

Q.1 The _____ contingency table is widely used. These tables are based on cross-tabulation.

- A. Trivariate
- B. Bivariate
- C. Univariate
- D. Percentage

Q.2 Q: ----- may have to reconstruct some data.

- A. reader
- B. Writer
- C. editor
- D. researcher

Q.3 In experiments, pretests and posttests measure _____ variable.

- A. Y
- B. Z
- C. A
- D. X

Q.4 When early reviewing of the data is not possible, _____ is done.

- A. Editing for Completeness
- B. Editing for Consistency
- C. In-House Editing
- D. Coding

Q.5 The purpose of experimental research is to allow the researcher to control the research situation so that causal relationships among _____ may be evaluated.

- A. Experiments
- B. Variables
- C. Partial
- D. Dependents

Q.6 Researchers convert raw count tables into _____ to see bi-variate relationship.

- A. Univariate
- B. Graphs
- C. Percentages
- D. Charts

Q.7 A _____ is a set of rules stating that certain numbers are assigned to variable attributes.

- A. coding procedure
 - B. field
 - C. code-book
 - D. file
-

Q.8 The researchers have created numerous _____ and _____ to measure social phenomenon.

- A. Variables, constants
 - B. Scales, indexes
 - C. Editing, coding
 - D. Data analysis, data transformation
-

Q.9 A/An _____ is a measure in which a researcher adds or combines several distinct indicators of a construct into a single score.

- A. Variable
 - B. Scale
 - C. Indicator
 - D. Index
-

Q.10 The process of changing data from original form to a form that is more suitable to perform data analysis is called

- A. Stratification
 - B. Coding
 - C. Data editing
 - D. Data transformation
-
