

ENG 504 GRAND QUIZ

1. The oversimplified account of (**1970s**) first language acquisition research the Children go through (**same stages**).
2. These stages are very **similar** across children for a (**given language**), although individual progress (**rate varies**.).
3. **Child language** is (rule-governed and systematic), and their rules do not necessarily correspond to **adult ones**.
4. Children are (**resistant**) to correction.
5. Their processing (**capacity limits**) the number of rules they can apply at any one time.
6. **Construction** differences among languages are not necessarily (**difficult**). Studies reveal that learners‟ (**errors**) do not necessarily originate from (**first language**).
7. In **1972**, (**Se-linker**) coined a term „ (**inter-language**) ‟ that refers to the language produced by learners both as a system and as a series of (**interlocked systems**).
8. **Krashen's Monitor Model:** The theory evolved in late (1970s); it was refined and expanded in early (1980s). It is based around **five** basic hypotheses: Second Language Acquisition:
    i. The Acquisition-Learning hypothesis
    ii. The Monitor hypothesis
    iii. The Natural Order hypothesis
    iv. The Input hypothesis
    v. The Affective Filter hypothesis
9. According to **Krashen's**, learning system has only (**one**) function, (**as a monitor or editor**).It comes into play only to make **changes** in the form of our (**utterance**.).
10. (**Natural order hypothesis**) says that we acquire the language rules in a (**predictable**) order that cannot be determined **solely** by formal simplicity. This hypothesis is (criticized) for being too (**strong**).
11. **Input hypothesis** is (criticized) for being (**vague and imprecise**).
12. (**Schumann**) noticed that early (**inter-language**) resembled pidgin language with characteristic features. SLA was compared to the (**complexification of pidgins**).
13. **Schumann's Acculturation Model of SLA:** It views second language acquisition from a radically **different angle**, and also remained **influential** during **subsequent decades**.
14. **SLA** with **pidginization** and **creolization**, and bringing to the fore **social** and **psychological** variables along with their roles in SLL.

The Genius elt Group

15. **Two** major factors are identified in acculturation: (**social distance** and **psychological distance**.)
16. **Social Distance** factors refer to those involving the relationship between the (**internal**) characteristics of a language group and the ability for the learner to become closer (**socially**) to that target language group.
17. **Psychological Distance** factors refer to the (**extent**) to which individual learners cope.
18. Psychologically with learning an L2. Among these factors are (anxiety**, motivation**, **and self-confidence**).
19. **By mid-1980s**, SLL had matured into an autonomous field of inquiry encompassing a number of substantial programs of research with their (**distinctive theoretical**) orientations and (**methodologies**).
20. **New links** emerged with cognitive science, (neuro-psychology and sociocultural) frameworks that have greatly enriched perception of SLA.
21. **Universal Grammar Approach (UG):** Language is a result of two factors‟ **interplay**: the **initial state** – „language acquisition device‟ and the course of experience – „input‟.
22. **UG** developed by **Noam Chomsky**.
23. UG is a **property** theory that attempts to characterize the **underlying linguistic** knowledge in SL learners‟ **minds**.
24. **Linguistic theory** aims to: Describe the **mental representations** of language that are stored in the **human mind.**
25. **UNIVERSAL GRAMMAR** a **transition** theory describes the process of language learning.
26. **UG** is also a transition theory as it is interested in describing the language transition process or learning process that occurs during the learning of the **second language**.
27. Language is the most **abstract** piece of knowledge.
28. Children create mental **representation** of language which goes beyond the **input** they are exposed to and is very similar to that of other **native speakers** of the same language variety.
29. **Second language learners** are **cognitively mature** and presumably much more resourceful in problem solving and **dealing** with **abstract concepts**.
30. **SL grammars** are **constrained** by universal grammar (UG)
31. **UG approach** is concerned with knowledge of language called "**competence**."
32. **A complete theory** of language also has to define how we access our knowledge base and how it relates to a number of **sociolinguistics** and **psychological** variables.
33. There are many **cognitively** "**normal**" children with impaired language condition known as "**specific language impairment**."

The Genius ELT Group

34. Language and cognition seem to be largely **separate** but they do **interact**.
35. Language is the most(**abstract piece**)of knowledge
36. SL grammars are constrained by (**universal grammar**)
37. (UG)does not constrain SL grammar or UG is **impaired**
38. **UG** approach is concerned with knowledge of language called(**competence**)
39. (**UG approach**)is not about performance, about how language is used in real life
40. A complete theory of language also has to define how we access our knowledge base and how it relates to a number of (**sociolinguistic and psychological**) variables White ,there are(**three potential sources**)(of cross- linguistic variation) relating to functional categories.
41. (**universal grammar**)is a theory of natural languages that definitely includes(**second language too**)
42. (**First and second language learning**) is similar in many ways.
43. (**First language**) is about some kind of language **blueprint** in brain.
44. (**SL learners**) are cognitively mature.
45. SL learners already know at least (**one**) other language.
46. SL learners have different (**motivations**) for learning a second language.
47. **Second language** are not constrained by(**UG principles and parameters**)
48. **Second language** do not behave like (**natural languages**).
49. SL learners has full access or (**partial access to UG**)
50. (**UG theory**) aims to describe and explain human language.
51. **Universal Grammar** theory scope does not include a theory of (**processing or learning**)
52. **Universal Grammar** is a (**linguistic**) theory.
53. The UG view of language has been very influential since (**1950s**) but not **uncontroversial**.
54. UG approach views language as a (**mental framework**) underlying all human languages.
55. The (**SLA**) are more interested in understanding how the human brain processes and learns new information
56. Therefore, there recent work has used range of (**elicitation techniques**)
57. it studies language clinically ,in a vacuum as a(**mental object**), on the other hand these are the central issues for(**cognitive theorists**) two approaches of cognitive theorists of SLA are (**processing theorists and emergentist/constructionist**)
58. Emergentist or constructionist does not consider separation between (**property and transition**)theories as legitimate
59. (**processing approaches**)are interested in how brain's processing mechanism deal with second language
60. **Processing approaches** include in (information processing approach)and (**processability theory**)
61. The mind is a (**general purpose**), symbol processing system.

The Genius ELT Group

62. **McLaughlin's** information processing model(**1987,1990**)
63. **Anderson's** active control of thought (**act***)model (**1983,1985**)
64. **Anderson's** model is a (**general cognitive model**) of skill acquisition
65. **Processability** theory looks more(**specifically**) at processing demands made by (**various**) formal aspects of second language
66. According to (**Anderson**) the move from (**declarative**) to procedural knowledge take place in (**three**) stages.
67. (**The cognitive stage**): A description of the procedure is learnt.
68. (**The associative stage**): A method for performing the skill is worked out.
69. (**The autonomous stage**): the skill becomes more and more rapid and automatic.
70. (**Processing approaches**) are interested in how brain's processing mechanism deal with second language.
71. **Information processing** approach investigates how different memory stores (**short term memory, long term memory**)
72. (**Processability theory**) looks more specifically at processing demands made by various formal aspects of second language.
73. In (**McLaughlin's model**), humans are viewed as autonomous and active.
74. (**Complex behaviour**) is composed of simpler modular processes.
75. Anderson's Active Control of Thought '**ACT' model** is more (**wide-ranging**)
76. (**Anderson**) posits three kinds of memory a working memory, a declarative long-term memory, and a procedural long-term memory.
77. **Anderson's** model is general cognitive model of (**skill acquisition**)
78. According to **Anderson**, the move from declarative to procedural knowledge takes place in three stages. (**The cognitive stage, the associate stage, the autonomous stage**).
79. (**O'Malley and Chamot 1990**) suggest that the learning strategies are procedures undertaken by the learners to make their language learning as effective as possible.
80. **Learning strategies** can be classified into **three** categories(**Metacognition strategies**, **Cognitive strategies, Social and effective strategies**)
81. **Learning strategies** are (**Complex procedure**) applied to tasks.
82. (**Learning is an active and dynamic process**) in which individuals make use of a variety of information and strategic modes of processing.
83. **Language is a complex skill** in term of how (**information**) is stored and learnt.
84. (**Towell and Hawkins**) reject the idea that **Anderson's** model can account for all aspects of SLL.
85. **Towell and Howkins** appeal to an(**information – processing account**)
86. (**Pienemann**) believes that language Learning is gradual acquisition of computational mechanisms.
87. (**According to Pienemann**) learners can only operate within their hypothesis space, constrained by available processing resources.
88. **Stages of acquisition** cannot be skipped through (**formal instructions**).

The Genius ELT Group

89. Most interesting aspects is the attempt to establish a link between (**Learning and teaching**)
90. (**Solbin 1979**) has devised operating principles which guide children in their processing of the linguistic strings which they encounter.
91. Linguistic elements **encode** relation between (**words**).
92. (**Underlying semantic**) relations should be marked overtly and clearly.
93. Use of (**grammatical markers**) should make semantic sense.
94. **Connectionism** is seen as an alternative to symbolic accounts of(**language acquisition**)
95. **Cognitivists** primarily investigate development of processing in (**SL learners**)
96. **The ultimate goal of any SLA** model is better (**understanding**) of SLA process overall.
97. **Functionalism** in linguistics is the(**explication**)
98. Explanation of grammatical structure in which semantic and pragmatic constructs are (**integral**).
99. (**O'Malley and Chamot**) raised a problem that teaching strategies will involve considerable time and efforts to be effective.
100. **Cognitive orientation** can be exemplified by the work of **Solbin** (**1985**).
101. **Cognitive orientation Solbin** proposed the existence of '**basic child grammar**' in which children construct their own form-function relationship to reflect a **child's-eye** view of the world.
102. **Solbin** suggested that one of the opening wedges for grammar is the linguistic encoding of a scene in which an agent brings about change of state in an object.
103. In **textual orientation** central issue is to investigate the **extent**.
104. In **textual orientation** particular linguistic devices are employed to organize stretches of discourse intra-sententially as well as across broader stretches of text.
105. At **discourse level**, functional linguists are interested in how both **vocabulary** and **grammar** are deployed to create **textual cohesion** across sequences of clauses and sentences.
106. **Social orientation** is interested in relationship between the development of child's formal language system and aspects of their social world and children's speech acts and their relationship with **lexical** or **grammatical** choices.
107. The **functional approaches** pay attention respectively to the relations between grammatical development and prototype events, between grammar, pragmatics and text organization, and between grammar and the social world.
108. The **functional tradition** is well established in **SLL** theory.
109. **Language development** is driven by pragmatic communicative needs and that the formal resources of language are elaborated to express more complex patterns of meaning.
110. **Functionalist research** takes form of naturalistic case studies, mostly of adults in early stages of SLL. These studies have offered numerous rich accounts of both rate and route of naturalistic SLL.

The Genius ELT Group

111. **Functionalists** are vary in their scope of enquiries. Some adopted a '**patch'** approach, studying evolution of forms or development of SL within '**time'** or '**space'** domain.

112. Some **Functionalist** proposed SL '**basic variety**' that represents a **proto-grammar** stage that all learners should **pass** through.

113. **Functionalist tradition** has contributed to our understanding of **inter-language** communication and made interesting suggestions about **interactions** between **formal and functional** development

114. **Functionalists** have demonstrated various devices which **inter-language** users deploy to **convey meaning.**

115. **Functionalists** drawn our attention to **textual and discourse** organization issues, and offered considerable evidence that early learners **rely heavily** on **parataxis** rather than on **syntax.**

116. A continuing limitation of **Functionalists** approach is that most attention is given to earliest stages of development. The range of target languages investigated is also not very wide.

117. **Functionalist researchers** insist on **gradual nature** of **Inter Language (IL)** development and syntacticization but with possible reorganizational consequences

118. Most **functionalists** have adopted a '**patch'** approach–working on overall utterance structure when studying the basic variety or alternatively exploring development within **semantic and formal** sub-systems.

119. **Functionalists** argue for a multi-level approach to analysis.

120. **Functionalist's** contribution at the **descriptive level** has been very **strong** and **varied**, their contribution to the **explanation of IL development** is **limited**.

121. **Basic variety** can be **effective** in meeting immediate communication needs, but it is less clearly established that communicative need is the **primary driver** for syntacticization and development beyond the basic variety.

122. **Functionalist** research **largely concentrates** on analysis of learners' **inter-language** output and pays relatively **less attention** to input and even **interaction**.

123. **Functionalist** research has mostly concerned itself with **naturalistic** adult learners acquiring a socially dominant target language (TL) in the workplace and other non-domestic settings.

124. **Functionalist** are mainly interested in the **discovery of universal** rather than language-specific characteristics of the learning process.

125. **Functionalist research** on **emergence** of SL has concerned itself with instructed learner. These learners are seen more successful in **acquiring morphology**.

The Genius ELT Group

126. **Functionalists agree** that instruction works by **increasing acquisition rate** and pushing along the acquisitional route, yet it does not explicitly explain the reason.

127. **Environmental language** use in **promoting** SLL in the form of input received by SL learner, SL output produced by learner, and SL interaction between learner and some other conversation partner.

128. **Interactionist**: perspective mostly **does not challenge** the concepts of autonomous language module or cognitive mechanisms at work within the individual learner.

129. **Input hypothesis** claims that **comprehensive input** is the only necessary condition for language learning to take place provided that learner **pays attention** to it. It is further directed toward interaction hypothesis and output hypothesis.

130. **Interactions** are not a simple **one-directional** source of target language input feeding into the learner's presumed **internal acquisition device**.

131. When **learners engage** with their **internal interlocutor** in negotiations around meaning, input's nature **might be qualitatively changed**.

132. The more **input** is queried, recycled and paraphrased, the greater its potential usefulness as input gets because it should become increasingly well-targeted to particular developmental needs.

133. **Merrill Swain's** (**1985-1995**) study with immersion students led her to question the claim that comprehensible SL input was **sufficient** to **ensure inter-language development**.

134. **Output Hypothesis**: **Swain** argued that students often succeed in comprehending second language (SL) text while only partly processing them.

135. **SL production** (**output**) really forces learners to undertake complete grammatical processing. It drives forward most effectively the development of SL **syntax and morphology**.

136. Adults commonly use '**special'** speech styles when talking with young children. Called **Baby talk**.

137. **Child-directed speech** (CDS) has undergone criticism from **UG theorists**.

138. **Noam Chomsky** described the **notion** that aspects of first language acquisition could be related to the input as (**absurd**).

139. Some **child language specialists** criticized **parameter-setting** models of acquisition as overly deterministic and ignoring **substantial** evidence of probabilistic learning from '**noisy'** input.

140. **Interactionists** such as **Gallaway** and **Richard** (**1994**) have pointed out the ways in which Child-directed speech (**CDS**) might facilitate language acquisition.

The Genius ELT Group

141. **Ways that pointed out by interactionists**: managing attention, promoting positive affect facilitating segmentation, feedback, correction models, reducing processing load, encouraging conversational participation, and explicit teaching of social routines
142. **Interactionists** are **cautious** about any possible contribution of CDS to language acquisition.
143. There are **four** findings related to SSL.
144. **Mostly CDS studies** were carried out in English speaking, middle-class family context in developed countries.
145. In such context, **CDS is typically semantically contingent**. Also, **explicit** formal corrections of child's production are unusual but recasts are common which offer useful negative evidence.
146. **Relationship of particular** formal characteristics of **CDS** and children's developing control of particular construction. Such relationships are complex and dependent on precise developmental stage reached by the **individual child**.
147. **Caretakers** are neither motivated by any prime language-teaching goal nor are their speech adapted to model target grammar.
148. **Cross-cultural** studies of interaction revealed that styles of CDS in middle class Anglophone societies are far from universal where **infants** are not seen as conversational partner. They strongly challenge environmentalist explanations of language learning that finely tuned CDS is actually necessary.
149. Cultures where **child directed speech** (CDS) of Western type is **rare or absent**, children's early utterances frequently include partial imitation and rote-learned segments.
150. **Cross cultural study** of child language development supports the idea that children will only learn to talk in an environment which they can make some sense of. On the other hand, they can learn to talk in a much wider variety of environments (**Lieven, 1994**)
151. The normally developing child is well **buffered** against variation in the **input.**
152. **Buffering implies** either small amount of social support or any of several different environmental events (**Snow, 1994**).
153. Researchers agree that **multi-dimensional** models of acquisition are necessary, and the way forward in clarifying how **input and interaction** may be **facilitating** language acquisition lies at present in close.
154. **Comprehensible input** is both **necessary** and **sufficient** for SLL to take place.
155. **Humans** acquire language in only one way-by understanding or by receiving '**comprehensive input**'.
156. Speaking is a result of acquisition, not its cause. **Comprehensible input**

The Genius ELT Group

157. **In Comprehensible input**: If input is understood, there is enough of it, the necessary grammar is automatically provided.

158. **Input hypothesis** is supported by rather little **empirical** evidence and is not easily testable. The concepts of '**understanding'** and '**noticing gap'** are not clearly operationalized and constantly proposed.

159. Among the research **traditions** that took inspiration from **Krashen's** proposals are:

(a) **The Interaction hypothesis** (b) **The Output hypothesis**

160. Alternative **psycholinguistic** theories are:

i. **Noticing hypothesis**
ii. **Input processing hypothesis**
iii. **Autonomous induction hypothesis**

161. **Various studies** during **1970s and 1980s** demonstrated that the talk addressed to learners was typically grammatically regular but somewhat simplified linguistically

162. **The degree of simplification** reported in many **descriptive** studies was **puzzlingly** variable. Also, these studies stopped short at description of distinctive features of '**Foreigner Talk Discourse**.'

163. **Long** proposed a more **systematic approach** to linking features of '**environmental'** language, and learners' **second language**.

164. **Long** proposed his **Interaction hypothesis** as an extension of **Krashen's** original Input hypothesis.

165. Following on **Long's original studies**, many others used a similar **taxonomy** and taught us a good deal about the types of **task** that are likely to promote **extensive negotiation** of meaning, **inside** and **outside** the classroom.

166. Many others also demonstrated that negotiation of meaning occurs between **non-native speaker peers** as well as between **more fluent and less fluent speakers**, given the right task conditions.

167. The advantages of these models over traditional symbolic models are:

i. They are neutrally inspired.
ii. They incorporate distributed representation and control of information.
iii. They are data-driven with prototypical representations.
iv. They show graceful degradation as do humans with language disorders.
v. They are models of learning and acquisition rather than static description**.**

168. The researchers who adopt **Functional/Pragmatic Perspectives** approach are centrally concerned with the ways in which SL learners set about making meaning and achieving their personal communicative goals.

The Genius ELT Group

169. **Functionalists** emphasize the importance of learners' speech acts and how they exploit immediate social, physical and discourse context to make meaning
170. **Functionalists** argue that the meaning-making efforts are a driving force in ongoing second language development that interacts with the development of formal **grammatical systems**.
171. **Functionalism** in linguistics is the explication and explanation of grammatical structure in which semantic and pragmatic constructs are **integral**.
172. **Mackey's (1999)** study provided the clearest evidence that taking part in interaction can facilitate second language development.
173. **Earlier interactionist** research was criticized for being one-sidedly pre-occupied with functional aspects of SL interaction and neglecting linguistic theory.

174. However, output hypothesis by **Swain (1985, 1995)** goes beyond this **'practice'** function and proposes three further functions for learner output:

    i. **The noticing/triggering function (conscious-rising role)**
    ii. **The hypothesis-testing function**
    iii. **The metalinguistic function** (**reflective role**)

175. Theorists arguing for a strongly Innatist Model claimed that language is simply not learnable from **normal input** that provides positive evidence and lacks **negative evidence**
176. **Nativists** finds the answer in some form of **Universal Grammar** to eliminate many possible generalizations about language structure that are compatible with the input received but are actually incorrect.
177. **Oliver's (1995)** study provides significant findings. It indicated that more than **60%** of the errors by non-native speaker children received negative feedback from their native speaker partners;
178. **Recasts** usually occurred in response to utterances containing single errors in association with particular types of grammar mistakes.
179. **Lyster and colleagues (1997)** noted that recasts were the most common type of feedback. However, recasts were much less likely to lead to immediate self-correction by the students.
180. Teachers were more likely to respond to **lexical errors** with negotiation (e.g. clarification requests), whereas they respond to **grammatical and phonological errors with recasts.**
181. **Schmidt (1990, 1994, and 2001**) has been most influential in promoting the idea that the amount of attention may influence the extent to which SL input and interaction actually produce SL intake.
182. Schmidt uses the term **'noticing'** to refer to the process of bringing some stimulus into focal attention and registering its simple occurrence, whether voluntarily or involuntarily.
183. Schmidt reserves the terms **'understanding'** and '**awareness'** for explicit knowledge: 'awareness of a rule or generalization.'
184. **Schmidt** is **optimistic** about the contribution of both kinds of attention.

The Genius ELT Group

185. **Schmidt** modified this view to the claim that: more **noticing** leads to more **learning**.
186. The accuracy of recast reproduction depends on the following factors:
    a. Learners' language level
    b. Length of the recast
    c. Number of corrections
187. **Input Processing theory by Bill Van Patten** and associates (1996, 2002) is well known because of an associated research program on language pedagogy, 'processing instruction.'
188. Input Processing theory by Bill Van Patten attempts to explain how **environmental** second language input becomes converted into **intake.**
189. Input processing theory is primarily focused on explaining the **shortcuts and restricted** processing strategies which learners seem to use.
190. **Autonomous Induction theory by Suzanne Carroll (2000)** offers a much more complete and ambitious model of the above mentioned processes.
191. **Carroll** rejects parameter (**re**)setting as a totally inadequate metaphor. Instead, she proposes inductive learning **(i-learning**).
192. **Inductive** learning refers to learning by **generalization** from examples.
193. **Carrol** challenges the claim that increased **comprehension** can lead to identification and acquisition in a sequential manner.
194. **Input**, **Output**, and **Interaction** hypotheses have led to very active strands of **empirical research.**
195. **Soviet** developmental **psychologist Vygotsky** who argued that humans do not act directly on physical world but rely on tools and labor activity, use symbolic tools or signs to mediate, and regulate their relationships with others.
196. Following were the leading supporters of the Soviet theorist **Lev Semeonovich Vygotsky:**
    i. **Jerome Bruner**
    ii. **James Wertsch**
    iii. **Barbara Rogoff**
    iv. **James Lantolf**
    v. **Mercer**
    vi. **Wells**
197. Language awareness empowers the learners to consolidate & systemize knowledge of L2 and become conscious of the relationship between _____ languages. (**Different)**
198. Learning styles and strategies are often (**Interrelated)**
199. In **communicative language teaching**, as the sole focus is on meaning processing, learners often fail to notice the difference in form, leading to errors. **Fossilization**
200. In second language acquisition process, the factor that determines how much a learner wants to learn a second language is termed as (**Motivation)**
201. Learners are more likely to switch to L1 in their _____ speech when confronted with a difficult task. (**Inner**)
202. Researchers use learning style research with _____ & cognition styles to determine ability, predict performance, and improve classroom teaching and learning. (**Personality).**

203. Drawing on L1, language awareness focuses on forms and functions of _____ language by exploiting a methodology that is reflexive, inductive, and interactive and investigation. (**Second)**
204. The domain which allows the learners to use the second language more effectively by rising consciousness of how a language is used & a word can have multiple meanings is termed as domain.(**Performance)**
205. In early development stages, the learners have to resort to language, the only available resource to organize and process new information. (**First)**
206. The ____ domain is the main domain in the second language learning and within it the role of the first language stands out very clearly. (**Cognitive)**
207. Cognitive-style research initially addressed phenomena as perceptual speech and flexibility, later researchers focused on processing styles from the point of view of (**EGO**) psychology.
208. In second language acquisition process, the factor that determines how much a learner wants to learn a second language is termed as (**Motivation)**
209. Language awareness emphasizes a person's sensitivity and _____ awareness of language's nature and role in human life. (**Conscious)**
210. First language maintains the vital _____ relationship between speech and thought (**Dialect)**
211. Language awareness is predicated on the assumption of _____ between acquisition and learning. (**Interface)**
212. The domain which fosters tolerance and acceptance of ethnic diversity in second language classrooms is called ____ domain. (**Social)**
213. Language awareness believes that explicit instruction and focus on _____ leads to L2 acquisition. (**Form)**
214. Language awareness aims to evoke _____ insight into the learner and bridges the space between L1 and L2. (**Analytical)**
215. Language awareness pedagogical theory works in domains. (**Five)**
216. **Power domain** creates awareness of the way language can be used to imply meaning.
217. The use of L1 in L2 classrooms has been appraised as too complex for learners, requiring them to operate in _____ different ways. (**Two)**
218. The factors related to the environment or social context within which the learner of second language is grounded are termed as factors. (**External)**
219. Language awareness sees integral links between L1 and L2 and strongly stresses the ____ role of L1 in L2 learning. (**Positive)**
220. Ehrman and Leaver (2001-2003) have reorganized the scales for cognitive styles like. (**Random-sequential, Leveling-sharpening, Abstract-concrete, All)**
221. According to, assigning a role to L1 in L2 learning provides the learners with the opportunity to view language objectively as a phenomenon. (**Hawkin)**
222. The factors related to the personality of the learner of a second language are called factors. (**Internal)**
223. Recent preferred learning models include multiple intelligence models, model. (**4-MAT**, Kalb's Jung-based, Stenberg's mental self-government, all **of the given options).**
224. In recent years, the influence of personality variables on ____ styles has increases greatly (**Learning**).

Genius ELT Group

225. Language awareness pedagogical theory is suggested as complementary to language teaching for its unique stance between L1 and L2. (**Communicative)**
226. Processing theories believe that language knowledge might be **(special)** in some way.
227. Pienamann believes that language is a/an **(gradual)** acquisition of computational mechanism.
228. **(Contemporary)** SLL theorists disagree with Anderson's implied position that SL grammar is initially learnt through conscious study and application of explicit rules.
229. According to McLaughlin's Model of information processing. **(Mind)** is a symbol-processing system.
230. Processability Theory focuses on the acquisition of the procedural skills required for processing the **(formal)** properties of second languages.
231. If learning strategies are a skill, then can be taught and become Proceduralized more **(quickly).**
232. Those who adopt **(emergentist or connectionist)** approach, to see their field as the whole process of language learning.
233. The skill becomes more and more rapid and automatic in **(autonomous)** stage.
234. At the **(autonomous)** stage, learners' action would become increasingly automatic to the point that the declarative knowledge may even be lost.
235. Which of the following linguistics developed teach ability hypothesis in which he considered the pedagogical implications of the learnability or Processability model? **(Pienamann)**
236. Connectionist do not separate the development of **(processing)** from the development of linguistic system.
237. Learning strategies must not be **(confused)** with communication strategies, they do overlap but there is difference in focus.
238. Process-ability Theory is outlined by (**Pienamann**) it aims to clarify how learners acquire computational mechanisms.
239. Learning strategies facilitate learning whereas communication strategies help to **(overcome)** a specific communication problem.
240. The **(perceptual salience)** approach argues that it is perceptual salience of linguistic information that drives the learning process forward, rather than an innate language-specific module.
241. At the **(autonomous)** stage, learner' action would become increasingly automatic to the point that the declarative knowledge may even be lost.
242. Learning is an active and dynamic process in which individual makes use of a variety of **(information)** and strategic modes of processing.
243. McLaughlin's Model of the information Processing describes that the capacity of mind at any given moment is **(limited).**
244. In the **(associative)** stage, a method for performing the skill is worked out.
245. Language is a complex **(cognitive)** skill in terms of how information is stored and learnt.
246. Connectionist s rely on controlled laboratory research involving experiments with **(artificial)** language or small fragments of real language.
247. According to Anderson's model of active control of Thought, there are
248. **(Three)** kinds of memory.

Team Genius ELT Group

249. Towell and **(Hawkins)** reject the idea that Anderson's model can account for all aspects of second language learning.
250. Some functional studies adopted a 'patch' approach, studying **(evolution)** of form or development of SL within 'time' or 'space' domain.
251. **(Processing)** theorists do not say much about language itself.
252. There is consensus that much grammar learning takes place without **(conscious)** awareness.
253. Connectionist do not separate the development of (processing) from the development of linguistic system.
254. Processing theorists concentrates on study of processing **(constraints)** operation in SLA.
255. Process-ability Theories outlined by **(Pienamann)**; it aims to clarify how learner acquire computational mechanisms.
256. **(Connectionism)** claims that learners are sensitive to regularities in the language input and sensitive to patterns on the basis of these regularities.
257. Fossilization is most evident in spontaneous production in which the learner engages in manufacturing his own meaning and linguistic expression. **(True)**
258. **(Connectionism)** is seen as an alternative to symbolic accounts of language acquisition.
259. Connectionist believe that our mind is **(predisposed)** to for associations between elements and create neural links between them.
260. Which of the following linguists developed teach ability hypothesis in which he considered the pedagogical implications of the learn ability or process ability model? **(Pienamann)**
261. Learning strategies must not be **(confused)** with communication strategies; they do overlap but there is difference in focus.
262. **(Solbin)** principles are based on the claim that certain linguistic forms are more "accessible" or more "salient" to the children than others.
263. When second language learner seems able to get rid of non-native-like structure despite abundant linguistic input over many years; it is called **(fossilization).**
264. **(Processing)** theorists do not say much about language itself.
265. Some Cognitivists specifically focus the processing **(mechanisms)** and how they develop in SLL.
266. Connectionist do not separate the development of **(processing)** from the development of linguistic system.
267. According to McLaughlin's Model of Information Processing, **(mind)** is a symbol-processing system.
268. The **(perceptual salience)** approach argues that it is perceptual salience of linguistic information that drives the learning process forward, rather than an innate language-specific module.
269. Processing Theorists believe that language knowledge might be **(special)** in some way.
270. The learning strategies may be conscious in the **(early)** stages of learning and later are without the person's awareness.
271. Ehrman and leaver (2001_2003) have reorganized the scales for cognitive styles like **(random sequential)**
272. CALP is referred to as **(academic)** English the proficiency to read write and learn at an appropriate grade level.

The Genius elt Group

273. The factors related to the environment or social context with in which the learner of second language is grounded are termed as **(external)** factors.
274. Surface processing is completion of the task with **(minimum)** conceptual effort that results in much less information retained in memory.
275. Integrative motivated student are more successful **(language)** learner than the other.
276. The students of **(Japan)** avoid risks and show little value of personal choice or freedom of thought.
277. In order to enable the most learners possible to learn an **(much)** as they can we read to give them every advantage.
278. Although there is individual difference research shows that SL learners frequently develop native like **(conversational)** skills within two years.
279. The **(power)** domain is the main domain in the second language learning and within in the role of the first language stands out very clearly.
280. The factors related to the personality of the learners of the second language are called **(internal)** factors.
281. Researchers use learning style research with **(personality)** cognitive styles to determine ability performance and improve classroom teaching and learning.
282. In recent years the influence of personality variable on **(learning) styles** has increased greatly.
283. The **(integrative)** motivated students are more successful **(language)** learners then the others.
284. The **(process)** model of motivation holds teachers responsible for student's motivation however it does not let students of the hook.
285. Specifically in **(Japanese)** culture the words and the statement of authority hence of teachers are not double or criticized.
286. Research indicates that increased exposure does not necessarily speed the **(second)** language acquisition.
287. Research argues that it is easy for the children as compared to adult learners to learners a second language this factors related to **(age).**
288. Recent preferred learning models include multiply intelligence models **4_MAT** model.
289. Student's passiveness is interpreted as the sign of respect within japans frame as a sign of indifference within **(western)** frame.
290. In order to enable the most learners possible to learners as **(much)** as they can we need to give every advantage.
291. Learning's styles and strategies are often **(interrelated).**
292. According to **(Hawkin)** assigning a role to L1 in L2 learning provides the learners with the opportunity to view language objectively as a phenomenon.
293. In recent years the influences of personality variable on **(learning)** style has increased greatly.
294. Learning SL is as **(difficult)** for a child as it is for an adult since children do not have access to memory techniques and other strategies.
295. According to **(attribution), (self-efficacy)** theory refers to belief in ones capabilities to organize and execute the courses of action is required to produce given attainments.

Genius ELT Group

296. Cognitive style researches initially addressed phenomena as perceptual speed and flexibility later researchers focused on processing styles from the point of view of **(ego)** psychology.
297. Positive effects of strategy instruction emerged for proficiency in **speaking** & **reading**
298. It is a possibility that the more intelligent children are able to learn the language more quickly this factor is related to the learners (**cognitive**).
299. According to **(Eccl-es and Wig field)** motivation is based on how students expect to succeed at a task and how much they value that success.
300. Universal grammar helps to explore the interplay between the first and language learners. **(Second)**
301. If learning strategies are a skill, then they can be taught and become proceduralized more. **(Quickly)**
302. Universal grammar is interested in the mechanisms that learners use. **(True)**
303. Small group of words that form meaningful unit in a clause is called a. **(phrase)**
304. Cross cultural study of child language development the idea that children will only learn to talk is an environment which they can make some sense of. **(Supports)**
305. Processing approaches agree with UG claims of language knowledge as. **(Innate)**
306. Process-ability theory is outlined by; it aims to clarify how learners acquire computational mechanisms**. (Pienamann)**
307. According to McLaughlin's model of information processing, is a symbol processing system. **(Mind)**
308. A child language is rule-governed and **(systematic)**
309. Children learn a language beyond the input they are exposed to. **(True)**
310. At the stage, learners' action would become increasingly automatic to the point that the declarative knowledge may even be lost. **(Autonomous)**
311. Language has a relationship between elements. **(Structural)**
312. In the stage a method for performing the skill is worked out. **(Associative)**
313. Noticing is the necessary and condition for the conversion of input intake. **(Sufficient)**
314. Interactions are not a simple source of target language input, feeding into the learner's presumed internal acquisition device. **(One-directional)**
315. According to the Interactionist research, native and non-native speaker's interlocutors will work actively to achieve an understanding**. (Mutual)**
316. Pienamann believes that language learning is a/an acquisition of computational mechanisms. **(Gradual)**
317. When we examine the role of input and interaction in acquisition, we come to know that adults commonly use 'special' speech styles when talking with young children. **(First language)**
318. Universal grammar is very useful for analysis/es. **(Linguistic)**
319. Theorists do not say much about language itself. **(Processing)**
320. The more input is queried, recycled and paraphrased, the greater is its potential usefulness as input because it should become increasingly well targeted to particular needs.**(developmental)**
321. Connectionist believe that our mind is to look for associations between elements and create neutral links between them. **(Pre-disposed)**
322. According to Lenneberg, the behavior of a child emerges before it is. **(Necessary)**

323. Functionalities research with orientation is interested in relationship between the development of child's formal language system and aspects of their social world. **(Social)**
324. According to Soviet development psychologist Vygotsky, humans use tools to mediate and regulate their relationship with others. (**Symbolic**)
325. Those who adopt approach, see their field as the whole process of language learning. **(Connectionist)**
326. Towell and reject the idea that Anderson's model can account for all aspects of second language learning. **(Hawkins)**
327. The 'metalinguistic function' of learners output proposed by swain (1995) is also known as **(reflective role)**
328. The noticing/ triggering function of learner output proposed by swain (**1995**) is also known as. **(Conscious-raising role)**
329. Merrill swain's (1985, 1995) argued that students often succeed in comprehending text, while only party processing them. **(Second language)**
330. Language is a complex skill in terms of how information is stored and learnt. **(Cognitive)**
331. **(Universal**) grammar (**UG**) wants to establish what is in the learner's mind.
332. Work on interaction approach has been carried out within a/n educational setting. **(Western)**
333. Language and cognitive seem to be largely apart but they do **(interact)**
334. According to Schmidt, 'Noticing' is a process of bringing into focal attention. **Stimulus**
335. Language consistent of a set of **(sound, structure, vocabulary)**
336. According to the sociocultural perspectives on SLL, learning takes place the interactions taking place in a social context. **(Within)**
337. Primarily investigate the development of processing in SL learners. **(Cognitivists)**
338. Connectionist rely on controlled laboratory research involving experiments with language or small fragments of real language. **(Artificial)**
339. Merrill swain argued that second language output really forces learners to undertake complete processing. **(Grammatical)**
340. Long proposed his hypothesis as an extension of Krashen's original input hypothesis. **(Interaction)**
341. Input processing theory is primarily focused on the shortcuts and restricted processing strategies which learners seems to use. **(Explaining)**
342. **(Emergentist or constructionist**) approaches the separation between transition and property theories. **(Reject)**
343. Negative evidence present in child-directed speech. **(Explicitly/prevalent)**
344. Is seen as an alternative to symbolic accounts of language acquisition.
345. **(Connectionism)**
346. Universal grammar ignores the variable/s. **(social and psychological)**
347. The approaches pay attention respectively to the relations between grammatical development and prototype events and between grammar and the social world. **Functional**
348. Learning is an active and dynamic process in which individuals makes use of a variety of and strategic models of processing. **(Information)**

Genius ELT Group

349. The learning strategies may be conscious in the stages of learning and later are performed without the person's awareness. **(Early)**
350. Inductive learning refers to learning by from examples. **(Generalization)**
351. In the cultures where CDS of Western type is rare or absent children's early utterances frequently include**. (Partial imitation, rote learned segments)**
352. Some child language specialists criticized parameters settings models of acquisition as overly deterministic and ignored evidence of probabilistic learning from noisy input. **(Substantial)**
353. There is consensus that much grammar learning takes place without awareness. **(Conscious)**
354. The accuracy of recast reproduction depends on **(learners language level, length of the recast, number of correction, all given)**
355. Damage to the left hemisphere of the brain may result in language proficiency. **False**
356. In the second language acquisition, CDS stands for **(child directed speech)**
357. In the orientation Central issue is to investigate the extent to which particular linguistic devices are employed to organize stretches of discourse intrasententially. **(Textual)**
358. Input processing theory was given by. **(Bill Van Patten)**
359. Processing theorists believe that language knowledge might be in some way. **(Special)**
360. Universal grammar is exclusively concerned with: (**knowledge of competence)**
361. Foreigner talk is a variety used to address foreigners. **(Simplified)**
362. FonF **s**tands for (**focus on form)**.
363. UG stands for (universal **grammar**).
364. IL stands for (**Inter-language**).
365. TL stands for (**Target language**).
366. CA stands for (**contrastive analysis**).
367. SL stands for (**second language**).
368. SLL stands for (**second language learning**).
369. SLA stands for (**second language acquisition**).
