ZOO502

ANIMAL PHYSIOLOGY

MIDTERM MEGA GRAND QUIZ FILE

ADMIRE ZOOLOGIST GROUP FOR 3RD SEMESTER

1. Delta cell constitute _ of iselets.

Ans. 10%

2. _ is the process of converting that sensory signal to an electrical signal.

Ans. Sensory transduction

3. Phases of action potential include_

Ans. Peak phase

4. The substance release via a duct through the gland to the external and internal epithelial surface is called as _

Ans. Exocrine secretion

5. Membrane potential is expressed in _

Ans. Millivolt

6. Growth hormone is a protein hormone about _ amino acids in a single chain.

Ans. 191

7. Cold receptor are _ times more than in skin than heat receptors.

Ans. 3.5

8. A relative deficiency of insulin associate with defective insulin receptors cause

Ans. Diabetes melletus Type II

9. _ secret progesterone and estrogen.

ADMIRE ZOOLOGIST GROUP

Ans. Corpus luteum

10. Nissls bodies consists of a group of_ and _ which are associated with protein synthesis.

Ans. Ribosome and rough endoplasmic reticulum

11. Antidiuretic hormone is also known as

Ans. Vasopressin

12. Thickness of cell membrane is

Ans. 5nm

13. _ are the cyclic unsaturated hydroxy fatty acids

Ans. Prostaglandin

14. In positive feedback system the end product _ the process of its production

Ans. Speed up

15. _ is an simple painless test that measure the your heart electrical activity.

Ans. Electrocardiogram

16. _ is the phenomenona of unequal distribution of ion across the two sides of different permeable membrane.

Ans. Domain equilibrium

17. Neutrohypophysis is secret _

Ans. Vasopressin and oxytocin

18. _ are coupled transporter that transfer two solutes in opposite directions.

Ans. Antiporter

19. Prostaglandin are synthesized in cellular membrane from _ chains.

Ans. 20- carbon fatty acids

20. _ are also water cannal.

Ans. Aquaporins

21. A absolute deficiency of insulin due to loss pancreatic beta cells cause

ADMIRE ZOOLOGIST GROUP

Ans. Diabetes melletus Type I

22. _ are known as delayed rectifier.

Ans. Voltage gatted potassium channel

23. A membrane potential is the difference in electrical charge between _ .

Ans. The inside and outside of the cell

24. Gonadotropin releasing hormone stimulus the release of _

Ans. FSH and LH

25. Tetrodotoxin is a neurotoxin obtained from the Japanese _

Ans. Puffer fish

26. Olfactory receptors located inside the _

Ans. Nasal cavity

27. The green yellow and red color lie between wavelength of _

Ans. 525 and 675 NM

28. Mammals have _ adrenal gland.

Ans. Two

29. Concentration of potassium is _ times higher in the cell than outside.

Ans. 10-20

30. Major ion responsible for _

Ans. Potassium sodium and chlorine

31. Major neuromodulators in the central nervous system includ _

Ans. Dopamine and serotonin

32. Thyrotrops are endocrine cell in the enterior pituitary gland which produce _

Ans. Prolactin

33. Most neuron have a RMP of _ when no impulse being conducted

Ans. -70mV

ADMIRE ZOOLOGIST GROUP

34. The receptor of umami taste were discovere in the year _.

Ans. 2000

35. Gland are mostly classified as _ types.

Ans. Two

36. Antidiuretic hormone known as _.

Ans. Vasopressin

37. Somatostatin _ the secretion of insulin and glucagon

Ans. Inhibit

38. Human have more than _ types of receptors of bitter taste.

Ans. 30

39. Adaption is _

Ans. Generally not reversible

40. Radioactivity labelled TTX is used to estimate density of _ channel.

Ans. Sodium

41. Threshold potential of most neuron fall between _ and_

Ans. -30mV and -50mV

42. _ is the also known as hypophysis

Ans. Pituitary gland

43. Plasma membrane differentiate concentration of ion inside and outside of cell.

Ans. Maintain

44. _ melinated axon has faster speed than _ thicker giant axon.

Ans. 20 picometer and 40x

45. Clotting of blood in response to injury example_.

Ans. Positive feedback

46. Diffusion is a transport and occurs _ the expense of energy .

ADMIRE ZOOLOGIST GROUP

Ans. Passive without

47. Pituitary gland often called as master gland secretary _ hormone.

Ans. Nine

48. _ produced tears that is delivered through _ on the surface of eye.

Ans. Lacrimal gland and lacrimal duct

49. _ is an immune system disorder that result in the over production of thyroid gland.

Ans. Grave's disease

50. _ is the most likely to extend the entire length of muscle fibers.

Ans. Myofibril

51. _ perceive the secretion of pain.

Ans. Nocireceptor

52. _ hormone inhibit the release of the growth hormone.

Ans. Somatostatin.

53. Parathormon over secretion leads to _

Ans. Hypocalcemia

54. Oxytocin stimulus motility of the oviduct in _

Ans. Birds.

55. The iselets of longer are found in _

Ans. Pancreas

56. Glycosuria is the excretion o glycogen into _

Ans. Urea

57. _ involved in spermatogenesis

Ans. Germ cell

58. Pituitary gland _ hormone.

Ans. Five

ADMIRE ZOOLOGIST GROUP

59. Parathormon over secretion leads to

Ans. Softness of bone

60. Example of steroids hormone .

Ans. Aldosterone

61. Salivary gland produce saliva that is delivered to oral cavity through _ ducts.

Ans. Submandibar

62. Major stimulus for beta cells to secret insulin is high blood _ level.

Ans. Glucose

63. The genes for _ cones pigments are closely linked in the x chromosome.

Ans. Red and green

64. Example of apocrine gland

Ans. Mammary gland

65. _ hormone act as enteric neurotransmitter

Ans. Substance P

66. In Many organisms ATCH also play role in _

Ans. Circadian rythms

67. Chromaffin cells are neuroendocrine cells found mostly in the _ of the adrenal gland in mammals.

Ans. Medulla

68. A color -blind person who lack _ cone called deuteranopia

Ans. Green

69. _ first step of digastric stomach.

Ans. Golumarulus filtration

70. _ of the digastric stomach act as fermentation chambers

Ans. Rumen and reticulum

71. Urine formation involve _ main process.

ADMIRE ZOOLOGIST GROUP

Ans. Three

72. Milk of marine mammals is about _ time as concentrated than cow milk.

Ans. Ten

73. _ is the process that allow bolus of food to pass from buccal cavity through the phyrnx into the esophagus.

Ans. Swallowing

74. _ is the part of the foregut.

Ans. Crop

75. Digastric stomach is found in _.

Ans. Artiodactyl

76. Golumarulus filtrate is almost similar in composition that of _

Ans. Plasma

77. Kindly excrete about _ mammals of fixed acids and associated hydrogen ion per day.

Ans. 70-100

78 . ……. is the process in which an individual organism adjust to a change in its environment .

ANS : Adaptation

79. In …… luteinizing hormones is also called as interstitial as interstitial cell stimulating hormones .

ANS : Males

80. Donnon Equilibium phenomenon was discovered by Frederick Donnan in ……

ANS : 1911

81 . External stimuli include stimuli of ……..

ANS : Light

82. Amine hormones (thyroid and adrenal medullary hormones) are synthesized by the action enzymes on a ….

ANS : Tyrosine

ADMIRE ZOOLOGIST GROUP

83. Gonadotropic hormones are produced by …….

ANS : None of the above

84. Growth hormones is a protein hormones of about …….. amino acids in a single chain .

ANS : 191

85. Pituitar gland is a small gland .about 1 centimeter in diameter and ……..

ANS : 0.5 to 1 gram

86. In many invertebrates species , action potentials cann last for ……. Milliseconds.

ANS : 10 -100

87. Most neurons have a resting membrane potential of …….. when no impulse is being conclude..)

ANS : -70mV

88. Neurohypophysis secretes ……

ANS: Vasopressin oxytocin

89. Human retina contains ….. rods and 6 millions cones.

ANS : 125 million

90. The hormones produced in the islets of langerhans are ……..

Ans : Insulin glucagon

91. The organs of vertebrates which regulate water and ions are …….

a. kidney

b. all of these

c. intestine bone

d. skin gills

92. ……. Is the coiled sensory structure in the inner ear that is specialized for hearing .

ANS : Cochlea

93. ……. Is the period during which no new action potential can be fired.

ADMIRE ZOOLOGIST GROUP

ANS : Absolute Refractoy period

94. Phases of action potentials include …….

a. falling phase

b. peak phase

c. all of these

d. stimulation rising phase

95. ……is the cytoplasm of muscle fibre.

Ans : Sarcoplasm

96. Symporters are coupled transporters that transfer two solutes in the ……. Direction .

ANS : SAME

97. ……. Is the most familiar fast acting neurotransmitter

ANS : Acetylecholine

98. The posterior lobs of pituitary is also called as …….

ANS : Neurohypophysis

99. Glycosuna is the excretion of glucose into the ……

ANS : Unne

100. Gastrin stimulates the ……. Secretion in stomach .

ANS : HCL

101. ……. is the period during which no new action potential can be fired '

ANS : Absolute refractory period

102. `Endocrine glands are the ductless glands that secrets their rproducts……

ANS : Directly into the blood

103: …… are the types of signals that neurine use to send information over long distances.

ANS : Action potentials

104. The parathyroid glands are …… glands embedded in the thyroid lobes .

ADMIRE ZOOLOGIST GROUP

ANS : Tiny . pea sized

105. …… is the contraction during which muscle length changes while muscle tention remains constant

ANS : Isotonic contraction

106. Secretes progesterone and estrogens

ANS : Corpus luteum

107……. Is an external or internal factor that can provoke response

ANS : Stimulus

108 . …… Is also called somatotropin .

ANS: Growth harmone

109. Mammary glands produce milk that a delivered through …… to the nipples

ANS : Lectiferous duct

110. THyroxine hormone is also known as ……..

ANS : T4

111. ……. Ia ahort stature that results from insuuficient secretion of growth harmone during childhood and adolescen….)

ANS : Gigantism

112. Internal stimuli include stimuli of …….

ANS : Pain

113. …… Is also kmown as hypophysis

ANS : Pituitary glands

114.The genes for ---- cone pigments are closely linked on the X chromosome. Red and green

ADMIRE ZOOLOGIST GROUP

115.Which of the following is an example of Apocrine Secretion?.....Mammary glands

116.Adenohypophysis contains ---------- types of glandular cells that synthesize and
117.secrete six hormones…….. Five

118. A color-blind person who lacks ----------cones is called a deuteranope……. Green

119 Oxytocin stimulates motility of the oviduct in ……. Birds

120. Parathormone over secretion leads to …… Softness of bones

121. Substance that is released via a duct through the gland to the external or internal epithelial surface Is called as: …… Exocrine secretion

122. Amine hormones (thyroid and adrenal medullary hormones) are synthesized by the action of enzymes on amino acid …….. Tyrosine

123. Salivary glands produce saliva that is delivered to the oral cavity for partial digestion of food through ---------- ducts…… submandibular and Parotid

124. Which of the following hormone acts as enteric neurotransmitter …… Substance P

125 .Which of the following hormone Inhibits release of growth hormone? ……Somatostatin

126.Pituitary gland release ---------- hormones……9

127.Which of the following is an example of steroid hormone? ……..Aldosterone

128.In many organisms. ACTH is also related to the …… Circadian rhythms

129.That type of secretion In Which entire cell is ruptured and breaks up to release its contents is called as ……..…… Holocrine secretion

130 Which of the following hormone is released from anterior lobe of pituitary?...Luteinizing
131 .Glycosuria is the secretion of glucose into the ……..

ANS : Urine

131 .In mammalian kidney, the pyramids are seen in ……

ANS : Medulla

132Somatostatin _____ the secretion of insulin and glucagon……

…ANS : Inhibit

ADMIN ZOOLOGIST GROUP

133 The islets of Langerhans contain _____ …….. All of these (alpha, beta, delta and PP cells)

134 .Which of the following is a part of foregut ?…….. Crop

135. _____ of the blood volume entering kidney through renal arteries is removed as filtrate by glomeruli…….. 10%

136. Adrenal cortex synthesized and secret a family of steroid hormones collectively called…… Corticosteroids

137. An absolute deficiency of insulin due to loss of pancreatic beta-cell causes…….. Diabetes mellitus Type-I

138 . …… are involved in spermatogenesis…….. Germ Cells

139. Insulin is secreted from the _____ of islets of Langerhans…….. Beta cells

140. .Which of the following is an example of apocrine secretion? …… Mammary glands

141. Seminiferous tubules are located within the _____.....Testes

142. .Mammals have _____ adrenal glands……..Two

143. .Salivary glands produce saliva that is delivered to the oral cavity through …….. parotid and submandibular ducts

144. .An relative deficiency of insulin associated with defective insulin receptors causes --- …….. Diabetes mellitus Type-II

145. .Chromaffin cells are neuroendocrine cells found mostly in the _____ of the adrenal glands in mammals……..Medulla

146. .The type of the secretion in which entire cell rupture and breaks up to release its contents is called …… holocrine secretion

147. The islets of Langerhans are found in…….. Pancreas

148. Delta cells constitutes _____ of islets…….. 10%

ADMIRE ZOOLOGIST GROUP

149. Major stimulus for the beta cells to secret insulin is high blood ____ level..... Glucose

150. _____is the process of converting that sensory signal to an electrical signal..... Sensory transduction

151. Phases of action potentials include..... All of the above

152. Membrane potential is expressed in..... Millivolts

153. Growth hormone is a protein hormone f about___ amino acids in a single chain.....191

154. .Cold Receptors are _____ times more common in skin than heat receptors.....3.5

155_____ secretes progesterone and estrogens..... Corpus luteum

156 Nissl's bodies consist of a group of _____ and _____ which are associated with protein synthesis..... Ribosomes, Rough endoplasmic reticulum

157 .Antidiuretic Hormone is also known as..... Vasopressin

45.'Thickness of cell membrane is —-.....5nm

158 _____ are cyclic unsaturated hydroxy fatty acids..... Prostaglandins

4In positive feedback systems the end product _____the process of its production.....Speeds up

159. .An _____ is a simple, painless test that measures your heart's electrical activity..... Electrocardiogram

160. _____ is the phenomenon of unequal distribution of ions across the two sides of a differentially permeable membrane..... Donnan Equilibrium

50.Neurohypophysis secretes..... Vasopressin. Oxytocin

161. ._____ are coupled transporters that transfer two solutes in opposite directions..... Antiporters

162. Prostaglandins are synthesized in cellular membranes from _____ chains.....20-carbon fatty acid

163. _____ are also called water channels protein..... Aquaporins

164.._____ are Known as "delayed rectifiers" ..... Voltage-gated potassium channels

ADMIN ZOOLOGIST GROUP

165. .A membrane potential is the difference in electrical charge between…….. The inside and outside of the cell

166. .Gonadotropin releasing hormone stimulates the release of……. FSH and LH

167. .Tetrodotoxin is a neurotoxin obtained from the Japanese……. Puffer fish

168. Olfactory receptors are located inside the……. Nasal cavity

169. .The green, yellow. orange. and red colors lie between wavelengths of…… 525 and 675 nm

170. Concentration of Potassium is ___times higher inside the cell than outside…….10-20

171.Concentration of sodium is ___times higher inside the cell than outside……..20-10

172 .Major ions responsible for Vrest are …….. K + , Na+ & Cl

173 .Which is most likely to extend the entire length of a muscle fibre?..... Myofibril

174. A goiter is an abnormal enlargement of your……...Thyroid gland 65.Thermoreceptors are located in……..Skin

175. .Melatonin is secreted by……..Pineal gland

176. .Adenohypophysis secretes _____tropic hormones……..Four

177 The Anterior lobe of pituitary gland is also called as……..adenohypophysis

178. . .Mechanisms through which carrier proteins actively transport substances are called…….Membrane pumps

179. The G proteins family consists of about _____ different proteins that are composed of three subunits……20

180. ……short stature that results from insufficient secretion of Growth Hormone during childhood and adolescence……Dwarfism

181. .Clotting of blood in response to an injury is an example of……..Positive feedback system

182. Mammary glands produce milk that is delivered through _____ to the nipples…….Lactiferous ducts

ADMIN ZOOLOGIST GROUP

183. Melatonin hormone synthesis_____ as the light _____..... increases, decreases

184. .Photopsins are the photoreceptor pigments found int he cone cells of the retina that are the basis of..... color vision

185 A. L. Hodgkin and A. F. Huxley carried out experiments on giant axons of squids in.....1940s and 1950s

186. Radioactively labeled TTX is used to estimate density of ____ channels.....Na+ 78.Naloxone is a .....Drug

187. .Saltatory Conduction Increases the velocity of nerve transmission_____ fold.....5 to 50

188. .Protein and peptide hormones are synthesized on the _____ of endocrine cells..... rough endoplasmic reticulum

189. .External stimuli include Stimuli of.....Light

190. .Membrane potential values vary with type and physiological state of the cell, ranging between millivolts.....-30 to -100

191.._____is a thick, multi-layered membranous structure that surrounds many vertebrate axons..... Myelin Sheath

192. .Visible spectrum for human eyes lies between the wavelengths of.....400-740nm

193.Pineal Gland are found on the dorsal surface of ____ in vertebrates ..... forebrain

194. .Action potentials can travel as fast as _____ in large axons.....120 m/s

195. Action potential can last for _____ milliseconds.....10-100

196. _____are the Junctions between axon terminals of one neuron and the dendrites of another neuron..... Synapses

197. _____are the type of signals that neurons use to send information over long distances..... Action potentials

.198. Most neurons have a resting membrane potential of _____ when no impulse is being conducted.....-70mV

ADMIRE ZOOLOGIST GROUP

199.Which one is not function of plasma membrane……

200.In many invertebrate species, action potentials can last for__milliseconds…….10-100

201._____is the movement of a substance from an area of high concentration to an area of low concentration……...Diffusion

202._____is the cytoplasm of a muscle fibre…….. Sarcoplasm 2

203.Facilitated diffusion is the _____ diffusion through the membrane down the concentration gradient_____.....Passive, without

204.Adrenocorticotropic Hormone is a peptide hormone comprising single chain of…….39

206.Exophthalmia is the abnormal protrusion of _____.....Eyeball

207. ._____is an external or internal factor that can provoke response……. Stimulus

208. Donnan Equilibrium phenomenon was discovered by Frederick Donnan in……1911

209. The human ear can detect sound frequencies lying between hertz…….20 to 20000

210. . _____ feedback system that end product works to stop or slow down that process……...Negative

211. . _____is also Known as hypophysis…….. pituitary gland

212 _____is the contraction during which muscle length changes while muscle tension remain constant…….. Isotonic Contraction

213. _____is the hypersecretion of Growth Hormone before puberty which causes excessive size and stature…….. Gigantism

214. The cell body of the neurons is also known as…….. Soma

215. Which of the following is not an example of Amine hormones……Cortisol

216_____ study of functions of tissue, organ and organ system of an individual…… Physiology

217 . Glands are broadly classified into _____ types……..two

218_____ are Coupled transporters that transfer solutes in opposite directions…….. antiporters

ADMIN ZOOLOGIST GROUP

218. Symporters are coupled transporters that transfer two solutes in the _____direction……..same

219_____ is the most familiar fast acting neurotransmitter…… Acetylcholine

220. __of digestive tract is specialized for grinding and mixing……Smooth muscles

221_____ helps in uterine contractions during child birth……Oxytocin

222. _____is an immune system disorder that results in the overproduction of thyroid hormones…… Graves' disease

223. Which of the following gland is regarded as master a gland……Pituitary gland

224. In humans most of _____is controlled by Adrenocorticotropic hormone…… skin pigmentation

225. Human retina contains _____rods and 6 million cones……125 million

226. Neuron has _____ basic components……Three

227. Plasma membrane _____ different concentration of ions inside and outside the cell……..Maintain

228. skeletal muscle cells are……..multinucleate.

229. After death, human and other animal's bodies gradually become rigid. This condition is called……rigor mortis

230. Walter Cannon coined the term homeostasis in……..1929

231. _____ is the study of physical laws that explain the relationship between pressure and flow of blood through blood vessels of the circulatory system…… Hemodynamics

232. _____ is the hypersecretion of growth hormone after maturity which cause enlargement of the bones of the head and of the extremities……Acromegaly

233. Average cardiac output for resting adult human is…… 5 L/min

234. According to Nernst equation, the equilibrium potential of a diffuse able ion depends on …… Absolute temperature

235. The__ is the region from which the axon of a neuron originates……. Axon Hillock

ADMIRE ZOOLOGIST GROUP

236. The period during which no new action potential can be fired is called the .....absolute refractory period.

237. Which of the following is a correct statement..... Symporters are coupled transporters that transfer two solutes in the same direction

. 238. . Adaptation is_____..... A slowly occurring evolutionary process

239. In humans Melanocyte Stimulating Hormone is released from _____ of anterior pituitary in extremely low quantities..... Adenohypophysis

240 _____ is a device that graphically records changes in the mechanical activities of animal tissues..... A kymograph

241. _____ is the plasma membrane of an axon..... Axolemma

242. Delayed rectifies are —-—-—-—-—— channels..... Voltage-gated K+ 135. Threshold potentials of most neurons fall between___and ____..... -30 mV, -50 mV

243. Catecholamines hormones included..... epinephrine and norepinephrine

244 . The receptors for umami (savory or delicious) taste were discovered in.....2000

245. ____ are projections of a neuron receive signals from other neurons..... Dendrites

246. _____are synthesized from the amino acids tyrosine..... Amine hormones

246. Where the pituitary gland situated..... below the hypothalamus

246. Control of blood glucose by insulin is an example of..... Negative feedback systems

247. Humans have are more than _____ different receptors for bitter taste.....30

248. A person with loss of _____cones is called a protanope..... Red

249. The organs of vertebrates which regulates water and ions are .....kidneys

250. Anterior lobe of pituitary gland contain _____ types of glandular cells that synthesized and _____ secret hormones..... five, six

251 _____are specialized to pump and circulate blood throughout the body..... Cardiac muscles

252. H. E. Huxley and A. F. Huxley proposed the sliding filament theory of muscle contraction in 1954

ADMIR ZOOLOGY GROUP

253. . Which of the following hormone responsible for the "fight-or-flight" response…… Epinephrine and Norepinephrine

254. _____are also called as spikes and nerve impulses…….. Action potentials

255. the posterior pituitary stores and release…… Oxytocin and Antidiuretic Hormone

256. Cell body of neuron contains_____..... All of the above

257. . Uterine cycle involves cyclic changes in the uterus. This cycle averages ___days……28

258. . Pituitary Gland is a small gland, about 1 centimeter in diameter and__ in Weight……0.5 to 1 gram

259. _____ are microscopic gaps found within myelinated axons……. Nodes of Ranvier

260. Endocrine glands are the ductless glands that secrete their products…… directly into the blood

261. _____ myelinated axon has faster speed than _____ thicker squid giant axon…… 20pm, 40x

262. . Gastrin stimulates the _____ secretion in stomach……..HCL _____ of testes produce and secrete the hormone inhibin…… Sertoli cell

263. . control of blood glucose by insulin is an example of …….

ANS : Neutral feedback system

264. A taste bud is composed of about ….. types of modified epithelial cells.

ANS : 50

265. Major ions responsible for vrest are ……..

Ans : K+ NA+ & Ca+

266. Plasma membrane ……. different concentRATION OF IONS inside and outside the cell .

ANS : Maintains

267……. Is the tendency of an organism to maintain relative internal stability.

ADMIRE ZOOLOGIST GROUP

ANS: Homeostasis

268 ……. is the study of functions of tissues organs systems of animals

ANS : Physiology

269 ……. are cycle unsaturated hydroxyl fatty acids .

ANS : prostsglandins

270. The permeability of Na+ channel for k+ ions is ……

ANS : 0.09

271. which of the following is not correct about ion channel protein.

ANS: Gated channels

272 ……. Is the structural and functional units of nervous system

ANS : neuron

273. A ' Lactotropic cell ' is a cell in the anterior pituitary which produce …….

ANS : Proloctin

274. …… is the volume of the blood ejected by each beat of heart .

ANS : stroke volume

275 . steroid hormones are synthesized from …….

ANS : cholesterol

276 Calcitonin is a harmone of which of following ?

ANS : Thyroid glands

277. Thikness of cell membrane is ….

ANS: 5 nm

278 many organism ACTH also plays role in …….

ANS : circadian rhythms

ADMIRE ZOOLOGIST GROUP

279 . That type of secretion in which entire cell rupturesand breaks up to release its contents is called as……

ANS Holocrine secretion

280 **Action potential can last for ……. Milliseconds**

ANS : 10-100

281. . Adrenocorticotropic Hormone is a peptide hormone comprising single chain of ….. amino acids .

ANS : 39

282 Substances that is released via a duct through the gland to the external epithelial is called as ….

ANS : Exocrine secretion

283. . Which of the following harmones is released from anterior lobs of pituitary.

ANS : Luteinizing Harmone (LH)

284 . Gestrin Stimulate the…….. secretion in stomach.

ANS: HCL

285 . The Myelin sheath is derived from the ……

ANS : schwan cell

286. which of the following harmone is released from anterior lob off pituitary ?

ANS : Prolactin inhibiting hormone (PIH)

END……

ADMIRE ZOOLOGIST GROUP
