STA630- Research Methods Final Term Paper

Question No: 1 (M - 1) :

Which of the following is NOT an assumption of action research?

Action researchers have basic research skills to collect and analyze data.
All professionals need and want feedback on their performance.

Results enable the researchers to evaluate the performance of others.

Teachers are capable of assuming responsibility for their own professional growth.

Question No: 2 (M - 1) :

Which of the following statements is TRUE for operational definition?

It is one that bears no relation to the underlying concept.

It is an abstract, theoretical definition of a concept

A definition of a concept in terms of specific and empirical measures.

It is one that refers to opera singers and their work.

Lesson 5

Operational definition is also called a working definition stated in terms of specific testing or measurement criteria. The concepts must have empirical referents.

Question No: 3 (M - 1) :

Which of the following statements best defines hypothesis?

A quantitative study.

A tentative prediction of the results of the research.

A qualitative research design.

The operational definition of the study.

Question No: 4 (M - 1) :

When the research starts from the effects and tracing the reasons back in time, what does it called?

Case study

Experiment

Observation studies

Historical comparative research

Case study: It is an in-depth analysis of a unit which could be an individual person, a couple, a group, or an organization. It is more like a clinical analysis in retrospect, starting from the effect and tracing the reasons back in time.

Question No: 5 (M - 1) :

The extent to which a test provides scores that are meaningful, appropriate, or useful is referred to as;

Reliability

Accuracy

Internal validity

Validity

Question No: 6 (M - 1) :

Mr. Hasan s son has applied to a high school in Florida, but the application was denied solely on his low score on the Iowa Test of Basic Skills (ITBS). His son wants to attend this school and contends his current grades and other standardized test scores speak well to both his past work and future academic capability. Which of the following characteristics of the ITBS is being questioned by this student?

Construct validity

Content validity

Predictive validity

Concurrent validity

Ref: This is a case where the appropriate validity evidence is criterion-related. Because the test purports to predict "future academic capability," predictive validity is a better alternative than concurrent validity.

Question No: 7 (M - 1) :

Internal consistency estimates of reliability such as the KR-20 or Cronbach's alpha are used more frequently than other estimates such as test-retest or parallel forms because

internal consistency estimates;

Are easily calculated.

Require only one administration of a test.

Are more accurate than all other types of estimates.

Are usually higher.

Question No: 8 (M - 1) :

Which of the following functions is performed by the Ordinal scale?

Categorize

Distance

Order

Unique origin

Lesson 17

Ordinal scales include the characteristics of the nominal scale plus an indicator of order.

Question No: 9 (M - 1) :

Which of the following is measured by the Interval scale?

Order of the object

Magnitude of the object

Categorize the object

All of the given options

On interval measurement scales, one unit on the scale represents the same magnitude on the trait or characteristic being measured across the whole range of the scale.

www.vuzs.info

Question No: 10 (M - 1) :

Following are the properties of nominal scale, except;

Least powerful

Suggest no order

Provide categorical information

Provide magnitude of object

Lesson 17

Nominal Scale: A nominal scale is the one in which the numbers or letters assigned to objects serve as labels for identification or classification. With nominal data, we are collecting information on a variable that naturally or by design can be grouped into two or more categories that are mutually exclusive, and collectively exhaustive.

Nominal scales are the least powerful of the four scales. They suggest no order or distance relationship and have no arithmetic origin.

Question No: 11 (M - 1) :

What is the difference between interval/ratio and ordinal variables?

Ordinal data can be rank ordered, but interval/ratio data cannot.

The distance between categories is equal across the range of interval/ratio data.

Interval/ratio variables contain only two categories.

Ordinal variables have a fixed zero point, whereas interval/ratio variables do not.

Interval/ratio variables are those whose categories are equidistant, such as age in years. Ordinal variables can be ranked ordered, but the distance between categories is not equal across the range.

www.vuzs.info

Question No: 12 (M - 1) :

A study design in which the researcher might create _____ to establish cause-and-effect relationship is called Experimental Design.

An artificial setting, control some variables and manipulates the independent variable

A natural setting, control some variables and manipulates the dependent variables

An artificial setting, control some variables and manipulates the dependent variable

All of the given options

Ref: An experiment involves the creation of a contrived situation in order that the researcher can manipulate one or more variables whilst controlling all of the others and measuring the resultant effects. Research process is in which one or more variables are manipulated under conditions which permit the collection of data which show the effects, if any, in unconfused fashion.

Question No: 13 (M - 1) :

Which of the following would LEAST likely be a data source for an action research study of "teachers' questioning techniques in social studies classes"?

Student questionnaires

Videotaping of classes

Students' standardized test scores

Classroom observation

Question No: 14 (M - 1) :

Teachers are advised to predict the results of student attitudinal questionnaires, because;

It will help them decide if students answered truthfully.

It gives them a point of comparison against which to judge actual responses.

It will allow them to apply statistical procedures in analyzing results.

It helps them familiarize themselves with the questionnaires.

Question No: 15 (M - 1) :

Which of the following is an example of a question about normative standards and values?

How many workers are employed at this plant?

What is your attitude towards the management at this plant?

Do you always cast your vote in trade union elections?

Are you aware of the main features of the European Union Directive for informing and consulting employees?

Ref: These types of questions are closely related to question about attitudes and beliefs.

Question No: 16 (M - 1) :

Questions that include negatives should be avoided because:

The respondent may miss out the negative word.

The respondent may be unsure how to answer if the question includes a double negative.

The respondent may be led by the question.

All of the given options.

Ref: When using a Likert scale it can be difficult to avoid asking a question with a negative, however the researcher should attempt to avoid them if possible.

Question No: 17 (M - 1) :

Random assignment to treatment groups is characteristic of which kind of research?

Causal-comparative

Correlational

Experimental

Descriptive

Lesson 33

Question No: 18 (M - 1) :

Which of the following is likely to happen if clear instructions are not given as to how the respondent should answer the question?

Respondents may delete inappropriate answers rather than select appropriate ones.

Respondents may choose only one answer when they need to choose as many as apply.

Respondents may complete questions that are not relevant to them.

All of the given options.

Ref: Clear instructions are vital as they allow for the respondent to move quickly and efficiently through the questionnaire which may in turn aid response rate.

Question No: 19 (M - 1) :

Which of the following is NOT an example of a problem with using social survey research to investigate behaviour?

Respondents tend to answer by giving the most socially desirable answer.

Respondents may inadvertently omit key terms in the question.

Respondents may not give an honest reply to what they see as a threatening question.

Respondents may be unwilling to reveal information as they believe they are likely to be identified.

Ref: An advantage of social survey research is that the researcher can ensure that the anonymity of the respondent is maintained by administering the same questions to each individual.

Question No: 20 (M - 1) :

What is the main purpose of pilot testing?

To accumulate responses

To identify respondent

To identify potential problems

To evaluate the research

Conventional wisdom suggests that pre-testing not only is an established practice for discovering errors but also is useful for extra training the research team.

Question No: 21 (M - 1) :

Which of the following sampling strategies was used when the three students with the highest GPAs were selected?

Extreme case

Snowball

Maximum variation

Normal case.

Question No: 22 (M - 1) :

Which of the following best describes qualitative data analysis?

It begins after all the data has been collected.

It is an ongoing, cyclic process integrated into all phases of research.

It is an awkward, haphazard process.

It builds from abstraction to specific, concrete examples

Question No: 23 (M - 1) :

Which of the following represents the most general conceptualization in qualitative data analysis?

Word

Topic

Category

Pattern

Question No: 24 (M - 1) :

The control procedure that allows the researcher to determine the effect of the independent variable and the control variable on the dependent variable both separately and in combination is;

Analysis of covariance

Matching

Forming subgroups to represent all levels of the control variable

Randomization

Question No: 25 (M - 1) :

Which of the following could NOT be a cause of variation in high school achievement?

- Reading ability
- Parental involvement
- Teacher expectations
- College attendance**

Question No: 26 (M - 1) :

In experimental research, what does a researcher manipulate?

- At least one dependent variable
- All variables

At least one independent variable

At least one independent variable and one dependent variable

In the simplest type of experiment, only two values of the independent variable are manipulated.

Question No: 27 (M - 1) :

In an experimental study, "the effects of inclusion on academic self-concept of children with special needs", the researcher must control which of the following?

The selection of subjects but not their assignment to a treatment group.

The selection and assignment of subjects.

The assignment of subjects to a treatment group but not their selection.

Neither the selection nor assignment of subjects.

Ref: Random assignment is an integral part of an experimental design. While it is possible to use random selection, it is highly unlikely given the low incidence of children in an inclusionary classroom.

Question No: 28 (M - 1) :

Ecological validity refers to:

The participants to whom results generalize

The instruments used to measure the independent and dependent variables

The internal validity of a study

The context to which results generalize.

Question No: 29 (M - 1) :

Many beginner researchers believe that research involves testing, treating, and testing again. This is an example of:

- Comparison group research
- Quasi-experimental research
- True experimental research

Pre-experimental research

Question No: 30 (M - 1) :

Single-subject research is LEAST concerned with:

Clinical significance

Internal validity

Validity of measuring instruments

External validity

Question No: 31 (M - 1) :

On which component of his field notes did Mr. Majid focused when he expressed in his notes his thoughts and ideas about what he observed?

Description

Reflection

Protocol

Formal data

Question No: 32 (M - 1) :

In which section is the researcher allowed greater flexibility to express opinions, discuss implications for educational practice, and suggest additional research?

Review of the literature

Significance of the study

Results

Discussion

Question No: 33 (M - 1) :

Determining the sample interval (represented by K), randomly selecting a number between 1 to K, and including each K element in your sample are the steps for which form of sampling?

Simple Random Sampling

Stratified Random Sampling

Systematic Sampling

Cluster sampling

Systematic Random Sample: Systematic random sampling is simple random sampling with a short cut for random selection. Again, the first step is to number each element in the sampling frame. Instead of using a list of random numbers, researcher calculates a sampling interval, and the interval becomes his or her own quasi random selection method. The sampling interval (i.e. 1 in K where K is some number) tells the researcher how to select elements from a sampling frame by skipping elements in the frame before one for the sample.

Question No: 34 (M - 1) :

A focus group session is ideally for;

1 hour

1 and half hour

2 hours

More than 2 hours

For duration, a focus group session typically lasts up to an hour and a half.

Question No: 35 (M - 1) :

In an experimental research study, the primary goal is to isolate and identify the effect produced by which of the following?

Dependent variable

Extraneous variable

Independent variable

Confounding variable

Question No: 36 (M - 1) :

Which of the following is the process of identifying and classifying each item and giving labels to each category?

Accretion

Count Behaviors

Intensity

Coding

Coding: The process of identifying and classifying each item and giving labels to each category.

Question No: 37 (M - 1) :

When do largest percentages form a pattern across cells?

If there is no relationship

If there is non linear relationship

If there is curvilinear relationship

If there is linear relationship

If there is curvilinear relationship, the largest percentages form a pattern across cells. For example, the largest cells might be the upper right, the bottom middle, and the upper left.

Question No: 38 (M - 1) :

Which of the following elements is/are not included for structuring Observation in Non reactive research?

Frequency

Intensity

Direction

Accretion

Question No: 39 (M - 1) :

A census taker often collects data through which of the following?

Standardized tests

Interviews

Secondary data

Observations

Lesson 37

Secondary Data: The data may be a time bound collection of information (population census) as well as spread over long periods of time (unemployment trends, crime rate).

Question No: 40 (M - 1) :

What is the particular advantage of secondary analysis to business students?

It is less challenging intellectually

It guarantees positive results

It is less expensive and less time consuming than primary analysis

It enables students to gain experience of the workplace

Ref: For students conducting a small research project either as an undergraduate or postgraduate, secondary analysis of existing data should be considered as a cost and time effective way of proceeding.

HADI VU PAST PAPER

WE DEAL ALL KIND OF VU PROJECT (PHP, ANDROID, PYTHON)

DEAR STUDENTS

ARE YOU LOOKING FOR ASSISTANCE

- 1) ASSIGNMENTS
- 2) QUIZZES
- 3) GDB
- 4) GRAND QUIZZES

We Provide, You Solution of VU Academic Activities include Assignments, Quizzes, GDBs, Grand Quizzes. If You Need Help in Services Kindly inform us.
