GYMIDTERM NOTES BY VU STUDY WORLD

“Quote”

“No body could count my regards for you”

Qno1 What is Reflective Practice?

- **Ans:** Reflective practice is an ongoing and dynamic process for the teacher. It involves
- thinking critically and deeply about what is happening in the class room. It occurs spontaneously, immediately but, also goes in a very planned and structured way. Most importantly, reflection leads to action.

Qno2 Which quality makes a teacher very good teacher?

- There is one quality above all which is important for making a teacher a good teacher and this is
- the ability to reflect on the **what, why and how** the things are happening in the classroom. The ability to think about, how we are working and most importantly, it is the ability to adapt and change teaching in relation to what is happening in the classroom. Reflection is a key to successful teaching.

Qno3 What is the implication of this for reflective practice?

- ➤ In a professional setting, reflection is:
- ➤ Deliberate

- ➤ Purposeful and ➤ Structured

Qno4 what is deep learning?

A process which links theory to practice is called deep learning.

Qno5 What is reflection according to John Moon ?

Ans: Reflection is a form of mental processing that we use to fulfill a purpose or achieve some anticipated outcome.

Mcqs lecture 1st

- (1) In addition, teachers' professional knowledge and understanding includes **ways to reflect and ways to evaluate** what is happening. This is part of the **professional role** of the teacher.
- (2) **Reflection** is a key to successful teaching.
- (3) Teaching is a profession and as such in a professional setting reflection is very **deliberate**. It is also **purposeful**. There is a reason for it. It is **structured** and it **links** our **understanding to theory to practice** and also includes **deep learning** and not **superficial learning**.

Topic 2 Why the interest in Reflective Practice?

Mcqs:

- **1-Stephen Brookfield (1995)** believes that of all the **pedagogic tasks** teachers face, getting inside students' heads is one of the **trickiest**.

- 2-Finally and most importantly, reflective practice is the key to **improvement**.
- 3-Reflective practice leads to seeking **research, resources and advice**.
- 4- Reflective practice leads to **Promotes collaboration between professionals**
- 5- **Reflection and critical reflection** are highly **personal processes** that require the professional to take daily experiences.

Qno1- Why the interests in Reflective practice?

Ans : Finally and most importantly, reflective practice is the key to improvement.

Qno2- Why reflective interest is necessary?

- Reflective practice leads to:
- Higher quality practice and better outcome for learners
- Awareness of value and beliefs
- More likely to challenge and change practices
- Leads to inclusive environment
- Promotes collaboration between professionals

Topic 3 What is to be Gained from Reflected Practice

Mcqs:

- The move is from a **deterministic or even patriarchal mentality** to one where there is considerable cope for **genuine dialogue** about the nature of our work.
From **David Halberstam**'s novel – **The Reckoning**
- **Hal Sperlich, an executive of ford Motors**, on one of his visits to **Japan in the early 1070s**, notices that there were no repair bays for defective cars:
 - **During the last two decades**, the **slogan of reflective teaching** has been embraced by teachers, teacher educators and educational researchers all over the world
(Halberstam, 1986: 716)
- The move toward seeing teachers a reflective practitioners is also a rejection of **top-down forms** of educational reform.

RP helps to promote a **positive learning environment**

. **Stephen Brokfield (1995) purposed** RP helps us to locate our teaching in the broader institutional.

- السلام علیکم بائیولوجی اور انکی برانچس خاص طور پر زووالوجی پروگرام کی ڈسکشن کے لیے اس لنک کو جوائن کریں کیونکہ ڈیٹا گروپ میں پرائیویسی رہے گی اور ڈیٹا شیئر کیا جائے گا
- گروپ میں لغویات کا استعمال نہیں کرنا مزہب اور مزہبی پہلو پہ نہ بحث کرنی ہے اور نہ ہی علماء کے بارے میں زبان درازی کرنی ہے ایڈمنز سے کسی بھی معاملے میں بالکل بحث نہیں کرنی اگر کوئی مسئلہ وغیرہ ہو تو صرف اس نمبر 03460004097 کو آئی بی کریں کوئی بھی لنک خاص طور پر وٹس ایپ گروپ لنک ہرگز شیئر نہیں کرنا گروپ رولز جو ادھر بتائے گئے ہیں اور ڈسکریپشن میں ہیں ہر حال میں فالو کرنے ہیں باقی گروپ میں ایک دوسرے سے گپ شپ بھی کر سکتے ہیں لیکن تنقید نہیں اور ایک دوسرے کی ہیلپ بھی فل کریں اچھے خون اور اچھے خاندان کا فرد ہونے کا ثبوت دینا ہے کیونکہ اس پرچم کے سائے تلے ہم ایک ہیں
- warning for all
- "خطا کار کے لیے تو معافی ہو سکتی ہے بٹ غدار کے لیے نہیں"
- بس یہ میرا جملہ یاد رکھنا باقی آپ سب سمجھ دار ہو

اچھی امید کیساتھ اجازت چاہتا ہوں اللہ نگہبان

Topic no37

L

From Theory to Practice: Boud's Triangular Representation.

1-The teacher begins to **deconstruct** their experiences and in **sewing develop a deeper understanding** of the questions and the issues involved in the work that they do.

2-We can talk about is **Boud's triangular representation**. It's a very **simple straightforward model**.

3-To start with and Boud's definition of **reflective practice** is very much based on the **exploration of experiences**.

4-The thing about the models of reflection is that they're all **cyclical**.

- **5- Boud's idea** is that the reflective cycle is there and it can be

clockwise or counter clockwise as a reflective process.

6- Boud's recognizes that this is a very **individualistic process** and this can be **criticized** because reflective practice is very often seen as a **collaborative activity**

Short question

Qno1: Described the boud,s Triangular representation?

- Experience

/ \

Learning- Reflection

Experience - Learning – reflection

Topic no38

From Theory to Practice: The Atkins and Murphy Model

Qno1: Describe The Atkins and Murphy Model?

- Ans: Another model of reflective practice which is aiming to move reflective practice from theory into action is the Atkins and Murphy model. This model attempts to try to address some of the

criticisms of a Boud's triangular representation. it has **five** components.

Qno2 Describe The five components of Atkins and Murphy Model?

- • awareness
- • describing the situation
- • analyzing the feelings and the knowledge associated with that situation
- • evaluating the relevance of the knowledge within that situation
- identifying the learning

Qno3 explain the five components of Atkins and Murphy model?

- **Awareness** Of discomfort, or action/experience
- **Describe the situation** :Include salient, feelings, thought, events or features.
- **Analysis feeling and knowledge** :
 - Identify and challenge
 - assumption, imagine and
 - explore alternatives

- **Evaluate the relevance of knowledge:**

- Does it help to explain/resolve
- problems? How was your use of
- knowledge?

- **Identify any learning**

Which has occurred?

Qno4 Describe The five stages of Atkins and Murphy model?

- **Stage one** is very much about the teacher becoming aware of some need for change. Because of
- some uncomfortable feelings due to the situation that they're confronted by.
- **Stage two** then comes from stage 1 and stage 2 is about the teacher examining those feelings and
- the components in the situation which generate those feelings.
- **Stage three** leads then into analysis of the situation based on the evaluation

- **Stage four** Then into stage for there is some sort of conclusion a summary of what all those
- feelings and all that thinking generates.
- **Stage five** and then finally into a stage five which is the learning stage and what the teacher has actually gathered from that experience.

- **Mcqs:**

- we must remember that this is not to say that the other models that exist about reflective practices are **redundant**
- Atkins Murphy suggest that any sort of reflection is not useful unless the teacher has a real **commitment to action.**

Teateacher as an individual is

Identifying a very personal **cognitive and affective feelings** a **schema** within what is happening there is a connection between the **intellectual and the emotional.**

- **Topic 39**

- **From Theory to Practice John Smyth's Framework for Reflection on Action**

- **(1993)**

Qno1: Describe Smyth's Framework takes the teacher through a number of phases?

Ans:

- • A Descriptive Phase
- • Reflective Phase
- • An Emancipator Phase

• Qno2 Describe the Reflective analysis against adopted theories?

Ans:

- Reflective analysis of the situation
 - Reflective analysis of intentions

• Qno3 What include in the The Reflective Phase Theory to Practice John Smyth's Framework for Reflection on Action ?

(1) Knowledge about practice processes and applications

(2) Self-awareness

• Qno4: In which The Emancipator Phase Involves?

- Engagement in Emancipatory and change processes learning and change in practice
- Self-critique and Emancipation

Mcqs

1-Description phase is very much about **examining and developing** a **genuine understanding a real honest understanding** of the teaching that they're engaged with it.

2-The Descriptive Phase involves:

Descriptive accounts and narrative.

3-Critique of Practice regarding conflicts, distortions and inconsistencies is **The Emancipator Phase**

4-Smyth proposes Reflection for teacher as a set of activities developed from question cues:

- **Activity: inform (analysis)**

Cue: what does this mean?

Topic 40

From Theory to Practice: Agyris and Schon (1978)

1-Perhaps the most **well-known model** of reflective practice which attempts to link theory to practice is the model by a **Garrison**. They have talk about two **types of learning** from reflection.

Qno1 Describe those learning which links From Theory to Practice: Agyris and Schon (1978)?

- **Ans:** Those reflections are:
 1. Single Loop Learning
 2. Double Loop Learning

Qno2 Differentiate B/w Single Loop Learning and Double Loop Learning?

- **Single Loop Learning:** Single loop learning is when a practitioner or organization, even after an error has occurred and a
- correction is made, continues to rely on current strategies, techniques or policies when a situation again comes to light.

OR

- Single – Loop Learning
- The most common style learning is just problem – improving the system as it exists.

Double Loop Learning:

- Double loop learning involves the modification of personal objectives, strategies or policies so
- that when a similar situation arises a new framing system is employed (i.e. new approaches are used to solve it).

OR

- Double – Loop Learning
- More than just fixing the problem, this style of learning questioning the underlying assumptions, values and beliefs behind what we do.

Qno03: Describe the Complex Ways of Processing Information?

- • Re-evaluating our goals
- Reframing our goals, values and beliefs

Topic 41

From Theory to Practice Mezirow (2000)

Mcqs

- A **Disorienting Dilemma** Includes loss of job, divorce, marriage, back to school, or moving to a new culture.

Self- Examination with feelings of fear, anger, guilt, or shame.

Qno1 Describe the theory to practice mezirow?

- Mezirow argues that learning only takes place where there is a process of transformation by the teacher and in this particular model. Mezirow points out that transformation actually begins with a dilemma a problem, for the teacher.

• Qno2 What Is Particularly Striking About the Mezirow's Ideas?

Particularly Striking About the Mezirow's Ideas is the emphasis on conscious, self –managed learning.

- • Particularly striking about the transformational model is that it is about learning but it is
- very much about managed learning. It's about the teacher taking responsibility and taking control of learning from experience.

Topic 42

Criticisms of Reflective Practice

1-A number of writers discuss key concerns of RP in terms of its problematic side: **Brookfield (1994, 1995)** explains the **cultural and personal risks** involved.

- 2-**Ash and Moore** actually say that there are certain **preconceived ideas and preconceived understandings** about reflective practice.

3-When an individual understands the word “**critical**” to **mean “negative”**, they can develop a negative frame of mind.

4-The respective abilities of “**novice**” and “**expert**” are relevant here – **novices tend to follow models mechanically and experts tend not to rely on models.**

Qno1 How many areas of concern about reflective practice?

Ans: There are four areas of concern about reflective practice:

Ethical

Professionals

Pedagogic

Conceptual

Topic 43 Introduction to Critical Thinking Part 1

Qno1: What are the characteristics of teachers who are good at critical thinking?

Ans: Critical thinking involves:

- Analyzing
- • Conceptualizing
- • Defining
- • Examining
- • Inferring
- • Listening
- • Questioning
- • Reasoning
- Synthesizing

• Qno2: What is Critical reflection?

- With a purpose to evaluate information in a disciplined way to help us **evaluate and refine our thinking.**
- As reflective practitioners we must want to be better at thinking, to seek out and be guided by knowledge and evidence that fits with reality:

1. Belief
2. If shown to be unfounded
3. Leads to a change of position and an appropriate response

Topic 44 Introduction to Critical Thinking Part 2

- **Qno1: What are the major mechanisms involved in critical thinning?**

The thinking process is as followed:

- 1. Biological process
- 2. Psychological process
- 3. Cognitive process
- 4. Communication process

Qno2 Describe Other types of thinking, or non-critical thinking?

Thinking based on past practices without consideration of current data is called non-critical thinking.

Habitual thinking

Brainstorming
Creative thinking
Prejudicial thinking
Emotive thinking

Mcqs:

Responding to the emotion of a message rather than the actual information presented is the case of **non-critical thinking.**

WE are thinking critically when we are Rely on **reason rather than emotion.**

WE are thinking **critically** when we are Fails to see **linkages and complexities** in information and situations.

Topic 45 Core Ideas about Thinking Skills

Qno1: What are the major mechanisms involved in critical thinking for the reflective practitioner?

Ans: Core Critical Thinking Skills

- 1. Analysis
- 2. Inference

- 3. Explanation
- 4. Interpretation
- 5. Self-regulation
- 6. Evaluation

• Topic 46 Critical Thinking Development: A Stage Theory

Qno1: Describe developing critical thinker goes through a sequence of stages?

- • Stage 1- The unreflective thinker
- • Stage 2- The Challenged thinker
- • Stage 3- The beginning thinker
- • Stage 4- The practicing thinker
- . Stage 5- The advanced thinker
- Stages6- The accomplished thinker

Topic 47 Importance of Critical thinking

Mcqs

Critical thinking Includes the ability to engage in **reflective and independent thinking.**

- Understanding the **logical connections** between ideas, identify, construct and evaluate Arguments is the case of **Critical thinking**.

Topic 48 A Schema for critical Thinking and Reflective Practice

Mcqs

A simple Venn Diagram for RP only has **2 circles**.

• .

A simple **Venn Diagram** for RP only has **2 circles**. This represents the structure of **professional learning**.

The diagram presents a **concrete experience** and the teacher conceptualizing the meaning of that experience.

The circle on the left represent – **self structure**.

Venn diagram represents the **individual value, beliefs and assumptions** that the teacher has about self-other and society.

Topic 49 Bloom's Taxonomy and critical Thinking

Qno1: How does critical thinking fit into Bloom's taxonomy (unrevised)?

The cognitive domain comprises:

- Knowledge
- Comprehension
- Application
- Analysis
- Synthesis
- Evaluation

Qno2 Describe types of knowledge comprehension analysis and synthesis ?

- ❖ Knowledge of specifics
- ❖ • Knowledge of terminology
- ❖ • Knowledge of specific facts
- ❖ • Knowledge of ways and means of dealing with specifics
- ❖ • Knowledge of conventions
- ❖ • Knowledge of trends and sequences
- ❖ • Knowledge of classification and categories

- ❖ • Knowledge of criteria
- ❖ • Knowledge of methodology
- ❖ • Knowledge of principles and generalizations
 - ❖ Knowledge of theories and structures

- **Comprehension**

- • Translation
- • Interpretation
- • Extrapolation

- **Analysis**

- • Analysis of elements
- • Analysis of relationships
- • Analysis of organizational principles

- **Synthesis**

- • Production of a unique Communication
- • Production of a plan or proposed set of objectives
- Derivation of a set of abstract relations

Topic 50 Techniques for Critical Thinking

Qno1 DescribeThe some basic techniques of critical thinking?

Be accurate:

- Check your facts.
- Inaccurate: –Most students don't know how to learn.

Be precise:

- Ensure you are able to check accuracy. Avoid generalizations and other ambiguities.
- Imprecise: –Maliha is problem student.

Precise: –Maliha has an attention deficit problem.

Empathize:

- Try to see things from others perspective. Other imagine how they feel. Imagine how you sound to them.

Be Relevant:

Stick to the main point. Pay attention to how each idea is connected to the main idea.

Math is an important skill. I like to teach math's because it's an important skill for my student.

Check your emotions:

- Emotions only confuse critical thinking. Notice how your emotions may be pushing your thinking in a certain direction.

Mcqs

There are **16 basic** techniques of critical thinking .

Topic 52 Halpern's Framework for Critical Thinking

Qn01 Describe the different kinds of critical thinking of Halpern's Framework for Critical Thinking?

Ans:

Thinking and Language

Argument Analysis

Hypothesis Testing

Qno2 Describe the Halpern process Dealing with probability and uncertainty?

Ans Halpern proposes a framework based on different kinds of critical thinking:

- ❖ Dealing with probability
- ❖ and uncertainty
- ❖ • Decision-making
- ❖ • Problem-solving
- ❖ • Creative thinking
- ❖ Memory Skills

• Qno3 explain Creative Thinking , Hypothesis Testing and Dealing with probability and Uncertainty?

- • Re-defining a problem
- • Generating possibilities
- • Seeing multiple perspectives
- • Taking risks

- **Hypothesis Testing**

- Predicting and confirming hypotheses
- • Operational definitions
- • Controlling variables
- • Sampling and generalizations Limits of correlational reasoning

- **Dealing with probability and Uncertainty:**

- Estimating probabilities
- • Risk assessments
- • Using baseline data
- • Decision-making
- • Framing a decision
- • Generating options
- • Predicting Consequences
- • Weighing pros and cons
 - Recognizing bias

Topic 53 Critical Incident Analysis

Mcqs

CIA helps teachers focus on the extent to which critical analysis is evident in their practice.

CIA stands for **critical incident analysis**

A critical incident is an event that can be called to mind easily and quickly because you remember it **vividly**.

We usually consider events to be critical when they are

unexpected- a surprise They can be **positive high or demoralizing lows**.

Qno1- What is critical incident?

- **Ans:** The term critical incident refers to any work teachers do that involves analyzing situations, reflecting on past experience making judgment and decision and taking actions without the benefit of a standard protocol or uniform response that takes care of each and every problem they encounter.

54 Examining Your Personal Filtering System

1- **screening process** leads to differing perceptions of circumstances and events resulting in different **interpretations** and subsequently in different responses.

2- When we critically examine our screens, we can become more **aware** of how our screens may be **filtering out potentially** more effective responses to classroom situations.

Topic 55 Learning Through Conceptual Innovation

Qno1: Which things involves Learning through conceptual innovation ?

- Learning through conceptual innovation Involves:
- • Seeing farther
- • Understanding deeper
- Making the right decision

Qno2 Learning through conceptual Innovation?

- It is more about the reflective practitioner:

- Re-Thinking: What is already known.
- Renewing the concepts: We use for understanding.
- Getting Wiser.

Topic 56 Technical and conceptual Learning

One reason for this is that new methods impact on **productivity almost immediately.**

We are not flexible enough when we are **confronted** by **complex situations.**

According to **Dewey Schon** and others concepts are **cognitive tools** for coping with the world and for solving problems.

Topic 57 Concept and Frames

- Reality leads to **sense making**, the elements of reality that are not perceived and elements of reality that are perceived.

Qno1: Describe Donald Schon?

Donald Schon says, – while a given situation can be conceived in a variety on ways, it is always a concept- structured situation.

Qno2 Describe the three important phases of concept formation?

- The process of concept formation has three important phases:
- **1: Perception:** Experience or learning in any form is the starting point of the process of concept formation.
- **2. Abstraction:** The mind analyses the perceived images and synthesizes what is common to all, neglecting what is not needed.
- **3. Generalization:** After making such observation in the form of abstraction for a number of times we are able to form a general idea about common properties because of these we will develop a concept.

58. New Realities

Qno1 Describe The interaction with new concepts triggers learning processes?

- The assimilation/incorporation of new concepts disturbs and transforms the knowledge we have about the world and ourselves.

- • The emergence of new concepts changes the way we perceive and understand the world.
- • New concepts emerge as new questions are made.
- • Conceptual innovation is like reframing but deeper.

Qno2 Described Reframing ?

- • Reframing is a way of:
- • Improving our understanding of a situation
- • Solving conflicts and inventing new strategies
- • Conceptual innovation enables you to rethink a whole group of situations
- • It brings up a new set of possibilities.

59 Paradigm Shift

Qno1 Explain paradigm shift?

- A paradigm shift brings a new set of concepts:
- • From things to people
- • From product to process
- • A paradigm shift brings a new set of concept:
- • From teacher to student

- • From standardizing to managing diversity
- • From replication to inspiration
- • From controlling to managing change and uncertainty.

Qno2 Describe Single loop learning, Double –loop learning and Triple-loop learning?

- **Single loop learning** (Following the rules)
 - • Rigid strategies
 - • Spend time detecting and correcting deviations from the rules
- **Double –loop learning** (changing the rules)
 - • Reflect on whether the rules themselves need to change
 - • Requires thinking outside the box
- **Triple-loop learning** (learning about learning)
 - • Learning how to learn
 - • Searching for meaning and understanding

60. Theories-in-Use or Espoused theories

Action is not always consistent with **formal beliefs.**

- **Theory-in-use** is embedded in the **logic of the action**, it is the theory that commands the thinking of the action.

Espoused theory is that theory used for **arguing about the actions**.

Espoused theories are **explicit** but most theories in use are **tacit**.

Reflective practice is about **ownership of knowledge**.

Reflective practice about invisible and visible, tacit and explicit, blindness and sight.

Topic 61 What is reflective writing?

Qno1 What is reflective writing?

- Reflective writing is evidence of reflective thinking:
- • Looking back at something (something that happened or an idea or a project) Reflecting writing
- is evidence of reflective thinking:
- • Analyzing what happened (thinking in depth and from different perspectives)

- Thinking carefully about what it means for you as a professional

Qno2 Describe the things involves in reflective writing?

- We already know that reflective writing:
 - Describes
 - Links theory to practice
 - Questions experience
 - Has a focus on improvement

Topic 62 A Structure for Reflective Writing

Qno1 Describe the structure for reflective writing?

1-Description

2-Interpretation

3-Outcome

4-Remember the following 4 key points
