Describe the stage of replacement; what is the strategy adopted by the competitors of 20th century and why? 3 marks

The Stage of Replacement: A New Paradigm

The stage of replacement means shifting to a new paradigm. Managers must shift to a new paradigm for managing organizations because of the anomalies that threaten their survival and prosperity. To make this shift, however, they must understand the new paradigm and how it differs from the old paradigm. To initiate this understanding, we will contrast the new (but still emerging) paradigm with the old paradigm.

Themes of the New Paradigm

The differences between the new and the old paradigm are organized around three themes: customer value strategy, cross-functional systems, and continuous improvement.

- **Theme 1: Customer Value Strategy**

Customer value is defined as the combination of benefits derived from using a product (or service) and the sacrifices required of the customer. The customer value strategy is the business plan for offering value to customers, including product characteristics, attributes, mode of delivery, support services, and so on. The theme of customer value strategy may be addressed in many topics, including quality, measurement, positioning, key stakeholder, and product design.

- **Theme 2: Cross-Functional Approach**

The old paradigm does not acknowledge systems that cut across functional or unit boundaries. Managers simply negotiate across functional interfaces to obtain minimal cooperation. In the new paradigm, managers define, own, and optimize cross-functional systems for customer value.

- **Theme 3: Continuous Improvement**

To keep pace with the changes in the external environment, managers have to change the organization. Managers have always made improvements. However, with rates of change increasing in the external environment, managers must improve differently and more frequently than in the past. They must pursue continuous improvement, which is a constant striving to change and make things better.

Advantages and the use of the fish bone diagram? 3marks

The most useful tool for identifying the causes of problems is a cause-and-effect diagram, also known as a fishbone or Ishikawa diagram, named after the Japanese quality expert who popularized the concept. A cause-and-effect diagram is simply a graphical representation of an outline that presents a chain of causes and effects. A team typically uses a cause-and-effect diagram to identify and isolate causes of a problem. The technique was developed by the late Dr. Kaoru Ishikawa, a noted Japanese quality expert.

What is the Juran's Trilogy? 3marks

The Juran's Trilogy is a registered trademark of Juran Institute, Inc.

The Juran's Trilogy summarizes the three primary managerial functions.

- Quality Planning
- Quality Control
- Quality Improvement

What are the motivation factors which influence to register ISO 9000? 5marks

Management Motivation for Registration to ISO 9000

Management motivation for adopting either ISO 9000 or TQM can vary widely. There are both appropriate and inappropriate motives. For example, if a company seeks ISO 9000 registration to obtain a

marketing advantage, its motive is inappropriate. As a result, the organization will likely give mere lip service to adopting the standard. Appropriate motives for adopting ISO 9000 include the following:

- To improve operations by implementing a quality management system that satisfies the ISO 9000 requirements for management responsibility; resource management; product realization; and measurement, analysis, and improvement.
- To create or improve a quality management system that will be recognized by customers worldwide.
- To improve product or service quality or the consistency of quality.
- To improve customer satisfaction.
- To improve competitive posture.
- To conform to the requirements of one or more major customers (although adoption would be better motivated by internal consideration, such as the preceding five).

What are the special and common causes of the variations explain with the example of any organization? 5 Marks

In a total quality setting, consistency and predictability are important. When a process runs consistently, efforts can begin to improve it by reducing process variations, of which there are two kinds:

- Common-cause variation is the result of the sum of numerous small sources of natural variation that are always part of the process.
- Special-cause variation is the result of factors that are not part of the process and that occur only in special circumstances, such as a shipment of faulty raw material or the involvement of a new, untrained operator.

Here are some examples of common and special causes of variation.

Common Causes

- Inappropriate procedures.
- Poor design.
- Poor maintenance of machines.
- Lack of clearly defined standard operating procedures.
- Poor working conditions, e.g. lighting, noise, dirt, temperature, ventilation.
- Machines not suited to the job.
- Substandard raw materials.
- Measurement error.
- Vibration in industrial processes.
- Ambient temperature and humidity.
- Insufficient training.
- Normal wear and tear.
- Variability in settings.
- Computer response time.

Special Causes

- Operator absent.
- Poor adjustment of equipment.
- Operator falls asleep.
- Faulty controllers.
- Machine malfunction.
- Computer crashes.
- Poor batch of raw material.
- Power surges.

Do you think that empowerment has the degree of involvement of the employees explain? 5 marks

Empowerment means giving someone power-granting the authority to do whatever is necessary to satisfy customers, and trusting employees to make the right choices without waiting for management approval. By empowering employees, organizations drive decision making down to its lowest possible level. Empowerment allows organizations to flatten their organizational structure because fewer managers are needed to “direct and control” employees. Many companies have found that giving people throughout the organization the power to make a difference contributes greatly to providing quality products and services to their customers. The need to empower the entire workforce in order for quality to succeed has long been recognized, even if it is only recently coming into practice.

People usually go through four stages when learning new concepts or skills. Suppose you are learning to play a video game for the first time, explain briefly any three stages of learning 3marks

As individuals must continue to learn, so must organizations. Prof. Peter Senge of MIT portrays organizational learning as going beyond the mere capture of knowledge to include gaining a deeper and complete understanding of how things work, and involve five learning disciplines:

1. Personal Mastery---a continual drive for personal and organizational development.
2. Mental Models---understanding how our cognitive schema affects our view of the world, and continually improving the accuracy of the model.
3. Shared Vision---working jointly toward a common view to which all aspire.
4. Team Learning---the use of dialogue to move beyond mere conversation to true joint understanding.
5. Systems Thinking---understanding the multiple cause-and-effect relationships and how they are interconnected in organizations, society and other systems.

Difference between control chart and Flow chart?

A **flowchart** is a picture of a process that shows the sequence of steps performed. Flowcharts are best developed by the people involved in the process—employees, supervisors, managers, and customers. A facilitator often is used to provide objectivity, to ask the right questions, and to resolve conflicts. The facilitator can guide the discussion through questions such as “What happens next?” “Who makes the decision at this point?” and “what operation is performed here?”

A **control chart** displays the state of control of a process. Time is measured on the horizontal axis, and the value of a variable on the vertical axis. A central horizontal line usually corresponds to the average value of the quality characteristic being measured. Two other horizontal lines represent the upper and lower control limits, chosen so that there is a high probability that sample values will fall within these limits if the process is under control – that is, affected only by common causes of variation. If points fall outside of the control limits or if unusual patterns such as shifts up or down, trends up or down, cycles, and so forth exist, special causes may be present.

Two fundamental mistakes that can be made concerning variation are:

1. Treating special causes as common causes, and
2. Treating common causes as special causes.

Importance of empowerment

1. Giving employees’ responsibility for their own work has led to improvements in quality, productivity, motivation, customer service, speed of decision making, and morale.
2. Empowerment leads to greater levels of satisfaction among the workforce.
3. Empowered employees give faster and friendlier service to their customers.
4. Employee satisfaction strongly related to customer satisfaction.

How a company will specify that product requirements have been met?

Monitoring and Measurement of Product

The company must monitor and measure the characteristics of the product to verify that product requirements have been met. This must be conducted at appropriate stages of the product realization process in accordance with the planned arrangements.

The company must ensure that the planned arrangements have been satisfactorily completed prior to product release and service delivery, unless otherwise approved by a relevant authority and, where applicable, by the customer.

The company must maintain records to verify evidence of conformity with product requirements. Records must indicate the person(s) authorizing release of product.

You want yourself get admitted to ABC university. How would you judge quality of education of university?

The following criteria should be taken into account when assessing possible universities; only you know how much weight to give each one. Thinking about each factor carefully helps you shorten your list of potential colleges where you feel the most comfortable.

- Size
- Location
- Public versus Private
- Academic Programs
- Student Diversity
- Male/Female Ratio
- Campus Life
- Athletics
- Cost
- Admissions Standards/Selectivity
- Facilities/Technology
- Family Issues
- Disability Services
- Study Abroad Programs/Co-ops/Internships

How would you rationalize functions of QFD as a tool to translate customer requirements into technical requirements?

Customer's needs and expectations drive the planning process for products and the systems by which they are produced. Marketing plays a key role in identifying customer expectations. That is what is known Voice of Customer in QFD or WHAT in a simple Matrix Diagram. Once these are identified, managers must translate them into specific products and service specifications that manufacturing and service delivery processes of the organizations (Voice of Process in QFD or HOW in Matrix Diagram) must meet. In some cases the product or service that customers receive is quite different from what they expect. It is management's responsibility to minimize such gaps.

Firms use several tools and approaches to help them focus on their external and internal customers.

- Matrix Diagram
- Relations Diagram
- Affinity Diagram
- Tree Diagram
- Arrows Diagram

Find mean 0, 2, 5, 9, and 12

$$= 28/5 = 5.6$$

Differentiate between leadership and management?

Leadership and management must go hand in hand. They are not the same thing. But they are necessarily linked, and complementary. Any effort to separate the two is likely to cause more problems than it solves. Still, much ink has been spent delineating the differences.

- The manager's job is to plan, organize and coordinate. The leader's job is to inspire and motivate.
- The manager administers; the leader innovates.

- The manager is a copy; the leader is an original.
- The manager maintains; the leader develops.
- The manager focuses on systems and structure; the leader focuses on people.
- The manager relies on control; the leader inspires trust.
- The manager has a short-range view; the leader has a long-range perspective.
- The manager asks how and when; the leader asks what and why.
- The manager has his or her eye always on the bottom line; the leader's eye is on the horizon.
- The manager imitates; the leader originates.
- The manager accepts the status quo; the leader challenges it.
- The manager is the classic good soldier; the leader is his or her own person.
- The manager does things right; the leader does the right thing.

How solution is planned and implemented in seven step of problem solving?

Seven simple statistically based tools are used extensively to gather and analyze data. Unlike the seven advanced management and planning tools, these tools are visual in nature and simple enough for anyone to understand.

These seven basic tools of quality are:

1. Flow-charts,
2. Check sheets,
3. Histograms,
4. Pareto diagrams,
5. Cause-and-Effect diagrams,
6. Scatter diagrams, and
7. Control charts

Being CFO of ABC Company, what are pre-requisites you should ensure for successful empowerment in your company?

- Provide education and resources
- Remove restrictive policies/procedures
- Create an atmosphere of trust
- Share information freely
- Make work valuable
- Train managers in leadership
- Train employees

Briefly Define Matrix Diagram and Relations Diagram (3 Marks)

Matrix Diagram: These are spreadsheets that graphically display relationships between characteristics, functions, and tasks in such a way as to provide logical connecting points between each item. QFD is one of many matrix diagrams now used for planning and quality improvements.

Relations Diagram: Purpose of this tool is taken a central idea and map out logical or sequential links among related categories. Every idea can be logically linked with more than one idea at a time. It allows lateral rather than linear thinking.

Define Team and enlist qualities of a good team member (3 Marks)

A small number of people with complementary skills who are committed to a common purpose, set of performance goals, and approach for which they hold themselves mutually accountable

Effective teams are goal-centered, independent, open, supportive, and empowered.

Peter Scholtes, a leading authority on teams for quality improvements, has suggested 10 ingredients for a successful team:

- Clarity in team goals
- An improvement plan
- Clearly defined roles

- Clear communication
- Beneficial team behaviors
- Well-defined decision procedures
- Balanced participation
- Established ground rules
- Awareness of group process
- Use of the scientific approach

Explain Deming's Chain Reaction (5 Marks)

Deming stresses that higher quality and improvement in quality leads to higher productivity, which in turn leads to long-term competitive strength. This theory states that improvements in quality lead to lower cost because of less rework, fewer mistakes, fewer delays and snags, and better use of time and materials. Lower costs, in turn, lead to productivity improvements. With better quality and lower prices, the firm can achieve a higher market share and thus stay in business, providing more and more jobs. Deming states emphatically that top management has the overriding responsibility for quality improvement.

Characteristics of developing process during Maturity levels (5 Marks)

A maturity model is a structured collection of elements that describe characteristics of effective processes.

A maturity model provides:

- A place to start
- The benefit of a community's prior experiences
- A common language and a shared vision
- A framework for prioritizing actions
- A way to define what improvement means for your organization

A maturity model can be used as a benchmark for assessing different organizations for equivalent comparison. It describes the maturity of the company based upon the project the company is dealing with and the clients.

Benefits of Quality Function Deployment (QFD)? (5 Marks)

QFD is an overall concept that provides a mean of translating customer requirements into appropriate technical requirements for each stage of product development and production. Voice of Customer is collection of all satisfiers, delighters/exciters and dissatisfiers i.e. WHAT part of a matrix that customers want from a product.

Variable Statistical control and Attribute Statistical control 5 marks

Check sheets are data collection forms that facilitate the interpretation of data. Quality-related data are of two general types—attribute and variable. Attribute data are obtained by counting or from some type of visual inspection: the number of invoices that contain errors, the number of parts that conform to specifications, and the number of surface defects on an automobile panel, for example. Variable data are collected by numerical measurement on a continuous scale. Dimensional characteristics such as distance, weight, volume, and time are common examples.

OR

Variables Data - quality characteristics that are measurable values.

– Measurable and normally continuous; may take on any value.

Attribute Data - quality characteristics that are observed to be either present or absent, conforming or nonconforming.

- Countable and normally discrete

Implementing a Quality Management System 5 marks

There are key steps that every company implementing a QMS will need to consider:

- Purchase the Standard
- Review support literature and software

- Assemble a team and agree your strategy
- Consider Training
- Review Consultancy Options
- Choose a registrar
- Develop a Quality manual
- Develop support documentation
- Implement your Quality Management System
- Consider a pre-assessment
- Gain registration
- Continual assessment

How to create organizational excellence? 5 marks

- Identifying Needs which companies and organizations commit themselves to satisfy. This was done largely through Information Network and Analysis activities.
- Establishing shared Objectives and desired Results linked to measures of Quality
- Defining the Work that has to be done together with the Policies and Procedures to establish a supportive work climate.
- Determining the core Competences needed and empowering people with skills and teambuilding needed to achieve results.

Because the research focused on management work, other tasks of organizational life contributing to organizational excellence were not covered. A review of published studies on management work suggested that these should include those focusing on aspects of organizational life and tasks, related to the critical role of the top leadership in mission and vision creation and the transformational impact of such behaviors. Integrating these different strands will lead to a more complete understanding of the components that define organizational excellence

Question No: 34 (Marks: 3)

The President of Samsung Electronics has appointed the Manager Quality as 'Management Representative'. Discuss the authority and responsibility of the Management Representative.

Authority and Responsibility:

- a. To ensure that needed process for the quality management system are established, maintained and implemented.
- b. To report to top management regarding the performance of the quality management system and any improvement, if required.
- c. To ensure the awareness of customer requirements throughout the organization.

Question No: 34 (Marks: 3)

Flow chart is an effective tool for data collection and analysis. Comment on this statement.

This is right flow chart is effective tool for data collection and analysis but it not gives a detailed picture. It normally helps people to visualize simple but important changes that could be happen in process. It also uses to identify the quality problems and areas for improvement.

Question No: 35 (Marks: 3)

What are the qualities of an effective team and the circumstances in which teams realize that the plan is not improved? (Marks=2+1)

Qualities

1. Effective team must achieve its goals
2. It improves the quality performance quickly.
3. Team must maintain and increase its strength as a unit.

Plan is not improved in below circumstances if it happens.

1. Goals are not clear
2. Improvement plan is not available

3. Roles are not defined properly
4. Loose communication

Question No: 36 (Marks: 5)

The policy of ABC Machine Works Ltd. is to provide products and services that meet the requirements of our customers in accordance with our quality policy. How the management and employees of this company are committed to achieving this policy?

When a company is committed to provide the products and services that meet the requirements of our customers in accordance with their quality policy then it means company has some quality policy and certifications from third party due to which are providing they are assured of product and services.

Because in company quality policy it is stated that company will follow the international and health related standards to provide the best product and services to others.

Like in ISO 9001:2000, quality management system is described and company have to follow it to remain ISO certified.

Question No: 37 (Marks: 5)

Performing is one of the stages of Team Growth. What can be the feelings of leader during this stage? Also discuss the role of a leader in “Performing”? (Marks=3+2)

Performing stage is very critical state for a leader because this is the time of to show and deliver something to others. To prove himself as leader. In this stage leader has to proven his role as a leader. As a leader he has to guide his team, motivate his team, take the responsibility and finish the work with team work.

Communicate everything clearly to team to perform at this stage. A leader should take his team as a unit with increasing strength with the passage of time.

Leadership and team work 5 marks

While leadership and teamwork are different virtues, they are strongly related in business, sports, the military and volunteerism. It is easy to state that leaders lead, while teams follow leaders to reach goals and objectives. Yet, great teams have superior leaders as members. To paraphrase a common definition of solid leadership, "Leaders are people that other people want to follow." However, most outstanding leaders are also equally accomplished team players.

What are the various responsibilities of a steering committee and how can the leader of a team make the team members aware of the group process? 3

Most organizations practicing total quality have a steering committee, called a quality council by Juran and a quality improvement team by Crosby. Steering committees are responsible for establishing policy for TQ and for guiding the implementation and evolution of TQ throughout the organization. The top manager of the organization is usually on the steering committee, as is the manager with overall responsibility for quality- for example, the Vice President /Director of Total quality. The steering committee may meet fairly often when a TQ effort is getting started, but usually meets only monthly or quarterly once things are under way. This group makes key decisions about the quality process – how quality should be measured and what structures and approaches should be used to improve quality. The steering committee also periodically reviews the status of TQ and makes the adjustment necessary to ensure customer satisfaction and continuous improvement. In general, the steering committee has overall responsibility for the progress and success of the TQ effort.

What are the basic types of statistical process control charts and how can you compute the upper control limit and the lower control limit? 3

A control chart displays the state of control of a process. Time is measured on the horizontal axis, and the value of a variable on the vertical axis. A central horizontal line usually corresponds to the average value of the quality characteristic being measured. Two other horizontal lines represent the upper and lower control limits, chosen so that there is a high probability that sample values will fall within these limits if the process is under control – that is, affected only by common causes of variation. If points fall outside of

the control limits or if unusual patterns such as shifts up or down, trends up or down, cycles, and so forth exist, special causes may be present.

Explain appraisal costs with the help of examples. 3

The costs associated with measuring, evaluating or auditing products or services to assure conformance to quality standards and performance requirements.

A common example of appraisal costs is the expenses from inspections. An organization should establish an inspection of their products and incoming goods from a supplier before they reach the customer. This is also known as acceptance sampling, a technique used to verify that products meet quality standards.

What are the requirements of total quality for human resources and how can the managers ensure empowerment in the organization? 5

TQ HRM Requirements

- Empower individuals and teams
- Continually improve key personnel management processes
- Maintain a satisfying work environment
- Promote individual and group participation

For empowerment to occur, managers must undertake two major initiatives:

- Identify and change organizational conditions that make people powerless, and
- Increase people's confidence that their efforts to accomplish something important will be successful.

Discuss the motivational factors that stimulate companies to obtain ISO certification. 5

The International Organization for Standardization (ISO) issued a set of international standards for quality management adopted by more than (90) countries. Therefore, many firms have taken the initiative of obtaining quality certification for the purpose of sustaining competitive advantage and improve their financial performance. In addition, costs accountants, especially in manufacturing firms, started measuring the quality costs on a regular basis.

This paper examines the extent to which Bahraini companies obtained ISO certification; the motivation behind quality certification; and the factors which encourage firms to implement cost of quality reporting. The next section of the paper reviews the existing literature on cost of quality. Section three discusses the research method. Section four presents the findings of the study. The last section concludes the study, highlights its limitations, and suggests directions for future research.

What are the various approaches that the organizations use to achieve cost leadership for high volume products? How can the benefits resulting from cost leadership be cancelled out? 5

To achieve cost leadership for high volume products, companies use a variety of approaches:

- Early manufacturing involvement in the design of the product both for make-versus-buy decisions and for assurance that the production processes can achieve required tolerances.
- Product design to take advantage of automated equipment by minimizing the number of parts, eliminating fasteners, making parts symmetric whenever possible, avoiding rigid and stiff parts and using one-sided assembly designs.
- Limited product models and customization in distribution centers rather than in the factory.
- A manufacturing system designed for a fixed sequence of operations. Every effort is made to ensure zero defects at the time of shipment. Work-in-process inventory is reduced as much as possible, and multi skilled, focused teams of employees are used.

A cost leader can achieve above-average performance if it can command prices at or near the industry average. However, it cannot do so with an inferior product. The product must be perceived as comparable with competitors or the firm will be forced to discount prices well below competitors' prices to gain sales. This can cancel any benefits that result from cost advantage.

For small and medium scale companies which usually do not enjoy a brand image, what benefits do they enjoy from the implementation of an ISO system? (3mark)

Benefits of ISO9001 certificate

For Small and Medium Scale companies, which normally do not enjoy much of brand image, ISO9001 certification helps to build confidence in the minds of customer organizations. This is particularly true in case of tenders and other contractual situations involving institutional buyers.

In India, where the Government is a prominent buyer, many of the public sector organizations have already started insisting on ISO9001 registration for vendor enlistment. In private sector also, the situation is not much different.

Other benefits of ISO9001 registration are:

- Clarity in definition of authorities and responsibilities
- Enhanced corporate image and market positioning
- Better records and documentation in case of litigation
- Use of recognized mark (of certifying agency) on stationary and advertisement
- Reduction in the need for multiple second party assessments
- Better traceability to root causes of quality problems
- Rectification of errors at the earliest stage
- No repetition of errors

There are various stages of team growth, what can be the feelings of a leader during 'Formation' stage? Also discuss the role of leadership in 'Forming'. (5 mark)

Forming:-

Feelings:-

- Excitement, anticipation, optimism
- Pride in being chosen
- Suspicion, fear, anxiety

Forming: Leadership

- To build trust and confidence, team leaders should
- Help members get to know each other
- Provide clear direction and purpose
- Involve members in developing and clarifying plans, roles, and ways of working together
- Provide information needed to get started

Explain briefly the following perspective in balance scorecard. (5 Marks)

(a) The Learning & Growth perspective

(b) The Business Process perspective

Perspectives

The balanced scorecard suggests that we view the organization from four perspectives, and to develop metrics, collect data and analyze it relative to each of these perspectives:

• **The Learning & Growth Perspective**

This perspective includes employee training and corporate cultural attitudes related to both individual and corporate self-improvement. In a knowledge-worker organization, people -- the only repository of knowledge -- are the main resource. In the current climate of rapid technological change, it is becoming necessary for knowledge workers to be in a continuous learning mode. Metrics can be put into place to guide managers in focusing training funds where they can help the most. In any case, learning and growth constitute the essential foundation for success of any knowledge-worker organization.

Kaplan and Norton emphasize that 'learning' is more than 'training'; it also includes things like mentors and tutors within the organization, as well as that ease of communication among workers that allows them to readily get help on a problem when it is needed. It also includes technological tools; what the Baldrige criteria call "high performance work systems."

- **The Business Process Perspective**

This perspective refers to internal business processes. Metrics based on this perspective allow the managers to know how well their business is running, and whether its products and services conform to customer requirements (the mission). These metrics have to be carefully designed by those who know these processes most intimately; with our unique missions these are not something that can be developed by outside consultants.

- **The Customer Perspective**

Recent management philosophy has shown an increasing realization of the importance of customer focus and customer satisfaction in any business. These are leading indicators: if customers are not satisfied, they will eventually find other suppliers that will meet their needs. Poor performance from this perspective is thus a leading indicator of future decline, even though the current financial picture may look good.

In developing metrics for satisfaction, customers should be analyzed in terms of kinds of customers and the kinds of processes for which we are providing a product or service to those customer groups.

- **The Financial Perspective**

Kaplan and Norton do not disregard the traditional need for financial data. Timely and accurate funding data will always be a priority, and managers will do whatever necessary to provide it. In fact, often there is more than enough handling and processing of financial data. With the implementation of a corporate database, it is hoped that more of the processing can be centralized and automated. But the point is that the current emphasis on financials leads to the "unbalanced" situation with regard to other perspectives. There is perhaps a need to include additional financial-related data, such as risk assessment and cost-benefit data, in this category.

Enlist and explain core leadership skills. (5 Marks)

E-Myth considers the five core skills of effective leadership:

1. **Vision** This is the ability to formulate ideas about the business or parts of the business; to understand opportunities or the need for change; to create a mental picture of what the business will be in the future; and to articulate all of that clearly in words and images. At the highest level, it's the creation of the entrepreneur's dream.
2. **Discrimination** being able to see what's important, to understand the available choices, and to make sound, practical decisions. Discrimination is free-form decision making rather than rule-based decision making. It's knowing what questions to ask, and being able to answer them in the absence of rules or previous experience.
3. **Strategic Thinking** The ability to see the big picture and devise an effective path — the right actions — that will lead to realizing the vision. Inventing "the rules of your game" (as Michael Gerber puts it) and creating your business philosophy and key policies.
4. **Commitment** This is the determination and energy to follow through and make the vision a reality even in the face of obstacles, opposition, uncertainty, and risk. Without an underlying passion for your vision, commitment is difficult to maintain.
5. **Inspirational Communication** This is the skill of communicating vision and strategy, and being able to infuse the organization with enthusiasm, dedication, and some of your own spirit and passion.

Role of sponsor in core process of an organization (3 Marks)

Using the quality control tool of run chart, discuss that how it can help in managing absenteeism in a production based organization. 5
