

PSY502 - Lesson 36+37

PART 1: ERIK ERIKSON – PSYCHOSOCIAL DEVELOPMENT

◆ Who was Erik Erikson?

Erik Erikson (1902–1994) was a psychologist who studied how a person develops psychologically across the whole life. Unlike Freud, who focused mainly on sexual drives, Erikson believed development is shaped mostly by social experiences.

📖 Key term:

- Psychosocial = “Psycho” means mind + “social” means society.

So psychosocial development means your mind grows through your interactions with people and society.

Erikson believed:

1. Development continues from birth to old age.
2. At every stage, a person faces a life problem or conflict.
3. How you solve that conflict shapes your personality.

He described 8 stages of life. Each stage has two sides - a positive side and a negative side.

-
1. Trust vs Mistrust (Birth to 1 year)
-

👉 What is happening?

A baby depends fully on caregivers.

📖 Terms:

- Trust = feeling safe and secure with others
 - Mistrust = feeling fear, doubt, and suspicion
- ✓ If parents are loving, consistent, and responsive → the baby learns trust.
- ✗ If care is cold, unpredictable, or neglectful → baby learns mistrust.

🧠 Example:

If a baby cries and the mother comforts them every time, the baby learns: “The world is safe.”

If nobody comes, the baby learns: “I cannot rely on anyone.”

Result:

- Success → confidence and security

- Failure → anxiety and fear of others
-

2. Autonomy vs Shame and Doubt (1–3 years)

👉 What is happening?

Children start doing things on their own.

📖 Terms:

- Autonomy = independence
 - Shame = feeling bad about yourself
 - Doubt = not trusting your abilities
- ✓ If children are encouraged → they feel capable
✗ If they are controlled or scolded → they feel ashamed

🧠 Example:

A child wants to feed themselves.

If parents allow it → "I can do things!"

If parents say "No, you are useless" → "I am bad at everything."

Result:

- Success → confidence and independence
 - Failure → low self-esteem and dependence
-

3. Initiative vs Guilt (3–6 years)

👉 What is happening?

Children start planning games and activities.

📖 Terms:

- Initiative = ability to start things
 - Guilt = feeling like you did something wrong
- ✓ If allowed to explore → they become leaders
✗ If stopped harshly → they feel guilty for trying

🧠 Example:

A child creates a new game.

If praised → "I am creative."

If scolded → "I should not try new things."

Result:

- Success → leadership and confidence
 - Failure → fear of taking action
-

4. Industry vs Inferiority (6 years to puberty)

👉 What is happening?

Children work hard in school and skills.

📖 Terms:

- Industry = working with effort
- Inferiority = feeling not good enough

✓ Encouraged → feel capable

✗ Criticized → feel useless

🧠 Example:

A child solves math problems.

If teacher praises → "I am smart."

If always compared → "I am a failure."

Result:

- Success → competence
 - Failure → low confidence
-

5. Identity vs Role Confusion (Teenage years)

👉 What is happening?

Teens ask: "Who am I?"

📖 Terms:

- Identity = clear sense of self
- Role confusion = not knowing who you are

✓ If exploration is allowed → strong identity

✗ If forced → confusion

🧠 Example:

Teen explores careers and beliefs.

If supported → "I know myself."

If controlled → "I am lost."

Result:

- Success → strong identity
 - Failure → confusion and insecurity
-

6. Intimacy vs Isolation (Young adulthood)

👉 What is happening?

People seek deep relationships.

📖 Terms:

- Intimacy = emotional closeness
- Isolation = feeling alone
- ✓ Healthy relationships → love and trust
- ✗ Fear of closeness → loneliness

🧠 Example:

Someone opens up to a partner.

If accepted → "I am loved."

If rejected → "I should stay alone."

Result:

- Success → meaningful relationships
 - Failure → loneliness
-

7. Generativity vs Stagnation (Middle adulthood)

👉 What is happening?

Adults contribute to society.

📖 Terms:

- Generativity = giving back
- Stagnation = feeling stuck
- ✓ Helping others → purpose
- ✗ No contribution → emptiness

🧠 Example:

Raising kids or mentoring → meaningful life

Not contributing → "My life has no value."

8. Integrity vs Despair (Old age)

👉 What is happening?

People reflect on life.

📖 Terms:

- Integrity = feeling satisfied with life
- Despair = regret and sadness
- ✓ Life feels meaningful → peace
- ✗ Life feels wasted → depression

🧠 Example:

"I lived well" vs "I failed in life"

PART 2: J. L. MORENO – PSYCHODRAMA

Moreno believed mental illness comes from blocked emotions and poor social relationships.

📖 Key terms:

- Spontaneity = natural, free emotional expression
- Psychodrama = therapy through acting
- Sociometry = study of group behavior

He created Psychodrama, where people act out their problems.

Elements of Psychodrama:

- Stage = place where drama happens
- Director = therapist guiding the drama

- Protagonist = main person
- Audience = group members
- Role playing = acting out roles
- Role reversal = switching roles to understand others

 Example:

A person acts as their father.

Then they switch roles to feel what the father feels.

This increases:

- Creativity
- Emotional release
- Mental health

Sociometry studies how people behave in groups. It helped modern fields like HR and management.

PART 3: HUMANISTIC PSYCHOLOGY

Humanistic psychologists focused on:

- Happiness
- Growth
- Meaning
- Human potential

They believed:

- Behaviorism ignored emotions
 - Psychoanalysis ignored human strengths
-

MASLOW – HIERARCHY OF NEEDS

Maslow said humans have levels of needs.

 Hierarchy = arrangement from strongest to weakest

1. Physiological needs

Food, water, sleep

2. Safety needs

Security and protection

3. Belongingness

Love, friends, family

4. Esteem

Respect, confidence

5. Self-actualization

Becoming your best self

 Example:

A hungry person cannot focus on self growth.

CARL ROGERS – CLIENT CENTERED THERAPY

Rogers believed:

- People can heal themselves
- Therapist must show empathy and acceptance

 Key terms:

- Self-actualization = becoming your true self
- Client-centered therapy = therapy focused on the person

A healthy person:

- Is open to experience
 - Lives fully
 - Feels free
 - Is creative
-

POSITIVE PSYCHOLOGY

Positive psychology studies happiness, strengths, and well-being.

 It focuses on:

- What is right with people
- Not just what is wrong

Leaders:

- Martin Seligman
- Csikszentmihalyi (Flow theory)

 Example:

Instead of only treating depression, positive psychology teaches how to build joy.

SECTION 1: ERIK ERIKSON AND PSYCHOSOCIAL DEVELOPMENT

Q1: Who was Erik Erikson and what was his contribution to psychology?

Answer:

Erik Erikson (1902–1994) was a psychologist who studied human development across the entire lifespan. He is best known for his theory of psychosocial development, which explains how social interactions and experiences influence personality growth. Unlike Freud, Erikson emphasized social and environmental factors over sexual development.

Explanation:

Erikson believed that humans grow not just in childhood but throughout life. Each stage of life presents a challenge or conflict, and how a person deals with it shapes their personality.

Example:

A child who receives consistent love and care learns to trust others. A teen exploring different career paths forms their personal identity.

Tips:

Remember Erikson = *"social development across lifespan"* and not just childhood. Think of life as 8 "social challenges" you have to overcome.

Q2: What is psychosocial development?

Answer:

Psychosocial development refers to the growth of an individual's mind and personality through social interactions with family, friends, and society.

Explanation:

"Psycho" = mind, "social" = society. Erikson believed that each stage of life has social challenges that shape confidence, identity, relationships, and purpose.

Example:

A toddler learns independence by choosing what to wear, while an adult develops intimacy by forming close relationships.

Tips:

Think: *how you act and feel is influenced by your environment at every stage of life.*

Q3: What are the eight stages of Erikson's psychosocial development?

Answer:

1. Trust vs Mistrust (0–1 year)
2. Autonomy vs Shame and Doubt (1–3 years)
3. Initiative vs Guilt (3–6 years)
4. Industry vs Inferiority (6–12 years)
5. Identity vs Role Confusion (adolescence)
6. Intimacy vs Isolation (young adulthood)
7. Generativity vs Stagnation (middle adulthood)
8. Integrity vs Despair (old age)

Explanation:

Each stage has a challenge (conflict) that needs to be resolved. Success leads to positive traits; failure may create difficulties in personality or behavior.

Example:

- A baby develops trust when caregivers are reliable.
- A teenager forms a sense of identity by exploring career or hobbies.
- An older adult reflects on life to gain integrity or feel despair.

Tips:

Think in **two halves**: first 4 stages = childhood, last 4 stages = adulthood.

Q4: Explain "Trust vs Mistrust" with its outcomes.

Answer:

From birth to 1 year, infants learn whether the world is safe and trustworthy. If caregivers respond consistently to needs, trust develops. If caregivers are neglectful or inconsistent, mistrust develops.

Explanation:

Trust gives a sense of security. Mistrust leads to fear, anxiety, and insecurity.

Example:

A baby cries and a parent comforts them → baby feels safe.

No response → baby learns the world is unreliable.

Tips:

Think: *"Can I rely on the world?"*

Q5: Explain "Autonomy vs Shame and Doubt" with outcomes.

Answer:

Between 1–3 years, children explore independence by making small choices. Support leads to autonomy; criticism leads to shame and doubt.

Explanation:

Children feel confident in their abilities if encouraged. Otherwise, they may become dependent and insecure.

Example:

A toddler chooses clothes for themselves. Positive reinforcement → confident. Scolded → embarrassed and unsure.

Tips:

Think: *"Can I do things by myself?"*

Q6: Explain "Initiative vs Guilt" with outcomes.

Answer:

From ages 3–6, children begin planning activities and taking initiative. Encouragement leads to leadership and decision-making skills. Suppression leads to guilt and fear of trying new things.

Example:

A child organizes a game with friends. Praised → feels capable. Criticized → feels like a burden.

Tips:

Think: *"Am I allowed to try new things?"*

Q7: Explain "Industry vs Inferiority" with outcomes.

Answer:

Ages 6–12, children develop skills and accomplish tasks. Encouragement leads to industry (competence); restriction or criticism leads to inferiority (self-doubt).

Example:

Completing school projects successfully builds confidence; repeated failure or criticism → feeling inadequate.

Tips:

Think: *"Can I succeed in what I try?"*

Q8: Explain "Identity vs Role Confusion" with outcomes.

Answer:

During adolescence, teens explore who they are and their future roles. Success leads to strong personal identity; failure causes confusion and insecurity.

Example:

A teen experiments with hobbies, career goals, and beliefs to form a sense of self.

Tips:

Think: *"Who am I?"*

Q9: Explain "Intimacy vs Isolation" with outcomes.

Answer:

Young adults form close relationships. Success → meaningful, committed relationships. Failure → isolation and loneliness.

Example:

Entering a supportive romantic relationship → intimacy. Avoiding relationships → isolation.

Tips:

Think: *"Can I connect deeply with others?"*

Q10: Explain "Generativity vs Stagnation" with outcomes.

Answer:

Middle-aged adults contribute to society through work, family, and community. Success → sense of purpose and productivity. Failure → stagnation and feeling unproductive.

Example:

Mentoring, parenting, or volunteering → sense of contribution. Doing nothing → life feels stagnant.

Tips:

Think: *"Am I leaving a mark on the world?"*

Q11: Explain "Integrity vs Despair" with outcomes.

Answer:

Older adults reflect on life. Integrity comes from feeling life was meaningful; despair comes from regret and unfulfilled goals.

Example:

"I lived well" → integrity. "I wasted my life" → despair.

Tips:

Think: *"Am I satisfied with my life?"*

SECTION 2: J. L. MORENO – PSYCHODRAMA AND SOCIOMETRY

Q12: Who was J.L. Moreno and what were his contributions?

Answer:

Jacob Levy Moreno (1889–1974) was a psychiatrist who founded Psychodrama, Sociometry, and contributed to Group Psychotherapy. He believed mental illness comes from lack of spontaneity and poor social relationships, and could be treated by acting out social and family situations.

Explanation:

He was inspired by Freud but criticized Freud for focusing too much on individual thought and ignoring social influences.

Example:

Psychodrama lets a patient act as themselves or others to understand feelings and improve relationships.

Tips:

Think: *"Acting helps heal the mind."*

Q13: What is Psychodrama and its components?

Answer:

Psychodrama is a therapy method using drama to explore emotions and relationships.

Components:

- Stage → where drama happens
- Director → therapist guiding the drama
- Protagonist → main character
- Audience → observers
- Role playing → acting roles
- Role reversal → swapping roles to understand others

Example:

Patient plays parent and child roles to resolve conflicts.

Tips:

Remember: *Protagonist acts, audience observes, director guides.*

Q14: What is Sociometry?

Answer:

Sociometry is the study of how individuals behave in groups and how group interactions affect individuals.

Example:

Measuring which student a group prefers to work with or how team dynamics function.

Tips:

Think: *"It's like mapping social connections and influence in groups."*

SECTION 3: HUMANISTIC PSYCHOLOGY

Q15: What is Humanistic Psychology?

Answer:

A branch of psychology that emphasizes human potential, happiness, and personal growth. It focuses on emotions, joy, contentment, and meaning rather than only behavior or unconscious conflicts.

Example:

Studying why helping others makes people feel happy rather than just treating mental illness.

Tips:

Think: *"Psychology of what's right, not only wrong."*

Q16: Explain Maslow's Hierarchy of Needs.

Answer:

Maslow proposed that human needs are arranged in a hierarchy:

1. Physiological → food, water, sleep
2. Safety → security, protection
3. Belonging → friends, family, love
4. Esteem → respect, confidence
5. Self-actualization → achieving true potential

Explanation:

Lower needs must be satisfied before higher needs. Self-actualization is unique to humans.

Example:

A starving person cannot focus on creativity (self-actualization).

Tips:

Remember: *Start with basics (food), end with becoming your best self.*

Q17: Who was Carl Rogers and what was his contribution?

Answer:

Carl Rogers (1902–1987) was a humanistic psychologist who developed Client-Centered Therapy. He believed people can solve their own problems if given empathy, understanding, and acceptance.

Explanation:

He focused on self-actualization as the highest form of mental health. A psychologically healthy person is open, creative, and free.

Example:

In therapy, a person reflects on feelings and discovers solutions without direct advice from the therapist.

Tips:

Think: *"Client knows best; therapist guides with care."*

Q18: What is Positive Psychology?

Answer:

Positive Psychology studies human happiness, strengths, and well-being. Unlike traditional psychology, it focuses on what is right with people rather than just mental illness.

Example:

Researching how gratitude, flow, or kindness improves life satisfaction.

Tips:

Remember: *It's science of happiness.*

SECTION 1: ERIK ERIKSON AND PSYCHOSOCIAL DEVELOPMENT

Q1: Explain Erik Erikson's theory of psychosocial development and its stages.

Answer:

Introduction:

Erik Erikson (1902–1994) was a psychologist who proposed that human development is a lifelong process influenced by social experiences. Unlike Freud, who focused on sexual drives, Erikson emphasized **psychosocial development**, meaning growth occurs through interactions with others and the environment. He outlined **eight stages of development**, each with a key conflict that shapes personality.

Eight Stages of Psychosocial Development

Stage	Age	Conflict	Positive Outcome	Negative Outcome	Example
Trust vs Mistrust	0–1	Can I trust the world?	Sense of security and confidence	Anxiety, fear, mistrust	Baby learns to trust caregiver who consistently comforts them
Autonomy vs Shame & Doubt	1–3	Can I do things myself?	Independence and self-confidence	Shame, doubt in abilities	Toddler chooses what to wear or eat; praised → confident, scolded → shame
Initiative vs Guilt	3–6	Can I take initiative?	Leadership and decision-making	Guilt and fear of action	Child starts a game with friends; encouraged → initiative, criticized → guilt
Industry vs Inferiority	6–12	Can I succeed in tasks?	Competence and productivity	Feelings of inferiority	Completing school projects successfully → confidence; failure → self-doubt
Identity vs Role Confusion	Adolescence	Who am I?	Strong sense of self	Confusion about self and future	Teen explores career, hobbies, and beliefs
Intimacy vs Isolation	Young adulthood	Can I form close relationships?	Meaningful, committed relationships	Loneliness, isolation	Romantic relationships or friendships
Generativity vs Stagnation	Middle adulthood	Am I contributing to society?	Productivity, purpose	Stagnation, feeling unproductive	Parenting, mentoring, volunteering
Integrity vs Despair	Old age	Did I live well?	Life satisfaction, peace	Regret, hopelessness	Reflection on accomplishments vs regrets

Key Features of Erikson's Theory

- **Lifespan approach:** Development continues throughout life.
- **Social focus:** Personality grows through interactions and environment.
- **Conflict-resolution:** Success in each stage leads to positive traits; failure may create difficulties.

- **Interconnected stages:** Early stages influence later outcomes.
-

Explanation (Plain English):

Erikson said life is like a series of social challenges. You start as a baby learning whether the world is safe (trust), grow into a child learning independence (autonomy), become a teen exploring your identity, and continue to deal with relationships, productivity, and life reflection as an adult. Each stage builds your confidence or creates struggles if not handled well.

Example for memory: Think of it like **levels in a video game**: succeed in one level → stronger character; fail → challenges in next level.

Q2: Describe the stage of "Identity vs Role Confusion" in detail.

Answer:

Introduction:

Adolescence is the period of transition from childhood to adulthood. According to Erikson, this stage involves exploring personal identity, beliefs, and future roles.

Key Features:

- Age: 12–18 years (teenage years)
- Conflict: Identity vs Role Confusion
- Focus: "Who am I?"
- Outcomes:

Positive Outcome:

- Clear sense of personal identity
- Confidence in career, beliefs, and social role

Negative Outcome:

- Confusion about self
- Indecision in career, relationships, and values

Factors Influencing Development:

- Family guidance and support
- Peer influence
- Societal expectations

Example:

A teen tries different hobbies, explores career options, or questions cultural beliefs. Support leads to strong identity; pressure or neglect leads to confusion.

Explanation (Plain English):

Teenage years are about exploring yourself. If society, family, or friends encourage you to try different things, you feel confident in who you are. If you are pressured or ignored, you may feel lost or unsure.

Tip: Think: *Adolescence = "Identity lab" for trying out who you are.*

Q3: Explain "Intimacy vs Isolation" and its relevance in adulthood.

Answer:

Introduction:

In young adulthood, the focus shifts to forming meaningful relationships. Erikson highlighted the challenge between **intimacy** (closeness with others) and **isolation** (emotional distance).

Key Features:

- Age: 18–40 years
- Conflict: Intimacy vs Isolation
- Focus: Building romantic, familial, and close friendships

Positive Outcome:

- Strong, lasting relationships
- Trust and emotional closeness

Negative Outcome:

- Avoiding relationships
- Loneliness and social isolation

Example:

Entering a supportive romantic relationship → intimacy

Avoiding relationships due to fear → isolation

Explanation (Plain English):

After establishing identity, adults need to connect deeply. Sharing life with someone builds trust and reduces loneliness. Avoiding connections leads to emotional isolation.

Tip: Think: *"Can I open up and share myself?"*

SECTION 2: J. L. MORENO AND PSYCHODRAMA

Q4: Discuss the contributions of J. L. Moreno in psychotherapy.

Answer:

Introduction:

Jacob Levy Moreno (1889–1974) was a psychiatrist who revolutionized therapy with his concepts of **Psychodrama** and **Sociometry**. He believed that mental illness often arises from blocked emotions and poor social connections.

Psychodrama:

- **Definition:** Therapy where patients act out their feelings and relationships in a dramatized form.
- **Components:**
 - Stage → physical or metaphorical setup
 - Director → therapist guiding the session
 - Protagonist → main patient
 - Audience → observers
 - Role Playing → acting out situations
 - Role Reversal → switching roles to understand others

Benefits:

- Increases spontaneity and creativity
- Resolves emotional conflicts
- Improves social skills

Sociometry:

- **Definition:** Study of social relationships and group dynamics
- **Application:** Helps in understanding how people behave in groups, with implications for organizational behavior and HR management

Example:

A patient acts out a conflict with a parent in therapy. Switching roles helps them understand both perspectives and release emotional tension.

Explanation (Plain English):

Moreno believed acting out problems lets people feel and understand emotions better. It's like **practicing life situations safely** in therapy. Sociometry measures who connects with whom in a group, helping improve teamwork and social understanding.

Tip: Think: *"Therapy + drama = Psychodrama."*

SECTION 3: HUMANISTIC PSYCHOLOGY

Q5: Explain Humanistic Psychology and its main principles.

Answer:

Introduction:

Humanistic psychology emphasizes human potential, personal growth, and happiness. It developed as a reaction to:

- Behaviorism → which ignored emotions
- Psychoanalysis → which focused too much on unconscious motives

Key Principles:

- Humans are inherently good and capable of growth
- Focus on present experiences and conscious feelings
- Self-actualization is the ultimate goal

Major Humanistic Psychologists:

1. **Abraham Maslow** → Hierarchy of Needs
2. **Carl Rogers** → Client-Centered Therapy

Maslow's Hierarchy of Needs:

Level	Description	Example
Physiological	Food, water, sleep	Hungry person cannot focus on learning
Safety	Security, protection	Stable home, safe environment
Belonging	Love, friendship, acceptance	Supportive family, friends
Esteem	Respect, confidence, recognition	Awards, acknowledgment at work
Self-actualization	Achieving full potential	Artist expressing creativity, scientist innovating

Carl Rogers – Client-Centered Therapy:

- People have capacity to solve their own problems
- Therapist provides empathy and acceptance
- Focus on self-actualization

Example:

Therapist reflects feelings; client discovers own solutions.

Explanation (Plain English):

Humanistic psychology says humans are not just “machines” reacting to stimuli or driven by unconscious desires. We can grow, choose, and be happy. Maslow shows our needs are layered—basic needs first, then growth. Rogers says therapy works best when people are understood, not judged.

Tip: Think: *“Humanistic psychology = growth, potential, and happiness.”*

Q6: What is Positive Psychology and how is it related to Humanistic Psychology?

Answer:

Introduction:

Positive psychology studies human happiness, strengths, and well-being. It emerged from humanistic psychology and focuses on what is right with humans, not just mental illness.

Key Features:

- Scientific study of happiness and well-being
- Focuses on strengths, resilience, gratitude, and flow
- Pioneers: Martin Seligman, Mihaly Csikszentmihalyi

Example:

Studying how practicing gratitude improves life satisfaction rather than only treating depression.

Explanation (Plain English):

Traditional psychology looked at problems; positive psychology looks at solutions and what makes life worth living. It's like flipping the lens from *“what’s wrong?”* to *“what’s right?”*.

Tip: Think: *“Positive psychology = happiness science.”*

SECTION 1: ERIK ERIKSON

MCQ 1 – Conceptual:

Erikson's psychosocial theory emphasizes:

- A) Sexual development only
- B) Social interactions across the lifespan
- C) Classical conditioning
- D) Unconscious instincts

Answer: B

Explanation: Erikson focused on social and environmental influences on personality development across the entire lifespan, not only childhood or sexual development.

MCQ 2 – True/False:

"According to Erikson, development stops after adolescence."

- A) True
- B) False

Answer: B

Explanation: Erikson believed development continues throughout life, with each stage having its own conflict.

MCQ 3 – Situational:

A 4-year-old child is constantly scolded when trying to play creatively and make decisions. According to Erikson, the child is likely to develop:

- A) Trust
- B) Initiative
- C) Guilt
- D) Autonomy

Answer: C

Explanation: Ages 3–6 correspond to the **Initiative vs Guilt** stage. Excessive criticism suppresses initiative and leads to guilt.

MCQ 4 – Conceptual:

Which of the following pairs correctly matches Erikson's stages with age?

- A) Trust vs Mistrust – 1–3 years
- B) Identity vs Role Confusion – Adolescence
- C) Intimacy vs Isolation – Middle adulthood
- D) Generativity vs Stagnation – Young adulthood

Answer: B

Explanation: Identity vs Role Confusion occurs during adolescence; other options mismatch stages and ages.

MCQ 5 – True/False (Tricky):

"The first four stages of Erikson's psychosocial development primarily relate to adult personality formation."

- A) True

B) False

Answer: B

Explanation: The first four stages (Trust to Industry) relate to **childhood development**, while the last four relate to adulthood.

MCQ 6 – Situational:

A young adult avoids deep relationships due to fear of commitment. Which stage of Erikson is being challenged?

- A) Integrity vs Despair
- B) Intimacy vs Isolation
- C) Generativity vs Stagnation
- D) Identity vs Role Confusion

Answer: B

Explanation: Young adulthood focuses on **Intimacy vs Isolation**. Avoiding relationships leads to isolation.

SECTION 2: J. L. MORENO

MCQ 7 – Conceptual:

Psychodrama was developed to:

- A) Study unconscious conflicts only
- B) Increase spontaneity and resolve emotional conflicts
- C) Measure IQ
- D) Replace all forms of psychotherapy

Answer: B

Explanation: Psychodrama uses acting and role-play to increase spontaneity, release emotions, and improve social understanding.

MCQ 8 – True/False:

Sociometry measures the social relationships and connections within a group.

- A) True
- B) False

Answer: A

Explanation: Sociometry studies individual behavior in group situations and the dynamics of social connections.

MCQ 9 – Situational:

A patient acts out a conflict with their parent in therapy and then switches roles to feel the parent's perspective. This technique is called:

- A) Role reversal
- B) Role projection
- C) Free association
- D) Cognitive restructuring

Answer: A

Explanation: **Role reversal** is a key component of Psychodrama, helping the protagonist understand another person's perspective.

MCQ 10 – Conceptual (Tricky):

Which of the following statements is FALSE regarding Moreno's Psychodrama?

- A) Creativity is essential for the protagonist
- B) It helps resolve mental illness through social and familial role exploration
- C) It completely ignores individual emotions
- D) Role-playing is a central technique

Answer: C

Explanation: Psychodrama emphasizes expressing and exploring emotions; it does **not** ignore individual emotions.

SECTION 3: HUMANISTIC PSYCHOLOGY

MCQ 11 – Conceptual:

Humanistic psychology differs from behaviorism because it:

- A) Focuses only on observable behavior
- B) Emphasizes unconscious sexual conflicts
- C) Focuses on human potential, emotions, and happiness
- D) Rejects scientific methods

Answer: C

Explanation: Humanistic psychology studies human growth, happiness, and personal potential, unlike behaviorism which focuses only on observable behavior.

MCQ 12 – True/False:

Maslow's Hierarchy of Needs suggests that self-actualization can be achieved even if basic physiological needs are not met.

- A) True
- B) False

Answer: B

Explanation: Maslow stated that lower-level needs (physiological, safety, belonging, esteem) must be satisfied before self-actualization.

MCQ 13 – Situational:

A student volunteers in the community, mentors younger students, and feels a sense of purpose. Which stage of human development (Maslow or Erikson) does this best reflect?

- A) Erikson: Generativity vs Stagnation
- B) Erikson: Integrity vs Despair
- C) Maslow: Esteem Needs
- D) Maslow: Physiological Needs

Answer: A

Explanation: Middle adulthood stage **Generativity vs Stagnation** focuses on contributing to society and leaving a meaningful legacy.

MCQ 14 – Conceptual:

Carl Rogers' Client-Centered Therapy emphasizes:

- A) Therapist providing direct advice and solutions
- B) Patient's capacity to solve their own problems
- C) Only analyzing unconscious conflicts
- D) Strict behavior modification

Answer: B

Explanation: Rogers believed the therapist provides empathy and understanding, allowing the patient to explore solutions themselves.

MCQ 15 – True/False (Tricky):

Positive Psychology arose mainly to study human illness and dysfunction.

- A) True
- B) False

Answer: B

Explanation: Positive psychology studies human happiness, strengths, and well-being, not mental illness.

MCQ 16 – Situational (Applied):

A researcher is studying how practicing gratitude and mindfulness improves life satisfaction. Which branch of psychology does this research belong to?

- A) Psychoanalysis
- B) Behaviorism
- C) Positive Psychology
- D) Cognitive Psychology

Answer: C

Explanation: Positive Psychology focuses on happiness, strengths, and well-being, such as gratitude and mindfulness.

CHEAT SHEET: ERIKSON, MORENO, HUMANISTIC PSYCHOLOGY

1 ERIK ERIKSON – Psychosocial Development

Key Term:

- **Psychosocial** = mind (psycho) + society (social); development shaped by social interactions.

Eight Stages (Quick Table):

Stage	Age	Conflict	Positive Outcome	Negative Outcome	Memory Hook / Mnemonic
Trust vs Mistrust	0–1	Can I trust the world?	Security & confidence	Fear, mistrust	"Baby trusts or cries"
Autonomy vs Shame & Doubt	1–3	Can I do things myself?	Independence	Shame, doubt	"Toddler chooses → proud / scolded → shy"
Initiative vs Guilt	3–6	Can I take initiative?	Leadership, creativity	Guilt	"Play leader or feel guilty"
Industry vs Inferiority	6–12	Can I succeed in tasks?	Competence	Inferiority	"School achievements → pride / failure → doubt"

Stage	Age	Conflict	Positive Outcome	Negative Outcome	Memory Hook / Mnemonic
Identity vs Role Confusion	Teen	Who am I?	Clear identity	Confusion	"Teen experiments → self-discovery"
Intimacy vs Isolation	Young adult	Can I form relationships?	Close relationships	Loneliness	"Love / friendships vs isolation"
Generativity vs Stagnation	Middle adult	Am I contributing?	Productivity & purpose	Stagnation	"Give back to society / feel stuck"
Integrity vs Despair	Old age	Did I live well?	Satisfaction, peace	Regret, despair	"Reflect → proud or regretful"

Tips / Mnemonics:

- **First 4 stages = childhood, last 4 = adulthood**
- **Memory trick:** "Tiny Ants Investigate Ice Islands Gratefully In Evening" → Trust, Autonomy, Initiative, Industry, Identity, Intimacy, Generativity, Integrity

Small Example:

- A baby cries → cared for consistently → **Trust**
- Teen tries different hobbies → strong **Identity**
- Adult mentors youth → **Generativity**

2 J. L. MORENO – Psychodrama & Sociometry

Key Terms:

- **Psychodrama** = therapy by acting out emotions and social situations
- **Sociometry** = measuring social connections and group behavior
- **Spontaneity** = freely expressing emotions and creativity

Psychodrama Components (Quick Table):

Component	Role
Stage	Place where drama occurs
Director	Therapist guiding the session
Protagonist	Main patient/actor
Audience	Observers of the drama
Role Playing	Acting out situations

Component	Role
Role Reversal	Switching roles to understand perspectives

Memory Hook / Mnemonic:

"S-PAR-DR" → Stage, Protagonist, Audience, Role-playing, Director, Role reversal

Small Example:

- Patient acts as their parent → then switches roles → gains perspective and emotional release

Tips:

- Psychodrama = **"Therapy + Drama = Healing"**
- Sociometry helps understand **group relationships**, like class seating preferences or team dynamics.

3 HUMANISTIC PSYCHOLOGY

Key Terms & Definitions:

- **Humanistic Psychology** = study of human potential, emotions, growth, and happiness
- **Self-actualization** = achieving full potential
- **Client-Centered Therapy** = therapy focusing on the client's own capacity to solve problems (Carl Rogers)
- **Positive Psychology** = scientific study of happiness, strengths, and well-being

Maslow's Hierarchy of Needs (Table)

Level	Definition	Example	Memory Hook
Physiological	Basic survival needs	Food, water, sleep	"Eat, drink, sleep first"
Safety	Security & protection	Home, job, rules	"Safe and sound"
Belonging	Love & relationships	Family, friends, teamwork	"Be loved"
Esteem	Respect & recognition	Awards, confidence	"Feel respected"
Self-Actualization	Full potential	Creativity, problem-solving	"Become your best self"

Mnemonic: "Please Stop Being Extremely Selfish" → Physiological, Safety, Belonging, Esteem, Self-Actualization

Small Example:

- Starving person → cannot focus on creativity
- Adult volunteering → self-actualization

Carl Rogers – Client-Centered Therapy

Feature	Explanation	Example
Empathy	Therapist understands client's feelings	Reflecting emotions in session
Unconditional Positive Regard	Accept client without judgment	"I accept you as you are"
Self-actualization focus	Helps client reach potential	Client discovers solution for personal problem

Memory Hook: "E-U-S" → Empathy, Unconditional regard, Self-actualization

Positive Psychology – Key Points

- Focuses on **strengths, happiness, well-being**
- Emphasizes **what is right with people**
- Pioneers: Martin Seligman, Mihaly Csikszentmihalyi
- Example: Studying gratitude, flow, kindness for life satisfaction

Mnemonic: "Happy People Always Smile" → Happiness, Positive, Attitudes, Strengths

4 QUICK MEMORY HOOKS & TIPS FOR EXAMS

- **Erikson Mnemonic: T-A-I-I-I-G-I-E** → Tiny Ants Investigate Ice Islands Gratefully In Evening
- **Maslow Mnemonic: P-S-B-E-S** → Please Stop Being Extremely Selfish
- **Psychodrama Mnemonic: S-PAR-DR** → Stage, Protagonist, Audience, Role-playing, Director, Role reversal
- **Carl Rogers: E-U-S** → Empathy, Unconditional Positive Regard, Self-actualization
- **Positive Psychology: "Happy People Always Smile"**

5 QUICK EXAMPLES FOR FAST RECALL

Concept	Example
Trust vs Mistrust	Baby cries → cared for consistently → trust world
