EDU654 Final Term Paper 2

Edu654 15 August 2023

3 marks question

- **write three benefits of human computer interface repeat**
- **write three benefits of e-learning being study in virtual university of Pakistan repeat**
- **what is the importance of collaborative learning in class room.**

Ans:-

23.8.23 15.8.23

Another important activity that students engage in classroom is discussion. The students must think and explain with one another just as they do in collaborative learning. Collaborative learning plays an important part in e learning and peer interaction. Peer interaction means that if teacher gets feedback from the students and comes to know of any difficulty in student understanding then he can make groups and start peer interaction. Students will learn the concept better by discussion instead of listening the same thing by the teacher again.

Third step is instant feedback. Because of instant feedback, all the weaknesses are highlighted and gradually can be overcome through proper planning.

- **how can some get education without goning formal school through technology**

Ans:-

such thinking is highlighted in the poetries of our poets. One of the most famous poets is Faiz Ahmed Faiz who wrote about the people who are unable to attend formal schooling but if provided 15.8.23 with the opportunities and resources, they can do wonders. Every person in Pakistan today has cell phones and most of them have Wi-Fi in it. If such people are guided properly to use these devices for their education their skills can be developed.

- **how discovery base learning with collaboration can be use in online class room**

Ans:-

15.8.23

There is a need to teach discovery and collaborative learning in our conventional classrooms. In the traditional classroom, a teacher is always in command of the classroom. Technology and technology should never be in command. The key role of the teacher is to imagine the collaborative classroom where there is no silence, students need to communicate with one another and share their ideas.

how students learn through majlis during faiz ahmed faiz times.

15.8.23

The discussion forums at that time were made when the teachers and students sat together for discussions. It was known as 'Majlis' in which the graduate students were given the level of former teachers. In 'Majlis' a student dictated his thinking and ideas to all members present there in a specific context that he had faced or suffered in life. All the students benefitted from the source presented and the presenter got instant feedback which is very necessary in learning. FAiz Ahmed Faiz also says that most of their study was not based on formal classroom setting, and students learnt mostly through the libraries or 'Majlis' discussions and discussions with senior teachers.

Ways to make learning possible for all:

- Firstly, all teachers should be called at one place to share their ideas and all students should be welcome to attend. All students can choose the topics of their interest so that can benefit from the teaching.
- Teachers and students must not be specified to a certain college or University.
- Second thing to keep in mind is that students must be able to use their learning in such discussions so that others can give feedback.
- Students today rely on internships before entering the practical field. At the time of Faiz Ahmed Faiz the component of practical field was included in the curriculum.
- Students must have command of the soft skills as they must not hesitate to comment or ask questions in a discussion forum.

5 marks questions

write 5 benefits of learning through games

Ans:-

What is Game-Based Learning? It is known as a Game-Based Learning (GBL) the learning method of using games while teaching a subject. Games that are used for this purpose have been designed with the idea of achieving learning outcomes. 15.8.23

Some benefits of using Game-Based Learning

- **Gets student attention.** Students are easily engaged in game activities due to their willingness to play.
- **Students get a positive experience about learning.** The use of games encourages students to keep learning and erases the idea that learning is boring.
- **Rememorize concepts or facts.** Activities such as solving a crossword or alphabet soup are more engaging than a regular test. Prepare some contests such as "Who wants to be a millionaire" or "The wheel of fortune". Encourage students to work in teams to achieve the goal where their **knowledge is the clue to succeed**.
- **Reinforce and consolidate knowledge in a friendly environment.** The most effective way to turn content into something **meaningful** is to find out where and when to use it. With games students can reinforce and consolidate their knowledge through practicing and

getting reward for their achievements.

- **Understand the consequences of our choices.** Using games enables users to understand the consequences of their choices. In other words, the students **learn through experiences**, through trial and error. Games offer a safe environment to test and **learn through mistakes** so that the information becomes meaningful as students understand its use.

how teacher can make creativity in class room

Ans:-

The major problem here is that teachers in classroom are unable to excite the students. It is the duty of the teacher to enhance the level of average learning students and made them think critically. They must be taught in ways that increases creativity. Moreover, they need to learn about communication, innovation and collaboration. 15.8.23

What are the major stages in schooling that needs improvement? 26.8.23

The first thing highlighted in this discussion was classroom environment in which a teacher is present; there is teaching presence, cognitive presence and social presence, and the book which the students read after class hours. Classroom atmosphere is almost damaged in our well-known schools and the textbooks are not up to the mark as well. Quiz#4

- The first stage discussed was that the books must be interactive.
- Students should be excited need to be enabled by teachers to discover.
- Information access point must be other sources as well as schools.
- Interactivity must be present in teaching. Quiz#3
- Transformation of knowledge can be possible in areas where school buildings are far away through online or mobile schooling.
- Smart devices can be applied to learning.

what is the importance of social presence in an online environment

Ans:-

Importance of Social Presence in an Online Classroom:

The Instructor's Role 15.8.23

The instructor's role is critical to learning, whether it is face-to-face classroom or online. Studies on distance learning advocate that instructor-to-student, and student-to-student (social presence) interaction is a critical component of learning, as it improves the effectiveness of learning as well as learner satisfaction.

Instructor's Issues

The role of the teacher automatically shifts when the physical is replaced by the virtual classroom. The new role of the instructor is "redefined as a facilitator, organizer, and manager". Online teachers need to realize their role in shaping the social aspects of the online classroom. The teacher plays a critical part in establishing social presence for the entire learning community.

Feedback & Time

In order to create a social link between students and the teacher, the teacher must take into account the isolation felt by students when online communication lags. If time frame expectations are not met, students feel less socially connected in an online learning classroom. Answering email with a shorter turn-around time is pertinent to fostering social presence in the online learning classroom.

use of technology for social interaction

playing football with him, now competition between them starts. Competition encourages motivation. When he starts playing with friends or team there is social interaction also. Social interaction gets enhanced and there is communication and collaboration between them while playing. He tries to achieve the target by beating the other friend. If he fails to beat his friend, he is

Questions

1. **Importance of collaborative learning repeat**

2.how innovator is different from other professions

In his book *Creating Innovators* Tony Wegner discusses the characteristics of innovators. He has discussed the life of a Curt Philips who invented IPhone. He was the team lead of Apple innovators. Curt Philips was the eldest child in the family. His education was a challenge for his parents as he changed many institutions. Then he went to Stanford University and the courses there really excited him.

- He wanted to invent something for the betterment of the people.
- He studied computers as he thought that it was not a specialized subject like engineering and he could use it to solve a lot of different problems.

However, he could never see himself wanting to write code for google. Writing a code on a server that no one would ever see or interact with did not really appeal to him. He wanted to create products for people that they could hold and use so he started exploring robotics. For his Master's degree, he took mechanical and electrical engineering classes and found out about embedded system design sequence called Smart Product Design and that was a turning point in his academic career.

2. Creativity context of a story

It is important to provide the students with context of a story while teaching simultaneous equation because it creates meaningfulness to the students. They will understand the concept more clearl when associated with daily life situations.

research project confirms what Steve Jobs told the reporter 15 years later – creativity is just connecting things. Here is what the researchers had to say:

"When you ask creative people how they did something, they feel a little guilty because they did not really do it. They just saw something. It seemed obvious to them after a while. That's because they are able to connect experiences they have had and synthesize new things. And the reason they were able to do that was because they had more experiences or they had thought more about their experiences than other people. A lot of people in our industry have not had very diverse experiences… so they do not have enough dots to connect and they end up with very linear solutions without a broader perspective on the problem. The broader one's understanding of the human experience, the better design we will have."

4. why shouldn't teachers intrupt students answer repeat

5. content developers ko content bnaty howy kn chezon ka khyal rkhna chaye repeat

6. use of technology for disable students to learn in class repeat

7. benefits of game based learning repeat

8.5 ways in the improvement in schooling stages repeat

9. 5ways in which emerging technology can replace or improve traditional classroom repeat

10. importance of teacher provide daily life experiences

Ans:-

We need to provide the students with daily life experiences for learning, so that they can be involved both physically and emotionally in learning. Problems in real life do not have a black and white solution. Teachers must also keep in mind that different students have different levels of learning. Such type of teaching and learning process follows **4C Model.** In this model following should be taken into account:

Quiz#3 26.8.23

- **Context:** Present a real life story, problem or scenario in a context
- **Challenge:** Incrementally, make the problem a challenge.
- **Choices:** Let the students explore the choices that they have.
- **Consequences:** Allow students to think critically about the consequences of adopting each choice.

EDU654 Final Term Paper 5

Edu654-16 Aug-11:30

-Innovator different from other professions repeat

-3 disadvantages of HCI

Ans:-

Disadvantages of HCI: 16.8.23

- Requires the user to learn "complex" commands or language
- "Hidden" features i.e. if you don't know the commands you won't know the features are there
- Not very good for novice users

-Concept maps

Ans:-

A teacher must:

- Identify key elements which should be communicated dents and then devise a pedagogical strategy to convey them.
- Make concept maps while teaching. Reflect on them whether they are effectively imparted to the students or not? 16.8.23
- Concept maps are not only important as a learning tool but they also play a vital role as an assessment instrument.
- Teacher must teach the students through hypothesis testing

-Types of narrative

Ans:-

Types of narratives: 16.8.23

- **Logical narrative**
- **Temporal narrative**
- **Spatial Narrative**

-Teaching strategies for disabled students repeat

Short questions

1. **What is reaction of teacher. when a student gives wrong answer.**

Ans:-

seasons. But unfortunately 98% of the respondents were unable to answer properly. They do not have the basic knowledge of why day, night or seasons occur? So, there is a flaw in our teaching and learning methods. Students know the answer to the questions but they do not know the logic behind its being correct. The way to test it is by hypothesis testing. Knowledge gained must be linked with hypothesis testing. When a problem is proposed to the students, they visualize it and list down the possible answers, and then they must be taught to think critically on every answer. They must think like, is the answer correct? If yes, why? If not, why? Going through this process, their knowledge base will become rich. If students only learns or memorize the answers, their base of knowledge is never rich. Teachers usually avoid hypothesis testing in classroom because it is time consuming. Today, internet can provide answers to many questions and solutions to problems in a limited time.

2. **What is importance of thypothsis testing.**

Ans:-

Hypothesis testing: 16.8.23

Hypothesis tests are procedures for making rational decisions about the reality of effects. A problem can have multivariable solutions. But there is a dominant answer to every question.

3. **What is meant by innovation write your own words. Repeat**
4. **Why instant feedback is important in online learning.**

Ans:-

Third step is instant feedback. Because of instant feedback, all the weaknesses are highlighted and gradually can be overcome through proper planning.

Instant Feedback: Rapid and frequent feedback helps students achieve their learning goals.

5. **Three individual experience of e-learning. Repeat**

Long questions

1. **As a teacher how you teach grade 1 students, what types of questions.**

2. **How should you teach students of same age and class**

First, when innovation takes place, it becomes obvious after a time. After that successful innovation is not questioned. For example, today children of same ages are taught in the same class that was also an innovation in education. As in the past, students in a class were from different ages because all people could not afford education. Now the obvious thing is that all children are divided age-wise in a class. Standardized testing is also another example.

3. How would you implement discovery based collaboratuve learning in online classroom. repeat

4. In what way teacher retain the to student what they are learning

Storytelling is such an effective tool for the teacher because it is a powerful form of communication. Both the student and the teacher benefit from it. Students learn from hearing stories because they pay closer attention, understand the message more readily, and retain key points longer. Teachers become better educators because being able to tell a story effectively enhances the perception of the teacher as a leader. A teacher who can adeptly tell a tale reveals an approachable, likeable, and human side to his or her personality. This helps to close the distance between the teacher and the students by making the teacher's status less threatening.

EDU654 Final Term Paper 7

EDU654 23Aug2023

1. **Importance of collaboration.**
2. **How teacher engage students in classroom.**

Ans:-

The first thing that most students do in classroom is listening and watching around the things in classroom whether it is a conventional classroom, e learning or blended classroom. It is very unfair with the students if teachers believe that students will start reading without looking at the book or without thinking.

23.8.23

Another important activity that students engage in classroom is discussion. The students must think and explain with one another just as they do in collaborative learning. Collaborative learning plays an important part in e learning and peer interaction. Peer interaction means that if teacher gets feedback from the students and comes to know of any difficulty in student understanding then he can make groups and start peer interaction. Students will learn the concept better by discussion instead of listening the same thing by the teacher again.

Third step is instant feedback. Because of instant feedback, all the weaknesses are highlighted and gradually can be overcome through proper planning.

3. **Creativity and innovative steps for student to tech.**

Ans:-

How Can We Teach Creativity and Innovation: 23.8.23

1. Design Projects to Bring Out Creativity
2. Create a Culture that Promotes Creativity and Innovation
3. Scaffold for Creativity and Innovation

4. **Why teacher don't interrupt the student while answer8ng.**
5. **Hypothesis and problem solving relationship.**

Ans:-

23.8.23

Student must try to find answers through hypothesis testing. **Hypothesis tests** are procedures for making rational decisions about the reality of effects. Secondly, students are able to do problem solving. For problem solving, they need to develop a hypothesis to get answer to the question. Hypothesis testing and problem solving go side by side. When a problem is proposed to the students, they think of a possible answer, but at the same time if their mind is stuck with another daily life observation that contradict with the answer, now here the thinking process starts that proceeds with problem solving and hypothesis testing.

6. **How technology improve traditional class room 4 steps.**

Ans:-

How can emerging technology replace or improve the traditional classroom: 23.8.23

Quiz#4

- Technology can provide instant feedback;
- Technology provides different learning rates;
- With the use of technology, for instance if a tablet is available a virtual class can start anywhere.
- Learning takes place even if the teacher has weaknesses in his teaching skills in a non-traditional classroom where technology is used.

7. **Factors that content developet must kep in mind.**

Ans:-

There are two ways one is that they must do it experimentally; secondly there have been many researches on the learning theories since 15 years. But in their system or content development section, these theories were not given importance. They are just observing other books and then creating content for their schools.

EDU654 Final Term Paper 8

Edu654

26/8/23

MCQs mostly from local file

4 mcqs book/author name

4 mcq about Faiz Ahmad Faiz

SUBJECTIVE

Importance of prior learning (5)

Ans:-

Importance of prior knowledge: 26.8.23

- Curriculum should be connected to community.
- Former knowledge of students is developed very strongly but the application of knowledge is not up to the mark because connection is not made with real life.
- In Italy schools, it is a tradition to study the community first and then incorporate it into the curriculum so that gaining knowledge and application will go side by side.
- Students should be able to put in use the knowledge that they have gained.
- Interactivity presupposes that the learner has some degree of prior knowledge.

How to stimulate higher order thinking in students (5)

4c concept (5)

Ans:-

solution. Teachers must also keep in mind that different students have different levels of learning. Such type of teaching and learning process follows **4C Model.** In this model following should be taken into account:

Quiz#3 26.8.23

- **Context:** Present a real life story, problem or scenario in a context
- **Challenge:** Incrementally, make the problem a challenge.
- **Choices:** Let the students explore the choices that they have.
- **Consequences:** Allow students to think critically about the consequences of adopting each choice.

How village student different from city student (3)

Ans:-

26.8.23

Students of Pakistan who live in cities have protected lives, they study in well known institutions and they go to school in a protected environment. They do not know the real challenges faced by other children of Pakistan who are not able to go to school. In villages, children do not give money to the shopkeeper rather they deal in barter trade. They know the current rates of wheat that they sell to the shopkeeper to buy things. They know the rates and are very sharp to calculate. They do their calculations very quickly and without the use of paper and pencil.

Now if the language of posing problems is their everyday language then students would be able to give the right answer. The prior knowledge of children who lives in villages or in backward areas is sufficient to understand a new concept. But we do not try to use that prior knowledge for their learning; instead we start with the simple concepts of teaching addition and subtraction which has no connection with real life situations. If these concepts are taught with the help of their real life experiences then it would last in their minds for a longtime. Our education system snubs the creativity in classroom and motivation for questioning in classroom

Personal experience of e learning (3)

Ans:-

E-learning facilities and community of inquiry must be developed for these learners that includes social, cognitive and teacher presence.

The three contexts of learning discussed earlier are:

- Firstly, the street smart children who cannot attend formal schooling but are intelligent enough to use the facilities for their future benefits and education.
- Second is the girl Khadija Niazi, who was studying an online course but suddenly due to some reasons YouTube was blocked. People around the world started to help her out in her difficulty by providing her lectures and notes through other sources instead of YouTube. It was a good example of cognitive presence among the students of the same course.
- Third is the websites where well known Universities provide online certificate courses.

In the book, "e-learning in the 21st century" it is written that:

Quiz#4

- E-learning has some inherent capabilities; the way to discover these inherent capabilities is our task.
- It is a complete transformation of learning

It is totally a new paradigm on which the following report is proposed:

Advantages of Khan academy (3)

Ans:-

Advantages: 26.8.23

- Effective communicator
- Khan Academy assumes that there must be a computer or laptop for every student, whereas VU has established centers for students all over the world.
- Instant feedback. Vu does not provide instant feedback
- It is easy to update the lectures of Khan Academy while VU requires a lot of production cost.

Subjective
3 advantage of HCI

Ans:-

Advantages of HCI: 26.8.23

- Very flexible with the use of "switches" (options)
- Good for "expert" users - can quickly access commands
- Uses the fewest system resources

3 advantage of vu

Ans:-

VU model Advantages 26.8.23
- Teaching and testing resources are made available to masses
- Scalability
- Centralized examination instruments

What Accomodations modification for physical disable students

Ans:-

Accommodations and Modifications 26.8.23 Quiz#4

Since each student differs in degrees of impairment and ability, accommodations and modifications must be individualized according to needs. Although some subjects are more difficult to accommodate and modify for certain disabilities, many options make learning accessible. Accommodations can include note takers, the use of scribes for written assignments, handouts in alternative formats, and separate rooms for testing. A teacher's creativity also opens new opportunities to learn.

Adaptive Physical Education

Physical disabilities should not exclude students from participating in gym activities. Depending on a student's disability, a separate, adaptive class or modifications within a typical gym class can offer physical education. Basketball, golfing and tennis can be adapted so that students can participate with the assistance of a physical education teacher or aide.

How we can get back student to school who drop out..

Ans:-

- In Pakistan 20-30 lac students reach high school. 26.8.23
- 30-50 lacs drop out and don't reach high school.

While 40% of children are going to school the rest 60% who are majority are not going to school. Students can be attracted to school by making school environment attractive, meaningful content should be taught to reduce the drop out rates. The technique to standardize education for all is not applicable. But for the group of students who are diverse and to control the drop outs, education needs to ne centralized. While customizing, it is necessary to think that how technology or pedagogical skills can be implemented.

How a teacher make association student(5)

Ans:-

Learning is about mental operations. To get the most out of your online class, think about the different associations and meaning students are developing from the material and the discussions generated during the class. A large gap between what is presented and what is learned means that students aren't cognitively involved in a class, as students may only be superficially interpreting content, thereby missing the overall intent of instruction. The effective delivery of instruction allows students and instructors to maintain cognitive presence within the classroom.

Steps to Create Cognitive Presence:

- Create a triggering event
- Explore the problem
- Integrate new ideas and meanings
- Come to a resolution

What is 4c and it components (5) repeat

School update krna hy koi sy 2 stages btaen es trha ki statement the(5)
Ans:-

What are the major stages in schooling that needs improvement? 26.8.23

6. What is Jigsaw technique. 3 marks

The Jigsaw method is a cooperative learning technique in which students work in small groups. Jigsaw can be used in a variety of ways for a variety of goals, but it is primarily used for the acquisition and presentation of new material, review, or informed debate. In this method, each group member is assigned to become an "expert" on some aspect of a unit of study. After reading about their area of expertise, the experts from different groups meet to discuss their topic, and then return to their groups and take turns teaching their topics to their group mates.

7. How can we attract drop out students back to school. 3 marks repeat

Benefit of jigsaw method

Benefits of the jigsaw technique:

- Students are directly engaged with the material, instead of having material presented to them, which fosters depth of understanding.
- Students gain practice in self-teaching, which is one of the most valuable skills we can help them learn.
- Students gain practice in peer teaching, which requires them to understand the material at a deeper level than students typically do when simply asked to produce on an exam.
- During a jigsaw, students speak the language of the discipline and become more fluent in the use of discipline-based terminology.
- Each student develops an expertise and has something important to contribute to the group.
- Each student also has a chance to contribute meaningfully to a discussion, something that is more difficult to achieve in large-group discussion.
- The group task that follows individual peer teaching promotes discussion, problem-solving, and learning.
- Jigsaw encourages cooperation and active learning and promotes valuing all students' contributions.
- Jigsaw can be an efficient cooperative learning strategy. Although the jigsaw assignment takes time in class, the instructor does not need to spend as much time lecturing about the topic. If planned well, the overall time commitment to using the jigsaw technique during class can be comparable to lecturing about a topic.

Technology ko use kr k traditional class ko kesy improve kiyah ja sakta hai repeat

Story telling is important in pedagogy asa tha kuch

Storytelling as a Pedagogical Tool

Storytelling is a powerful pedagogical tool. Simply put, storytelling is delivering information in an organic form. The teacher, the storyteller, and the performer share a similar purpose: to inform, engage, and entertain their audience. They all seek to communicate their message in the most compelling and provocative way possible. Telling a story engages the audience in a unique way. Storytelling, then, is yet another device in the repertoire of a good teacher. It is not only a potent tool for the teacher as a way of organizing information, but as a dynamic means for students to express what they have learned. The magic of storytelling changes the atmosphere in the classroom and in so doing enhances the learning environment. Stories serve to open the mind so that the hearer is ready to take things in. In short, stories appeal to the heart, and, once the heart is won, the mind is open to learn!

Stories promote lively imagination on the part of students. When students listen to a story, they create mind pictures, make inferences and predictions, and fill in the gaps. They in a sense become involved in creating the story, thus forming a relationship with the narrative. When packaged as a story, the oral delivery of information promotes greater involvement than does written language.

In order to appeal to different learning styles, it is necessary to transcend the traditional presentation of fact and theory. Stories are concrete; they exemplify concepts better than abstract, non-creative methods. Teaching storytelling also teaches presentation, communication, and writing skills. Using storytelling as a method of instruction and assessment supports educational objectives. These include:

EDU654 Final Term Paper 15
