CELL BIOLOGY

MIDTERM

Most Important Repeated Questions

SPRING 2024

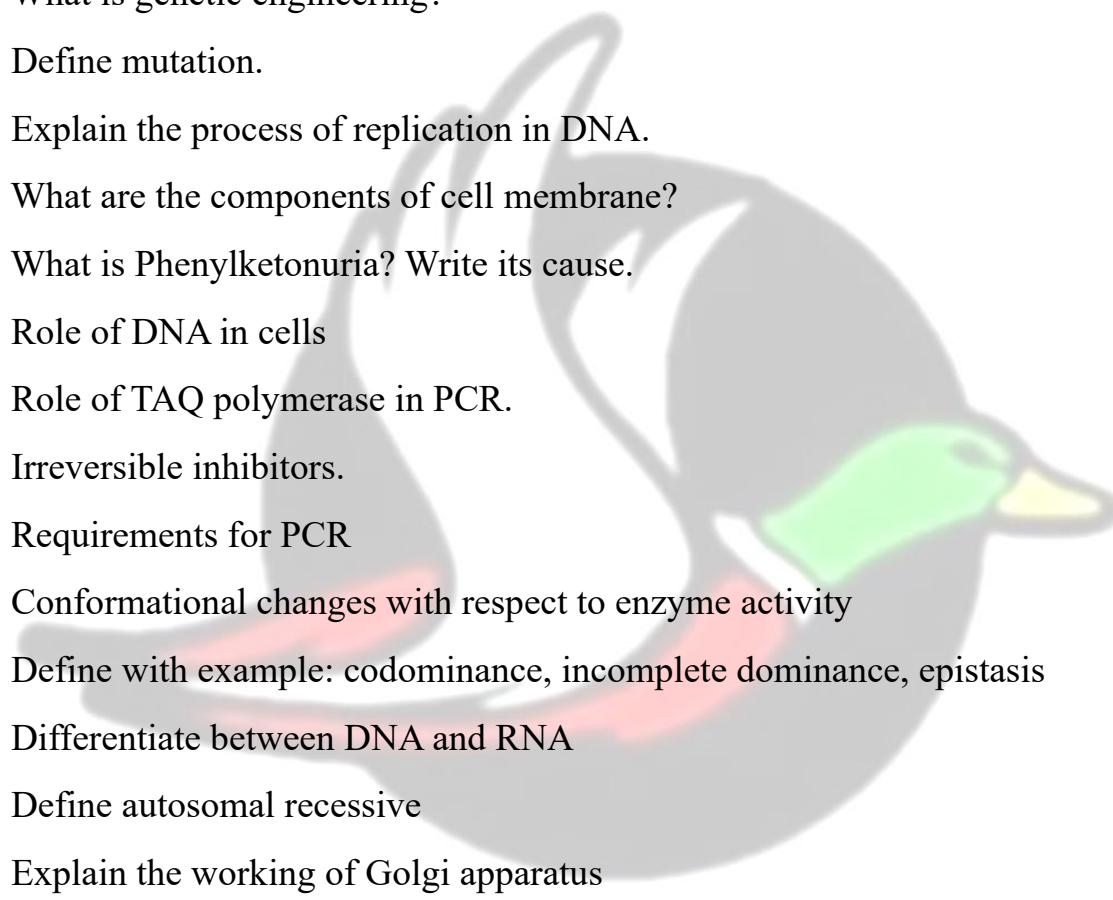

By

★♥️🅐lif🅔xpert🅔oologist♥️★

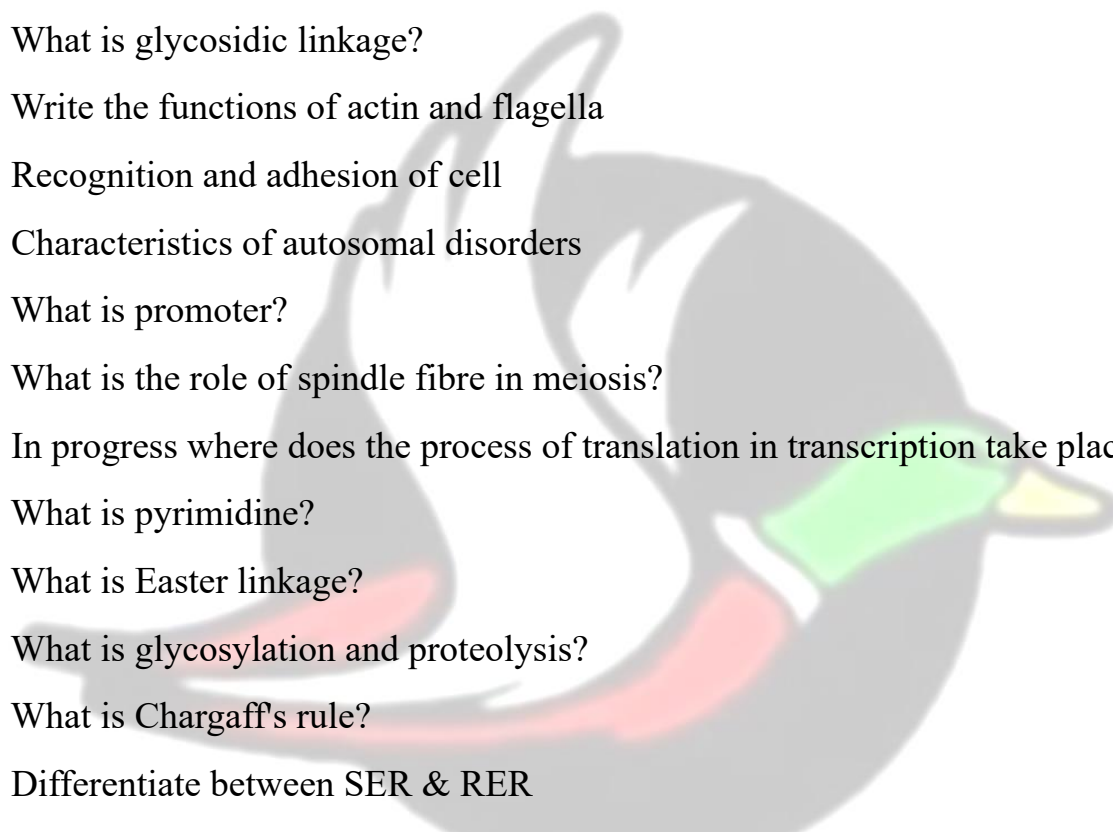

IMPORTANT QUESTIONS

Subjective:

1. What is cytoskeleton? What are the components of cytoskeleton?
2. What is threshold effect and its effects on identical twins.
3. Why dNTPs is used in PCR mixture?
4. Write a note on peptide Bond, primary and secondary structure of proteins.
5. What is feedback inhibition? Write it with an example of krab cycle.
6. Write a note on the experiment of Hershey & Chase.
7. Write a note on protein structure.
8. What is adopted hypothes and messenger hypothesis.

9. What is cytogenic disorder?
 10. NLS protein targetting
 11. What are centrosomes?
 12. What is ionic bond?
 13. What is Easter linkage?
 14. Define plasmid
 15. What is genetic engineering?
 16. Define mutation.
 17. Explain the process of replication in DNA.
 18. What are the components of cell membrane?
 19. What is Phenylketonuria? Write its cause.
 20. Role of DNA in cells
 21. Role of TAQ polymerase in PCR.
 22. Irreversible inhibitors.
 23. Requirements for PCR
 24. Conformational changes with respect to enzyme activity
 25. Define with example: codominance, incomplete dominance, epistasis
 26. Differentiate between DNA and RNA
 27. Define autosomal recessive
 28. Explain the working of Golgi apparatus
 29. What are the steps of PCR
 30. Translation and transcription in prokaryotes
 31. Mendel's first law of inheritance
 32. What are the types of PCR?
 33. Stages of meiosis I & meiosis II
 34. Briefly describe plasmid, genetic engineering, mutation
 35. Write three examples of RNA viruses
- 

36. Write down characteristics of meiosis II
37. How gel electrophoresis is performed and what is its purpose?
38. Why X chromosome is bigger than Y chromosome?
39. Dominant relation in Mendel's law
40. Applications of PCR
41. Explain different replication models of DNA
42. What are different types of RNA? Write their functions
43. What is reversible inhibitor? Give example
44. Mendel chose which organism for his experiment and what specific traits he investigated?
45. Write the function of mitochondria.
46. Write the factors which denature protein structure
47. Write a short note on the technique of genetic engineering
48. What is centrosome?
49. What is cholesterol? Write its function.
50. Differentiate between nucleotide and nucleoside
51. Inhibitors
52. Steps of meiosis
53. Functions of carbohydrates
54. Differentiate between Klinefelter's and Turner's syndrome
55. Differentiate between phenotype and genotype
56. What is the role of ethidium bromide in gel electrophoresis?
57. Functions of cellular membranes
58. Write four names of macromolecules present in living organisms
59. What is denaturation step in PCR?
60. Write characteristics of mitosis
61. Write a note on transcription

- 
62. Differentiate between cofactor, coenzyme and prosthetic group with examples
 63. What do you know about condensation and hydrolysis?
 64. Crossing over in meiosis
 65. What is ionic bond?
 66. Define hypotonic hypotonic and isotonic condition
 67. What is nuclear membrane and cell membrane?
 68. What is glycosidic linkage?
 69. Write the functions of actin and flagella
 70. Recognition and adhesion of cell
 71. Characteristics of autosomal disorders
 72. What is promoter?
 73. What is the role of spindle fibre in meiosis?
 74. In progress where does the process of translation in transcription take place?
 75. What is pyrimidine?
 76. What is Easter linkage?
 77. What is glycosylation and proteolysis?
 78. What is Chargaff's rule?
 79. Differentiate between SER & RER
 80. Define RELP
 81. What is exergonic reaction?
 82. Define cross pollination
 83. What is Turner's syndrome write its symptoms
 84. Explain cell cycle
 85. Explain the structure of DNA
 86. Amphiphatic molecule
