ENG505 - Language Learning Theories (Quiz 1) Quiz Start Ti

Question # 7 of 10 (Start time: 12:44:33 PM, 03 May 2024)

Which of the following theories focuses on the use of scaffolding, providing feedback, correcting errors language learners to speak?

Select the correct option

- Behaviouristic
- Cognitive
- Conversation
- Acculturation

Click to Save Answer

scaffolding

through practice and then it becomes automatic. The mental processes rely on the analysis where the

©Copyright Virtual University of Pakistan

positive and negative feedback play an important role for reconstructing and meaningful language learning.

Conversation Theory Imp

Conversation theory advocates participation process as useful mechanism for language learning. The participation encourages scaffolding and corrective feedback. The emphasis is on initiating conversations which do not require speaking full sentences. Language learning is seen to be a process of communication where through suggestions and error correction, learning is improved.

Schumann's Acculturation Theory Imp

The basis of Schumann's 'Acculturation Theory' is a 'social theory' which considers social forces as the deriving factors that affect language learning and acquisition processes. It emphasizes that instead of internal mental activities, the external factors facilitate learning by providing the target language culture for specific language functions. Language being social phenomena does consider attitudes and stereotypes towards the target language as affective learning factors. Errors can be corrected.

Question # 6 of 10 (Start time: 12:43:30 PM, 03 May 2024)

Who proposed the theory of 'Universal Grammar'?

Select the correct option

- John Shumann
- Plato
- B.F. Skinner
- Noam Chomsky ✓

Click to Save

Universal gra

In the **nature versus nurture** debate, Plato tended to side with nature, believing that knowledge was innate. According to Noam Chomsky (1986), 'Knowledge of Language' begins with informal characterization of 'Plato's Problem – the problem of explaining how we can know so much given so little evidence.' Descartes, a French philosopher, also believed that language acquisition was a simple and easy process and reinforced the innateness of language, as it reflected the general rationality of human beings. In contrast to innateness, the concept of *Tabula Rasa* or blank slate was proposed by Locke which refers to the notion that all knowledge comes from outside us through sensory experience rather than through innate knowledge.

Topic-004: Historical Perspective-I Part-II

The two different schools of thought, behaviourism and nativism, can be traced back from the middle of the 20th century. B.F. Skinner, a behaviourist, put forward the concept of behaviourism which took Locke's ideas of sensory input and claimed that there is no innate device to do programming of language rather our behaviour is in fact a response to external stimuli. It refutes the theory of Universal Grammar proposed by Noam Chomsky which proposed the existence of Language Acquisition Device (LAD) as an innate faculty to process human language. In the light of these two diverse notions, John Schumann introduced 'Acculturation Model' which covers both social and psychological aspects responsible for our success. The process is related to the immigrants' process of 'picking up' a new language while being completely immersed in the language.

Topic-005: Historical Perspective-II

From late nineteenth to early twentieth century, modern history of the psychology of learning became the focus of researchers of 'Behaviourism' which propagated learning as behaviour and 'Constructivism' which laid emphasis on mental processes involved in learning. The prominent figures include Wilhelm Wundt (1879), German psychologist, and William James (1890), an American philosopher and physician, who belonged to these two varied approaches. Thus, two branches of the psychology of learning developed during that period were Behaviourism and Constructivism.

Behaviourism concerns with what can be seen happening – behaviour. Constructivism rests on

Question # 4 of 10 (Start time: 12:41:38 PM, 03 May 2024)

Which of the following questions was not answered by the Greek philosophers, Plato and Aristotle?

Select the correct option

- How do they interact?
- What is experience?
- What is myth?
- What is knowledge?

Click to Save Answer & Mo

what is

'Design-based Research' (also known as design experiments) by Collins et al. intends to address several needs and issues central to the study of learning. These are as follows:

- The need to address theoretical questions about the nature of learning in context
- The need for approaches to the study of learning phenomena in the real world situations rather than the laboratory
- The need to go beyond narrow measures of learning
- The need to derive research findings from formative evaluation

Topic 112: Conducting Classroom Research

Classroom research is a recent trend that has been emerging due to severe need of designing lessons according to specific needs of learners. As pointed out by Long (1983), classroom centered research is 'eminently practical' because it is 'concerned with what actually goes on in the classroom as opposed to what is supposed to go on' (p. 284). By definition, Classroom-Centered Research (CCR) views classroom as the 'object' of research, and not simply the 'setting' for research. The CCR determines not only what happens in the classroom but also the conditions that can affect teaching and learning processes. It is observed that sometimes simple research results do not leave any impact unless they are empirically tested.

Topic 113: Making Research Accessible to Teachers and Facilitating Action Research

For effective teaching practices, it is imperative to make research accessible to teachers. It contributes to the professional development of teachers and equips them with the updated methodologies.

skinner

Lesson-05

BEHAVIOURISM-II

Topic-019: Operant Conditioning

B.F Skinner proposed the concept of 'Operant Conditioning.' He introduced the theory of *Verbal Behaviour* in 1957. According to this theory, a person's behaviour gets reinforced through the mediation of other persons. Any change that occurs in one's behaviour is a result of others' reinforcement. Skinner identified following three types of responses that can follow behaviour:

1. Neutral Operant
2. Reinforcer
3. Punisher

Skinner emphasized that positive and/or negative reinforcement affects one's behaviour. It leads to the development of a particular behaviour. The concept of punishment is closely linked to the negative reinforcement, and scheduling of reinforcement determines the modification in a behaviour.

Topic-020: Mediation Theory

The 'Mediation Theory' was introduced by Charles Osgood (1953, 1957). It claims that the linguistic stimulus (a word or sentence) elicits a 'mediating' response that is self-stimulating. Mediation process is viewed as covert and invisible, acting within the learner. This makes it a cognitive theory which rationalizes internal and external processes for developing behavioural association.

Question # 10 of 10 (Start time: 03:53:43 PM, 03 May 2024)

Perception Level is the _____ level of behaviorism.

Select the correct option

- fourth
- second
- first
- third

percep

Features of Mediation Theory

1. Physical stimulus: reaction of a body (hear, see, touch or smell causes us to feel something)
2. Internal response: internalization
3. Internal stimulus: leads to internal stimulus – which is the thought in which you relate the stimulus to outward response
4. Outward response: visible or physical response that takes place due to the first response

The theory functions at three levels:

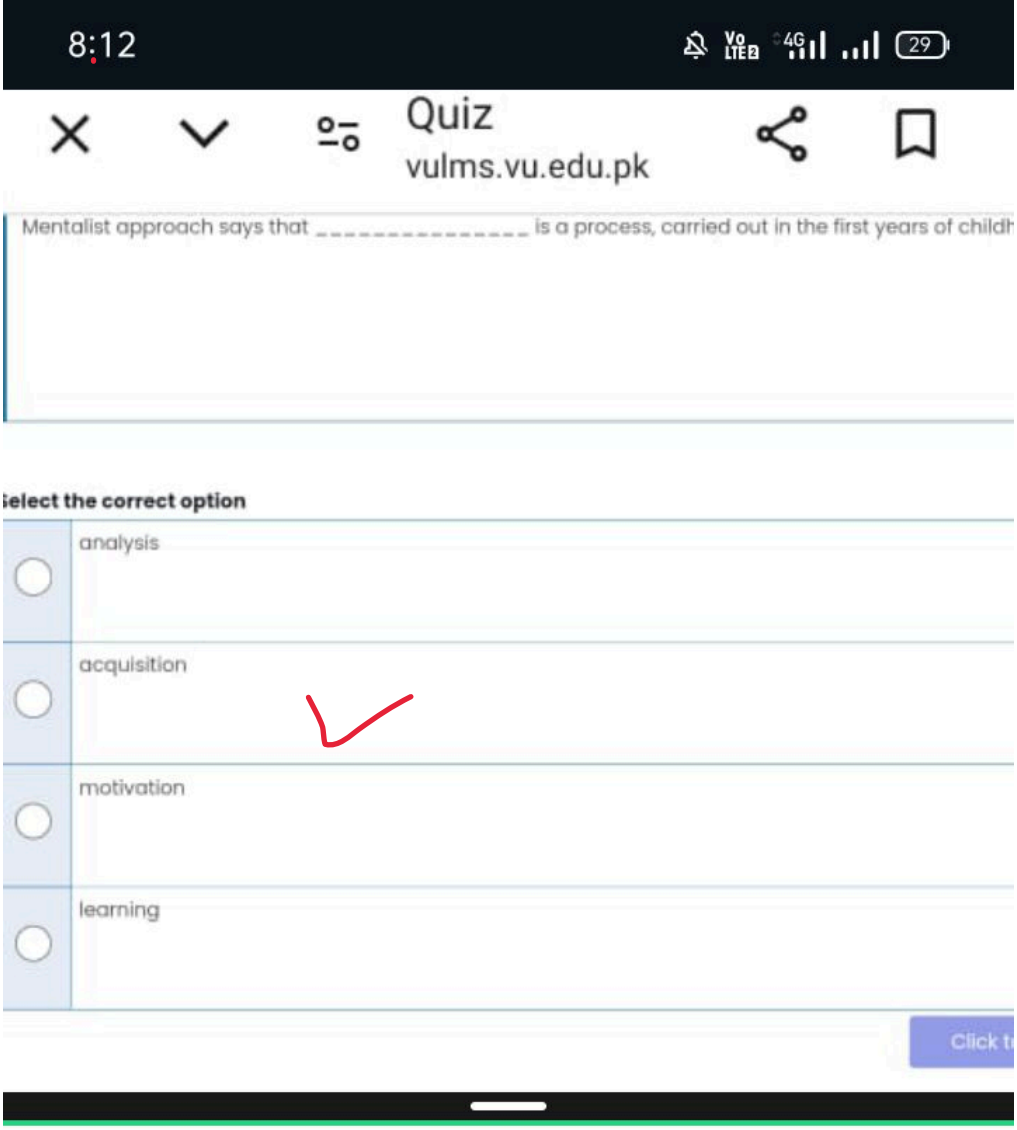

- *Sensational Level:* basic stimulus response reaction occurs
- *Perception Level:* input occurs relating it to the past experiences
- *Representational Level:* outward reaction, overt behavioural response to the word

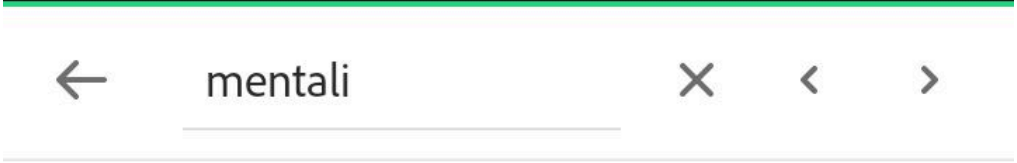

Topic-021: The Law Effect

'Law of Effect' was introduced by Edward Thorndike (1898). It proposed that pleasant feedback leads to the repetition of a particular behaviour and unpleasant feedback ceases it. The theory views learning as a process of developing association between a certain situation and its resultant pleasant

Language Learning Theories (ENG505) VU

Topic-012: Acquisition vs. Learning

Acquisition (Mentalist Approach)

Acquisition as a mentalist approach that refers to the initial process of childhood, where a child acquires his/her knowledge of native language unconsciously. The process is considered effortless assimilation of linguistic knowledge because of its sub-consciousness.

The notion that acquisition is the unconscious process claims that it has nothing to do with intelligence i.e. all children of different degrees of intelligence go through the same process of acquiring their native language. Main features of language acquisition (Mentalist Approach) include:

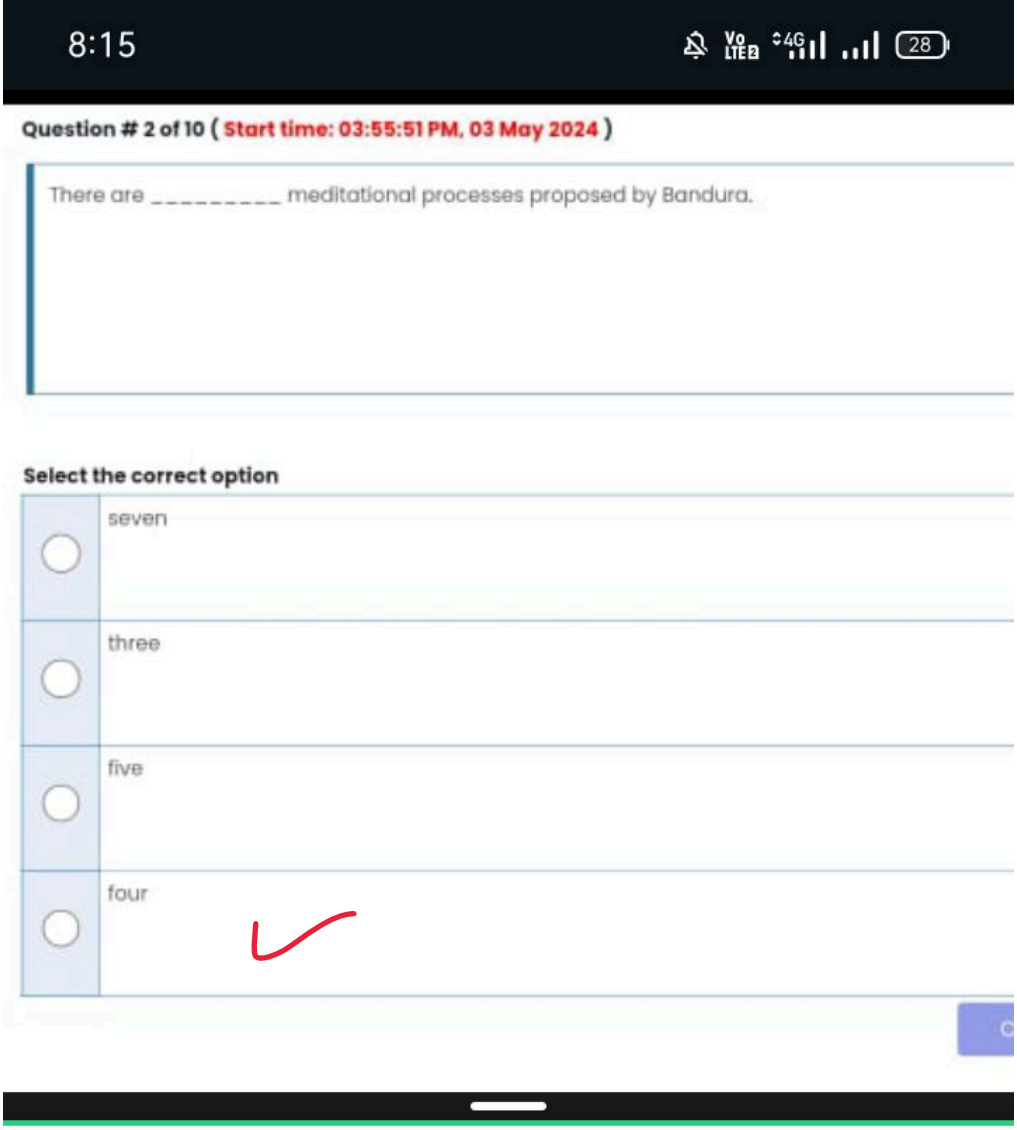

- Presence of Language Acquisition Device (LAD) as an inherited ability.
- Children appear to be 'hard-wired' to acquire the grammar.
- It lacks evidence of grammatical errors in children.
- A child would notice if an ungrammatical sentence is uttered.
- It generates awareness of what is grammatical or ungrammatical.

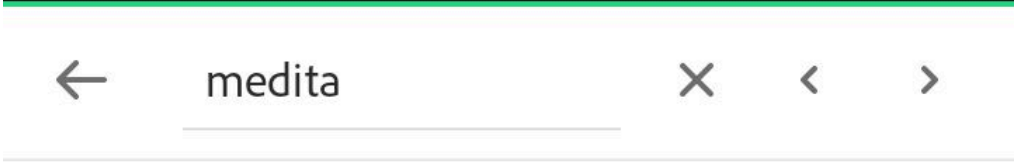

Learning (Behaviourist Approach)

Learning belongs to behaviourist approach and deals with a mechanical process of habit formation. As opposed to acquisition which is a subconscious process, learning involves both explicit (learner's is aware of modification of his/her knowledge base) as well as implicit (change in the learner's knowledge base but outside his/her conscious introspection) learning processes. Drill, imitation, and repetition are the basic elements of learning.

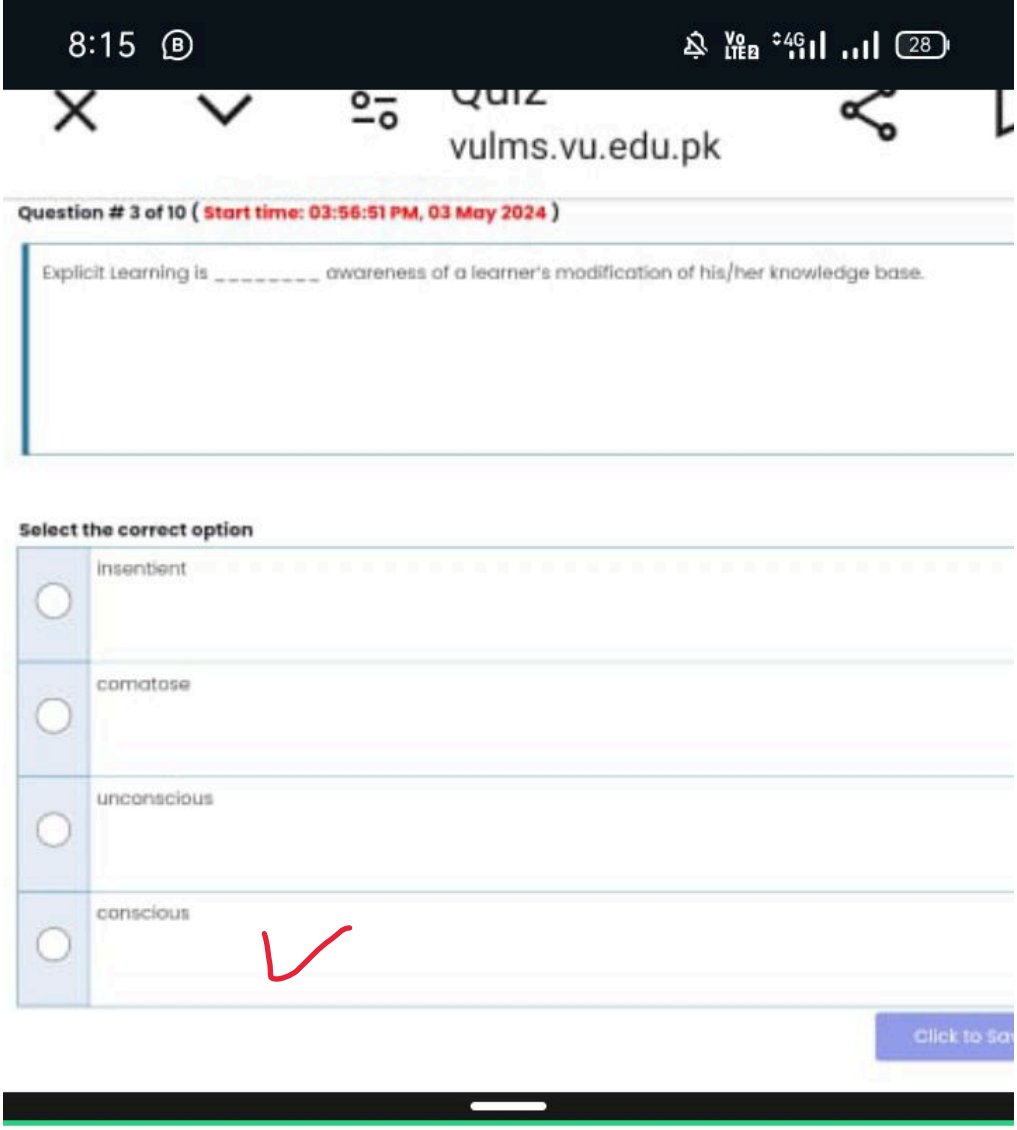

Key features of learning (Behaviourist Approach) include:

- Learning is entirely a product of experiences.

Language Learning Theories (ENG505)

explicit

intelligence i.e. all children of different degrees of intelligence go through the same process of acquiring their native language. Main features of language acquisition (Mentalist Approach) include:

- Presence of Language Acquisition Device (LAD) as an inherited ability.
- Children appear to be 'hard-wired' to acquire the grammar.
- It lacks evidence of grammatical errors in children.
- A child would notice if an ungrammatical sentence is uttered.
- It generates awareness of what is grammatical or ungrammatical.

Learning (Behaviourist Approach)

Learning belongs to behaviourist approach and deals with a mechanical process of habit formation. As opposed to acquisition which is a subconscious process, learning involves both explicit (learner's is aware of modification of his/her knowledge base) as well as implicit (change in the learner's knowledge base but outside his/her conscious introspection) learning processes. Drill, imitation, and repetition are the basic elements of learning.

Key features of learning (Behaviourist Approach) include:

- Learning is entirely a product of experiences.
- It is controlled by the conditions under which it takes place.
- Variations in learning do exist.
- Language learning is practice based.
- Imitation, repetition, reinforcement and retention have significant roles in language learning.

Topic-013: Competence vs. Performance

Competence is the 'mental reality' which is responsible for all those aspects of language use which can be characterized as 'linguistics.' Chomsky refers to it as a system of rules, mastered, and the ability to produce infinite number of sentences.

anthony

Lesson-02

INTRODUCTION TO THE COURSE-II

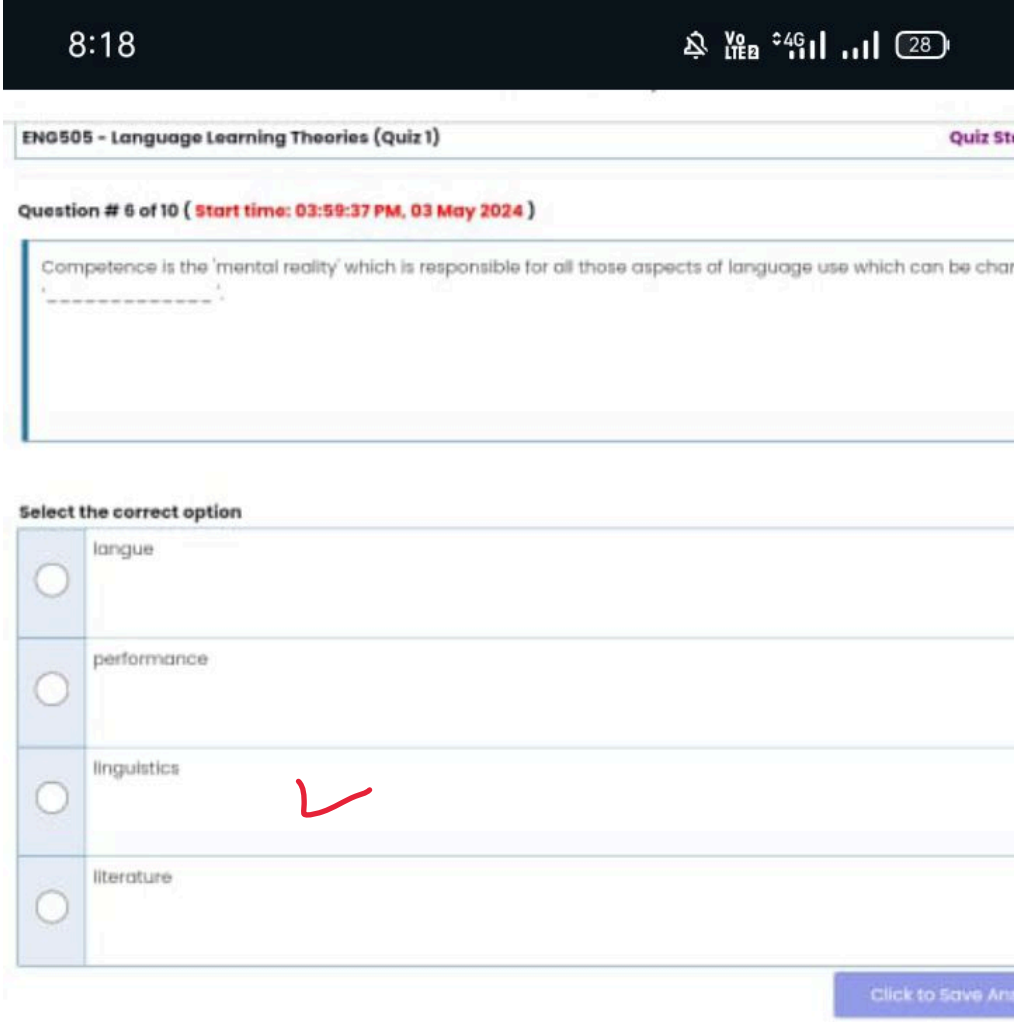

Topic-008: Introduction to Approaches, Methods and Techniques Part-I

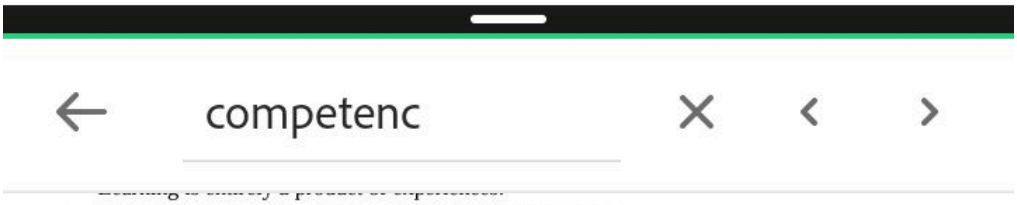

Edward Anthony proposed a 'three-level framework' (1965) based on 'Approach, Methods, and Techniques.' **'Approach'** is a set of principles or ideas about the nature of language learning; **'Method'** is an overall mechanism; **'Technique'** is a specific strategy/way. Researchers vary in terms of design, procedure and approach; Anthony's framework emphasized 'Approach,' whereas Richards and Rogers considered 'Method' as a broader term in comparison to approach. Repka and Stern claim that 'method or methodology' is a broader term that covers the rest. Goal orientation, organization, progressiveness, and linking of age to content and successiveness are the general characteristics of methods. However, methods and methodology are related to planning of a specific task, content, procedure, and assessment.

Topic-009: Introduction to Approaches, Methods and Techniques Part-II

Three principal views of language are structural, functional, and interactive. **Structural principal** of language deals with the understanding of the structurally related elements in a language; it includes grammar translation and audio-lingual methods. The key features of grammar translation and audio-lingual methods are concerned with memorization of grammar rules and habit-formation based on conditioning respectively. It caters to writing, listening and speaking components of a language.

Functional principal claims that language is a tool to accomplish certain functions. It focuses more on oral and situational language teaching for functional purposes. The functional approach relies on

- It is controlled by the conditions under which it takes place.
- Variations in learning do exist.
- Language learning is practice based.
- Imitation, repetition, reinforcement and retention have significant roles in language learning.

Topic-013: Competence vs. Performance

Competence is the 'mental reality' which is responsible for all those aspects of language use which can be characterized as 'linguistics.' Chomsky refers to it as a system of rules, mastered, and the ability to produce infinite number of sentences.

Key Features of Competence

- Competence is similar to the concepts of *Langue* and *Parole* discussed by Ferdinand de Saussure.
- It is described as unconscious knowledge of grammar.
- Knowledge of language is observed as implicit.

Lesson-04

BEHAVIOURISM-I

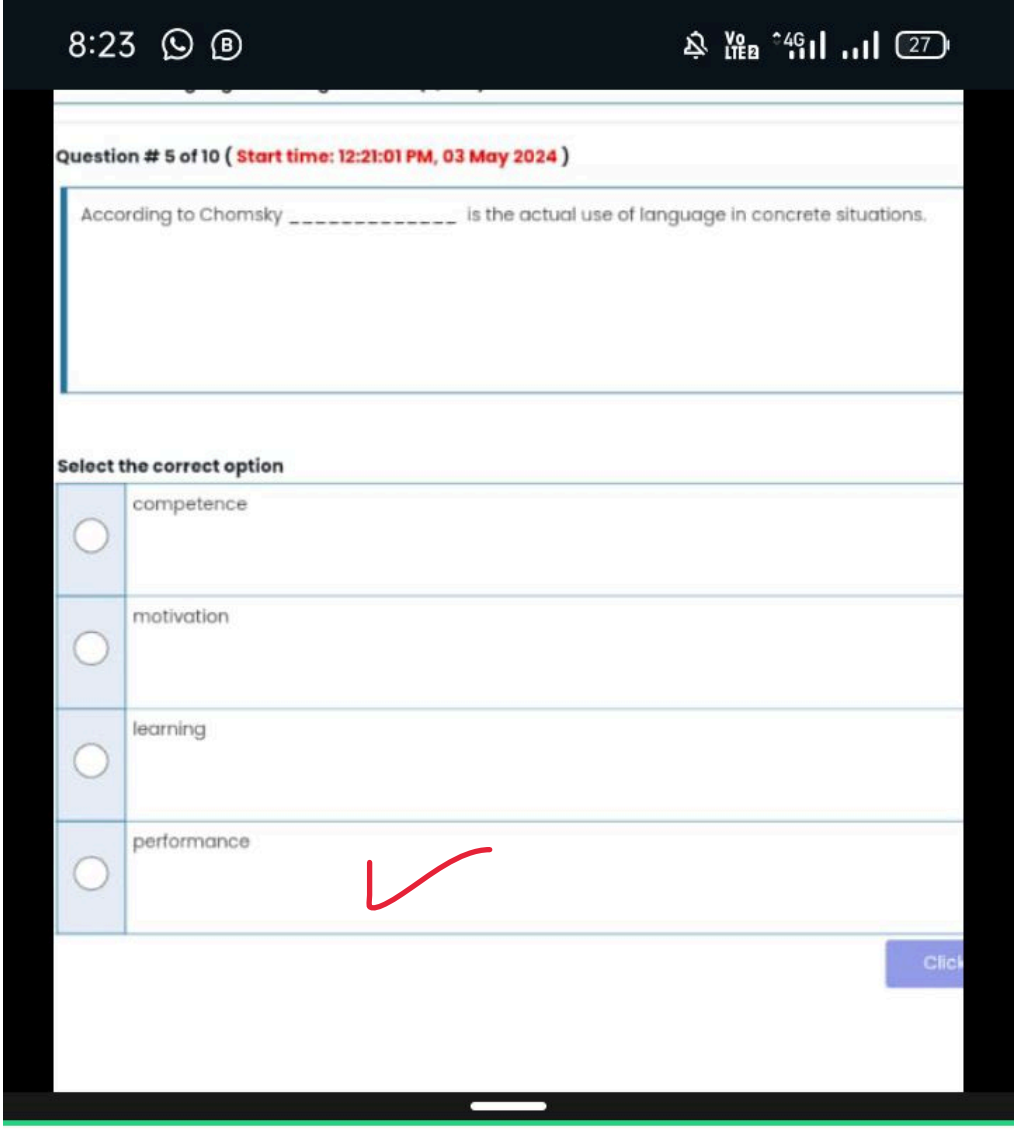

Topic-015: Behaviourism

The behaviourist movement began with John Watson in 1913. It is also known as a psychological approach which emphasizes scientific and objective methods of investigation. The behaviourists claim that knowledge is external, and humans are born with blank slate. Learning takes place through association between stimuli-response processes resulting into specific habit formation.

Critics believe that it does not provide learners with the ability to solve problems and opportunities for improvement. Some examples of behaviourist theory are:

- Drill/ rote work
- Repetitive practice
- Bonus points (incentive to do more)
- Participation points (incentive to participate)
- Verbal reinforcement (such as 'well done')
- Establishing rules

Topic-016: Pavlovian Conditioning

actual

- Synthetic a priori truths

Topic-026: The Lenneberg Theory and Competence and Performance

The concept of CPH was first proposed by Penfield and Roberts (1959) and later developed by Lenneberg (1967). The Lenneberg theory is known as Critical Period Hypothesis (CPH). According to this theory, successful language acquisition occurs before puberty. It views the initial years of one's life as crucial for acquisition process. It emphasized L1 acquisition with two factors:

- learning takes place during childhood
- existence of neurological mechanism

The case study of Genie (1970), who was deprived of language input for 13 years, supported CPH theory.

Competence: It is native speaker's knowledge of his language, system of rules mastered, and the ability to understand and produce infinite number of sentences.

Performance: The concept is about 'the actual use of language in concrete situations' (Chomsky, 1965). Dell Hymes (1966) also supported Chomsky's concept of performance and further proposed:

1. Language is but one mode of communication.
2. It varies from situation to situation.
3. Language acquisition of such competency is subject to social needs.
4. A model of language must design it with a face toward communicative conduct and social life (Hymes).

8:25

Question # 2 of 10 (Start time: 12:17:37 PM, 03 May 2024)

Learning takes place through association between stimuli-response processes resulting into specific habit formation.

Critics believe that it does not provide learners with the ability to solve problems and opportunities for improvement. Some examples of behaviourist theory are:

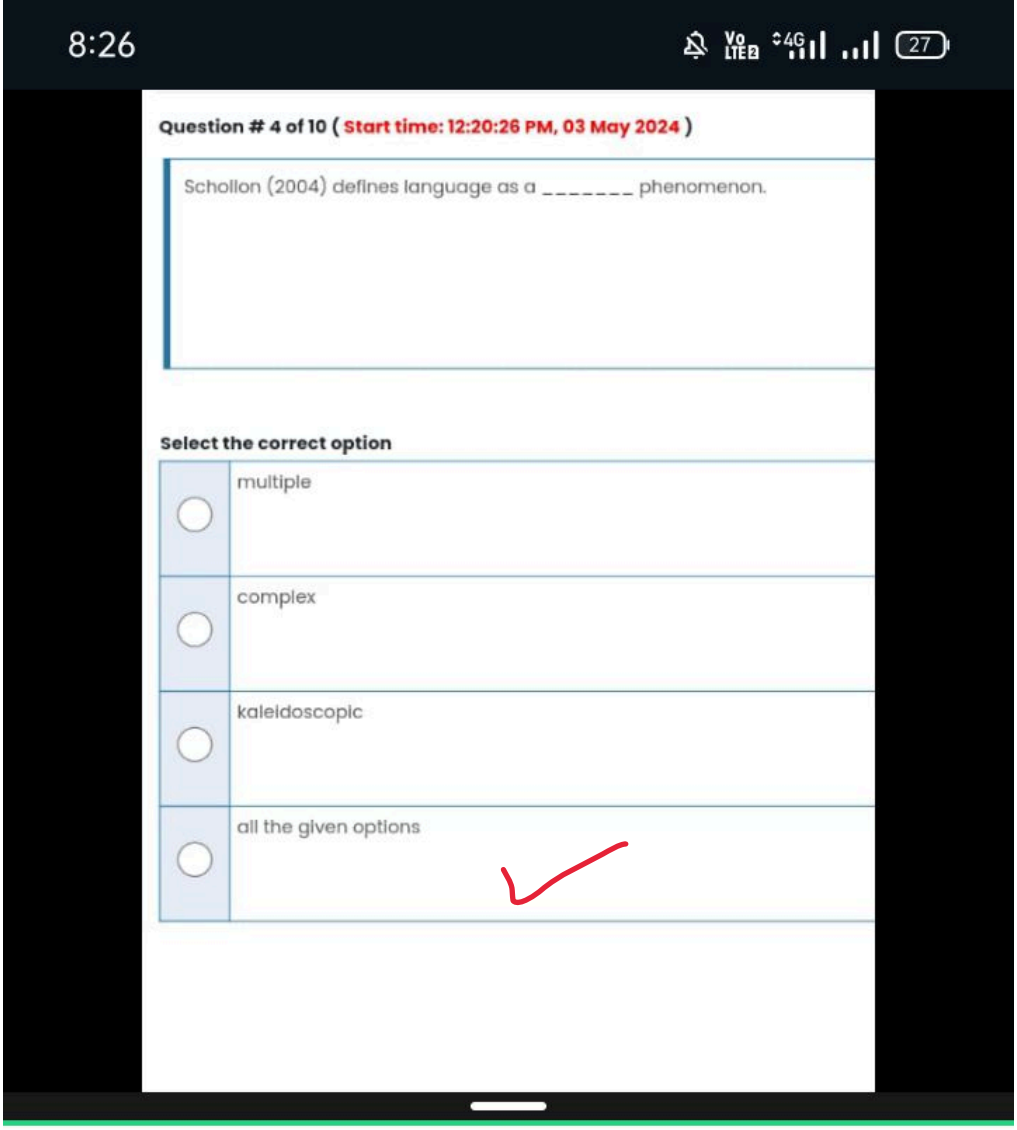

- Drill/ rote work
- Repetitive practice
- Bonus points (incentive to do more)
- Participation points (incentive to participate)
- Verbal reinforcement (such as 'well done')
- Establishing rules

Topic-016: Pavlovian Conditioning

Russian Physiologist, Ivan Pavlov is the founder of 'Pavlovian Conditioning'. He discovered it accidentally during 1890s. He conducted an experiment on a dog and learnt that a dog would salivate in response to the ringing of a bell. The Pavlovian conditioning follows:

Unconditioned Stimulus (food) > Unconditioned Response (Salivate)

It introduced the Law of Temporal Contiguity, whereby two stimuli were presented together to

schollo

- develop awareness of current teaching approaches and methodologies supported by language learning theories
- enable effective planning and teaching, with a solid rationale at the background in a variety of curricular and learning environments
- analyze current research trends in language learning

Topic-002: Introduction to Language Learning

Language is a vast domain which has a system that consists not only of the acquisition process but also the development and use of complex systems of communication. It consists of linguistic units and each unit has its own unique system. Some of the key features related to language include:

A systematic means of communicating ideas or feelings by the use of conventionalized signs, sounds, gestures, or marks having understood meanings (Merriam-Webster's Collegiate Dictionary, 2003, p. 699).

- A multiple, complex, and kaleidoscopic phenomenon (Schollon, 2004, p. 272).

Language is a complex, specialized skill, which develops in the child spontaneously, without conscious effort or formal instruction, is deployed without awareness of its underlying logic, is qualitatively the same in every individual, and is distinct from more general abilities to process information or behave intelligently (Pinker, 1994).

Based on the complexity of its nature, language has been defined in multiple ways. A consolidation of a number of possible definitions of language yields the following composite definition:

- Language is systematic.
- Language is a set of arbitrary symbols.
- The symbols are primarily vocal, but may also be visual.
- The symbols have conventionalized meanings to which they refer.
- Language is used for communication.
- Language operates in a speech community or culture.
- Language is essentially human, although possibly not limited to humans.

8:26

Question # 8 of 10 (Start time: 12:23:16 PM, 03 May 2024)

Social Learning Theory by Bandura focuses on _____.

Select the correct option

- feeling
- interaction
- thinking
- none of the given options

social learning the

to as the process of classical conditioning (based on Pavlov's observations).

Similar to the Pavlovian Conditioning, the Classical Conditioning supports the habit formation and opposes the idea of consciousness as responsible factors for learning. The theory of Classical Conditioning is a scientific theory that follows three stages: Before, During, and After Conditioning as the concrete processes of learning.

Topic-018: Reciprocal Determinism

The concept of Reciprocal Determinism was proposed by Albert Bandura in 1977. He introduced Social Learning Theory which advocated that behaviour is not a single phenomenon, rather a result of the interaction between cognitive, behavioural, and environmental determinants. Since external and internal both factors were considered vital for developing a particular behaviour; therefore, Meditating and Observational learning were emphasized by Bandura.

1. Mediating processes occur between stimuli and responses.
2. Behaviour is learned from the environment through the process of observational learning.

Bandura suggests that most of the human behaviour is learned by observation.

1. Observing the behaviour of others (models)
2. Using the information (imitate) as a guide for our own behaviour
3. Reinforcement or punishment determines the behaviour

nature vs. nurture debate.

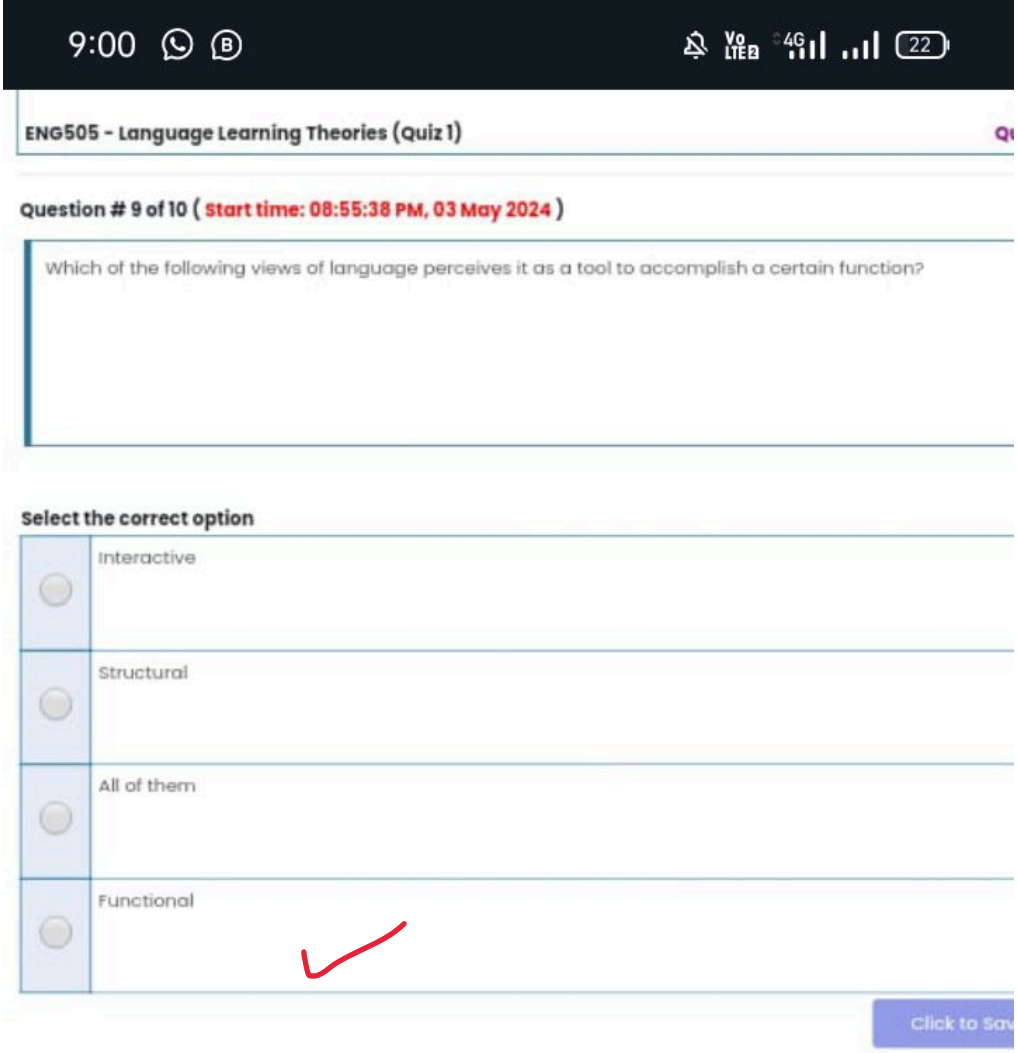

In the **nature versus nurture** debate, Plato tended to side with nature, believing that knowl was innate. According to Noam Chomsky (1986), 'Knowledge of Language' begins with i characterization of 'Plato's Problem – the problem of explaining how we can know so much gi little evidence.' Descartes, a French philosopher, also believed that language acquisition was a simple and easy process and reinforced the innateness of language, as it reflected the general rationality of human beings. In contrast to innateness, the concept of *Tabula Rasa* or blank slate was proposed by Locke which refers to the notion that all knowledge comes from outside us through sensory experience rather than through innate knowledge.

Topic-004: Historical Perspective-I Part-II

The two different schools of thought, behaviourism and nativism, can be traced back from the middle of the 20th century. B.F. Skinner, a behaviourist, put forward the concept of behaviourism which took Locke's ideas of sensory input and claimed that there is no innate device to do programming of language rather our behaviour is in fact a response to external stimuli. It refutes the theory of Universal Grammar proposed by Noam Chomsky which proposed the existence of Language Acquisition Device (LAD) as an innate faculty to process human language. In the light of these two diverse notions, John Schumann introduced 'Acculturation Model' which covers both social and psychological aspects responsible for our success. The process is related to the immigrants' process of 'picking up' a new language while being completely immersed in the language.

Topic-005: Historical Perspective-II

From late nineteenth to early twentieth century, modern history of the psychology of learning became the focus of researchers of 'Behaviourism' which propagated learning as behaviour and 'Constructivism' which laid emphasis on mental processes involved in learning. The prominent figures include Wilhelm Wundt (1879), German psychologist, and William James (1890), an American

tool to

methodology' is a broader term that covers the rest. Goal orientation, organization, progressiveness, and linking of age to content and successiveness are the general characteristics of methods. However, methods and methodology are related to planning of a specific task, content, procedure, and assessment.

11

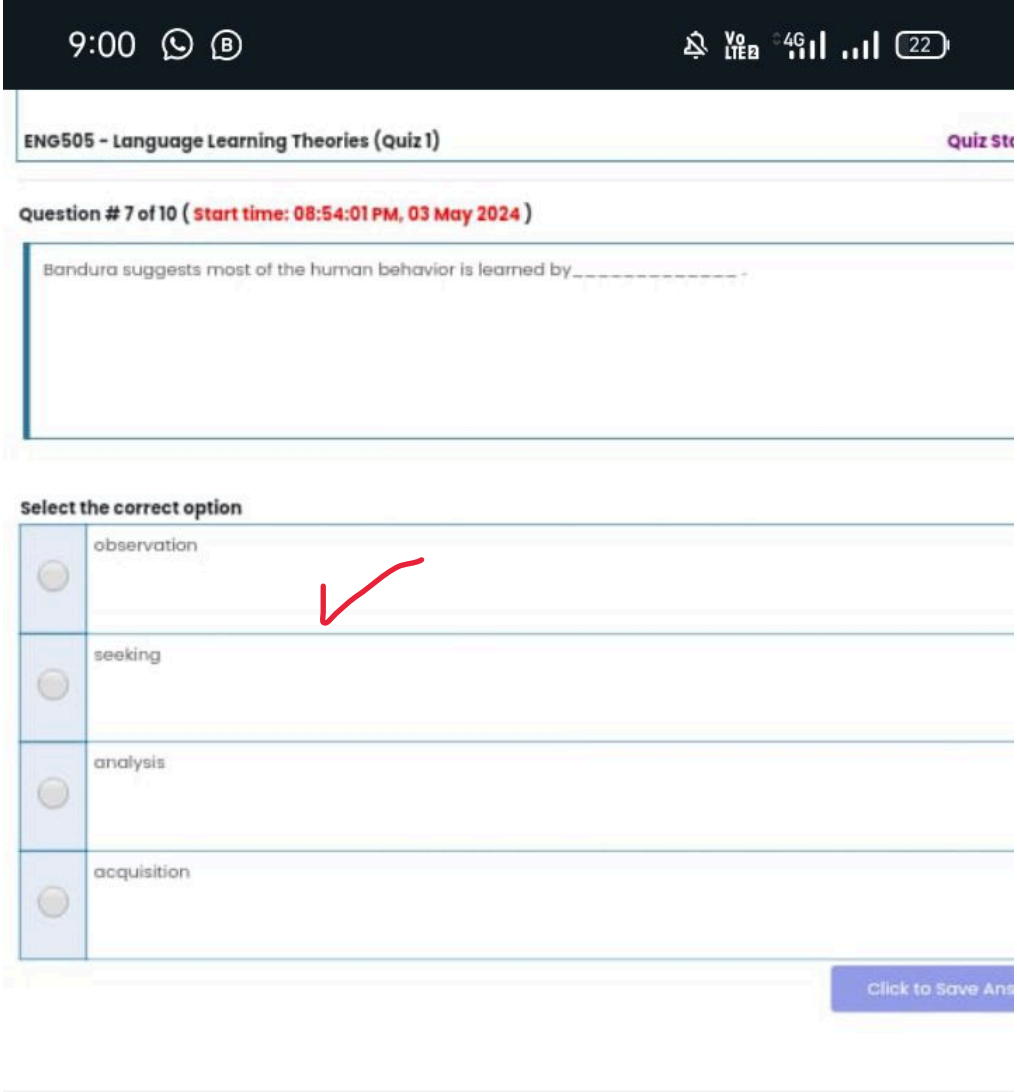

Topic-009: Introduction to Approaches, Methods and Techniques Part-II

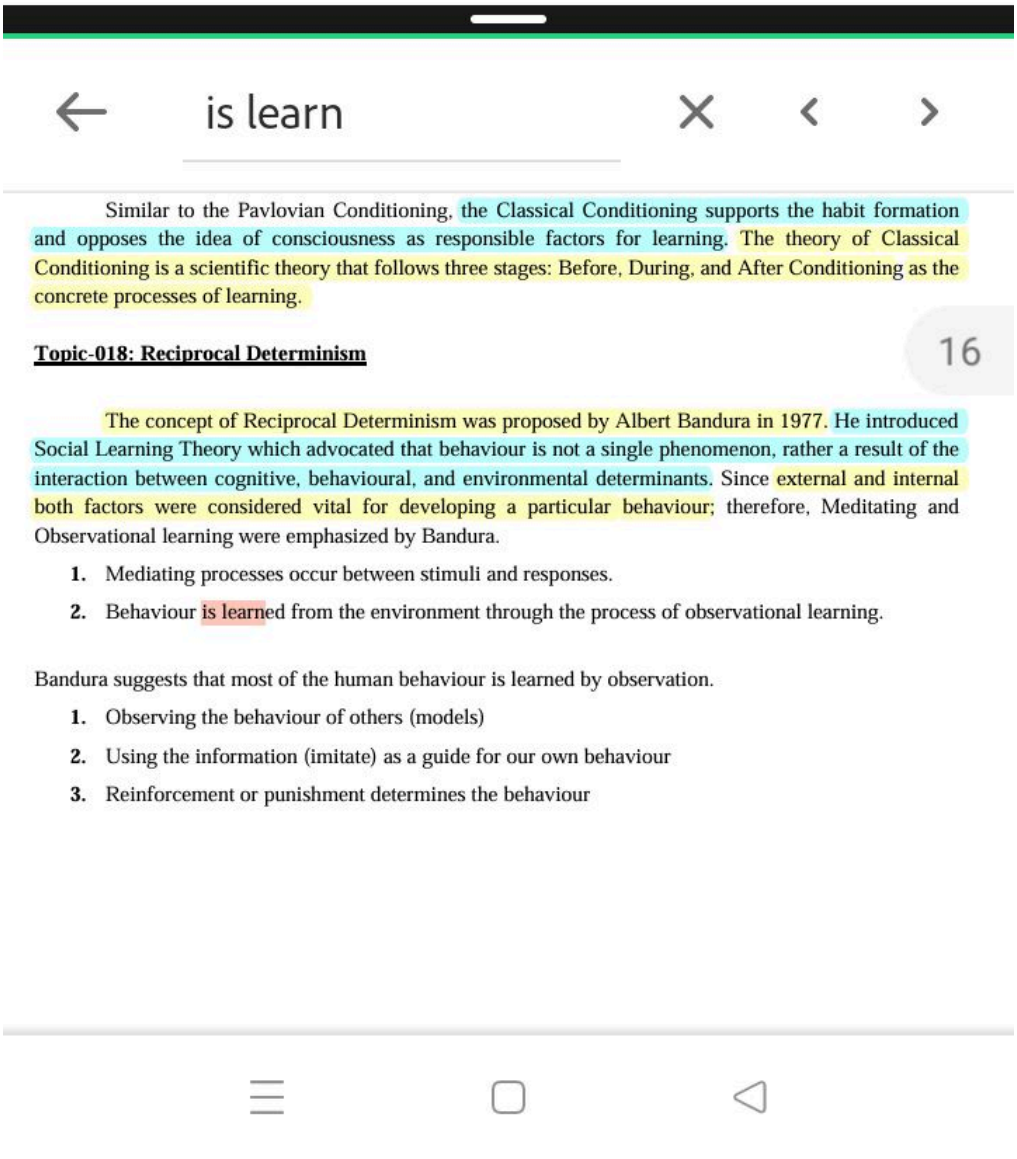

Three principal views of language are structural, functional, and interactive. **Structural principal** of language deals with the understanding of the structurally related elements in a language; it includes grammar translation and audio-lingual methods. The key features of grammar translation and audio-lingual methods are concerned with memorization of grammar rules and habit-formation based on conditioning respectively. It caters to writing, listening and speaking components of a language.

Functional principal claims that language is a tool to accomplish certain functions. It focuses more on oral and situational language teaching for functional purposes. The functional approach relies on speech and structure; therefore, it includes vocabulary control and grammar control respectively.

Topic-010: Interactive Method

Interactive principal of language looks at language as means of creating and maintaining social relations. It focuses on processes that can best suit the learners' needs to interact meaningfully in a speech community. The key features include: Direct Method (emphasizes target language to be learned through imitation), Communicative Language Teaching (emphasizes interaction as both the means and the ultimate goal), Community Language Learning (emphasizes learner as a member of a community and propagates the importance of mutual trust between teacher and the learner), Silent Way (emphasizes problem solving by involving the target language material), Suggestopedia (emphasizes rich sensory learning environment like pictures, color, music, active participation in songs and games etc.), and Total Physical Response (emphasizes instant understanding of the target language by responding to the command given in the target language).

Question # 7 of 10 (Start time: 08:54:01 PM, 03 May 2024)
Bandura suggests most of the human behavior is learned by_____.
Select the correct option
observation
seeking
analysis
acquisition
Click to Save Ans

is learn
Similar to the Pavlovian Conditioning, the Classical Conditioning supports the habit formation and opposes the idea of consciousness as responsible factors for learning. The theory of Classical Conditioning is a scientific theory that follows three stages: Before, During, and After Conditioning as the concrete processes of learning.
Topic-018: Reciprocal Determinism
16
The concept of Reciprocal Determinism was proposed by Albert Bandura in 1977. He introduced Social Learning Theory which advocated that behaviour is not a single phenomenon, rather a result of the interaction between cognitive, behavioural, and environmental determinants. Since external and internal both factors were considered vital for developing a particular behaviour; therefore, Meditating and Observational learning were emphasized by Bandura.
1. Mediating processes occur between stimuli and responses.
2. Behaviour is learned from the environment through the process of observational learning.
Bandura suggests that most of the human behaviour is learned by observation.
1. Observing the behaviour of others (models)
2. Using the information (imitate) as a guide for our own behaviour
3. Reinforcement or punishment determines the behaviour
