve Type iii is the slowest cycle **Phosphorus cycle**
88. Lagoons Stabilization Ponds are feet deep **3-5'**
89. swallows and pink fairy armadillos are ---- **Insectivores**
90. -----of global fresh water use in agriculture **69% to 90%**
91. ----- near the surface, however, harmful to life **Ozone**
92. Batesian Mimicry Mimics usually than models **Smaller**
93. Appearance of an animal that warns predators it is toxic, distasteful or dangerous. **Aposematism**
94. In Mutualism both individuals get ----- **Benefit**
95. Which is not the effect of fragmentation? **Genetic drift is decreased.**
96. ----- are sensitive to UV, indirectly affecting crops____ **Cyanobacteria**
97. ----- of human body is carbon by weight. **20%**
98. In large forests, an enormous amount of water will through leaves..... **Transpire**
99. Evidences of evolution are based upon following EXCEPT **Immunology**
100. k-selected species are Typically are competitors in such crowded habitats.____ **Strong**
101. Oxygen was produced billion year ago.____ **2.5**
102. Troposphere make 99% of the total of water vapor and aerosols____ **Mass**
103. 12 to 50 km layer of atmosphere is ---- **Stratosphere**
104. ----- Simplified abstractions of real food webs, but complex in their dynamics____ **Food Chain**
105. It has a half life of 15 year____ **Dichlorodi Phenyltrichloroethane**
106. ----- are worst affected due to their edges.____ **Plants**
107. Sometimes species cannot utilize their niche.____ **entire**
108. Humans are species **k-selected**
109. Tropical deforestation is responsible for approximately of world greenhouse gas emissions.____ **20%**
110. It has two phase _____ **Exponential Growth**
111. These stage from a foraging cycle----- **All of these**
112. Camouflage also known as ----- **Cryptic coloration**
113. Transparency more efficient in_____ **deeper water**
114. An species becomes invasive when it becomes established in its new environment and out competes native species____ **exotic**
115. ---- is produced as result of lightening. _____ **Nitric acid**
116. The shape of type II survivorship curve is ---- **diagonal**
117. Female enters via ostiole and oviposits in female flowers____ **wasp**
118. The located directly above the thermosphere. _____ **exosphere**
119. ----- density populations may attract predators who wouldn't bother with a sparser population.____ **High**
120. ----- is useful tool to distinguish atmospheric layers _____ **Temperature**
121. . HMS Beagle set sail on December 27, 1831 on a voyage. _____ **5-year**
122. Each successional stage is called a ----- **seral stage**
123. animal wastes, plant residues have BOD _____ **high**
124. ----- water holds less DO than cold water _____ **Warm**
125. Chemicals that contain carbon atoms are called _____ **Organic Compounds**
126. Third Atmosphere Reduces the amount of in the atmosphere **oxygen**
127. Zebra Mussel Accidentally introduced to the Great Lakes in ----- **1988.**
128. A Feeds on plants such as grasses, soft flowering plants (forbs) and algae____ **Grazers**
129. Genetic code of is universal. _____ **mRNA**
130. Invertebrates predator are such as _____ **jelly fish**
131. Ticks and mites are the example of. ____ **Ectoparasites**
132. Removal of the top can alter the food web dynamics _____ **predator**
133. Which of these Native to the Pacific Ocean _____ **Lionfish**
134. They can breakdown Carbohydrate Anaerobically also _____ **bacteria**
135. Extinct hippopotamus like animal, now called _____ **Toxodon**
136. Disjunct Distribution occur due to following barriers except **Chemical**
137. In the process of bacteria. release compounds such as cadaverine and putrescine causing decaying odor **Putrefaction**
138. Reduction in area of safe zones for prey making them vulnerable to-- --. **predators**
139. Mutualism is the long-term relationship between individuals of species ____ **Different**
140. Atmosphere of Earth is the layer of **Gases**

141. Population size above carrying capacity. _____ **decreases**
142. Horses had been present and had become extinct long ago in _____ **S. America.**
143. Likely sea level rise during the 21st century is _____ **5 mm per year**
144. The process of through plant leaves is called transpiration. _____ **evaporation**
145. cycle is thermostat of earth. _____ **Carbon dioxide**
146. In water changes from its liquid state to a gaseous state _____ **Evaporation**
147. Extremely wet or dry events within the monsoon period have increased since _____ **1980**
148. In stratosphere temperature ranges from near the tropopause _____ **-51c**
149. Inter specific competition between individuals of species. _____ **Same**
150. A niche may be described in terms of. **All of these**
151. Pathogen is the source of pollution. _____ **Non point source**
152. Which of the following limiting factor cannot regulate population at constant level? _____ **Density independent**
153.can damage physiological and psychological health. _____ **Noise** pollution
154. Speed of wind far exceed those in the troposphere reaching near **220 km/h**
155. 541 million years ago, O₂ made stable of atmosphere. 15% **predators**
156. Reduction in area of safe zones for prey making them vulnerable to .. **predators**
157. Mimicry is them as something else. **Disguising**
158. There is constant probability of death throughout lives in _____ **Type II**
159. Decomposer plays important role in and cycles _____ **Carbon and nitrogen**
160. communities may begin in areas nearly devoid of. **Life**
161. Variability in Net Primary Productivity of Wetlands and tropical rain forests is _____ **2000 g/m²/ year**
162. Death,...new species and additional nutrients establish this community. _____ **Decay**
163. In Mesosphere Layer, directly above the and directly below the thermosphere _____ **Stratosphere**
164. Interspecific competition, occurs between species to use the same resources _____ **Two**
165. It has relatively high probability of surviving to adulthood. _____ **k-selected**
166. Gradual changes over the time with changing environment was foundation of _____ **Theory of uniformitarianism**
167. Animals absorb phosphates by eating plants or **herbivores.**
168. Natural environment where a species/organism lives is called _____ **Habitat**
169. In homeostasis is a critical factor. _____ **Water**
170. In Layers of atmosphere air pressure and density with altitude. _____ **Decreases**
171. The entire niche that a species is capable of using based on its tolerance limits and resource needs. **Physiological**
172. Atmosphere contains about billion metric tons of carbon in form of CO₂. _____ **750**
173. Exponential decline of chemical-bond energy in a trophic chain limits Number of top level **Carnivore**

MID TERM

1. In crypsis animals habitually press their bodies to the
2. The shape of Type II survivorship curve is _____ **Diagonal**
3. In order to protect themselves from herbivory, plants use _____ as a physical defense. _____ **resins**
4. Water vapor causes about _____ of the greenhouse effect on Earth ----- **36-70%**
5. In troposphere drop in vapor pressure is due to _____ **gravity**
6. tons of space debris strikes Earth every single day in Atmosphere _____ **100**
7. Which of the following animal _____ has long life expectancy? _____ **whales**
8. Too small prey does not worth for spending in capture. _____ **energy**
9. Both terrestrial and marine has Aposematism . _____ **ecosystem**
10. Following are the evidences of the Darwin's theory of natural selection EXCEPT _____ **Molecular Biology**
11. Animals undergo _____ in extended period of drying. _____ **Aestivation**
12. _____ is a tool which measures the proportion of individuals in a given species that are alive at different ages. _____ **Survivorship curve**
13. Select the correct sequence of a food chain starting from the lowest trophic level to the highest trophic level. _____ : **Primary producer : Primary consumer : Secondary consume : Tertiary Consumer : Apex Predator**
14. In Transpiration Water moves from the roots through the stems to the
15. Animal that eat at their or other species's soft feces **Rabbit**

16. Orientation towards a factor called..... **Taxis**
17. Strongly contrasting, non-repeating markings such as spots or stripes are the characteristics of..... **Disruptive coloration**
18. Which of the following factor is the major reason of invasion of species?..... **Human activities**
19. Agriculture accounts for_____ of water resources.
20. Proteolysis releases nitrogen and..... **Phosphorus**
21. Lagoons are also called **Stabilization ponds**
22. Mesosphere temperature decreases with increasing..... **height**
23. In Mesosphere upper boundary is around kilometres **85 to 100**
24. Animal wastes and plants residues have _____ BOD. _____ **High**
25. Parasitism enhances fitness of parasite but reduces fitness of **host**
26. Feed on non-grass plant material called **browsers**
27. Habitats are seriously degraded by _____ pollution. _____ **Chemical**
28. Oxygen is less soluble in _____ water. _____ **Warmer**
29. Eutrophication occurs due to the _____ of nutrients in water. _____ **Over enrichment**
30. Unlike to carbon and nitrogen, Phosphorus cannot be found in air in the state. _____ **gaseous**
31. Which of the following is a threatened species? _____ **Elephant**
32. Who proposed the theory of "inheritance of acquired characteristics or soft inheritance"? _____ **Lamarck**
33. It Occurs in large animals. _____ **Winter sleep**
34. _____ is more than 20 times as effective as carbon dioxide at trapping heat in the atmosphere. _____ **Methane**
35. Land pollution indirectly affects the _____ system of human beings. _____ **Respiratory system**
36. Natural selection prefers _____ population size. _____ **Large**
37. Sudden strike on the nearby prey by the predator is called _____ **Ambush**
38. Nearly 90% of the Earth's ozone occurs in the **Stratosphere**
39. Which of the following is a density dependent factor? _____ **Food**
40. _____ is the essential component that screens out UV radiation in the upper atmosphere. _____ **Stratospheric ozone**
41. Loss of _____ percent energy occurs from one level to next. _____ **90%.**
42. In interspecific interactions counter-illumination eliminates **light**
43. Zebra mussels were accidentally introduced to the Great Lakes in **1988**
44. Countershading create an illusion of **flatness**
45. It is a component of all proteins and nucleic acids. _____ **Nitrogen**
46. _____ is an underrated environmental problem. _____ **Noise pollution**
47. Idiobiont parasitoid immediately paralyse their hosts for their larvae to eat. _____ **wasps**
48. Which of the following terms can be used to describe a niche? _____ **Food consumption**
49. Algae, is an example of: _____ **Photoautotroph**
50. One species gains benefits other species harmed called **parasitism**
51. Which of the following is the density independent factor? _____ **Predation**
52. There is no limit of number of in Mullerian Mimicry **species**
53. In Exosphere Density is too for them to behave as a gas by colliding with each other. _____ **low**
54. Attina Ants grow fungi in their colonies. _____ are harvested by ants from these fungi to feed their larvae. _____ **Gongylidia**
55. In ecological pyramids, width of a box is proportional to the _____ of that trophic level _____ **Productivity**
56. _____ transfers heat from one place to another by mass motion of a fluid such as water, air or molten rock. _____ **Convection current**
57. Subset of the food-web ----- is impacted by a change in population Number _____ **(dynamic)**
58. Y-axis is a logarithmic plot of numbers of survivors X-axis is a linear plot of _____ **(age).**
59. The first community to become established in an area is called _____ **(pioneer community.)**
60. Which animal change it color rapidly _____ **(chameleon)**
61. Plant algae and cyanobacteria are _____ **(photo autotrophs)**
62. Plants are _____ **(autotrophs)**

63. 3 oxygen atom form _____ (ozone.)
64. above thermosphere is _____ (exosphere)
65. Second layer _____ (stratosphere)
66. This process of evaporation through plant leaves is called _____ (transpiration.)
67. --- are species that occur outside of their natural ranges because of human activity_ **Exotic Species**
68. Deforestation directly affects rate of _____ (transpiration).
69. Pere David's deer was a native species of _____ (China).
70. mutualism is Long-term relationship between individuals of _____ (different species)
71. High population ----- can lead to the accumulation of harmful waste products that kill individuals or Impair reproduction, reducing the population's growth. _____ (densities)
72. The maximum population _____ the species that the environment can sustain indefinitely. **size of**
73. Gross primary productivity Gap Raw rate at which the ----- synthesize new organic matter. _____
 ----- (primary producers)
74. Interaction as a system between both components ----- --. _____ **Non living components**
75. ----- is a group of individuals belonging to same species occupying same space in a particular. _____ **Population**
76. ----- is a group of population occupying same space in a particular time. _____ **Community**
77. The external factors are ----- . **Climate and topography**
78. Formed in response to specific external factors in that environment ----- . **Biome**
79. Animals use ----- energy to make organic molecules. _____ **Chemical energy**
80. Synthesis of organic compounds of their bodies from inorganic precursors -----
 The process occurs in dark habitats ----- . _____ **Chemoautotrophs**
81. There are ----- types of herbivory depending upon different feeding habits. _____ **8**
82. Plant and food is the primary source of ----- . _____ **Ominvores**
83. Breakdown of tissues by the body's own internal chemicals and enzymes is called - _____ **Autolysis**
84. Breakdown of tissues by bacteria is called ----- . _____ **Putrefaction**
85. Measurements of species per unit area are called ----- . _____ **Species richness**
86. Geographic limit causes the size of a population ----- . _____ **Decrease**
87. The species occupation in its environment is tremendous --- . _____ **Beavers**
88. Butterflies are one of the best examole of ----- . _____ **Indicator species**
89. Response of an organism towards an abiotic stimuli ----- . _____ **Taxi (light)**
67. The main environmental force that influence the terrestrial plants..... --. **Gravity**
68. Examples of primary consumers ---- . _____ **zooplankton, cow, zebra, rabbits, deer, etc**
69. The living portion of earth surface is named as ----- . _____ **Biosphere**
70. A population increase by immigration and decrease by ----- or departure of individuals from the population. _____ **Emigration**
71. The population density of small organism is ----- . _____ **High**
72. Currently human population is about----- . _____ **7.4 billion**
73. Division of freshwater ecosystems are ----- **Lotic and lentic water bodies**
74. The large natural bodies of standing freshwater found by precipitation on run off ar ----- . _____ **Lakes**
75. Corals are tiny living animals belong to group of organisms----- . _____ **Cnidarian**
76. Aestivation is commonly occurred in----- **many invertebrates, reptiles and amphibians**
77. Plant names Viola Orvensis is present in ----- . _____ **Basic soil**
78. Species having wider range of niches ----- . _____ **Generalist species**
79. Panda is an example of ----- **Specialist species**
80. Who plays role of ecological engineers in ecosystem. _____ **beavers**
81. Hawk is example of----- . _____ **Tertiary consumer**
82. Nitrogen in----- % in atmosphere. _____ **78%**
83. The process of making carbohydrates from water and carbon dioxide is called **Photosynthesis**
84. Plays a major role in shaping communities ----- **Foundation species**
85. Top most horizon is ----- **O horizon**
86. The species occupation in its environment is tremendous ----- . Beavers/ **foundation species**
