

ZOO507 QUIZ 1 ...

1. Aestivation is also called... **summer sleep.**
2. as species richness and evenness increases, species diversity will.... **increase.**
3. The number of individuals per species is called.... **species abundance.**
4. commensalism is a relationship. **Useful for one species and second is neither helped nor harmed.**
5. Low equality energy is... **dispersed from of energy.**
6. the major difference between hibernation and torpor is...
Hibernation is a winter sleep.
7. arousal from torpor takes around one hour and involves violent shaking and muscle... **all of the above**
8. is the number of different species in a particular community... **species richness.**
9. amphibian, fish and reptile can not maintain their body temperature rather it fluctuates., they are called as ... **poikilotherms**
10. Aggregation of populations of different species living together in a specific area constitute a biotic... **community**
11. During sweating, body surface temperature of an organism.... **decreases.**
12. is the change in the genetic composition of one species in response to a genetic change in another... **coevolution.**
13. The daily time of decreased metabolism and lowered body temperature is called... **torpor**
14. Which one of these are not an electromagnetic radiations with short wavelength... **infrared radiation.**
15. In ectotherms, controls body temperature.... **external forces.**
16. Those animals which regulate their body temperature by external sources are called... **ectotherms**

17. The term is used for maintenance of an internal body temperature of an organism... **thermoregulation**
18. Human eye can detect electromagnetic radiation of wavelength... **380nm**
760nm
19. Is defined as the number of species represented in a specific region, landscape or an ecological community.... **species richness.**
20. Which one of these animals do not go under winter sleep.... **salamanders**
21. What is called when two species trigger evolutionary changes in each other... **coevolution..**
22. Ectotherms are also called.... **cold blooded animals.**
23. The fluctuation in the intensity of sunlight in different regions of the world affects the... **temperature.**
24. The process of successful establishment of the species in a new area is called.... **ecesis.**
25. A form of kinetic energy, in which energy travels in the form of a wave as a result of changes in electric and magnetic fields are... **electromagnetic radiations.**
26. _____ refers to the evenness of distribution of individuals among species in a community.... **relative abundance.**
27. Which of the following describes a coevolutionary relationship.... **none of the above.**
28. What is called for the process when older communities of plants and animals are replaced by newer communities... **ecological succession.**
29. Light plays a vital role in ____ of the following life running processes... **all of the above.**
30. Hypothalamus works like a.... **thermostat.**
31. During cold occurs to generate heat from respiration... **shivering.**
32. is a measure of community complexity... **species diversity.**
33. On the basis of wavelength there are... types of electromagnetic radiation... **2**

34. Hibernation can be defined as... to sleep for an extended period of time...
35. The non living components of an ecosystem are called... abiotic factors.
36. How many types of ecological succession are there....2
37. Which one of these is not a character of a community....curiosity
38. The torpid state may last for....year.
39. Dormancy of insects in summer is called aestivation.
40. Mechanism of thermoregulation regulates__ in the body of an organism.....temperature.
41. __ is a kind of colouration or patterns that help an animal to appear to blend with the surrounding.... camouflage.
42. How many types of biotic communities are there... 3
43. The normal body temperature of human beings is... 37 degree c.
44. The contribution of each plant species to the vegetation can be defined as... species composition.
45. Which one of these not an example of major community... plants.
46. Temperature, light, air water and soil are all__ components of the environment.... abiotic
47. Which one of these is not the character of ectotherms.... generate body heat due to metabolic rate.
48. Carbon dioxide and water cannot react and release oxygen of__ is absent... sunlight.
49. Sunlight is very important factor inphotosynthesis.
50. Which of the following factors is not responsible for heat loss... excessive fat deposits.
51. Which is not a biotic factor.... sunlight.
52. Aestivation occurs because ofheat and dry climate.
53. Hibernation is a mean of energy conservation.
54. The ____ is the result of many interacting factors , both abiotic and biotic.....structure of a community.

55. Which of these factors in a community is not an abiotic factor... **predator.**
56. Mutualism is a __ relationship,.. **useful for both species.**
57. ____ is concentrated form of energy and has a high capacity to do work...**high quality of energy.**
58. __ is essentially the composition of a community, including the number of species in that community and their relative numbers.. **community structure.**
59. A self regulating, self sustaining and independent unit of community is called a ____ community ...**major community.**
60. The formation of a climax community from abandoned farm land is an example of....**secondary succession.**
61. Products of photosynthesis are **glucose and oxygen.**
62. Which one of these is not true about torpor... **higher metabolic activity.**
63. A mutualistic association between algae and fungus in which both the partners get benefits from other is known as **lichens**
64. Types of animals which can approximately maintain their constant body temperature are called... **endothermic.**
65. What is called for the term in which all the living organisms that occupy an area undergoing a primary succession in the beginning stages... **pioneer community.**
66. All are the examples of endoparasites except ...**flea.**
67. What is the difference between evolution and coevolution...**coevolution results when 2 or more species interact.**
68. Humming bird can regulate its own body temperature independent of environment hence is called... **endotherm.**
69. Which one of these are true hibernators... **all of these.**
70. Winter sleep is a form of ...**hibernation.**
71. Which one of these is not true about hibernation... **also known as summer sleep.**
72. What is lichens **association between algae and fungi.**

73. The final stable community in an ecological succession is called.... **climax community**.

74. Fishes , most of the invertebrates and amphibians are examples of ... animals.. **ectotherms**.

75. During ___ the body temperature of animal drops and its heart beating slow down with minimum use of energy.... **hibernation**.

76. Australian burrowing frog goes under...**aestivation**.

77. Which of the following is not an example of major community...**plant**.

78. Electromagnetic radiations of short wavelength have.... **MoreMore energy**.
