

PSY502 - Lesson 27+28

LESSON 27: SCIENTIFIC LOOK AT MENTAL DISORDERS

◆ 1. How ancient humans explained mental illness

In very early history, people did not understand the brain. So they explained mental problems using spiritual ideas.

👉 Key idea:

Ancient people believed there was a "soul" inside the body. They thought the soul controlled behavior and thinking.

📌 Definition

- Soul: A non-physical part of a person believed to control life and mind (spiritual concept, not scientific).

🧠 What they believed

- If someone behaved strangely, they thought the soul was disturbed.
- So mental illness = problem in the soul.

📖 Example

If someone heard voices, today we might say "hallucinations."
Back then they said, "His soul is disturbed or angry."

◆ 2. Dreams and the soul

Ancient people also believed the soul left the body during sleep.

👉 They thought:

- The soul traveled and did things.
- These activities appeared as dreams.

📌 Definition

- Dream: Mental images and stories the brain creates during sleep.

📖 Example

If someone dreamed of flying, they believed the soul actually flew out of the body.

◆ 3. "Mad" people in ancient times

They thought a "mad" person:

- Did not care about themselves
- Did not respond to the world
- Lived in a different world

Definitions

- Mad: Old word for mentally ill (not scientific, now considered disrespectful)
- Hallucination: Seeing or hearing things that are not really there
- Delusion: Strong false belief not based on reality

Example

If a person said, "I am talking to invisible angels," people thought he had spiritual powers, not illness.

◆ 4. Greek and Roman shift to medicine

Later, Greek and Roman thinkers became more logical.

 They said:

Mental illness is not spiritual. It is a medical problem.

Definition

- Medical explanation: Explaining illness using body and brain, not spirits

Example

Instead of saying "He is possessed," they said "His brain or nerves are sick."

◆ 5. From respect to cruelty

At different times people treated the mentally ill in extreme ways.

- Some respected them as prophets
 - Some burned them as witches
 - Some tortured them to remove evil spirits

Definition

- Possession: Belief that a spirit or devil controls a person

- Trepanning: Drilling a hole in the skull to release evil spirits

 Example

In Egypt, they drilled holes in skulls thinking demons would escape.

◆ 6. Middle Ages: Chains and prisons

In 13th to 15th centuries:

- Mentally ill people were treated like criminals
- They were chained and jailed

 Definition

- Asylum: A place made to keep and treat mentally ill people

They were not treated as patients. They were punished.

◆ 7. Industrial and French Revolutions

When cities became crowded:

- Crime increased
- Begging increased
- Mental illness increased

 So governments put all "problem people" together.

 Definition

- Scapegoating: Blaming one group for problems caused by society

 Example

Instead of fixing poverty and jobs, they blamed mentally ill people.

◆ 8. Beginning of scientific thinking

By mid 1700s:

- People started saying mental illness is a nervous disease

 Definition

- Nervous disease: A disorder of the brain and nerves

 Example

Instead of saying "Devil did it," they said "The brain is sick."

LESSON 28: SCIENTIFIC LOOK AT MENTAL ILLNESS

◆ 9. Separation of mentally ill from criminals

In 1790, France passed laws:

- Mentally ill must be separated from criminals
 - They need treatment, not punishment

This was a big scientific shift.

◆ 10. Philippe Pinel – the humane reformer

Pinel freed patients from chains.

Definitions

- Empirical: Based on observation and evidence
- Psychiatry: Medical study of mental disorders

What he did

- Treated patients as sick people
- Studied them scientifically
- Kept records of cases

Example

Instead of locking them, he talked to them and observed patterns.

◆ 11. Samuel Tuke – moral treatment

Tuke also removed chains and treated patients kindly.

He believed:

- Kindness helps healing
- Patients need respect

Definition

- Moral treatment: Treating patients with dignity and structure

Example

Giving clean rooms, good food, routine, and care.

◆ 12. Franz Mesmer – mesmerism

Mesmer believed in “animal magnetism.”

Definitions

- Animal magnetism: Imaginary life energy (not real scientifically)
- Mesmerism: Early form of hypnosis

Example

He touched patients thinking he restored their energy.

Later science showed:

- There is no animal magnetism
 - But hypnosis can affect the mind
-

◆ 13. James Braid – real hypnotism

Braid made hypnosis scientific.

Definitions

- Hypnosis: A focused mental state where suggestion affects behavior
- Visual fixation: Staring at an object to focus attention

Example

A person stares at a light and becomes deeply relaxed and suggestible.

◆ 14. Jean Charcot – hysteria

Charcot used hypnosis to treat hysteria.

Definitions

- Neurologist: Doctor of brain and nerves
- Hysteria: Old term for emotional disorder with physical symptoms

Example

A person has paralysis with no physical cause.

◆ 15. Bernheim – power of suggestion

Bernheim said:

Hypnosis works because of suggestion, not disease stages.

📌 Definition

- Suggestion: Planting ideas that influence behavior

📌 Example

If a doctor says “You feel calm now,” the patient feels calm.

◆ 16. Modern systems: ICD and DSM

After World War II:

📌 Definitions

- ICD: International Classification of Diseases
- DSM: Diagnostic and Statistical Manual of Mental Disorders

👉 These books list and define mental disorders scientifically.

SHORT QnAs

1. How did ancient humans explain mental illness?

Answer:

Ancient humans believed that mental illness was caused by disturbances in the soul, which they considered a “person within a person.” They thought that if the soul was upset or unbalanced, it caused unusual thoughts, behaviors, or emotions. Dreams were also considered the result of the soul leaving the body during sleep and performing activities that manifested in dreams. Mental illness was not seen as a medical or biological problem but a spiritual or supernatural phenomenon.

Explanation:

The concept of the soul was central to ancient understanding of human behavior. People had no knowledge of the brain or nervous system, so they explained abnormal behavior in spiritual terms. Anything unusual—like hearing voices or seeing things others could not—was interpreted as a sign of a disturbed soul.

Example:

If someone was talking to invisible beings, the ancients might say, "His soul is wandering," rather than suspect a psychological disorder.

Tips:

- Remember "soul disturbance → mental symptoms" as the main ancient idea.
 - Connect this to dreams and hallucinations—they were explained spiritually, not biologically.
-

2. What did the ancients think about "mad" people?

Answer:

"Mad" people were thought to live in a world of their own. They appeared indifferent to reality and society, and they were believed to experience visions or spiritual phenomena. Ancient cultures sometimes regarded them as prophets or people with supernatural abilities, but at other times, they were feared and punished as possessed by evil spirits.

Explanation:

The term "mad" was used for anyone showing extreme or unusual behavior. Because people didn't understand mental illness scientifically, they created spiritual explanations. Sometimes, these individuals were respected; sometimes, they were persecuted.

Example:

Someone who claimed to speak to angels might have been admired in one culture, or accused of witchcraft in another.

Tips:

- Remember that "madness" was socially defined, not medical.
 - Think of it as a mix of fear and reverence.
-

3. How did Greek and Roman thinkers explain mental illness?

Answer:

Initially, Greeks and Romans believed that mental illness was caused by possession by spirits. Later, with the development of medicine and rational thinking, they began to view mental illness as a medical problem related to the body and not spiritual forces. This marked the beginning of a more scientific approach to understanding mental disorders.

Explanation:

Greek and Roman medicine gradually shifted from supernatural to natural explanations. They started studying symptoms, identifying patterns, and thinking of treatments in terms of body and mind.

Example:

Hippocrates, a Greek physician, suggested that an imbalance of bodily fluids (humors) could lead to mental disturbances.

Tips:

- Greek/Roman shift = supernatural → medical
 - Link to the idea of "nervous or humoral imbalance."
-

4. How were mentally ill people treated in the Middle Ages?

Answer:

During the Middle Ages (13th–15th centuries), mentally ill people were often treated cruelly. They were considered witches, wizards, or possessed by the devil, and subjected to torture, imprisonment, and even execution. Treatments included chaining, beating, and trepanning (drilling holes in the skull to release evil spirits).

Explanation:

Without medical knowledge, society relied on fear and superstition. Mentally ill individuals were scapegoated for social problems and treated like criminals.

Example:

A woman accused of being a witch could be burned alive because she exhibited "abnormal" behavior.

Tips:

- Middle Ages = chains, torture, fear of possession.

- Remember trepanning as the extreme "medical" attempt using spiritual logic.
-

5. What social changes influenced mental illness treatment in the 18th century?

Answer:

The French Revolution and Industrial Revolution caused population migration to cities, overcrowding, crime, and poverty. Mentally ill people were often grouped with criminals in asylums. They were labeled as "mentally sick" not only for medical reasons but also as scapegoats to manage social upheaval. The concept of institutional treatment emerged, emphasizing discipline and work as a form of cure.

Explanation:

Rapid social change forced societies to deal with both crime and mental illness. Institutionalization became a practical solution for separating and controlling populations.

Example:

Paris and Lyons in France, and Bristol and Norwich in England, established asylums where inmates were given work as a form of therapy.

Tips:

- Link social change → asylums.
 - Remember scapegoating = blaming mental illness for social problems.
-

6. How did scientific thinking change the understanding of mental illness?

Answer:

By the mid-18th century, mental illness began to be seen as a disease of the nervous system rather than possession by spirits. Mental disorders were approached scientifically, emphasizing observation, diagnosis, and treatment. This shift marked the beginning of modern psychiatry.

Explanation:

Scientific thought replaced superstition. Physicians began observing patients systematically and developing humane treatments based on evidence.

Example:

Instead of chaining patients, doctors started separating them from criminals and providing medical care.

Tips:

- Key shift = mental illness as a nervous disease.
 - Think of it as the start of the medical model in psychiatry.
-

7. Who was Philippe Pinel and why is he important?

Answer:

Philippe Pinel (1745–1826) was a French physician who freed mental patients from chains and advocated humane treatment. He emphasized observation and record-keeping to study mental disorders scientifically. Pinel is considered a pioneer in modern psychiatry.

Explanation:

Pinel rejected superstition and punishment. He believed mental illness is a disease like any other and patients should be treated with care and studied empirically (through observation and evidence).

Example:

He released patients from chains at a Paris hospital and organized their treatment, improving outcomes.

Tips:

- Remember Pinel = human rights + scientific observation.
 - Empirical = evidence-based approach.
-

8. Who was Samuel Tuke and what was his contribution?

Answer:

Samuel Tuke (1784–1857) was an English reformer who promoted moral treatment of mentally ill patients. He freed patients from chains and treated them with respect and dignity, emphasizing a structured, humane environment.

Explanation:

Tuke believed that a calm, organized, and supportive environment could aid recovery. This approach influenced asylum care in Europe.

Example:

Providing routine, clean living conditions, meaningful activities, and social interaction for patients.

Tips:

- Tuke = moral treatment and environment matters.
 - Think “treat patients like humans, not criminals.”
-

9. Who was Franz Mesmer and what was mesmerism?

Answer:

Franz Mesmer (1734–1815) was a German physician who proposed “animal magnetism,” a supposed life force that caused mental illness when out of balance. He treated patients by touching them to restore this force, a method called mesmerism.

Explanation:

Though his ideas were unscientific, Mesmer’s treatments were an early attempt at psychological therapy. It introduced the concept that mental states could be influenced by non-physical methods, leading to hypnosis.

Example:

He used baths or hand-touching to “transfer magnetic energy” to patients.

Tips:

- Remember Mesmer = early hypnosis, not real science.
 - Link to idea of mind-body influence.
-

10. Who was James Braid and what did he contribute?

Answer:

James Braid (1795–1860) was a Scottish neurosurgeon who turned Mesmerism into scientific hypnotism. He defined hypnosis as a “nervous sleep” induced by focused attention, and demonstrated its therapeutic use.

Explanation:

Braid emphasized physiological mechanisms, not mystical forces. Hypnosis became a legitimate treatment method in psychology.

Example:

Patients stared at a bright object to enter a relaxed, suggestible state.

Tips:

- Braid = scientific hypnotism.
 - Focus on technique and observable effect, not magic.
-

11. Who were Jean Charcot and Bernheim?

Answer:

- **Jean Charcot (1825–1893):** French neurologist who studied hypnosis to treat hysteria and influenced Freud.
- **Bernheim (1840–1919):** French physician who expanded hypnosis to other mental illnesses and emphasized the power of suggestion.

Explanation:

Both contributed to understanding mental illness scientifically and psychologically. Charcot studied physical symptoms of hysteria; Bernheim highlighted psychological influence.

Example:

Charcot treated patients with paralysis caused by hysteria. Bernheim showed suggestion could help reduce symptoms.

Tips:

- Charcot = clinical observation.

- Bernheim = psychological suggestion.
-

12. What are ICD and DSM?

Answer:

ICD (International Classification of Diseases) and DSM (Diagnostic and Statistical Manual of Mental Disorders) are modern manuals used to classify, diagnose, and define mental disorders scientifically.

Explanation:

They standardize mental illness terminology and provide criteria for diagnosis, making research and treatment consistent worldwide.

Example:

A doctor can diagnose depression based on DSM criteria, ensuring treatment aligns with international standards.

Tips:

- ICD = global classification (WHO)
 - DSM = U.S.-based psychiatric manual
 - Think "ICD & DSM = language of modern psychiatry."
-

LONG QnAs

1. How did the understanding and treatment of mental disorders evolve from ancient times to the 18th century?

Answer

I. Ancient Times

- **Soul concept**
 - Humans believed that a "soul" existed inside the body, controlling thoughts and behavior.

- Mental disorders occurred when the soul was disturbed.
- **Dreams**
 - Considered actions of the soul outside the body during sleep.
- **Madness**
 - “Mad” people lived in a separate world and experienced visions or spiritual phenomena.
- **Spiritual perception**
 - Sometimes respected as prophets, sometimes feared as possessed.

Belief System	Explanation of Mental Illness	Treatment/Behavior
Ancient man	Disturbance of soul	Rituals, prayer
Ancient Egypt	Evil spirits	Trepanning (drilling skull)
Greece/Rome	Initially spirits, later medical	Early medical observation

II. Middle Ages (13th–15th Century)

- Mental illness seen as:
 - Possession by evil spirits or devil
 - Witchcraft
- Treatments included:
 - Torture, chaining, burning
- Social perception:
 - Mentally ill considered dangerous, immoral, or criminals

III. Early Modern Period (16th–18th Century)

- Social changes:
 - French and Industrial Revolutions → population migration → overcrowded cities → rise in crime and social unrest
- Institutionalization:
 - Mentally ill grouped in asylums

- Work and discipline considered “cure”
 - Shift toward medical/scientific thinking:
 - Mid-18th century: Mental illness regarded as nervous disease
 - Treatment starts to focus on observation, environment, and care
-

Explanation in Plain English

- **Ancient Times:** People had no brain knowledge. They explained unusual behavior as spiritual—disturbed soul, possession by spirits, or special visions.
 - Example: Hearing voices meant your soul was restless.
 - **Middle Ages:** Fear dominated. People thought mentally ill were witches or devils and treated them cruelly.
 - Example: A woman showing erratic behavior could be burned as a witch.
 - **Early Modern Period:** Society changed; cities were crowded, and mentally ill people were put in asylums alongside criminals. Eventually, people started realizing mental illness is a disease, not a crime or possession.
 - Tip: Think of it as “from superstition → punishment → beginnings of science.”
-

2. Discuss the role of Philippe Pinel and Samuel Tuke in the reform of mental illness treatment.

Answer

I. Philippe Pinel (1745–1826)

- **Background:** French physician, director of a Paris hospital
- **Contributions:**
 - Freed patients from chains
 - Advocated humane treatment
 - Observed patients carefully and kept detailed records

- Treated mental disorders as medical conditions, not supernatural
- **Significance:** Pioneer of modern psychiatry; emphasized empirical (observation-based) study

II. Samuel Tuke (1784–1857)

- **Background:** English reformer
- **Contributions:**
 - Continued Pinel's humane treatment approach
 - Advocated **moral treatment**:
 - Treat patients with dignity
 - Create a structured, calm environment
 - Use daily routines and meaningful work
- **Significance:** Improved living conditions in asylums; emphasized kindness as part of therapy

Reformer	Nationality	Key Contribution	Concept Introduced
Philippe Pinel	French	Freed patients from chains	Empirical study of mental illness
Samuel Tuke	English	Structured humane care	Moral treatment

Explanation in Plain English

- Both Pinel and Tuke shifted mental illness care from punishment to **humane treatment**.
- Pinel focused on **observation and scientific documentation**.
- Tuke focused on **environment and moral support**, showing that calmness and routine help recovery.
- Example: Instead of chaining patients, Pinel released them, while Tuke made asylums comfortable and organized.

3. Explain the concept of Mesmerism and its role in the development of psychological treatments.

Answer

I. Franz Mesmer (1734–1815)

- German physician who introduced **"animal magnetism"**
- Belief: Humans have a life force that can be out of balance, causing mental illness
- Treatment: Touching or using objects to "restore energy"
- Early form of **psychological therapy**

II. Limitations

- No scientific evidence for animal magnetism
- Methods were popular but largely unproven
- Discredited before Mesmer died

III. Influence on Hypnotism

- **James Braid (1795–1860):**
 - Coined "hypnotism" from Mesmer's work
 - Defined it as a "nervous sleep" induced by **focused attention**
 - Showed it could be used therapeutically
- **Jean Charcot (1825–1893):**
 - Used hypnosis to treat hysteria
 - Influenced Freud
- **Bernheim (1840–1919):**
 - Emphasized **suggestion** in treatment
 - Expanded hypnosis to other mental illnesses

Explanation in Plain English

- Mesmer thought mental illness came from a mystical energy imbalance.
- Braid turned it into a scientific approach: hypnosis, a real psychological technique.
- Charcot and Bernheim studied it systematically and used it to treat hysteria and other mental problems.

Example:

Patient stares at a bright object under hypnosis → enters a deeply relaxed state → symptoms like anxiety or paralysis can improve.

Tip:

- Mesmer = mystical ideas
 - Braid/Charcot/Bernheim = scientific methods
 - Remember: hypnosis started from Mesmerism but became scientific.
-

4. How did the classification and diagnosis of mental illness develop in the 19th and 20th centuries?

Answer

I. 19th Century

- Mental illness increasingly viewed as **medical/nervous disease**
- Use of **clinical observation**:
 - Symptoms documented systematically
 - Treatments developed based on evidence
- Hypnosis and suggestion studied for therapy

II. 20th Century

- **Scientific classification** introduced:
 - Mental disorders treated like physical diseases
 - Development of standardized diagnostic manuals

System	Purpose	Year Introduced
ICD (International Classification of Diseases)	Classify all diseases including mental disorders	After WWII (by WHO)
DSM (Diagnostic and Statistical Manual of Mental Disorders)	Standardized psychiatric diagnosis	After WWII (by APA)

III. Significance

- Allowed consistent research and treatment worldwide
- Mental illness recognized as medical problem, not supernatural or criminal
- Foundation for modern psychiatry

Explanation in Plain English

- In the 19th century, doctors began observing patients, documenting symptoms, and testing treatments scientifically.
- By 20th century, mental disorders were categorized like other medical diseases.
- ICD and DSM helped doctors speak the same “language” about mental illness worldwide.

Example:

Depression is diagnosed the same way in Pakistan, USA, or France using DSM or ICD criteria.

Tip:

- ICD = international (WHO)
- DSM = primarily US (APA)
- Think: classification = foundation of modern psychiatry

5. Summarize the overall transition in human understanding of mental disorders from ancient times to modern scientific psychiatry.

Answer

I. Ancient Understanding

- Mental illness caused by:
 - Soul disturbances
 - Evil spirits
 - Witchcraft or supernatural forces
- Treatments: Rituals, prayer, trepanning, torture

II. Middle Ages

- Mentally ill seen as:
 - Dangerous, possessed, or criminal
- Treatments: Chains, prisons, execution

III. Early Modern Period

- Social upheavals (French/Industrial Revolutions)
- Institutions/asylums created for mentally ill
- Work and discipline thought to be cure

IV. 18th–19th Century Scientific Approach

- Enlightenment → Rational thought → Mental illness as nervous disease
- Pinel and Tuke promoted humane treatment
- Observation, records, and moral care became standard

V. 19th–20th Century

- Hypnosis and suggestion explored (Mesmer → Braid → Charcot → Bernheim)
- Mental illness classified scientifically (ICD, DSM)
- Modern psychiatry established: illness treated medically, not spiritually

Table Summary:

Era	Understanding of Mental Illness	Treatment
Ancient	Soul disturbances	Rituals, trepanning
Middle Ages	Possession, witchcraft	Chains, torture, execution
Early Modern	Social scapegoating, nervous disease	Asylums, work therapy
18th–19th C	Nervous disease, humane care	Observation, moral treatment
19th–20th C	Medical disease, psychological therapy	Hypnosis, classification, standardized treatment

Explanation in Plain English

- Human understanding of mental illness moved **step by step**:
 1. Spiritual (soul, demons)
 2. Fear and punishment (witchcraft, chains)
 3. Social management (asylums, work)
 4. Scientific/medical (Pinel/Tuke, nervous disease)
 5. Modern psychiatry (hypnosis, classification, evidence-based treatment)

Example:

If someone heard voices:

- Ancient → disturbed soul
- Middle Ages → possessed, chained
- Early Modern → asylum work
- 18th–19th C → observed by doctor
- Modern → diagnosed via DSM, treated medically

Tip:

- Think of it as a **timeline of understanding → humane treatment → scientific approach**.

1. True/False MCQs

1. Ancient people believed mental disorders were caused by disturbances in the soul.

- **Answer:** True

- **Explanation:** Early humans had no knowledge of the brain; they explained abnormal behavior as the soul being disturbed.

1. During the Middle Ages, mentally ill people were treated mainly with observation and moral care.

- **Answer:** False

- **Explanation:** Middle Ages treatments were cruel—chains, torture, and execution were common.

1. Philippe Pinel advocated freeing mental patients from chains and observing them scientifically.

- **Answer:** True

- **Explanation:** Pinel emphasized humane treatment and empirical observation.

1. Franz Mesmer's theory of "animal magnetism" was scientifically proven and is still used today.

- **Answer:** False

- **Explanation:** Mesmer's idea was mystical; it was later replaced by scientific hypnosis.

1. ICD and DSM are manuals used to classify mental disorders systematically.

- **Answer:** True

- **Explanation:** They provide standardized criteria for diagnosis and research worldwide.

2. Conceptual MCQs

1. Which of the following best explains the term "scapegoating" in the context of mental illness?

A) Treating patients with kindness to improve recovery

- B) Blaming mentally ill people for social problems
- C) Observing symptoms to classify disorders
- D) Using hypnotism to treat mental disorders

- **Answer:** B

- **Explanation:** Scapegoating refers to blaming one group (mentally ill) for problems caused by society, especially during industrialization and social upheavals.

1. "Moral treatment" in psychiatry refers to:

- A) Using punishment to correct behavior
- B) Treating patients with dignity and creating structured environments
- C) Performing surgical procedures on the brain
- D) Using mystical energy to cure mental illness

- **Answer:** B

- **Explanation:** Samuel Tuke introduced moral treatment, focusing on kindness, routine, and supportive care.

1. Which of the following statements about Philippe Pinel is correct?

- A) He introduced trepanning to release evil spirits
- B) He chained patients to prevent escape
- C) He freed patients from chains and documented their symptoms
- D) He believed mental illness was caused by evil spirits

- **Answer:** C

- **Explanation:** Pinel emphasized humane treatment and systematic observation of mental patients.

1. Hypnosis, as introduced by James Braid, differed from Mesmerism because:

- A) It relied on mystical "animal magnetism"
- B) It was based on physiological and psychological observation
- C) It cured evil spirit possession

D) It involved trepanning

- **Answer:** B

- **Explanation:** Braid made hypnosis scientific, focusing on attention and physiological processes rather than mystical energy.

1. The mid-18th century shift in understanding mental illness emphasized:

A) Punishment of mentally ill as criminals

B) Mental illness as a nervous disease requiring observation

C) Belief in possession by evil spirits

D) Complete rejection of hospitals for mentally ill

- **Answer:** B

- **Explanation:** Rational, scientific thought led to viewing mental illness as a disorder of the nervous system.

3. Situational/Applied MCQs

1. A patient in 1790s Paris is kept alongside criminals in a city asylum. Which historical factor explains this practice?

A) Fear of evil spirits

B) Lack of understanding of the nervous system

C) Overcrowding and social upheaval from industrialization

D) Influence of Mesmer's animal magnetism

- **Answer:** C

- **Explanation:** Industrialization and migration caused overcrowded cities; mentally ill were grouped with criminals for social management.

1. A physician observes that his patients' paralysis has no physical cause but improves after suggestion. This approach is most similar to:

A) Pinel's empirical study

B) Bernheim's use of hypnotism

- C) Mesmer's animal magnetism
- D) Middle Ages punishment techniques

- **Answer:** B

- **Explanation:** Bernheim expanded hypnosis and suggested that suggestion can improve mental symptoms.

1. A patient in a medieval village claims to hear voices. The villagers accuse her of witchcraft and attempt to punish her. Which of the following is true?

- A) She is treated with moral care by Samuel Tuke
- B) She is being scapegoated based on superstition and fear
- C) She will be classified using DSM criteria
- D) She is observed empirically like in Pinel's hospital

- **Answer:** B

- **Explanation:** In the Middle Ages, mentally ill were feared and punished; this is an example of scapegoating.

1. If a doctor today diagnoses depression using standardized criteria, which manuals could they be using?

- A) Mesmer's Manual of Animal Magnetism
- B) Pinel's Hospital Records
- C) DSM or ICD
- D) Charcot's Hypnosis Guide

- **Answer:** C

- **Explanation:** DSM and ICD provide global standards for diagnosing mental disorders.

1. Which of the following is an example of a shift from spiritual to scientific understanding of mental illness?

- A) Trepanning patients to remove evil spirits
- B) Chaining patients in medieval asylums
- C) Observing patients' symptoms to classify and treat disorders medically

D) Accusing women of witchcraft

- **Answer:** C
- **Explanation:** Moving from supernatural explanations to medical observation reflects scientific progress.

CHEAT SHEET – Mental Disorders: History & Scientific Outlook

1. Key Terms & Definitions

Term	Definition (Plain English)	Small Example	Memory Hook / Mnemonic
Soul	Non-physical part of a person controlling thoughts & behavior	Ancient belief: hearing voices = disturbed soul	Soul → S piritual cause
Mad / Madness	Old term for mentally ill; unusual behavior or hallucinations	Talking to invisible beings	Mad = M ind abnormal
Trepanning	Drilling a hole in the skull to release evil spirits	Ancient Egypt procedure	Trepan → T hrill hole in skull
Possession	Belief someone is controlled by evil spirits	Hearing voices → possessed	Possession → P uppet
Scapegoating	Blaming a group for societal problems	Mentally ill blamed for urban crime	Scape → S hame others
Nervous disease	Mental illness seen as disorder of nerves/brain	Anxiety, paralysis without injury	Nervous = N euro-related
Asylum	Institution for housing and treating mentally ill	Paris asylum, 18th century	Asylum = A way from society
Empirical / Observation	Based on evidence & careful observation	Pinel observing patients	Empirical → E vidence

Term	Definition (Plain English)	Small Example	Memory Hook / Mnemonic
Moral treatment	Humane care: routine, kindness, structure	Tuke's York Retreat	Moral = M anners & care
Animal magnetism	Mesmer's idea of a life force affecting mental illness	Touching patients to restore balance	Animal = A we-inspiring energy (wrong theory!)
Hypnosis	Focused mental state to influence mind/behavior	Staring at object → relaxation	Hypnosis → H elpful suggestion
Suggestion	Planting ideas to influence behavior	Patient told "you feel calm" → calms down	Suggestion → S way mind
Hysteria	Emotional disorder with physical symptoms	Paralysis with no injury	Hysterical = H idden cause
ICD / DSM	Manuals for diagnosing mental illness scientifically	Diagnosing depression	ICD = International, DSM = D iagnostic

2. Historical Timeline – Mental Illness Understanding

Era	Understanding	Treatment / Approach	Example / Note
Ancient	Soul disturbance, spiritual	Rituals, trepanning	Voices → disturbed soul
Ancient Greece/Rome	Spirits initially → medical reasoning	Early medical observation	Hippocrates: humors imbalance
Middle Ages	Possession, witchcraft	Chains, torture, burning	Women accused of witchcraft
Early Modern (16th–18th C)	Nervous disease, social management	Asylums, work therapy	Industrial Revolution: overcrowding → institutions
18th–19th C	Scientific observation, humane care	Moral treatment, Pinel/Tuke	Chains removed, structured routine
19th–20th C	Psychological therapy	Hypnosis, suggestion,	Mesmer → Braid → Charcot → Bernheim

Era	Understanding	Treatment / Approach	Example / Note
		classification	
Post-WWII	Modern psychiatry	ICD/DSM for diagnosis	Standardized diagnosis worldwide

Memory Hook:

"Soul → Spirits → Chains → Science → DSM"

- S: Soul
- S: Spirits
- C: Chains
- S: Scientific observation
- D: DSM / Diagnosis

3. Key Contributors & Their Contributions

Name	Country	Contribution	Keywords / Tip
Philippe Pinel	France	Freed patients from chains, empirical observation	"Pinel = Pain removed, patients observed"
Samuel Tuke	England	Moral treatment, structured humane care	"Tuke = Treat kindly"
Franz Mesmer	Germany	Animal magnetism, early mesmerism	"Mesmer = Mystical energy"
James Braid	Scotland	Scientific hypnotism	"Braid = Brain focus"
Jean Charcot	France	Hypnosis for hysteria	"Charcot = Clinician of nerves"
Bernheim	France	Suggestion in treatment	"Bernheim = Brain suggestion"

4. Treatment Evolution – Quick Table

Era	Treatment	Focus / Idea
Ancient	Rituals, trepanning	Soul, spirits
Middle Ages	Chains, torture, execution	Fear, punishment
Early Modern	Work in asylums	Discipline, social management
18th C	Observation, humane care	Nervous disease, science
19th C	Moral treatment, hypnosis	Evidence-based, psychological methods
20th C	ICD / DSM, psychiatric medicine	Classification, medical treatment

Tip: Think of “**Ritual → Chains → Work → Observation → Therapy → DSM**” for exams.

5. Mnemonics / Memory Hooks for Key Terms

1. **M.A.S.H.E.D** → Historical treatment sequence

- **Mad** / Soul (Ancient)
- **Asylums** / Animal Magnetism (Early Modern)
- **Scary Chains** (Middle Ages)
- **Humane care** (Pinel/Tuke)
- **Evidence** / Hypnosis (Braid, Bernheim)
- **DSM** / ICD (Modern)

1. **PINEL** → Remember humane treatment

- **Patient** freed
- **Investigate** empirically
- **Nervous** disease
- **Evidence** collected
- **Log** symptoms
