Islamic Perspective:

"A continuous process that nurtures the natural potentials of human beings from the intellectual, behavioural, spiritual and physical aspects in an integrated and balanced manner so as to produce righteous human beings who will bring goodness to this world and hereafter."

Islamic Philosophy-2:

1. **Ibn Khaldun (1332-1406)**

- Major contribution was in the History of Philosophy and Sociology.
- Wrote about the History of the world.

His great works:

- Universal History
- Summary of the result (religion)

2. **Al-Frabi (870-950 AD)**

- Major contribution was in philosophy, Logic and Sociology

His great works:

- **Kitab al-ihsa al ulum:** explains the classification and principles of basic science.
- **Kitab al-Musiqa:** a book on music

There are four areas of philosophical inquiry:

Metaphysics: concerned with questions about the nature of reality. In other words, metaphysics deals with the real. What is real? Everything that we see, touch, feel, hear, taste is all real. Everything in this universe is real. So, according to metaphysics, if everything was real then man should be involved in finding out about everything and that basically is education.

Epistemology: concerned with the nature of knowledge

Axiology: concerned with the nature of values (The moral learning). We want our children to develop their mind, body, spiritually but we also want them to develop morally.

Ontology is the philosophical study of the nature of being, becoming, existence, or reality, as well as the basic categories of being and their relations.

Comprehensive education means a complete picture. **Allah's word** is the Quran, Hadith, Fiqa, Teachings of the Prophet (S.A.W) are all Allah's word and direct studies.

Ayyamilla which is history and culture, tradition, geography will then leads to other Social Sciences.

Allah's world which is supporting studies. God created the world and he created it in 7 days.

Allah's World is science and technology. Allah's world is made up of matter and energy, and that is what science teaches wether its plant life, animal life, materials, energy etc . all that is created by God.

God's kingdom includes laws and economics. These are given to us that how we do business, trading or banking. So you can see that education in Islamic perspective is very integrated and all this together will be you language arts. Because without language you won't be able to do any of this.

The Meaning of Philosophical Inquiry

"Whenever people choose to embrace, if their choices are made in a logical, rational manner, they are engaged in the process of doing philosophy".

Four specific areas of philosophical inquiry:

- Metaphysics concerned with questions about the nature of reality.
- Epistemology concerned with the nature of knowledge.
- Axiology concerned with the nature of values.
- Logic concerned with the nature of thinking and reasoning.

Eric Berne's three important questions:

- ❖ Who am I?
- ❖ Why am I here?
- ❖ Who are all these other people and what do they want of me?

Idealism

Ideas are the only true reality, the only thing worth knowing. Ideas are generated in the hand and these need to be translated as these are only thoughts. So, as people develop ideas, old ideas lead to newer ideas, lots of ideas and information is created and that brings us to know how many of these new ideas do we need.

Focus: Mind

Originators:

- ✓ Plato
- ✓ Socrates

"Perennialism" Related Educational Philosophy to Idealism
Perennialism

Focus: Teach ideas that are everlasting. Seek enduring realities which are constant, through great literature, art, philosophy, religion.

Key Proponents

- Robert Hutchins
- Jacque Maritain
- Mortimer Adler
- Allan Bloom

Topic: 26 - Realism

Reality exists independent of the human mind. World of physical object is ultimate reality. They say that reality is something that exists. The ultimate reality is the physical objects so everything that you can see, touch and feel is real.

Focus: Body

Originator: Aristotle

Essentialism

Related Educational Philosophy to Realism

Focus: Teach the common core, "the basics" of information and skills (cultural heritage) neede for citizenship. (Curriculum can change slowly)

Key Proponents

- William Bagley
- Arthur Bestor
- E.D. Hirsch
- Chester Finn
- Diane Ravitch
- Theodore Sizer

Topic: 32 - Pragmatism

Universe is dynamic and evolving. Purpose of thought is action. Truth is relative. The key term here is evolving which means that when you evolve you change. So, when you change, nothing can be permanent. Things change, nothing is permanent is the pragmatism approach.

Focus: Experience

Originators

- Pierce
- Dewey

Progressivism

Related Educational Philosophy to Pragmatism

Focus: ideas should be tested by active experimentation. Learning rooted in questions of learners in interaction with others. Experience3 and student centered.

Key Proponents

- John Dewey
- William Kilpatrick

Reconstructionism Critical pedagogy: Analysis of world events, controversial issues and diversity to provide vision for better world and social change.

Focus: Freedom

Originators

- George Counts
- J. Habermas
- Ivan Illich
- Henry Giroux

Related Educational Philosophy to Reconstructionism:

Existentialism:

Focus:

- Reality is subjective, within the individual. Individual rather than external standards.

Key Proponents:

- Sartre
- Kierkegaard

Topic: 44 - Eclecticism:

- There is a way of dealing with all the various models.
- Eclecticism is not a philosophical system or model, but rather is the synthesizing and personal interpretation of various models to draw out the best components for you.
- Thus, you pull the best from various models in an effort to build your own statement of personal philosophy.

What things happen in a humanistic classroom?

- Active learning strategies
- Conflict resolution
- Incorporating whole class

A Comparison:

Education	School
❖ Broad	❖ Specific
❖ Take place anywhere anytime, anyplace	❖ Particular location; limited definition
❖ Behavior changes processes	❖ Place for education collective body of pupils
❖ Lack of formalization	❖ Formalized
❖ No assessment processes	❖ Assessment
❖ Non-official	❖ Official
❖ Lack of system	❖ Systemic
❖ No need for certified person	❖ Certified person
❖ No specific time limit for learning	❖ Compulsory period for attendance

What is psychology?

Psychology is the scientific study of mental functions and behaviors including:

- Perception
- Cognition
- Behavior
- Emotion
- Personality
- Interpersonal relationships

The major theories of learning have been classified into three groups:

1. **Behaviorist Theories:**

- Focuses on stimulus response and reinforcers
- Studies conditioning, modifying or shaping behavior through reinforcement and rewards

2. **Cognitive Theories: Topic: 71**

- Focuses information processing in relation to the total environment

- Studies developmental stages, understanding, multiple forms of intelligence, problem solving, critical thinking, and creativity.

3. **Phenomenological and Humanistic theories: Topic: 72**

- Focuses on the whole child, their social, psychological and cognitive development
- Studies focus on human needs, attitudes, feelings and self awareness.

Topic: 074 (Edward Thorndike)

Thorndike is said to be the Father of Modern Educational Psychology and founder of Behavioral Psychology.

- Started his research with animals using stimulus-response (Classical Conditioning) and develop the idea of Connectionism.
- In 1928 – Thorndike conducted his first major study with adults

Edward Thorndike's Connectionism:

- Defined learning as a connection or association of an increasing number of habits. More complicated associations means higher levels of understanding.
- Three laws of learning

THREE LAWS OF LEARNING

Topic: 075 - Three Laws of Learning-1:

1. **Law of Readiness:**

- Often misinterpreted as educational readiness
- Deals with attitudes and focuses on "Why Should I do This?"
- If nervous system is ready, conduction is satisfying and lack of conduction is annoying.

Topic: 076 - Three Laws of Learning-2:

2. **Law of exercise:**

- Strength of connections is proportional to the frequency, duration and intensity of its occurrence.
- Justifies drill, repetition and review.
- Seen today in behavior modification and basic skill instruction.

Topic: 077 - Three Laws of Learning-3:

3. **Law of Effect:**

- Responses that cause satisfaction, strengthen connections and discomfort weakens connections.
- Justifies use of rewards and punishments, especially Skinner's Operant Model.

Ivan Pavlov

- Pavlov was the first behaviorist to demonstrate Classical Conditioning.
- He is best known for his experiment with salivating dogs

Classical Conditioning:

- Eliciting an unconditioned response by using previously neutral stimuli.
- Unconditioned stimuli create reflexes that are not "learned," but are instinctual.
- Neutral and unconditioned stimuli are introduced at the same time. Unconditioned stimuli are gradually removed, and the neutral stimuli elicit the same reflex.

Pavlov's Dog:

- ❖ **Pavlov's experiment with salivating dogs best demonstrated the principal of Classical Conditioning.**
- ❖ **Dogs were trained to salivate at the sound of a bell**
- Dogs naturally salivated with food. (Unconditioned response)
- A bell (neutral stimuli) was rung every time the dogs were fed over a period of time creating the association/connection of bell with food.
- After time the dogs salivated at the sound of the bell alone.

James Watson

- ❖ **Watson took Pavlov's findings to another level.**
- ❖ **Emphasized that learning was observable or measureable, not cognitive**
- ❖ **Believed the key to learning was in conditioning a child from an early age based on Pavlov's methods.**
- ❖ **Nurture vs nature**
- Watson's theories strengthened the argument for the influence of experiences as opposed to genetics.

Topic: 082 – B. F. Skinner

- ❖ B. F skinner was one of the most influential American Psychologists.
- ❖ He began his research with rats at Harvard and pigeons during WWII.
- ❖ His work led to the development of Theory of Operant Conditioning.
- The idea that behavior is determined or influenced by its consequence.
- ❖ **Respondent vs Operant behavior**
- **Respondent behavior** is the elicited response tied to a definite stimulus.
- **Operant behavior** is the emitted response seemingly unrelated to any specific stimuli.

Topic: 083 – Operant Conditioning-1

- ❖ Types of reinforcers (stimuli)
- **Primary –** Stimuli fulfilling basic human drives such as food and water.
- **Secondary –** personally important such as approval of friends or teachers, winning money, awards or recognition. Secondary reinforcers can become primary. Due to the wide range of secondary reinforcers, Skinner referred to them as generalized.

Albert Bandura

- ❖ **Bandura contributed to the understanding of learning through observation and modelling**
- He showed that aggressive behavior can be learnt from watching adults fighting, violent cartoons or even violent video games. Passive behavior can also be learnt from watching adults with subdued attitudes.

Robert Gagne

- ❖ Gagne's hierarchy of learning notes the transition from behaviorism to cognitive psychology.
- ❖ The hierarchy of learning is an arrangement of 8 behaviors ranging from simple to complex.
- ❖ He also describes 5 observable and measureable learning outcomes.
- ❖ **The hierarchy of learning is an arrangement of 8 behaviors ranging from simple to complex.**

- The first five behaviors are Behaviorist, the nest 2 are both behaviorist and cognitive and the last (highest form) is cognitive.
- The hierarchy suggests a "bottom-up" approach to learning where general principles/concepts must be learnt before advanced learning can take place.

Gagne's Hierarchy of Learning-1

1. **Signal learning (behavioral)** Classical conditioning – response to a signal. Students have to be trained what a signal means and what they are required to do. It is very similar to what Pavlov was trying to do. So, this is learning by association

Stimulus response: (behavioral) Operant Conditioning – response to a given stimulus. This is the learning through reinforcement because your behavior is reinforced

- **Tylor -**-- various assessment
- **Taba -**-- Too many facts, not enough connections
- **Bruner -**-- stages like Piaget, but are revisited to develop in complexity
- **Kohlberg -**-- moral stages

- **Assimilation**

(Filing information in an existing schema)

- +
- **Accommodation**

(Changing schemata to fit new information)

- **=Learning**

Jean Piaget Cognitive Developmental Stages-1

1. **Sensorimotor:** Lasts from birth to 2 years

The child:

- Uses his senses and his increasing motor skills to explore the environment
- Begins to use language to imitate and represent the environment

Egocentric:

- The child is aware only of himself and his own likes, dislikes, and wants
- He cannot see other people's perspectives

2. **Preoperational:**

- Lasts from 2 – 7 years
- The child can speak and print words
- His memory and imagination develops
- His thinking is often not logical
- Much egocentric thinking occurs

3. **Concrete Operational:**

- Lasts from 7 – 11 years
- The child has the ability to do simple math and measurement, with manipulatives
- He begins to understand cause and effect
- He can think about real, concrete things in systematic ways, but cannot understand abstract concepts
- He is no longer egocentric (he can now understand other people's points of view)

4. **Formal Operational:**

- He is able to use logic and abstract thinking
- He questions previously accepted thoughts, ideas and values

Schema theory explains:

- Importance of accessing prior knowledge
- Why cognitive dissonance strategies work

LEV VYGOTSKY:

The Zone of Proximal Development (ZPD) is a distance between a student's performance with help and performance independently

– Piaget Vs. Vygotsky

	Piaget	**Vygotsky**
Emphasis	Discrete hierarchical stages of the individual	Modelling and guided learning
Which outcomes first social learning (chicken) or development (egg)?	Development	Social learning
