CS504 GRAND QUIZ

Modules with high cohesion and low coupling can be treated and analysed as

- White boxes
- **black boxes**
- grey boxes
- none of these

While establishing the services for an object, the following fundamental questions should be asked:

- Why does the system need this object anyway?
- What useful questions can it answer?
- What useful action can it perform?
- All of the given options.

----------is a role that each actor plays in the system under consideration.

- An act
- **A participant**
- A function
- None of the given

Any Engineering approach must be founded on organizational commitment to ----------.

- Cost
- Scheduling
- **Quality**
- Performance

Return values in synchronous massages are:

- Compulsory
- **May not used when response is obvious**
- Not used at all
- Represented by solid lines

According to Caper Jhones analysis of project activities, coding only has ------- affect part in system development.

- **13-14%**
- 36-40%
- 50-60%
- 70-80%

Normally a system is more easy to modify if its modules have

- High coupling and high cohesion
- High coupling and low cohesion
- Low coupling and high cohesion
- Low coupling and Low cohesion

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

In multi-threaded or multiprocessing applications where different execution threads may pass information to one another by sending ----------to each other.

https://vulmshelp.com/

- Interrupt calls
- Synchronous messages
- **Asynchronous messages**
- System Calls

Which of the following is not among the four layers of the object-oriented pyramid?

- The subsystem layers
- The class and object layer
- **The abstract layer**
- The message layers

System models include:

- User business processes
- User activities for conducting the business process
- Processes that need to be automated
- **All of the given options**

In the architecture trade-off analysis method the architectural style should be described using the

- Data flow view
- Module view
- Process view
- **All of the given**

---------- is concerned with decomposing the system into interacting sub-systems.

a) **System structuring**
b) Control Modelling
c) Molecular Decomposition
d) None of the given

A use case represents:

- A class, its attributes and operations
- An operation's interface and signature
- **The role a user plays when interacting with the system**
- The system's functionality for a particular purpose

External entity may be:

- Source of input data only
- **Source of input data and destination of results**
- Destination of results
- Repository of data

The process of utilizing our knowledge of computer science in effective production of ----------.

i. **Chemical Engineering**

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

ii. **Electrical Engineering**
iii. **Computer Engineering**
iv. **System Engineering**

Coupling is a measure of ---------- of a component.

- **Independence**
- Dependence
- Aggregation
- Composition

---------- has become a standard notation for object-oriented system modelling:

- **UML**
- C++
- OCL(Object Constraint Language)
- None of the given option

An arrow in data flow diagram represents:

- **Direction of flow of data**
- Processing of data
- External agent
- Internal Agent

---------- diagrams does not capture control flow information, it just shows the flow of data in a system.

- Sequence
- **Data Flow**
- Activity
- Class

In ---------- the analyst determines the source of requirements and where do these requirements consume:

- Data flow analysis
- **Source and sink analysis**
- Down parsing
- Up parsing

Data cannot flow from one external entity to other external entity because:

- It will get corrupted
- **It is not allowed in DFD**
- An external entity has no mechanism to read or write
- Both are outside the context of the system

In the functional design, the structure of the system resolves around:

- Objects

https://vulmshelp.com/

- Properties
- **Functions**
- All of the given options

---------- is one of the techniques to document domain knowledge

- **State transition diagram**
- Feasibility matrix
- System matrix
- None of the given options

In case of ---------- approach , decomposition of a problem revolves around data.

- **Object-Oriented**
- Action-Oriented
- Event-Oriented
- Process-Oriented

The ---------- relationship is a kind of a generalization specialization relationship:

- Bit-Byte
- Uses
- Binary
- **Extends**

Which statement is not true about system software?

- Change request has direct impact on software
- Passes through a constant process of evolution
- Change requests have direct impact in the form of defects
- None of the given

Strong cohesion implies that:

- **All parts of a component have a close logical relationship with each other**
- All parts of a component don't have a close relationship with each other
- Component is dynamic in nature
- Component is static in nature

The intent of Object-Oriented Analysis(OOA) is to define:

- All classes
- Relationships among classes
- Behaviour of classes
- **All of the given options**

Requirement engineering focuses on ---------- aspect of the software development process.

- Both what and how

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

- **What**
- How
- Why and how

---------- relationship is concerned with classes, not with class instantiates.

- Association
- **Inheritance**
- Aggregation
- Composition

Which of the following statements are true in context of the object model deviation through the Coad methodology?

a) A place is also a contains
b) Every container needs to be a place
c) Same person may play different times in the system.

- A only
- A and b
- **A and c**
- All of the given

The goal of ---------- is to translate the customer's desire for a set of defined capabilities into a working product.

- Electrical engineering
- **Product engineering**
- Hardware engineering
- Mechanical engineering

In case of a ------- message, the called routine that handles the message is completed before the caller resumes execution.

- Synchronous
- Asynchronous
- Bidirectional
- **A only**

ii. B only
iii. C only
iv. All of the given

In multiprocessing applications, different execution threads may pass information to one another by sending ------- to each other.

- Interrupt calls
- Synchronous messages
- **Asynchronous messages**
- System calls

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

A car is made up of a body, three or four wheels, a steering mechanism, a breaking mechanism, and a power engine"

The above statement is example of:

- **Whole-part relationship**
- Inheritance
- Specialization
- Generalization

To help separate an object's external behaviour from its implementation, the technique used is called -------

- Generalization
- Association
- Composition
- **Abstraction**

Sequences of messages can be present in:

(a) Use case diagram
(b) Sequence diagram
(c) Collaboration diagram

- a only
- b only
- c only
- **b and c**

Which of the following strategies lead to good software design:

- Separation of concerns
- Modularity
- Divide-and-conquer
- **All of the given options**

Data flow model:

- Captures the flow of data in a system
- Helps in developing an understanding of system's functionality
- Describes data origination, transformations and consumption in a system
- **All of the given options**

------- requirements are often called product features.

- Functional
- **Non-functional**
- Developer
- User

In the functional design, the structure of the system revolves around.

- Objects
- Properties

https://ulmshelp.com/

- **Functions**
- All of the given option

The first step in any OOA process model is to

- **Build an object-relationship model.**
- Define collaborations between objects.
- Elicit customer requirements
- Select a representation language

The ------ relationship is kind of a generalization specialization relationship.

- Bit-byte
- Uses
- Binary
- **Extends**

Regarding data flow model, which of the following statement(s) is true:

- It captures the transformation of data between processes/functions of a system
- **Processes on a data flow can operate in parallel**
- Only those processes are represented which we need to automate
- All of the given option

---------- is an extremely powerful technique for dealing with complexity.

- Aggregation
- **Abstraction**
- Inheritance
- Association

In “point of sale system”. the term “payment” represents

- Actor
- Participant
- **Transaction**
- Container

The architecture components for product engineering are

- **Data, hardware, software, people**
- Data, documentation, hardware, software
- Data, hardware, software, procedures
- Documentation, hardware, people, procedures

An object model encompasses the principle(s) of

- Abstraction
- Encapsulation
- Hierarchy or inheritance
- **All of the given option**

Prototyping is used when there is ---------- regarding requirements.

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

- **Uncertainty**
- Confirmation
- Conflict
- Consensus

In ------- phase of software development, requirement analyst focuses on possible design of the proposed solution.

- Maintenance
- Development
- **Definition**
- Vision

At which stage of software development loop, results are delivered?

- Problem definition
- Solution integration
- Technical development
- **Status quo**

A class will be cohesive if:

- Class does not implement complex interfaces
- Class does not have complex methods
- **If most of the methods do not use most of the data members most of the time**
- If most of the methods use most of the data members most of the time.

A DFD is normally levelled (adding more levels of abstraction) as

- It is a good idea in design
- It is recommended by many experts
- It is easy to do it
- **It is easier to read and understand a number of smaller DFDs than one large DFD**

Identify the true statement(s)

- An attribute that may have a number of values should be replaced by a new class and an object connection
- An attribute that varies over time, e.g. price of an item, should be replaced by an additional class with an affective data and value
- Replace “yes/no” type attribute with “status” type attributes for flexibility
- **All of given option**

---------- Is a technique in which we construct a model of an entity based upon its essential characteristics and ignore the inessential details.

- Inheritance

https://vulmshelp.com/

- Polymorphism
- Aggregation
- **Abstraction**

A structure is a manner of an organization which expresses a ------ strong organization within the problem domain.

- **Semantically**
- Syntactically
- Graphically
- None of the given

An object model of a system captures the ------ structure of a system.

- **Static**
- Dynamic
- Iterative
- Hierarchical

To determine the architectural style or combination of styles that best fits the proposed system, requirements engineering is used to uncover

- Algorithmic complexity
- **Characteristics and constraints**
- Control and data
- Design patterns

Which statement is not according to the software engineering principles? Software engineering is a(n) _____

- Balancing act
- Disciplined approach
- **Unsystematic approach**
- Quantifiable approach

In abbot's textual analysis technique, different part of speech is identified within the text of the specification and these part are modelled using different _____

- Event
- Process
- Operations
- **Components**

Quantitative methods for assessing the quality of proposed architectural designs are readily available.

- True
- **False**

In order to determine the role and responsibilities of the identified objects, we need to consider which of the following step(s):

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

a) Who I am?
b) What I know?
c) Who I know?
d) What I do?

- A only
- A and b
- B ,c and D
- **All of the given**

In object oriented design _____ layer contains the details that enable each object to communicates with its collaborators.

- Subsystem
- Responsibility
- **Message**
- Object

In sequence diagram, the boxes denote:

- **Objects (or classes)**
- Messages, sent from one object to other
- Life-time of objects
- None of the given option

In " railway tickit reservation system" the roles such as enquiry. Reservation and ticketing and cancellation are to be performed by the user called:

- **Passenger**
- System analyst
- System developer
- System designer

Class responsibilities are defined by _____

ii. Its attributes only
iii. Its collaborators
iv. Its operations only

iv. Both its attributes and operations

Requirement engineering mainly deals with the _____ of the system

- Vision phase
- **Definition phase**
- Development phase
- Maintenance phase

In UML based object oriented model of a system, a composition relation between two objects is shown by a _____ sign on the whole side of a relation line.

- An unfilled diamond

https://vulmshelp.com/

- A filled diamond
- A half diamond
- A dot

_____ analysis educates the analyst on business domain complexity and shows a way to deal with it.

- **Domain**
- Use case
- Object collaboration
- None of the given options

In this case of _____ intra component linkages are stronger while inter component linkages are weak.

- High cohesion
- Low coupling
- Low cohesion
- **High coupling**

An architectural style encompasses which of the following elements?

- Constraints
- Set of components
- Semantic models
- **All of the given**

In software engineering paradigm, any engineering approach must be founded on organizational commitment to _____

- Cost
- Scheduling
- **Quality**
- Performance

Identify the true statement:

- **Normally object oriented design is more maintainable than functional oriented.**
- Software with functional oriented design does not fulfil non functional requirements.
- Object oriented design can not implement “separation of concerns” strategy
- Function oriented design does not lead to an efficient product

A process in data flow diagram (DFD) represents

- Flow of data
- **Transformation of data**
- Storage of data
- An external agent

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

A maintainable design is a design , which supports

- Change
- Debugging
- Adding new features
- **All of the given**

Whole part structure is also called _____

- Generalization
- **Aggregation**
- Specialization
- Association

_____ are kind of umbrella activities that are used to smoothly and successfully perform the construction activities.

- Design activities
- **Management activities**
- Testing activities
- Maintenance activities

When you encounter both transform flow in the same DFD the flow is partitioned and the appropriate mapping technique is used on each part of the DFD.

- **True**
- False

Software architecture must address ---------- requirements of a software system.

- Functional
- Non-functional
- User Interface Requirements
- **Both functional and non-functional**.

To construct a system model the engineer should consider one of the following restraining factors.

- **Assumptions and constraints**
- Budget and expenses
- Data objects and operations
- Schedule and milestones

A cohesive class is one which emphasizes on ---------- unit of functionality.

- Single
- **Multiple**
- Static
- None

The best way to conduct a requirement validation review is to

https://vulmshelp.com/

- Examine the system model for errors
- have the customer look over the requirements
- Send them to the design team and see if they have any concerns
- **Use a checklist of the questions to examine each requirement**

Defining the services of an object means:

- What it does?
- **What it knows?**
- Who knows it?

Which one of the following is the external quality of a software product?

- Correctness
- Concision
- Cohesion
- **Low coupling**

In Data Flow Diagram, the entity or system, outside the boundary of this system is called:

- Process
- Data flow
- **External agent**
- Data store

GUI stands for:

- Genaric user Interface
- **Graphical user interface**
- Genaric user interaction
- Graphical user interaction

Specialization means:

- Calling the same method with the object of child object
- Hiding the data
- **Creating new subclasses for an existing class**
- None of the given options

In a use case diagram, an ellipse signifies a(n):

- Actor
- Class
- **Use case**
- System boundary

Software development is a step-by-step process, and in --------- phase of software development Business objective of an organization get cleared

- Maintenance
- Development

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

- Definition
- **Vision**

If you try to make software more user-friendly then the --------- may suffer.

- Reliability
- Software
- **Efficiency**
- Cost

In object-oriented design, the structure of the system revolves around.

- **Objects**
- Properties
- Methods
- All of the given option

In -------- relationship, a class shares the structure and behaviour defined in another class:

- Aggregation
- Composition
- **Inheritance**
- Uses

In Object Oriented Design, combining the services offered by an object with the attributes they work on, results in:

(a) Lower coupling and strong cohesion
(b) Lower cohesion and strong coupling
(c) Increased likelihood of reuse

(d) Decrease the modularity of the system

- A only
- B and c only
- **A and c only**

A change becomes ---------- because of close presence of data and functions.

- Accessible
- Global
- Private
- **Localized**

Software engineering is a ---------- approach.

- Systematic
- Disciplined
- Scheduled
- **All of the given options**

An external entity that interacts with the system is called a(n):

https://vulmshelp.com/

- Use case
- **Actor**
- Stakeholder
- Association

More powerful hardware resulted into the development of ----------powerful and --------- software.

- Less, complex
- **More , complex**
- More, simple
- Less, simple

A context diagram is used:

- As a first step in developing a detailed DFD of a system
- In systems analysis of very complex systems
- **As an aid to system design**
- As an aid to programmers

" System should maintain transaction log of every system"
The above statement is an example of:

- **Functional requirement**
- Non-functional requirement
- Pseudo requirement
- None of these

The architectural model provides the software engineer with the view of the system as a whole:

- **True**
- False

As per Peter Coad's methodology , which of the following may not be a perfect candidate for being an object?

- Zone
- Recipient
- Garage
- **Password**

In the case of ---------- approach , data is decomposed according to functionality requirements.

- Object-oriented
- **Action-oriented**
- Event-oriented
- Process-oriented

In UML based Object Oriented Model of a system, the diamond sign is used to depict ---------

https://vulmshelp.com/

- relations between two objects/classes.
  - Aggregation and Association
  - Inheritance and Association
  - **Composition and Aggregation**
  - Composition, Aggregation and Association

The system specification describes the:

- **Function and behavior of a computer-based system**
- Implementation of each allocated system element
- Algorithmic detail and data structures
- Time required for system simulation

In object oriented approach, ---------- are the people and organizations that take part in the system under consideration:

- **Actors**
- Places
- Participants

Software Design discusses ---------- aspect of software development.

- What
- **How**
- Who
- When

---------- requirements cause frequent modifications in user interface.

- Functional
- Non-functional
- **Unstable**
- User

By levelling a DFD (adding more levels of abstraction) we mean:

- **Splitting it into different levels**
- Make its structure uniform
- Expanding a process into one with more sub-processes giving more detail
- Summarizing a DFD to specify only these essentials

A "register" in "Point of Sale system" is an example of:

- Actor
- Participant
- **Tangible thing**
- Transaction

---------- is a set of processes and tools to develop software.

- **Software engineering**
- Information

https://vulmshelp.com/

- Software
- None of the given

The ---------- on which program operates is also considered as part of the software.

- **Data**
- Information
- Program
- None of the given

---------- diagram provides a time-based view and collaboration diagrams which provide an organization based view of the system's dynamics.

- Data flow diagram
- Entity relationship diagram
- Class diagram
- **Sequence diagram**

Synchronous messages are "call events" and are denoted by ----------

- **Full arrow**
- Half arrow
- <<create>>
- <<destroy>>

Which of the following are the components of system engineering software?

- Process
- Methods
- Tools
- **All of the given**

Identifying system features include ----------

- Log important information
- Conduct business
- Analyze business results
- **All of the above**

---------- is yet another technique that is used to reduce customer dissatisfaction at the requirement stage.

- Study of similar systems
- Site visits
- **Prototyping**
- All of the above

Data store notation in DFD represents:

- Data input
- Data output

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

- **Data input and data output**
- None of the above

The process of defining attributes is called ----------

- Who know me?
- **What I know?**
- Whom I know?
- All of the above

The output of the design process is a description of the:

- **Software architecture**
- Software Code
- Software
- All of the above

Which of the following are the levels of software requirements?

- Business requirements
- User requirements
- Functional requirements
- **All of the above**

Given below are some statements associated with data flow diagrams. Identify the correct statement among them.

- Data flow is made used of to model what systems do
- Flows of data can take place from a process to a sink
- **Context diagrams shows the major system processes**
- All processes have to be labelled or decomposed

In which of the following diagram the actors and attributes are represented with system boundary?

- Data flow diagram
- Entity relationship diagram
- Class diagram
- **Use case diagram**

_____ is real looking mock_up of what would be eventually delivered and might not do anything useful.

- Study of similar system
- Site visits
- **Prototyping**
- All of the above

_____ is blueprint for software construction.

- **Object oriented design**

https://vulmshelp.com/

- Sequence design
- Software design
- All of the above

_____ requirements lead to ill-spent time and rework.

- Unacceptable
- **Ambiguous**
- Dissatisfaction of customer
- None of the above

Which type of diagram is used to depict the dynamic behaviour of a system.

- ERD diagram
- DFD diagram
- Class diagram
- **Collaborations diagram**

What is the most crucial non-functional requirement of a system to control radiation dosages that are emitted as treatment for cancer?

- Security
- Reliability
- Easy usability
- **Accuracy**

A better design has an objective achieve

- High cohesion
- Low cohesion
- Low coupling
- **High cohesion and low coupling**

Which of the following are the components of software engineering framework is combine the three remaining components?

- Process
- Method
- **Tools**
- All of the above

In sequence diagrams the time required by the receiver object to process the message is denoted by an _____

- **Activation box**
- Message line
- Life line
- All of the above

How many types of OOD modes have _____.

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

- One
- **Two**
- Three
- Four

Which notation is used to represent the process of the system in DFD model.

- **Process**
- External agent
- Data flow
- Data store

Requirement engineering mainly deals with the _____ of the system

- Process
- Maintenance
- Development phase
- **Definition phase**

Insufficient user involvement leads to _____ products.

- **Unacceptable**
- Ambiguous
- Dissatisfaction of customer
- None of the above

Collaboration diagrams have basically two types of components: objects and _____

- Messages
- Method
- Classes
- **None of the above**

In object-oriented analysis how many number of tasks must occurs _____.

- 1
- **2**
- 3
- None of the above

State transition diagram is helpful in determining _____.

- Data store
- Process flow
- **Business understanding**
- None of the above

In sequence diagram events are organized in a _____ time life line.

- **Vertical**

https://vulmshelp.com/

- Horizontal
- Both A and B
- All of the above

Asynchronous messages are “signals,” denoted by _____.

- **Full arrow**
- Half arrow
- <<create>>
- <<destroy>>

When we write a program for computer and then we named it as _____ .

- Data
- Information
- **Software**
- None of the given

Context level diagram present in which of the following document.

- **SRS-software requirement specification**
- Design document
- Test phase
- All of the above

_____ is diagram in which objects are interact with each other and these are arranged in a sequence.

- ERD diagrams
- Inheritance diagrams
- Class diagrams
- **Sequence diagrams**

Which of the following layers are include in object-oriented design?

- The subsystem layers
- The class and object layer
- **All of the above**
- The message layers

Which notation is used to represent the boundary of the system in DFD model?

- Process
- **External agent**
- Data flow
- Data store

Identifying whole-part structures (aggregations) means what are my _____.

- **Components**
- Structures
- Class

https://vulmshelp.com/

- Object

An object or class may further be classified on the basis of _____ .

- Behaviour driven attributes
- Data driven attributes
- Responsibility driven attributes
- **All of the above**

DFD notation contains

- Process
- External agent
- Data flow
- **All of the above**

The doted lines in sequence diagram are called ____ .

- **Life line**
- Message line
- Entities line
- All of the above

An object may create another object via a _____ message .

- Full arrow
- half arrow
- **<<create>>**
- <<destroy>>

How many levels of software requirements are _____?

- One
- Two
- Three
- **Four**

Which of the following diagram has iterative activities?

- Data flow diagram
- Entity relationship diagram
- Class diagram
- **Use case diagram**

Which of the items listed below is not one of the software engineering layers?

- Tools
- **Manufacturing**
- Process
- Methods

Coupling is a measure of _____ a module or component.

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

- **Independent**
- Dependent
- Closeness
- All of the given

Software maintenance phase involves

- Debugging
- Adding new features
- Making changes
- **All of the given**

The hardest single part of building a software system is deciding precisely _____ to build.

- When
- **What**
- Why
- All of the given

Interaction diagrams depict the ____ behaviour of the system.

- Static
- Active
- **Dynamic**
- None of the given

A _____ can be used to describe the dynamic behaviour of an object-oriented system.

- ERD diagrams
- Inheritance diagrams
- Class diagrams
- **Series diagrams**

The Use case diagram shows that which ____ interact with each use case.

- Use case
- **Actor**
- Component
- Relation

Transactions are the _____ that must be remembered through time.

- **Events**
- Action
- Triggers
- Methods

A necessary supplement to transform or transaction mapping needed to create a complete architectural design is

- Entity relationship diagrams

https://vulmshelp.com/

AL-JUNAID INSTITUTE GROUP

- The data dictionary
- **Processing narratives for each module**
- Best cases for each module

i. ch module

PAST PAPER

CS504 - Software Engineering - I (Quiz No. 1)

Quiz Start Time: 09:30 PM, 11 December 2022

Question # 6 of 10 (Start time: 09:35:01 PM, 11 December 2022)

Total Marks: 1

An arrow in Data Flow Diagram (DFD) represents

Select the correct option

- Processing of data
- Direction of flow of data
- External agent
- Internal agent

Question No : 23 of 26 Marks: 3 (Budgeted Time 6 Min)

Define following:-

1) Synchronous Messages
2) Asynchronous messages

Answer (Please click here to Add Answer)

Asynchronous messages are "signals," denoted by a half arrow. They do not block the caller. Asynchronous messages typically perform the following actions:

- *Create a new thread*
- *Create a new object*

Communicate with a thread that is already running
Synchronous Messages:-
Synchronous messages are "call events" and are denoted by the full arrow. They represent nested flow of control which is typically implemented as an operation call. In case of a synchronous message, the caller waits for the called routine to complete its operation before moving forward.

Question No : 25 of 26 Marks: 5 (Budgeted Time 10 Min)

Consider the following five code fragments.

1	2	3

class File {
void OpenFile () { ... }
void SearchIndex () { ... }
void CloseFile () { ... }
}
	class AreaFun {
	double CircleArea()
	{ ... }
	double RectangleArea() { ...
	}
	double TriangleArea() { ... }
	}
		class MyClass {
		void OpenFile () { ... }
		void SearchIndex () { ... }
		void InitPrinter () { ... }
		void Print index { ... }
		}

4	5	

class POST {
void CheckPower () { ... }
void InitializeDisc () { ... }
void LoadBootstrap () { ... }
}
	Class MakeSoup {
	void BoilWater () { ... }
	Void AddIngredients () { ... }
	void MixIngredients () { ... }
	void ServeSoup () { ... }
	}	

Which of the above code fragments show the weakest level of cohesion? Brief it with reason.

answer: 3

Question # 9 of 10 (Start time: 11:55:57 AM, 08 June 2022) **Total Marks:** 1

All the documents related to the software are also considered as part of the _____.

Select the correct option

- (●) Software
- ( ) Logical Document
- ( ) Relational Database
- ( ) Physical Document

CS504:Quiz No. 1

Quiz Start Time: 11:45 AM, 08 June 2022

Question # 1 of 10 (Start time: 11:45:49 AM, 08 June 2022) **Total Marks: 1**

A prototype is not the real product. It is rather just a real looking _____ of what would be eventually delivered and might not do anything useful.

Select the correct option

- (●) Mock-up
- ( ) Structure
- ( ) Ad-hoc
- ( ) Design

CS504:Quiz No. 1

Quiz Start Time: 08:26 PM, 08 June 2022

Question # 9 of 10 (Start time: 08:34:18 PM, 08 June 2022)

Total Marks:

Data cannot flow from one external entity to other external entity because:

Select the correct option

- It will get corrupted
- An external entity has no mechanism to read or write
- It is not allowed in DFD
- Both are outside the context of the system

CS504:Quiz No. 1

Quiz Start Time: 08:26 PM, 08 June 2022

Question # 10 of 10 (Start time: 08:36:48 PM, 08 June 2022)

Total Marks: 1

The system specification describes the

Select the correct option

- time required for system simulation
- implementation of each allocated system element
- function and behavior of a computer-based system
- algorithmic detail and data structures

Quiz Start Time: 11:45 AM, 08 June 2022

Question # 3 of 10 (Start time: 11:48:27 AM, 08 June 2022) **Total Marks: 1**

Requirement engineering mainly deals with the _____ of the system.

Select the correct option

- ○ Maintenance Phase
- ○ Vision Phase
- ● Definition Phase
- ○ Development Phase

Quiz Start Time: 11:45 AM, 08 June 2022

Question # 5 of 10 (Start time: 11:50:56 AM, 08 June 2022)

Total Marks:

In software engineering paradigm, any engineering approach must be founded on organizational commitment to _____.

Select the correct option

- Performance
- Quality
- Scheduling
- Cost

AL-JUNAID INSTITUE OF GROUP

1. Whole part structure is also called
   a. Generalization
   b. Aggregation
   c. Specialization
   d. Association
2. A prototype is not the real product. It is rather just a real looking _ of what would be eventually delivered and might not do anything useful.
   a. Mock-up page 68
   b. Ad-hoc
   c. Design
   d. Structure
3. In "Railway ticket reservation system" the roles such as inquiry, reservation, ticketing and cancellation are to be performed by the user called:-
   a. Passenger
   b. System analyst
   c. System developer
   d. System designer
4. A useful technique for evaluating the overall complexity of a proposedarchitecture is to look at the component's _.
   a. number and size of components
   b. flow dependencies and sharing dependencies
   c. size and cost
   d. function points
5. _ _ relationship is concerned with classes not with the class instantiates.
   a. Association
   b. Inheritance
   c. Aggregation
   d. Composition
6. Software development is a step-by-step process, and in_ phase of software development Business Objective of an organization gets cleared.
   a. Maintenance
   b. Development
   c. Definition
   d. Vision
7. The data on which the program operates is also considered as part of the .
   a. Important Data
   b. Software page 01
   c. Logical Data
   d. Utility Software

0304-1659294

8. From the following which is/are not the example(s) of illegal data flow in Data Flow Diagram (DFD)
    a. External Agents directly communicating with each other
    b. External Agent updating information in a DataStore
    c. External Agent accessing information from a Data Store
    d. There must be an intermediate process which should transform data received from one external entity and then send the transformed data to the other external entity
9. In sequence diagram, the objects are organized in a _ line and the events in a _ time line.
    a. Horizontal, straight
    b. Vertical, straight
    c. Horizontal, vertical
    d. Vertical, horizontal
10. Consider the following piece of code:
    public class Square extends Shape {
    // some code
    }
    The above code is an example of:
    a. Part-Whole relationship
    b. Generalization/Specialization
    c. Data Sharing
    d. Data encapsulation
11. Requirement engineering mainly deals with the _ _ of the system
    a. Vision Phase
    b. Definition Phase page 16
    c. Development Phase
    d. Maintenance Phase
12. A _ relationship indicates that one entity is composed of one or more parts which are themselves instances of that or another entity.
    a. Inheritance
    b. Whole-part
    c. Generalization
    d. Specialization
13. In UML Object Model Notation _
    a. C++ language-specific programs are constructed
    b. mathematical problems are visualised
    c. relationships among classes and sub-classes are expressed page 92
    d. Graphs and tables are used to explain Software Engineering principles
14. In the case of _ , intra component linkages are stronger while inter component linkages are weak.
    a. high cohesion

0304 1659294

b. low coupling page 73
c. low cohesion
d. high coupling

15. Transactions are the _ that must be remembered through time.
a. Events page 93
b. Actions
c. Triggers
d. Methods

16. The modules interacting with each other through message passing have _ between them.
a. low cohesion
b. high cohesion
c. low coupling page 74
d. high coupling

17. In UML based Object Oriented model of a system, the inheritance relation between two classes is shown by a _ sign towards the super-class side on the association line between the two.
a. A filled diamond
b. An unfilled diamond
c. A half arrowhead
d. An arrowhead page 92

18. Which statement is not according to the software engineering principles? Software engineering is a(n) _ __.
a. Balancing act
b. Disciplined approach
c. Unsystematic approach page 5
d. Quantifiable approach

19. A _ is not the real product but just a real looking mock-up of what would be eventually delivered.
a. Software
b. Program
c. Prototype(page 68)
d. Test Case

20. The best way to conduct a requirements validation review is to
a. examine the system model for errors
b. have the customer look over the requirements
c. send them to the design team and see if they have any concerns
d. use a checklist of questions to examine each requirement

21. More powerful hardware resulted into the development of _ powerful and _ software.
a. less, complex
b. more, complex page 4
c. more, simple

d. less, simple

22._ _ pointed out the elegant conceptual integrity exhibited by layered organization of software systems, with the resulting gains in development and maintenance ease.
a. David Parnas
b. Shaw and Garlan
c. Barry Boehm
d. EdsgerDijkstra page 115

23. The architecture components for product engineering are
a. data, hardware, software, people
b. data, documentation, hardware, software
c. data, hardware, software, procedures
d. documentation, hardware, people, procedures

24. In Object oriented design, combining the services offered by an object with the attributes they work on, results in:
a) Lower coupling and stronger cohesion
b) Lower cohesion and stronger coupling
c) Increased likelihood of reuse
d) Decreases the modularity of the system
a. a only
b. band c
c. a and c
d. b and d

25. Architectural design process involves performing a number of activities which includes system structuring, control modeling and _ __.
a. System Analysis
b. Modular Decomposition page 120
c. Testing
d. Graphical User Interface

26. In use case diagram, the scope of the system is defined by:
a. Actor
b. Entity
c. System Boundary
d. "Extends" relationship

27. Specialization means
a. Calling the same method with object of child object
b. Hiding the data
c. Creating new subclasses from an existing class page 34 , 86
d. Abstraction

28. Which of the following sentence is true regarding user interface design?
a. GUI interfaces are good for all tasks which a user needs to perform at an interface.
b. The higher the response time, the better is the interface
c. The simpler the interface, the efficient is the system

0304 1659294

d. Command-line interfaces are faster for some tasks which the user needs to perform

29. In the architecture trade-off analysis method the architectural style should be described using the
    a. data Flow view and process view
    b. data Flow view and module view
    c. module view and process view
    d. data Flow view, module view and process view page 136
30. In Data Flow Diagram, the entity or system, outside the boundary of this system is called
    a. Process
    b. Data Flow
    c. External Agent
    d. Data Store
31. A cohesive Class is one which emphasizes on _ unit of functionality
    a. Single
    b. Multiple page 76
    c. Static
    d. Both Single and Multiple
32. The goal of _ is to translate the customer's desire for a set of defined capabilities into a working product.
    a. Electrical Engineering
    b. Product Engineering
    c. Hardware Engineering
    d. Mechanical Engineering
33. In Object Oriented Design. _ layer contains the details that enable each object to communicate with its collaborators
    a. Subsystem
    b. Responsibility
    c. Message page 89
    d. Object
34. A DFD is normally leveled (adding more levels of abstraction) as
    a. it is a good idea in design
    b. it is recommended by many experts
    c. it is easy to do it
    d. it is easier to read and understand a number of smaller DFDs than one large DFD
35. As per Peter Coad's methodology, which of the following may NOT be a perfect candidate for being an object?
    a. Zone
    b. Recipient
    c. Garage
    d. Password page 93 94

36. Which of the given component of software engineering framework provides different techniques that can be used to perform a particular task?
    a. Processes
    b. Tools
    c. Methods page 12
    d. Quality Focus
37. To determine the architectural style or combination of styles that best fits the Proposed system requirements engineering is used to uncover
    a. algorithmic complexity
    b. characteristics and constraints page 126
    c. control and data
    d. design patterns
38. In _ _relationship, a class shares the structure and behavior defined in another class.
    a. Aggregation
    b. Composition
    c. Inheritance page 86
    d. Uses
39. Prototyping is used when there is regarding requirements.
    a. Uncertainty(page 68)
    b. Confirmation
    c. Conflict
    d. Consensus
40. The process of utilizing our knowledge of computer science in effective production of software systems is called
    a. Chemical Engineering
    b. Electrical Engineering
    c. Computer Engineering
    d. Software Engineering page 2
41. In Abbot's Textual Analysis technique, different parts of speech are identified within the text of the specification and these parts are modeled using different_
    a. Event
    b. Process
    c. Operations
    d. Components page 90
42. To help separate an object's external behavior from its implementation, the technique used is called_
    a. Generalization
    b. Association
    c. Composition
    d. Abstraction page 86

0304 1659294

43. A Process in Data Flow Diagram (DFD) represents
    a. Flow of data
    b. Transformation of data (page 49)
    c. Storage of data
    d. An external agent
44. In data flow diagram (DFD). Create, Update, Delete and Read operations are normally called:
    a. CRUD operations page 53
    b. DURC operations
    c. RUDC operations
    d. CDUR operation
45. Collaboration diagram can show_
    a) Binary messages
    b) Asynchronous messages
    c) Synchronous messages
    a. a only
    b. b only
    c. c only
    d. both b and c page 111
46. Data cannot flow from one external entity to other external entity because
    a. It will get corrupted
    b. It is not allowed in DFD page 59
    c. An external entity has no mechanism to read or write
    d. Both are outside the context of the system
47. In_ Phase of software development, Requirement Engineer focuses on realizing the Business Object of an under developed product.
    a. Maintenance
    b. Development page 16
    c. Definition
    d. Vision
48. Which of the following is not part of software architecture?
    a. Databases
    b. data design
    c. program structure
    d. algorithm details
49. Selecting objects in a domain) include:
    a. Actors. Participants and Places
    b. Only Participants
    c. Only Actors
    d. Only Actors and Places
50. Defining the services of an object means:
    a. What it does? Page 96
    b. What it knows?

0304 1659294

c. Who knows it?
d. Whom it knows?

51. In sequence diagram, the solid lines depict:
    a. Objects (or classes)
    b. Messages being sent from one object to the other page 107
    c. Life-time of an object
    d. state of the object
52. Sequence diagrams:
    a. Provide the static behavior
    b. Provide Data Flow
    c. Provide a time-based view 106
    d. Provide parallel data flow
53. _ requirements cause frequent modifications in user interface
    a. Functional
    b. Non-functional
    c. Unstable page 62
    d. User
54., security and maintainability are the types of _ requirements.
    a. Non-functional page 120
    b. Domain
    c. Functional
    d. Business
55. A change becomes _ because of close presence of data and functions
    a. Accessible
    b. Global
    c. Private
    d. Localized page 81
56. System _ are built to allow the system engineer to evaluate the system components in relationship to one another.
    a. Requirements
    b. Documents
    c. Models page 42
    d. Test cases
57. In _ phase of software development, requirement analyst focuses on possible design of the proposed solution.
    a. Maintenance
    b. Development (page 16)
    c. Definition
    d. Vision
58. The focus of sequence diagrams is:
    a. On objects/classes and messages exchanged among them (page 106)
    b. On static Model of system
    c. On object constraints
    d. On the flow of Control

0304-1659294

59. In Data Flow Diagram (DFD), data flow can:
    a. Only originate from an external entity
    b. Only terminate in an external entity
    c. Originate and terminate in an external entity
    d. Either originate or terminate in an externalentity but not both

60. In _ the analyst determines all the sources of requirements and where do theserequirements consume
    a. Data Flow Analysis
    b. Source and Sink Analysis (page 40)
    c. Down Parsing
    d. Up Parsing

61. In a top-down system analysis, a/an _ required to develop high level view of thesystem at first.
    a. Analyst page 54
    b. Designer
    c. Tester
    d. Developer

62. The Use case diagram shows that which _ interact with each use case.
    a. Use case
    b. Actor page 32
    c. Component
    d. Relation

63. The context diagram is used as the top levelabstraction in a _ developed according toprinciples of structured analysis.
    a. Dataflow diagram (page 31)
    b. Activity Diagram
    c. State Transition Diagram
    d. Use Case Diagram

64. Different messages in sequence diagrams includes:
    a. Simple
    b. Asynchronous
    c. Notify
    d. Both Simple and Asynchronous page 108

65. A software requirement document describes all the _ provided by the system along with the constraints under which it must operate.
    a. Conditions
    b. Services page 23
    c. Events
    d. Processes

66. In case of a _ message, the called routine that handles the message iscompleted before the caller resumes execution.
    a) Synchronous
    b) Asynchronous
    c) Bidirectional
    a. a only page 108

0304 1659294

b. b only
c. c only
d. both b and c

67. In object oriented design, _ layer contains the data structures and algorithmic design for all attributes and operations for each object.
    a. Subsystem
    b. Class and Object
    c. Message
    d. Responsibility page 89

68. Asynchronous messages:
    a. are implemented as operation call
    b. These block caller before response
    c. occurs in multi-threaded applications (page 109)
    d. are shown by dotted line

69. In UML based object oriented model of a system, a composition relation between two objects is shown by a _ sign on the whole side of a relation line.
    a. An unfilled diamond
    b. A filled diamond
    c. A half diamond
    d. A dot

70. In UML based Object Oriented Model of a system, the diamond sign is used to depict _ relations between two objects/classes.
    a. Aggregation and Association
    b. Inheritance and Association
    c. Composition and Aggregation
    d. Composition, Aggregation and Association

71. A "register" in "Point of sale system" is an example of:
    a. Actor
    b. Participant
    c. Tangible thing page 100
    d. Transaction

72. A use case represents
    a. A class, it attributes and operation
    b. An operation's inter faces and signature
    c. The role a user plays when interaction with the system page 32
    d. The system's functionality for a particular purpose

73. In the case of _ approach, data is decomposed according to functionality requirements.
    a. Object-oriented
    b. Action-oriented page 80
    c. Event-oriented
    d. Process-oriented

74. To construct a system model the engineer should consider one of the following restraining factors?
    a. Assumptions and constraints
    b. Budget and expenses
    c. Data object and operation

d. Schedule and milestone

75. When two components of a system are using the same global data area, they are related as
    a. Data coupling
    b. Content coupling
    c. Common coupling google
    d. External coupling
76. _ Structure represents the internal organization of the various data and control items.
    a. Data
    b. Value
    c. Information
    d. Conceptual
77. The method of dividing and assigning different portions of a large system to different groups for construction is called _
    a. Work Breakdown Structure (page 119)
    b. Working Boundary Structure
    c. Work Basic Structure
    d. Work Breakdown System
78. "A car is made up of a body, three or four wheels, a steering mechanism. a breaking mechanism and a power-engine"
    The above statement is example of :
    a. Whole-Part relationship page 95
    b. Inheritance
    c. Specialization
    d. Generalization
79. In software engineering paradigm, any engineering approach must be founded on organizational commitment to .
    a. Cost
    b. Scheduling
    c. Quality (page 15)
    d. Performance
80. _ is a technique that can be used to reduce customer dissatisfaction at requirement stage.
    a. Analysis
    b. Negotiation
    c. Prototyping (page 71)
    d. GUI
81. Which of the following activities are included in the design process of a software architecture _?
    a. System Development and Deployment
    b. Architectural Analysis and Testing
    c. Requirement Specifications of the system
    d. System Structuring and Modular Decomposition

0304 1659294

82. In UML based Object Oriented model of a system, the association relation between two objects is depicted by .
    a. A straight line
    b. A filled diamond sign on the whole side of the line
    c. An unfilled diamond sign on the whole side of the line
    d. Any arrowhead sign on one side of the line

83. _ are kind of umbrella activities that are used to smoothly and successfully perform the construction activities
    a. Designee activities
    b. Management activities (page 14)
    c. Testing activities
    d. Maintenance activities

84. Software Design discusses _ aspect of software development
    a. What
    b. How
    c. Who
    d. When

85. Include and extend relationship is used in UML notation of a/an .
    a. Activity Diagram
    b. Data Flow Diagram
    c. Entity Relationship Diagram
    d. Use Case Model

86. External Entity may be
    a. source of input data only
    b. source of input data or destination of results
    c. destination of results only
    d. repository of data

87. An object model of a system captures the_ structure of a system.
    a. Static page 93
    b. dynamic
    c. iterative
    d. Hierarchical

88. The criteria used to assess the quality of an architectural design should be based on system
    a. accessibility and reliability
    b. data and control
    c. functionality
    d. implementation details

89. In case of _ approach, decomposition of a problem revolves around data
    a. Object-oriented
    b. Action-oriented page 80
    c. Event-oriented

d. Process-oriented

90. How can we implement generalization in Object Oriented programming languages?
    a. Polymorphism
    b. Encapsulation
    c. Abstraction
    d. Inheritance

91. Which of the following is NOT among one of the four layers of the Object Oriented (OO) design pyramid
    a. The subsystem layer
    b. The class and object layer
    c. The Abstract layer page 89
    d. The message layer

92. _____ is a technique in which we construct a model of an entity based upon its essential characteristics and ignore the inessential details.
    a. Inheritance
    b. Polymorphism
    c. Aggregation
    d. Abstraction page 79

93. The project manager would need _____ document to monitor and track the progress of the project.
    a. Design
    b. Project
    c. Requirement page 18
    d. Planning

94. In the case of action-oriented approach data is decomposed according to:
    a. Object requirements
    b. Functionality requirements
    c. Corresponding domain model
    d. Compatibility with object interface

95. An architectural style encompasses which of the following elements?
    a. Constraints, Set of Components and Semantic Models page 126
    b. Set of Components and Semantic Models
    c. Semantic Models and Constraints
    d. Set of Components and Constraints

96. In order to determine the role and responsibilities of the identified objects, we need to consider which of the following step(s):
        a) Who I am?
        b) What I know?
        c) Who I know?
        d) What I do?
    a. a only
    b. a and b
    c. b, cand d page 102
    d. cand d

97. In sequence diagram, the boxes denote:
    a. Objects (or classes) page 106
    b. Messages, sent from one object to other
    c. Life-time of Objects
    d. Relationships

98. _____ is a system component that provides services to other components but would not normally be considered as a separate system.
    a. Method
    b. Module page 121
    c. Message
    d. Relationship

99. A tangible entity in the real life is called _____.
    a. Functions
    b. Object page 85
    c. Class
    d. Sub-Class

100. Sequence of messages can be present in:
    a) Use case diagram
    b) Sequence diagram
    c) Collaboration diagram

    a. a only
    b. b only
    c. c only
    d. b and c

101. The system model template contains which of the following elements
    a. Input
    b. Output
    c. System Out
    d. Input/Output

102. Identify the TRUE statement:
    a. Normally Object Oriented design is more maintainable than functional oriented.
    b. Software with Functional oriented design does not fulfill non functional requirements.
    c. Object Oriented design cannot implement "Separation of concerns" strategy
    d. Function Oriented design does not lead to an efficient product

103. An external entity that interacts with a system is called a(n):
    a. Use case
    b. Actor
    c. Stakeholder
    d. Association

104. By levelling a DFD (adding more levels of abstraction) we mean
    a. Splitting it into different levels
    b. Make its structure uniform

c. Expanding a process into one with more sub-processes giving more detail
d. Summarizing a DFD to specify only the essentials

105. Software Engineering is the combination of tools, techniques and .
   a. Testing
   b. Processes page 6
   c. Maintenance
   d. Design

106. _ _ is concerned with decomposing a system into interacting sub-systems.
   a. System Structuring
   b. Control Modeling
   c. Modular Decomposition page 121
   d. Work Breakdown Structure

107. There are _ most important characteristics of an object.
   a. Six
   b. Four
   c. Two
   d. Three

108. "System should maintain transaction log of every transaction"
The above statement is an example of
   a. Functional requirement
   b. Non-functional requirement
   c. Pseudo requirement
   d. Both Non-functional and Pseudo requirements

109. In object oriented approach, _ are the people and organizations that take part in the system under consideration.
   a. Actors
   b. Places
   c. Participants
   d. Tangible things

110. The modules that interact with each other through message passing have _ .
   a. Low coupling page 73
   b. High coupling
   c. Low cohesion
   d. High cohesion

111. Identifying Whole-part structures (Aggregations) means what are my
   a. Components page 94
   b. Attributes
   c. Methods
   d. Messages

112. In "point of sale system " the term payment represents
   a. Actor
   b. Participant

c. Transaction (page 99)
d. Container

113. Return values in synchronous messages are:
   a. Compulsory
   b. May not used when response is obvious (page 109)
   c. Not used at all
   d. Represented by solid lines
114. GUI stand for
   a. Generic user interface
   b. Graphic user interface
   c. Generic user interaction
   d. Graphical user interaction
115. Which of the following is not the object model principle?
   a. Abstraction
   b. Encapsulation
   c. Hierarchy or inheritance
   d. Exposure page 86
116. The system specification describes the
   a. function and behavior of a computer-based system
   b. implementation of each allocated system element
   c. algorithmic detail and data structures
   d. time required for system simulation
117. The _ provides the software engineer with a viewof the system as a whole.
   a. Process Model
   b. Architectural Model
   c. Business model
   d. Requirements Model
118. Requirement engineering focuses on _ aspect of the software development process.
   a. Both what and how
   b. What
   c. How
   d. why and how
119. An arrow in Data Flow Diagram (DFD) represents
   a. Direction of flow of data
   b. Processing of data
   c. External agent
   d. Internal agent
120. The _ relationship is kind of a generalization specialization relationship.
   a. Bit-Byte
   b. Uses
   c. Binary
   d. Extends

121. In the case of _ _ in a system, module boundaries are not well defined.
   a. low cohesion
   b. high coupling
   c. low coupling
   d. high cohesion

122. _ Component of software engineering framework provides automated or semi-automated support in a software development.
   a. Processes
   b. Methods
   c. Quality Focus
   d. Tools

123. In Data Flow Diagram (DFD), one data store cannot directly copy the data from another .
   a. Agent
   b. Process
   c. Data store
   d. Flow

124. All the documents related to the software are alsoconsidered as partof the _ .
   a. Physical Document
   b. Logical Document
   c. Relational Database
   d. Software

125. Which elements of business processing engineering are the responsibilities of the software engineer?
   a. business area analysis
   b. business system design
   c. product planning
   d. information strategy planning

126. A class will be cohesive if:
   a. Class does not implement Complex interfaces
   b. Class does not have complex methods
   c. If most of the methods do not use most of the data members most of the time
   d. If most of the methods use most of the data members most of the time

127. A context diagram is used
   a. As the first step in developing a detailed DFD of a system
   b. In systems analysis of very complex systems
   c. As an aid to system design
   d. As an aid to programmers

128. _ d. Association
   a. Aggregation
   b. Abstraction
   c. Inheritance

_ is an extremely powerful technique for dealing with complexity.

129. In multiprocessing applications, different execution threads may pass information to one another by sending _ to each other.
   a. Interrupt calls
   b. Synchronous messages
   c. Asynchronous messages
   d. System calls

130. Normally a system is more easy to modify if its modules have
   a. High coupling and high cohesion
   b. High coupling and low cohesion
   c. Low coupling and high cohesion
   d. Low coupling and Low cohesion

131. UML is a language for
   a. High-level Programming
   b. Low-level Programming
   c. Modeling and Design
   d. Creating diagrams only

132. _ is not the part of Peter Coad methodology
   a. Select actors
   b. Select participants
   c. Select places
   d. Select actions

133. Which of the following is the external quality of software product?
   a. Correctness
   b. Concision
   c. cohesion
   d. Low coupling

134. While establishing the services for an object, the goal is to keep data and action together for _ coupling and _ cohesion
   a. Lower, Higher
   b. Higher, Lower
   c. Lower, Lower
   d. Higher, Higher

135. A necessary supplement to transform or transaction mapping needed to create a complete architectural design is
   a. entity relationship diagrams
   b. the data dictionary
   c. processing narratives for each module
   d. test cases for each module

136. Construction activities are directly related to software .
   a. Management
   b. Planning
   c. Quality Assurance
   d. Development

137. OOD results in a design that achieves a number of different levels of _ .
a. Operation
b. Event page 89
c. Modularity
d. Process

138. At which stage of software development loop, results are delivered?
a. Problem definition
b. Solution integration
c. Technical development
d. Status quo

139. _ Requirements are often called product features.
a. Functional
b. Non-functional
c. Developer
d. User

140. Strong cohesion implies that
a. All parts of component have a class logical relationship with each other
b. All part of component do not have a close logical relationship with each other
c. Component is dynamic in nature
d. Component is static in nature

141. _ Diagram does not capture control flow information; it just shows the flow of the data in a system.
a. Sequence
b. Data Flow
c. Activity
d. Class

142. A life line represents the object's life during the interaction in a sequence diagram while its notation is depicted by _
a. Solid Lines
b. Dotted Lines
c. Full Arrow
d. Curved Lines

143. An attribute that varies over time, e.g. price of an item, should be replaced by a/an _ _ with an effective date and value
a. Additional Class
b. Additional Method/Function
c. Interface
d. Structure

144. Which of the given component of software engineering framework demands rational and Timely development of a software?
a. Tools
b. Methods
c. Quality Focus

d. Processes

145. A context diagram
   a. describes detailed design of a system
   b. is a DFD which gives an overview of the system
   c. is a detailed description of a system
   d. is not used in drawing a detailed DFD

146. Which one is not a part of Software Development phase?
   a. Construction
   b. Scope
   c. Project Vision
   d. Definition

My Point of View

147. Software architecture must address _ requirement of a software system
   a. Functional
   b. Non Functional
   c. User interface Requirements
   d. Both Functional and Non Functional

148. If Cat is derived from Mammal Class, and Mammal is derived from Animal Class, then:
   a. Cat will inherit Animal's functions and data
   b. Cat will not inherit Animal's functions and data
   c. Cat will not be able to access any class
   d. Cat is allowed to access only the Mammal's Class

149. Which of the following is not supported by a maintainable design?
   a. Change
   b. debugging
   c. Adding new features
   d. Higher maintenance cost

150. The condition that must be met before the use case can be invoked, is called:
   a. Pre-Condition
   b. Post-Condition
   c. Pre-Assertion
   d. Post-Assertion

Short Question

2+3 Marks

Question No 1

What is software?

Answer

When we write a program for computer we named it as software. But software is not just aprogram; many things other than the program are also included in software.

Question No 2

Adding user interface detail in the SRS is controversial a creative process i.e by adding GUI detail to the SRS document, focus e shift from what to how (analysis design) do you agree ?

Answer

Yes I am agree because Client appreciates more the contents of the SRS document if our SRS document contains the GUI details than if we don't have them there.

Question No 3

How many items in software? Write name

Answer

- Program
- Data
- Documentation

Question No 4

Define data flow diagram

Answer

A data flow diagram (DFD) is a graphical representation of the "flow" of data through an information system, modeling its process aspects. Often they are a preliminary step used to create an overview of the system which can later be elaborated.

Learning With A&I

Question No 5

What is Engineering?

Answer

The process of productive use of scientific knowledge is called engineering.

Question No 6

Define cohesion?

Answer

Cohesion is an internal property of a module. Cohesion describes the intra-component linkages while couple shows the inter-component linkages. Cohesion measures the independence of a module.

Question No 7

Difference between Software and Other Systems. (marks 3)

Answer

If the software has a bug and that bug was present in the older CD then that will remain in the new one. This is a fundamental difference between software and other systems

Question No 8

Keeping connie's case study in mind, as discussed in lecture, list down whole parts structures which were identified.

Answer

Identify Whole-Part Structures

A store as a whole is made up of cashiers, registers, and items.

A register contains a cash drawer.

A sale is constituted of sale line items.

Learning With A&I

Question No 9

What is elaborated Use case? Explain it

Answer

After the derivation of the use case model, each use is elaborated by adding detail of interaction between the user and the software system. An elaborated use case has the following components:

Use Case Name, actors, summary, precondition, post-condition, extend, uses, normal course of events, alternative path, exception, assumption.

Question No 10

How many software Engineering phase? And write the name.

Answer

There are four basic phase of S.E

1.Vision

2.Definition

3.Development

4.Maintenance

Question No 11

Define Motivation of GUI?

Answer

Motivation for GUI

- System users often judge a system by its interface rather than its functionality
- A poorly designed interface can cause a user to make catastrophic errors
- Poor user interface design is the reason why so many software systems are never used

Learning With A&I

Question No 12

Define abstraction?

Answer

An abstraction is a technique in which we construct a model of an entity based upon its essential characteristics and ignore the inessential details.

Question No 13

Is the design of software architecture a creative process?

Answer

Design of software architecture is a creative and iterative process. This involves performing a number of activities, not necessarily in any particular order or sequence.

Question No 14

What is Ambiguity?

Answer

Ambiguity means that two different readers of the same document interpret theruirement differently.

Question No 15

Suppose you are working as a software engineer involved in the development of an e-commerce website. What are the 2 most important characteristics your software must have?

Answer

Two most important characteristics are that software should be reliable and useable.

Learning With A&I

Question No 16

Differentiate between architectural design and system architecture in a single line?

Answer

Architecture faces towards strategy, structure and purpose, towards the abstract while Design faces towards implementation and practice, towards the concrete.

Question No 17

Write the name of Delete Information use case?

Answer

There are two existing use cases

1.Record Transaction

2.Cancel Transaction

Question No 18

Define Asynchronous Messages

Answer

Asynchronous Messages

Asynchronous messages are “signals,” denoted by a half arrow. They do not block the caller. Asynchronous messages typically perform the following actions:

- Create a new thread
- Create a new object

Communicate with a thread that is already running

Learning With A&I

Question No 19

Define Synchronous Messages?

Answer

Synchronous Messages

Synchronous messages are “call events” and are denoted by the full arrow. They represent nested flow of control which is typically implemented as an operation call. In case of a synchronous message, the caller waits for the called routine to complete its operation before moving forward.

Question No 20

UML stands for…..?

Answer

Unified Modeling Language

Question No 21

HOW DO YOU DETERMINE THAT AN OBJECTIVE BELONGS TO CERTAIN CLASS?

Answer

The basic unit of object oriented design is an object. An object can be defined as a tangible entity that exhibits some well defined behavior. The structure and behavior of similar objects are defined in their common class. A class specifies an interface and defines an implementation.

Question No 22

Define cohesion?

Answer

Cohesion is an internal property of a module. Cohesion describes the intra-component linkages while couple shows the inter-component linkages. Cohesion measures the independence of a module

Learning With A&I

Question No 23

What is meant by "System's Static View"?

Answer

Static view of semantic classes

Requirements are assessed and classes are extracted (and represented) as part of the analysis model.

Static view of attributes

Every class must be explicitly described. The attributes associated with the class provide a description of the class.

Static view of relationships

Objects are "connected" to one another in a variety of ways. The analysis model must represent these.

Static view of behaviors

The relationships just noted define a set of behaviors that accommodate the usage scenario (use-cases) of the system

Question No 24

Define abstraction?

Answer

An abstraction is a technique in which we construct a model of an entity based upon

Question No 25

What is Common Mistakes in Data Flow Diagrams? (marks 2)

Answer

- There is no input for the process Freeze Member Account
- In a similar manner, the process Create a New Member Account does not produce any output.

Learning With A&I

Question No 26

What is STD?

Answer

STD stands for State transition diagrams. This is another technique to document domain knowledge. This is an easy technique to design a Application application.

Question No 27

What is behavior driven perceptive of an objective?

Answer

Behavior is how an object acts and reacts in terms of its state changes and message passing. The behavior of an object is completely defined by its actions. A message is some action that one object performs upon another in order to elicit a reaction. The operations that clients may perform upon an object are called methods.

Question No 28

What is Textual Analysis? Explain it

Answer

Textual analysis was developed by Abbot and then extended by Graham and others. In this technique different parts of speech are identified within the text of the specification and these parts are modeled using different components.

Question No 29

What is Software Architecture?

Answer

Architecture is the organizational structure of a system. Architecture can be recursively decomposed into parts that interact through interfaces, relationships that connect parts, and constraints for assembling parts. Parts that interact through interfaces include classes, components and subsystems.

Learning With A&I

Question No 30

Define life line of objects ?

Answer

The boxes denote objects (or classes), the solid lines depict messages being sent from one object to the other in the direction of the arrow, and the dotted lines are called life-lines of objects..

Question No 31

Define Attributes ?

Answer

The first two activities would identify most of the objects (classes) in the problem domain. Now is the time to think about the role and responsibilities of these objects. The first thing to consider is their attributes,

Question No 32

How many types of Identify Structures?

Answer

There are two type of structures

Generalization-Specialization (Gen-Spec) and whole-part.

Question No 33

Define problem statement?

Answer

A simple cash register has a display, an electronic wire with a plug, and a numeric keypad, which has keys for subtotal, tax, and total. This cash storage device has a total key, which triggers the release on the drawer.

Learning With A&I

Question No 34

What is Textual Analysis? Explain it

Answer

Textual analysis was developed by Abbot and then extended by Graham and others. In this technique different parts of speech are identified within the text of the specification and these parts are modeled using different components.

Question No 35

What is the purpose of collaboration diagrams?

Answer

Collaboration diagrams can also be used to depict the dynamic behavior of a system. They show how objects interact with respect to organizational units (boundaries!). Collaboration diagrams can also show synchronous, Asynchronous, create, and destroy message using the same notation as used in sequence diagrams.

Question No 36

Differentiate between architectural design and system architecture in a single line?

Answer

Architecture faces towards strategy, structure and purpose, towards the abstract while Design faces towards implementation and practice, towards the concrete.

Question No 37

What is the difference between Aggregation and Association?

Answer

As compared to association, aggregation implies a tighter coupling between the two objects which are involved in this relationship. Therefore, one way to differentiate between aggregation and association is that if the two objects are tightly coupled, that is, if they cannot exist independently, it is an aggregation, and if they are usually considered as independent, it is an association.

Learning With A&I

Question No 38

It is fact that good design makes maintenance easier. Which design principle help this to be achieved?

Answer

A good design from one angle may not seem to be suitable when looked from a different perspective. For example, a design that yields efficient and compact code may not be very easy to maintain. In order to establish whether a particular design is good or not, we therefore have to look at the project and application requirements.

Question No 39

What are architectural designs Process, explain briefly?

Answer

System structuring

System structuring is concerned with decomposing the system into interacting sub-systems. The system is decomposed into several principal sub-systems and communications between these sub-systems are identified.

Control modeling

Control modeling establishes a model of the control relationships between the different parts of the system.

Modular decomposition

During this activity, the identified sub-systems are decomposed into modules. This design process is further elaborated in the following section where architectural views are discussed.

Question No 40

Keeping in mind the Connie's case study, what rule of thumbs was identified, list them down.

Answer

Who I Know – Rules of Thumb

- An actor knows about its participants person knows about cashier
- A transaction knows about its participants a session knows about its register and cashier
- A transaction contains its transaction line items sale contains its sales line items
-

Learning With A&I

- A transaction knows its sub transactions session knows about its sales sale knows about its payments
- A place knows about its transactions store knows about its sessions
- A place knows about its descriptive objects store knows about its tax categories
- A container knows about its contents a store knows about its cashiers, items, and registers

Question No 41

The CPU of a computer consists of an ALU and a CU. Intel and AMD are two types of CPUs, which are widely used in computers. Users of computers can be either novices or experts.

Consider the following classes.

(i) CPU and AMD
(ii) User and Computer
(iii) CPU and ALU

Answer

CPU and AMD

There is relationship between CPU and AMD is “A kind of” type as AMD is a kind of CPU.

User and Computer

The relationship between User and Computer is “simple Association” type as there is weak relationship between user and computer.

CPU and ALU

Relationship between CPU and ALU is “composition” type as ALU is a part of CPU.

Question No 42

How can we decrease Coupling explain it?

Answer

That is, we can reduce the coupling of a system by minimizing the number of messages in the protocol of a class.

Learning With A&I

Question No 43

Define data flow diagram?

Answer

A data flow diagram (DFD) is a graphical representation of the "flow" of data through an information system, Modeling its process aspects. Often they are a preliminary step used to create an overview of the system which can later be elaborated.

Long Questions

Learning With A&I

Question No 1

What is the Cardinality of Objective?

Answer

Cardinality. The data model must be capable of representing the number of occurrences Objects in a given relationship. Tillmann [TIL93] defines the cardinality of an object/relationship pair in the following manner:

- One-to-one (l:l)—An occurrence of [object] 'A' can relate to one and only one occurrence of [object] 'B,' and an occurrence of 'B' can relate to only one occurrence of 'A.'
- One-to-many (I:N)—One occurrence of [object] 'A' can relate to one or many occurrences of [object] 'B,' but an occurrence of 'B' can relate to only one occurrence of 'A.' For example, a mother can have many children, but a child can have only one mother.
- Many-to-many (M:N)—An occurrence of [object] 'A' can relate to one or more occurrences of 'B,' while an occurrence of 'B' can relate to one or more occurrences of 'A.' For example, an uncle can have maany nephews, while a nephew can have many uncles.

Question No 2

What parameters are used to measure and analyze design quality?

Answer

A software design can be looked at from different angles and different parameters can be used to measure and analyze its quality. These parameters include efficiency, compactness, reusability, and maintainability. A good design from one angle may not seem to be suitable when looked from a different perspective. For example, a design that yields efficient and compact code may not be very easy to maintain. In order to establish whether a particular design is good or not, we therefore have to look at the project and application requirements.

Question No 3

Discuss some of the purpose of interacting diagram?

Answer

The purposes of interaction diagrams are to visualize the interactive behaviour of the system. Now visualizing interaction is a difficult task. So the solution is to use different types of models to capture the different aspects of the interaction.

That is why sequence and collaboration diagrams are used to capture dynamic nature but from a different angle.

So the purposes of interaction diagram can be describes as:

To capture dynamic behaviour of a system.

To describe the message flow in the system.

To describe structural organization of the objects.

To describe interaction among objects.

Question No 4

What should be consideration for maintain design?

Answer

In order to make a design that is maintainable, it should be understandable and the changes should be local in effect. That is, it should be such that a change in some part of the system should not affect other parts of the system. This is achieved by applying the principles of

Learning With A&I

modularity, abstraction, and separation of concern. If applied properly, these principles yield a design that is said to be more cohesive and loosely coupled and thus is easy to maintain.

Question No 5

To manage the complexity of the system we need to apply the principle of abstraction. Discuss briefly?

Answer

An abstraction is a technique in which we construct a model of an entity based upon its essential characteristics and ignore the inessential details. The principle of abstraction also helps us in handling the inherent complexity of a system by allowing us to look at its important external characteristic, at the same time, hiding its inner complexity. Hiding the internal details is called encapsulation.

Question No 6

Discuss the relationship between sequence diagram and logical complexity?

Answer

It is important to understand that the diagrams are meant to make things clear. Therefore, in order to keep them simple, special attentions should be paid to the conditional logic. If it is simple then there is no harm in adding it to the diagram. On the other hand if the logic is complex then we should draw separate diagrams like flow charts.

Question No 7

What is action-oriented approach for Software Design?

Answer

In the case of action-oriented approach, data is decomposed according to functionality requirements. That is, decomposition revolves around function. In the OO approach, decomposition of a problem revolves around data. Action-oriented paradigm focuses only on the functionality of a system and typically ignores the data until it is required. Object- oriented paradigm focuses both on the functionality and the data at the same time. The basic difference between these two is decentralized control mechanism versus centralized control mechanism respectively. Decentralization gives OO the ability to handle essential complexity better than action-oriented approach.

Learning With A&I

Question No 8

Collaboration Diagrams depict Dynamic behavior of the system, explain it.

Answer

Collaboration diagrams

Collaboration diagrams can also be used to depict the dynamic behavior of a system. They show how objects interact with respect to organizational units (boundaries!).

Since a boundary shapes communication between system and outside world e.g. user interface or other system, collaboration diagrams can be used to show this aspect of the system. The sequence of messages determined by numbering such as 1, 2, 3, 4, This shows which operation calls which other operation.

Question No 9

What is the importance of Classification in identifying Classes and objects?

Answer

Consider a large university library. Tens of thousands of books, periodicals, and other information resources are available for use. But to access these resources, a categorization scheme must be developed. To navigate this large volume of information, librarians have defined a classification scheme that includes a Library of Congress classification code, keywords, author names, and other index entries. All enable the user to find the needed resource quickly and easily.

Question No 10

Narrate some of the architectural design guidelines that can help in addressing non-functional requirements challenges.

Answer

Software architecture must address the non-functional as well as the functional requirements of the software system. Following are some of the architectural design.

Performance –Performance can be enhanced by localizing operations to minimize sub-system communication.

Learning With A&I

That is, try to have self-contained modules as much as possible so that inter-module communication is minimized.

Security –Security can be improved by using a layered architecture with critical assets put in inner layers. Safety –Safety-critical components should be isolated

Availability –Availability can be ensured by building redundancy in the system and having redundant components in the architecture.

Maintainability–Maintainability is directly related with simplicity. Therefore, maintainability can be increased by using fine-grain, self-contained components.

Question No 11

Comparison of software architecture and Building architecture

Answer

When building a house, the architect, the general contractor, the electrician, the plumber, the interior designer, and the landscaper all have different views of the structure. Although these views are pictured differently, all are inherently related: together, they describe the building's architecture. The same is true with software architecture. Architectural design basically establishes the overall structure of a software system.

Question No 12

Difference between computer science and software engineering?

Answer

When we use physics in making machines like engines or cars then it is called mechanical engineering. And when we apply the knowledge of physics in developing electronic devices then the process is called electrical engineering. The relation of computer science with software engineering is similar as the relation of physics with the electrical, mechanical or civil engineering or for that matter the relation of any basic science with any engineering field. So, This is the process of utilizing our knowledge of computer science in effective production of software systems.
