

SPORT PSYCHOLOGY (PSY 407)

Which of the following statement is TRUE about cohesion?

- A. Cohesion is based on group tasks
- B. Cohesion is multidimensional**
- C. Cohesion is stable
- D. Cohesion exists in all groups

Characteristics that differentiate a group from a collection of individuals:

- A. Rarely absent, individuals have own perspectives
- B. Refer to themselves as "we", primarily interested in individual accomplishments**
- C. Concerned with activities of others, do not see each other as rivals
- D. Avoid talking freely in order to be supportive, try to assist associates

All of the following are qualities of effective leadership EXCEPT:

- A. Generosity
- B. Respect
- C. Trust
- D. Sense of superiority**

Which type of exercise is more effective in reducing clinical depression in patients?

- A. Aerobic exercise**
- B. Anaerobic exercise
- C. Acute exercise
- D. Chronic exercise

_____ exercise refers to exercise that is accomplished at an exercise intensity that allows for the intake of sufficient oxygen to maintain continuous exercise.

- A. Resistance
- B. Anaerobic
- C. Continuous
- D. Aerobics**

The basic premise of the _____ hypothesis is that social interaction associated with exercising with friends and colleagues is pleasurable and has the net effect of improving mental health.

- A. Cognitive Behavioral
- B. Social interaction**
- C. Distraction

D. Endorphin

All of the following are exercise behavior theories, EXCEPT:

- A. Social cognitive theories
- B. Theory of reasoned action
- C. Fiedler's contingency theory
- D. Transtheoretical model

Hyper responsiveness to mental stressors is associated with all of the following EXCEPT:

- A. Increase in heart rate
- B. Increase in blood pressure
- C. Increase in plasma catecholamine
- D. Decrease risk of heart disease

All the below are stages in the transtheoretical model of change EXCEPT:

- A. Goal setting
- B. Precontemplation
- C. Contemplation
- D. Maintenance

Ali is so obsessed with working out and his muscularity that if he finds any imperfection in his muscularity, it drives him crazy. Ali is most likely suffering from:

- A. Overtraining
- B. Muscle dysmorphia
- C. Superman complex
- D. Disordered exercise syndrome

Vividly imagined events produce innervations in muscles that are similar to that produced by physically practicing the movement. This is an illustration of _____.

- A. Symbolic learning theory
- B. Psycho neuromuscular theory
- C. Muscular contraction theory
- D. Psychodynamic theory

Which of the following theory states that mental practice and imagery work because the individual literally plans his actions in advance?

- A. Attention and arousal
- B. Psychoneuromuscular
- C. Neodissociation

D. Symbolic learning

In what kind of imagery the athlete imagines himself executing a sport task from within his own body?

- A. External imagery
- B. Cognitive imagery
- C. Internal imagery**
- D. Applied imagery

For a weight lifter what kind of imagery would be most effective?

- A. Visual
- B. Auditory
- C. Kinesthetic**
- D. Olfactory

In Table Tennis what kind of imagery would be less effective?

- A. Visual
- B. Auditory
- C. Kinesthetic
- D. Olfactory**

Which of the following statement is INCOREECT about hypnosis?

- A. Hypnosis is not the same as sleep
- B. Hypnosis can increase the accuracy of memory**
- C. Hypnosis is not a dangerous procedure if applied by a qualified clinician
- D. Hypnosis does not precipitate a literal re-experiencing of childhood events

Which of the following is an example of psychological skill?

- A. Imagery
- B. Progressive relaxation
- C. Meditation
- D. General self-awareness**

Self confidence, attentional control, arousal control and anxiety control are the examples of _____.

- A. Psychological methods
- B. Psychological skills**
- C. Psychological inventories
- D. Psychological problems

Which of the following technique is used when a Psychologist wants to learn about athlete's attitude towards Sport Psychology?

A. Interview

- B. Performance profile
- C. Observation
- D. Psychological inventories

The purging of anger and frustration associated with not being able to accomplish a goal is known as _____.

- A. The frustration effect
- B. Instrumental aggression
- C. The catharsis effect**
- D. Hostile aggression

The basic supposition of _____ is that if subjects perceive that there are no right or wrong responses, they will probably be open and sincere in their responses.

- A. Rating scales
- B. Projective procedures**
- C. Structured questionnaires
- D. Interviews

Fear of getting defeated by a weaker challenger could create a threat to an athlete's ego is called _____.

- A. Fear of performance failure**
- B. Fear of negative social evaluation
- C. Fear of physical harm
- D. Situation ambiguity

Small incremental increases in arousal result in small incremental increases or decreases in performance and moderate arousal results in optimal performance are the basic tenets of _____.

- A. Martens' Multidimensional anxiety theory
- B. Fazy and Hardy's catastrophe theory
- C. Inverted-U theory**
- D. Drive theory

How many traits are measured by the Athletic Motivation Inventory?

- A. Ten
- B. Eleven**

- C. Twelve
- D. Thirteen

Which theory facilitates to explain the associations between learning and arousal, and between performance and arousal?

- A. Inverted-U theory
- B. Jones' directionality theory
- C. Apter's reversal theory
- D. Drive theory**

Fill in the blanks. Each blank carries 1 mark.

The belief that the personality interacts with situation to predict performance is known as The Interactional Model.

Anxiety has two components one is **trait** component and second is **state** component.

The individual zone of optimal functioning (IZOF) was developed by **Yuri Hanin**.

The fundamental assumption of **Directionality** theory an athlete's perception of how intensity affects performance is more important than the intensity itself.

The Profile of Mood States (POMS) is by far the most commonly used instrument for measuring mood states in psychology.

High competence motivation leads to successful task performance. This view is presented by _____.

- Harter**
- Vealey
- Bandura
- Seligman

When females work alone or in situations not involving social comparisons, they are likely to respond with self-confidence levels _____ to those of males.

- Higher
- Lower
- Equal**
- None of the above

When an athlete comes to identify with an extrinsic motivation to the degree that it is perceived as being his own, it is called _____.

External regulation
Introjected regulation
Identified regulation
Integrated regulation

Goals which focus on specific behaviors exhibited throughout a performance, are called _____.

Outcome goals
Performance goals
Process goals
Specific goals

Who introduced the concept of a zone of optimal functioning?

Yuri Hanin
Mihaly Csikszentmihalyi
Landers
Seligman

Fill in the blanks. Each blank carries 1 mark.

The concept of **Self-handicapping** is that individuals proactively reduce the amount of effort.

A **specific** goal is one that focuses exactly on the goal to be achieved.

Reactive behaviors are coach reactions to players or team behavior.

The concept of **attentional focus** includes the ability of an athlete to both narrow and broaden her attention when necessary.

In setting effective goals, one should never use **outcome** goal strategy by itself.

Violation of _____ in setting goals is the most common reason goals are not met.

A. Rules and regulations
B. Discipline
C. SMART principle
D. Team norms

All of the following are reasons young athletes participate in sports EXCEPT:

- A. To improve skills and learn new skills
- B. To have fun
- C. To improve academic performance
- D. To be with friends or make new friends

Aggression and violence among athletes is _____.

- A. Reason of children participation in sport
- B. Benefits of youth sport
- C. Potential negative factor associated with youth sport
- D. Reverse dependency trap

Information in _____ can be continually upgraded, recognized and strengthened.

- A. New information store
- B. Sensory information store
- C. Short-term information store
- D. Long-term information store

Any random thought or event that would tend to break an athlete's concentration could be considered as _____.

- A. Centering
- B. Attentional flexibility
- C. Cognitive interference
- D. Thought stopping

An athlete's necessary attentional focus on the details of executing a skill that is being learned refers to _____.

- A. Controlled processing
- B. Automatic processing
- C. Thought processing
- D. Mechanical processing

According to _____ the individual's unconscious sexual and aggressive instincts are the major determinants of behavior.

- A. Skinner
- B. Maslow
- C. Freud
- D. Cattell

Which of the following theory proposes that human organism possesses an innate drive or tendency to enhance itself to realize capacities and to act to become a better and more self fulfilled person?

- A. Psychodynamic theory
- B. Social learning theory
- C. Humanistic theory**
- D. Trait theory

Which one of the following is NOT a projective test of personality?

- A. Rorschach test
- B. Thematic Apperception Test
- C. Troutwine athletic profile**
- D. House Tree Person Test

Studies suggest that Athletic Motivation Inventory is a poor predictor of psychological strength of _____ player.

- A. Cricket
- B. Ice hockey**
- C. Tennis
- D. Foot ball

The first sport psychology laboratory was established by _____.

- A. Warren Johnson
- B. John Lawther
- C. Arthur Slater-Hammel
- D. Coleman Roberts Griffith**

Sport psychologists study the relation of leadership with sport in _____.

- A. 1950 to 1960
- B. 1960 to 1970
- C. 1970 to 1980**
- D. 1980 to 1990

Which of the following is NOT Bandura's fundamental element in developing self efficacy?

- A. Successful performance
- B. Motivational arousal**
- C. Verbal persuasion
- D. Vicarious experience

At what age, the child can clearly distinguish among the concepts of ability, effort and outcome?

- A. 11 years
- B. 12 years**
- C. 13 years
- D. 14 years

What is the key element in attribution theory?

- A. Thought
- B. Feeling
- C. Performance
- D. Perception**

Weiner classified ability as _____.

- A. Internal and Stable**
- B. Internal and Unstable
- C. External and Stable
- D. External and Unstable

Attributing failure to a _____ suggests to the child that failure is a realistic expectation for the future.

- A. Luck
- B. Stable factor**
- C. External factor
- D. Unstable factor

The process by which an extrinsic motivation has been fully internalized by the individual is referred to as _____.

- A. Identified regulation
- B. Introjected regulation
- C. Integrated regulation**
- D. External regulation

Which of the following goal would be least effective when used in isolation?

- A. Outcome goals**
- B. Performance goals
- C. Process goals
- D. Persistent goals

A goal which you write down, place in a time capsule and open up a year later to see if you have accomplished it. That is called to be _____.

- A. Specific goal
- B. Measurable goal
- C. Observable goal
- D. Effective goal**

When asked athletes about their perception of the home court advantage they indicated that they felt that home court familiarity and crowd support were the _____.

- A. Primary factors**
- B. Secondary factors
- C. Important factors
- D. None of the above

The Group Environment Questionnaire (GEQ) has been sport psychologists' primary inventory of choice over the last _____.

- A. Ten years
- B. Fifteen years**
- C. Twenty years
- D. Twenty five years

3. Successful volleyball teams are characterized by _____ of team cohesion on the part of both starters and nonstarters.

- A. High level**
- B. Medium level
- C. Low level
- D. None of the above

During the performing stage, the team is ready to perform as a _____ unit.

- A. Cohesive**
- B. Individual
- C. Group
- D. None of the above

Exercise that is accomplished at an exercise intensity that allows for the intake of sufficient oxygen to maintain continuous exercise is called _____.

- A. Acute exercise
- B. Chronic exercise
- C. Aerobic exercise**

D. Anaerobic exercise

Fill in the blanks. Each blank carries 1 mark.

No social-psychological effect is more important to athletic performance and outcome than the audience effect.

Team cohesion leads to team performance, and Team performance leads to team cohesion.

Traits found in all successful leaders are referred to as universal traits, as opposed to situational traits.

Quality interaction, communication, and respect between coach and athlete lead to athlete satisfaction and improved performance.

Anaerobic exercise requires the athlete to breathe hard following exercise in order to replenish stored energy.

Research shows that female sportspersons utilize _____ as a coping strategy more often than their male counterparts.

- A. Positive thinking
- B. Relaxation
- C. Attentional focus
- D. Social support

_____ can effectively reduces tension and anxiety associated with sport.

- A. Relaxation procedures
- B. Energizing strategies
- C. Goal setting
- D. None of the above

_____ is not a team energizing strategy.

- A. Pep talk
- B. Team goal setting
- C. Post competition conference
- D. Self talk

Jacobson's _____ procedure requires that subject lie on their backs, the room should be fairly quiet and arms and legs should not be crossed, to avoid unnecessary stimulation.

- A. Progressive relaxation

- B. Meditation
- C. Autogenic training
- D. Feedback training

_____ coping strategies center on alleviating the environmental stimulus that is causing the stress response.

- A. Emotion focused
- B. Problem focused**
- C. Approach focused
- D. None of the above

Fill in the blanks. Each blank carries 1 mark.

The symbolic learning theory states that mental practice and imagery work because the individual literally plans his/her actions in advance.

Meichenbaum developed **Stress inoculation training (SIT)** that is a cognitive-behavioral program.

Emotion focused coping strategies seek to regulate emotions in order to reduce or manage cognitive distress.

Precompetition workouts that enhance and increase activation are apparently effective in reducing **feelings of anxiety**.

Literature review concludes that mental practice is more effective than **no** practice.

The basic attributional model was proposed by_____.

- Russell
- Heider**
- Duncan
- McAuley

The third dimension added by Weiner to the attributional model is _____.

- Controllability**
- Ability
- Task difficulty
- Locus of causality

_____ developed the Causal Dimension Scale (CDS).

Weiner

Heider

Russell

None of the given options

CDS2 measures _____ specific dimensions of causality.

32

6

8

4

In ego orientation, _____ becomes the driving force.

Social comparison

Master of skill

Self-improvement

None of the given options

Goal orientation is a _____.

Psychological trait

Environmental state

Situation specific state

Personality trait

A mastery climate is one in which _____.

Poor performance and mistakes are punished

Competition between teammates is encouraged

Effort is rewarded

Cooperation is not emphasized

Attributing success to _____ suggests to the child that success is a realistic expectation for the future.

Luck

Stable factors

External factors

Unstable factors

According to the _____ principle, a person's attributions for success or failure can be predicted on the basis of the performance of others on the same task.

Covariation

Expectancy

Attributional

Involvement

People with internal locus of causality believe _____.

They are not responsible for the outcome

Fate plays an important role in the outcome

They are not in control of their destiny

None of the given options
