Zoo101 Quiz Chapter NO.67

(Chemical Molarity and Normality)

Question No.01

Multiple Choices:-

1. The number of moles of solute per liter of solution is called:
(a) Molarity
(b) Molality
(c) Normality
(d) Both a and b
2. Write the formula of moles**:**
(a) Mass in grams /Molar mass
(b) Molar Mass/Mass in grams
(c) None
3. The strength of solution measured in terms of grams equivalent per liter is called**:**
(a) Molality
(b) Normality
(c) None
4. What is the Normality formula**:**
(a) N1V1=N2V2
(b) N1V2=N2V1
5. Find Molarity of a 0.40 moles of NaCl dissolved in 0.250 L of water?
(a) 1.6 moles per liter
(b) 2.6 moles per liter
(c) 1.9 moles per liter
6. Write the formula of molarity:
(a) Mass /molar mass
(b) Moles of solute/Liters of solution

Question No.02

Short Questions:-

01. Define Normality?

Ans: The strength of solution measured in terms of grams equivalent per liter is called **Normality.** It is denoted by N.

A solution having one gram equivalent of dissolved solute in one liter of its solutions called normality.

02 .What is the molarity of a 0.40 moles of NaCl dissolved in 0.250 L of water?

- **Solution:**

- M=Moles solute/L solution
- M=0.40 mol/0.250L
- M=1.6 moles/L
