

linguistics anthropology

linguistics anthropology for a group of people who use the same variety of a language and who share specific rules for speaking and for interpreting speech. It includes discourse communities and the range and varieties of languages that members of the speech community use to interact with each other.

Defining a speech community

there are some factors that make easier to define a speech community other than just language. Those are social, geographical, cultural, political and ethnic factors, race, age and gender.

Discourse historical approach

Discourse analysis as a whole is the work of text grammarians, working mostly with written language. Text grammarians see texts as language elements pass into together in relationships with one another that can be defined. Linguists have made a significant impact in this area. Its most important contribution has been to show the links between grammar and discourse.

Functions of according to Halliday

Michael Halliday, the founder of systemic functional linguistics, calls these three functions the ideational, interpersonal, and textual. The ideational function is further divided into the experiential and logical.

Endophoric referencing

divided into anaphoric, cataphoric, and esphoric respectively refers to the previously mentioned (preceding) information in text, information presented later in the text, the same nominal group or phrase following the presupposed item. (Halliday and Hasan 1976). There are also personal, demonstrative, and comparative references referring to speech situation noun pronouns like he, him or possessive determiners like mine and yours, this, here, there, then, same, equal, so, similarly, and otherwise

Anaphoric and cataphoric reference

In this sentence, he refers to Michael which will be treated as a anaphoric reference, and it refers to the bank which will also be treated as an anaphoric reference. In the above given examples, Michael and bank will be treated as cataphoric reference. Hence, an anaphoric reference occurs when a word or phrase refers to something mentioned earlier in the discourse, whereas a cataphoric reference occurs when a word or phrase refers to something mentioned later in the discourse.

The social and cultural context

of genres An important stage in genre analysis, formerly, is an examination of the social and cultural context in which the genre is used. In the case of a written text, factors that might be considered Include: □ The setting of the text

□ The focus and perspective of the text

- The purpose of the text
- The intended audience for the text, their role and purpose in reading the text

The relationship between writers and readers of the text; expectations, conventions and requirements for the text

Function Word

A distinction is often made between grammar words and lexical words in language. This distinction also appears sometimes as function words versus content words, or empty words versus full words.

The communicative purpose of a genre,

further, may evolve over time. It may change, it may expand or it may shrink (Swales 2004). Communicative purpose, further, can vary across cultures even when texts belong to the same genre category.

What is EAP?

English for Academic Purposes (EAP) is usually defined as teaching English with the aim of assisting learners' study or research in that language. In this sense it is a broad term, covering all areas of academic communicative practice such as pre-tertiary, undergraduate and post-graduate teaching, classroom interactions, academic publishing and curriculum issues, as well as research, student and instructional genres

systems of transitivity.

It has two components of logical and experiential functions.

In traditional grammar, **transitivity** was developed as the concept of transitive or intransitive verb (Halliday, 1976) whether the verb takes an object or not, but in SFL it functions to link grammar to the meta functions; however, in Halliday's terms, transitivity as a major component in experiential function of the clause deals with the "transmission of ideas "representing 'processes' or 'experiences': actions, events, processes of consciousness and relations" (1985). It is a semantic system to analyze representations of reality in a linguistic text and create the same experience through various lexico-grammatical options influenced by different mind styles or authorial ideology.

Fundamental of discursive

The study of discourse and gender is an interdisciplinary endeavor undertaken by scholars in linguistics, anthropology, communications, social psychology, education, literature, and other disciplines.

Discursive psychology is usefully understood as working with three fundamental

observations about the nature of discourse. Discourse is:

- ☐ Oriented to action ☐ Situated sequentially, institutionally and rhetorically
- ☐ Constructed and constructive

The three main approaches to the study of media discourse can be characterized as

- ☐ Discourse analytic
- ☐ Sociolinguistic
- ☐ Nonlinguistic

Traditionally, **rhythm has been considered an important element in the teaching of spoken English**. This is probably due to two main factors. Firstly, there does seem to be rhythmically in varying degrees in long stretches of speech, especially carefully considered deliveries such as broadcast talks, fluent reading aloud, speeches and monologues, as well as some ordinary conversation. Secondly, the concept of English as a stress-timed language, deeply rooted in theoretical and applied linguistics, has dominated approaches to the teaching of rhythm.

criteria that contribute to the development of a good and workable research topic.

In her book *Qualitative Methods in Sociolinguistics*, Johnstone (2000) lists a number of criteria that contribute to the development of a good and workable research topic. In her case, she is talking about research in the area of sociolinguistics. What she says, however, applies equally to discourse analysis projects. These criteria include

- ☐ A well-focused idea about spoken or written discourse that is expressed as a question or a set of closely related questions;
- ☐ An understanding of how discourse analytic techniques can be used to answer the research question you are asking;
- ☐ An understanding of why your question about spoken or written discourse are important in a wider context; that is, why answering the question will have practical value and/or be of interest to the world at large;
- ☐ Familiarity with and access to the location where your discourse analysis project will be carried out;
- ☐ Ability to get the discourse data that is needed for the research project;

Relationship between beats and rhythm

When we listen to a stretch of spoken English discourse, we often feel that there is a rhythm or regularity to it, which gives it a characteristic sound, different from other languages and not always well-imitated by foreign learners. The impression of rhythm may arise out of a feeling of alternation between strong and weak 'beats'.

discourse analytic approach

This paper, however, takes a discourse analytic approach, specifically a critical discourse analytic approach, employing the concept of modality to characterize the political orientation of two sample texts. Within critical discourse analysis, modality is understood as encompassing much more than simply the occurrence of overt modal auxiliaries such as may, might, can, could, will, would, shall, should, must, and ought. Rather, modality concerns the writer's (or speaker's) attitude toward and/or confidence in the proposition being presented. In Halliday's system, modality is primarily located in the interpersonal component of the grammar and choices in this component are independent of grammatical choices in other components, for example, choices of transitivity in the ideational component

In linguistics, the term text refers to:

1. The original words of something written, printed, or spoken, in contrast to a summary or paraphrase. 2. A coherent stretch of language that may be regarded as an object of critical analysis.

Text linguistics refers to a form of discourse analysis a method of studying written or spoken language that is concerned with the description and analysis of extended texts (those beyond the level of the single sentence). A text can be any example of written or spoken language, from something as complex as a book or legal document to something as simple as the body of an email or the words on the back of a cereal box.

The Differences between Reference and Substitution

"It is important to point out differences between reference and ellipsis-substitution. One difference is that reference can reach a long way back in the text whereas ellipsis and substitution are largely limited to the immediately preceding clause. Another key difference is that with reference there is a typical meaning of co-reference. That is, both items typically refer to the same thing. With ellipsis and substitution, this is not the case. There is always some difference between the second instance and the first. If a speaker or writer wants to refer to the same thing, they use reference. If they want to refer to something different, they use ellipsis-substitution

Developing a Discourse Analysis Project

Discourse analysis is a useful tool for studying the political meanings that inform written and spoken text. Discourse Analysis is the investigation of knowledge about language beyond the word, clause, phrase and sentence levels. All of them are the basic building blocks of successful communication. In discourse analysis researchers have to infiltrate language as a whole beyond the micro level of words and sentences and look at the entire body of communication produced in a given / particular situation. Discourse analysis refers to attempts to study the organization of language above the sentence or above the clause, and therefore to study larger linguistic units, such as conversational exchanges or written texts (Stubbs 1983). However, Michael Stubbs redefines Discourse in his later work as it is therefore more accurate to say that text and discourse analysis studies language in context: how words and phrases fit into both longer texts, and also social contexts of use

Interactional sociolinguistics

(IS) studies the language use of people in face-to-face interaction. It is a theoretical and methodological perspective on language use with eclectic roots in a wide variety of disciplines such as dialectology, ethnomethodology, conversation analysis, pragmatics, linguistic anthropology, micro-ethnography and sociology. Basically,

Researchers in rhetorical genre studies describe genres as part of the **social processes** by which knowledge about reality and the world are made. Genres, in this view, both respond to and contribute to the constitution of social contexts, as well as the socialization of individuals. Genres, then, are more than just socially embedded; they are socially constructive.

Traditional pronunciation teaching has found its strength in the ability of linguists to segment the sounds of language into isolated items **called phonemes** which, when used in the construction of words, produce meaningful contrasts with other words (e.g. the phonemes /p/ and /b/ in English give us contrasts such as pump and bump, pat and bat, .etc.), The position and manner of articulation of phonemes in a language like English are well described and can be presented and practiced in language classes either as isolated sounds, in words, in contrasting pairs of words or in minimal contexts.
