MCQs were from Quiz 1 and Quiz 2 files by Barbie. About 4-5 MCQs from handouts but that were from the given topics

CONCEPT OF ASSESSMENT-I

Topic- 001: Measurement, Assessment and Evaluation

Measurement ✓Q.

Measurement is the process by which the attributes or dimensions of some object (both physical and abstract) are quantified. The tools used for this purpose may include test, observation, checklist, homework, portfolios, project etc. Measurement can be easily understood if we use this word to measure height and distance because these things are physical present in the existence so height can easily be measured by scale. But in the field of education, our variable are not physical and cannot be directly measured e.g. attitude, behavior, and achievement etc. these all are abstract, so there measurement is relatively difficult than those who have physical existence. The tool used for measuring the abstract variables cannot measure exactly like scale (thermometer). So, in this whole course, whenever the measurement word is used it means that tool which will be used for measuring student abilities and then converts it in numerical form.

Assessment

It means an appraisal of something to improve the quality of teaching and learning process for deciding what more can be done to improve the teaching, learning and outcomes.

Evaluation ✓Q

Evaluation is the process of making a value judgment against intended learning outcomes to decide the quality and extent of learning. Evaluation is ab

measured by scale. But in the field of education, our variable are not physical and cannot be directly measured e.g. attitude, behavior, and achievement etc. these all are abstract, so there measurement is relatively difficult than those who have physical existence. The tool used for measuring the abstract variables cannot measure exactly like scale (thermometer). So, in this whole course, whenever the measurement word is used it means that tool which will be used for measuring student abilities and then converts it in numerical form.

Assessment

It means an appraisal of something to improve the quality of teaching and learning process for deciding what more can be done to improve the teaching, learning and outcomes.

Evaluation

Evaluation is the process of making a value judgment against intended learning outcomes and behavior, to decide the quality and extent of learning. Evaluation is always related to your purpose, you aligned your purpose of teaching with what students achieved at the end, with their quality and quantity of learning.

Example:

In a classroom situation, as a teacher, when you teach a chapter or unit to a class, first you made the objectives, either you will do it yourself as a teacher or you take it from a curriculum document of the particular subject. Objectives are also written at the start of the chapter or book which shows that at the end of the unit what the student will be able to do this, that is also referred as student learning outcomes. These SLOs can be checked by two aspects:

1. Assessment
2. Evaluation.

When you, as a teacher reflect on your teaching on a daily basis that what you teach yesterday was a

classroom a
When we are teaching in a classroom,

1. Developing students 'knowledge
2. Improving their concepts
3. Teaching the skills
4. Making their attitudes

And while doing so, we collect information about the development of these thing interpret and use it to communicate about the learning progress of students. This called classroom assessment

Classification of Assessment ✓ Q.

Assessment can be classified in four ways

1. Nature of Assessment
2. Format of Assessment
3. Use in Classroom Instruction
4. Method of Interpreting Results

1. Nature of Assessment

i. Maximum Performance Assessment
ii. Typical Performance Assessment

2. Format of Assessment

i. Fixed Choice Assessment

CONCEPT OF ASSESSMENT-II

Topic- 001: Use of Assessment in Classroom Instruction

Classification of assessment in terms of its uses in classroom instruction

i. Placement Assessment
ii. Diagnostic Assessment

Placement Assessment

Placement assessment determines prerequisite skills, degree of mastery of course goals and mode of learning. It is used when we want to assess student's prior knowledge so that we can decide what the leve of student is. It is associated with a student's entry level performance to know either student have a sufficient knowledge required for a particular course or not. Through placement assessment, teacher can be able to know that where a student should be placed according to the present knowledge or skills. It determines the level of student knowledge at the beginning of session and helps teacher plan the lesson accordingly. In the classroom, the teacher can use placement assessment to assess the level of students' knowledge and skills and then make lesson plans keeping in mind the level and need of students accordingly. It also determines the interest and aptitude of the student regarding a subject and helps in selecting the correct path for the future.

Examples:

Readiness test: It is used to determine the students' knowledge or concept about a particular course of instruction or what is the level of students.

Aptitude test: It is used for the admission in a particular program.

Pretest: It is made according to the course objectives and determines the student present knowledge about them.

Self-report inventories: It determines the student level

about them.

Self- report inventories: It determines the student level by interviewing or discussion.

Diagnostic Assessment (2).

It determines the causes (intellectual, physical, emotional, environmental) of persistent learning difficulties. E.g. if you are having a headache, first you will try to cure it by yourself by taking a medicine and you got a relief, but if you did not get a relief by taking the medicine then either you change your medicine or you go to the physician or doctor. At first, doctor prescribed medicines, if you still have a headache you again go to the doctor, then the doctor suggests you the tests, i.e. blood test, urine test etc. Then finally by seeing the test reports the doctor able to recognize the reason or cause of the headache. And when doctor knows the root of your headache then he will prescribe you the medicine for that cause, this is diagnosis.

A diagnosis does not start at the first day, it is for the constant or continuous problems, e.g. if a student continues to experience failure in reading or mathematics or any other subject despite the use of prescribed alternative methods , then a diagnosis is indicated. Teachers try to find out what is the root of students' failure.

Diagnotic assessment identifies the causes of persistent learning difficulties and is used when a student continues to experience failure despite using alternative methods.

Topic- 002: Use of Assessment in Classroom Instruction – Formative and Summative Assessments

Formative Assessment:

It determines learning progress, provides feedback to reinforce learning, and correct learning errors. When we assess student during classroom instruction with a purpose to have a feedback that how can we make our teacher learning process better, that is formative assessment. In this assessment, we are not assessing what students learnt or not, rather we assess the process behind the students learning .The process behind the student learning includes a teaching method, book, if we make all these things according to the needs of students then learning will improve.

It is conducted during the academic session or teaching-learning process so that I can get a feedback about my way of teaching and how students are learning and decisions are made on the basis of results immediately. It is an ongoing process to modify teaching strategies on the basis of students need.

It provides feedback to teachers:

- About weakness and strength of learning process
- To modify their teaching practices
- To improve teacher-learning process

It also helps students to reflect on their weaknesses and encourages them for their successful learning. Formative assessment provides feedback to students who are struggling with a specific content area or concept. The main difference between formative and summative assessment is that the

- To improve teacher-learning process

It also helps students to reflect on their weaknesses and encourages them for their successful learning. Formative assessment provides feedback to students who are struggling with a specific content area or concept. The main difference between formative and summative assessment is that the in formative assessment, improvement is in the process of learning rather than to certify students .We use different tools for formative assessment and it includes teacher made tests, custom made tests from textbook.

Summative Assessment

It comes at the end of the instructional session (course of the unit). It is designed to measure extend of achievement of intended learning outcomes. The primary utility of this type of assessment is to assign grades and certifying the level of mastery and expertise in a certain subject. It is usually done through teacher made achievement tests or alternative assessment techniques like portfolio to summarize the overall performance of the student at the end of the session. It is not compulsory to do it at the end of the semester, in semester system, there is a midterm and final term in one semester, and these both are summative assessment. It usually compares the student learning either with other students' learning (norm-referenced) or the standard for a grade level (criterion-referenced). Summative assessment include teacher made survey test, performance, rating scales and product scales.

Topic- 003: Types of Assessment: Methods of Interpreting Results

- Norm-referenced Assessment
- Criterion-referenced Assessment

Norm-referenced Assessment

Norm-referenced assessment measures the students' performance, according to the relative position in any known group, E.g. ranks tenth in classroom group of 50 or top 5 students in a class. Relative positio means a point defined with reference to another position (where a student stands
students) rather than reporting students' achievement.

MCQ It comes a

Topic- 003: Types of Assessment: Methods of Interpreting Results

- Norm-referenced Assessment
- Criterion-referenced Assessment

Norm-referenced Assessment

Norm-referenced assessment measures the students' performance, according to the relative position in any known group, E.g. ranks tenth in classroom group of 50 or top 5 students in a class. Relative position means a point defined with reference to another position (where a student stands compared to other students) rather than reporting students' achievement, it reports students standing among other students. NRT is utilized to discriminate between a certain groups of students. It is never used for certification or

Norm-referenced assessment compares a students performance to a known group and is not used for certification but for distinguishing b/w groups.

adjustment inventories.

Criterion-referenced Assessment

Criterion-referenced assessment describes student performance, according to a specific domain of clearly defined learning tasks, e.g. adds single-digit whole numbers. With this you do not compare student's performance with other students rather you compare the performance of all students with criteria (in our case that criteria are our learning outcomes). It is most commonly used in schools to report the achievement of learning outcomes against set goals rather than other students. It grades the students to pre-defined criteria and student's grades represent their mastery over content. Students with the same level of expertise achieve the same level of grades. A cut point is determined to distinguish between failed and successful students, regardless of score of highest and lowest achiever. It consists of teacher-made tests, custom made tests from the test publishers and observational techniques.

Criterion - R.T assessment compares student's Performance against specific predefined criteria or learning outcomes.

Its primary purpose is to report achievement of learning goals rather than Comparing student's to each other.

Q ASSESSMENT, TESTING AND NATIONAL CURRICULUM

Topic- 007: Role of National Curriculum in Assessment ✓

In national curriculums of Pakistan, learning of student is classified into four levels.

1. Competency
2. Standards
3. Benchmarks
4. Student learning outcome (SLOs)

4 Levels in which leaning of students is classified.

Competency

It is a key learning area, for example, algebra, arithmetic, geometry, etc. in mathematics and vocabulary, grammar, composition, etc. in English.

Standards

These define the competency by specifying broadly, the knowledge, skills and attitudes that students will acquire, should know and be able to do in a particular key learning area during twelve years of schooling.

Benchmarks ✓

The benchmarks further elaborate the standards, indicating what the students will accomplish at the end of each of the five developmental levels in order to meet the standard.

Student Learning Outcomes

These are built on the descriptions of the benchmarks and describe what students will accomplish at the end of each grade. It is the lowest level of hierarchy.

Every assessment regardless of

1. A model for how students present
2. Tasks or situations that allow the examiner to observe the
3. Inferences from performance evidence about the quality of learning

In developing a test to assess student learning, taxonomy provides a framework of categories with different hierarchical levels of outcomes.

Popular Taxonomies

1. Bloom's taxonomy of educational objective
2. Structure of Observed Learning Outcomes (SOLO)
3. Depth of Knowledge (DOK)

Topic- 011: Bloom's Taxonomy and SOLO Taxonomy

The taxonomy of structure of observed learning outcomes (SOLO) was initially developed by Biggs and Collis in 1982, and then well described in Biggs and Tang in 2007. It carries five different levels of competency of learners.

Levels of Structure of Observed Learning Outcomes (SOLO)

1. Pre-structural
2. Uni-structural
3. Multi-structural
4. Relational
5. Extended Abstract

Depth of Knowledge (DOK)

DOK (Depth of Knowledge) was presented by Webb in 1997, giving four levels of learning activities.

2. Uni-structural
3. Multi-structural
4. Relational
5. Extended Abstract

Depth of Knowledge (DOK)

DOK (Depth of Knowledge) was presented by Webb in 1997, giving four levels of learning activities.

Levels of Depth of Knowledge (DOK)

1. Recall
2. Skill/Concept
3. Strategic Thinking
4. Extended Thinking

Bloom's Taxonomy of Learning Objectives

Bloom's Taxonomy was presented by Benjamin Bloom in the 1956, consists of a framework with most common objectives of classroom instructions.

1. Cognitive
2. Affective
3. Psychomotor

Cognitive Domain

- Knowledge
- Comprehension

- Guided Response
- Mechanism
- Complex covert Response
- Adaption
- Origination

Topic- 012: SOLO Taxonomy

Levels of SOLO

1. Pre-structural
2. Uni-Structural
3. Multi-structural
4. Relational
5. Extended Abstract

1. Pre-structural

Students are simply able to acquire bits of unconnected information and respond to a meaningless way.

Example:

Question: What is your name?

Answer: What is your name?

2. Uni-Structural

Student shows concrete understanding of the topic. But at this level is only able to resp element from the stimuli or an item that is provided.

Indicative verbs: identify, memorize, do simple procedure

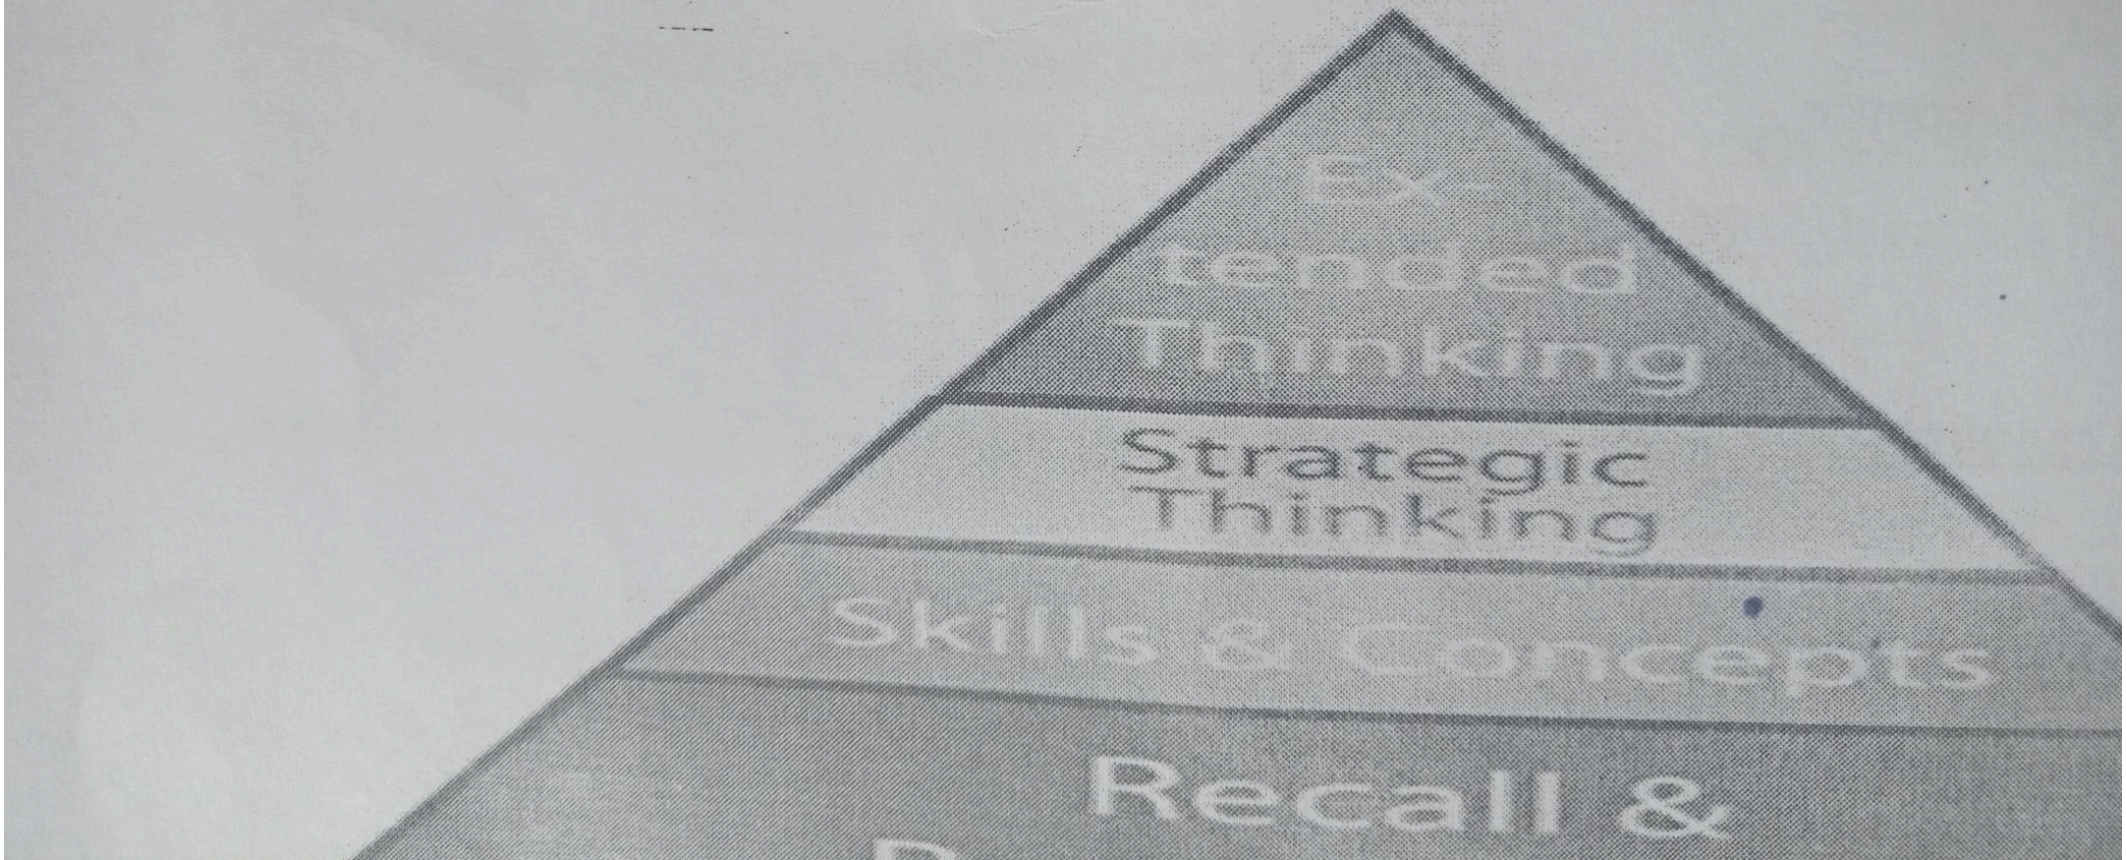

3. Multi-Structural

Indicative verbs: theorize, generalize, hypothesize, reflect, generate.

Topic- 013: Depth of Knowledge

Levels of DOK

1. Recall
2. Skill/concept
3. Strategic Thinking
4. Extended Thinking

PURPOSE OF TESTING-I

Topic- 018: Educational Decisions Making

Types of Educational Decisions

- Instructional
- Grading
- Diagnostic
- Selecting
- Placement
- Counseling and Guidance
- Program or Curriculum
- Administrative

8 types MCQs

These types of decisions are taken at different levels. Some are decided at the board/ administrative level while some are taken at school management level and other are taken in classrooms by teachers.

Instructional Decisions

Instructional decisions are the nuts and bolts types of decisions made in the classroom by teachersSuch decisions include deciding to:

- spend more time on specific units
- regroup student in class for better management
- instructional plans

Grading Decisions

Educational decisions based on grades are also made by the classroom teacher but much less frequently than instructional decisions. For the most students grading decisions are the most influential decision made about them.

Diagnostic Decisions

Diagnostic decisions are those made about a student's strengths and weaknesses and the reasons behind them. Teachers make diagnostic decisions based on information yielded by an informal teacher made test decisions about diagnostic nature can also be made with the help of standardized tests.

Selection Decisions

Selection decisions involve test data used in part for accepting or rejecting applicants for admission into a group, program, or institution.

Placement Decisions

Placement decisions are made after an individual has been accepted in a program. They determine where in a program someone is the best suited to begin with.

Program or curriculum decision

This type of decision is taken at policy level. Where it is decided if a lesion, unit or subject will continue or abandoned for the next academic session according to the national objectives of education.

Topic- 019: Types of Test

In classroom assessment different forms of assessments are utilized. Each form of test has its own benefits and disadvantages. The most common type of assessment used in classrooms is written assessment.

Types of Written Tests

- Verbal
- Non-verbal
- Objective
- Subjective
- Teacher Made
- Standardized
- Power
- Speed

Verbal

Emphasize reading, writing, or speaking. The most tests in education are verbal tests.

Non-verbal

It does not require reading, writing or speaking ability. The tests composed of numerals or drawings are an example of non-verbal test.

Objective

It refers to scoring of tests when two or more scorers can easily agree on whether the answer is correct or incorrect; the test is an objective one. True/ false, multiple choice and matching tests are examples of it

Subjective

When it is difficult for two scorers to agree on whether an item is correct or incorrect, the test is a subjective one. Essay tests are the example of it.

Teacher Made

It is constructed solely by teacher only to be used in the classroom. This type of test is custom designed according to need and issues related to specific class.

Standardized

Test constructed by measurement experts over a period of years. They are designed to measure broad national objectives and have a uniform set of instructions that are adhered to during each administration. Mostly it has tables of norms, to which a student performance may be compared to determine where the student stands in relation to a national sample of students at the same level of age or grade

Power

Tests with liberal time limits that allow each student to attempt each item. Items tend to be difficult

Speed

Tests with time limits so strict that no one is expected to complete all items. Items tend to be easy.

Topic- 020: Norm Referenced Assessment (NRT)

General purpose of assessment is to gather information to make better and more informed decision. The utility of that information is what differentiate among thetypes of assessments.

Norm Referenced Assessment (NRT)

Type of test which tells us where a student stands compared to other students. It helps to determine a student's place or rank among a group of similar students. Such kind of test is called norm-referenced test.

Dimensions

- It provides estimate of ability in a variety of skills in much shorter time.
- NRT tends to be general. It measures variety of skills at same time but fails to measure them thoroughly.
- It is hard to make decisions regarding the mastery of student's skill in subject.
- It provides estimate of ability in a variety of skills in much shorter time. NRT is much difficult
- for students to solve. On average only 50% students are able to get an item right in a test.

Topic- 021: Criterion Referenced Assessment (CRT)

This type of test tells us about student's level of proficiency in or mastery of some skill or set of skills. This is achieved by comparing a student's performance to a standard mastery called a criterion. Test that yields such information is called criterion referenced test.

Dimensions

- CRT tends to be specific. It measures particular a set of skill at one time and focus on level of achievement of that skill. CRT gives clear picture regarding the mastery of student's skill in subject.
- It measures skill more thoroughly, so naturally it takes more time comparing to NRT in measuring the mastery of said skill.
- Items included in CRT are relatively easier. Around 80% of the students are expected to respond item correctly in the test.
- CRT compares students 'performance to the standards indicative of mastery.
- Breadth of content sampled is narrow and covers very few objectives.

In CRT, classification of the examinee is measured as master/non-master or
ranks or scale scores are frequently used.

Topic- 024: Formative Assessment

Formative assessment provides feedback and information during the instructional process, while le
is taking place and occurring. Formative assessment measures student progress, but it can also asse
own progress as an instructor.

Types of Formative Assessment

- Observations during in-class activities; of student's non-verbal feedback during lecture.
- Homework exercises as review for exams and class discussions
- Reflections journals that are reviewed periodically during the semester
- Question and answer sessions, both formal (planned) and informal (spontaneous)
- Conferences between the instructor and student at various points in the semester
- In-class activities where students informally present their results
- Student feedback collected by periodically answering specific question about the instruction and t
self-evaluation of performance and progress

Diffe

Q.

Topic- 026: Summative Assessment

Summative assessment takes place after the learning has been completed and provides information and feedback that sums up the teaching and learning process. Typically, no more formal learning is taking place at this stage, other than incidental learning which might take place through the completion of projects and assignments. Summative assessment is more product-oriented and assesses the final product, whereas formative assessment focuses on the process toward completing the product. Once the project is completed, no further revisions can be made. If, students are allowed to make revisions, the assessment becomes formative.

Types of Summative Assessment

- Examinations (major, high-stakes exams)
- Final examinations (a truly summative assessment)
- Term papers (drafts submitted during the semester would be a formative assessment)
- Projects (project phases submitted at various completion points could be formatively assessed)
- Portfolios (could also be assessed during its development as a formative assessment)
- Performances

Topic- 027: Functions of Summative Assessment ✓ Q. imp

- Focus of measurement in summative assessment is on course or unit objectives.
- Broad sample of all objectives is used in summative assessment.
- This type of assessment uses wide range of difficulty while selecting items for the test.
- Summative assessment is done at the end of the unit or the course.
- Most important functions of summative assessment is to assign grade, certification of accomplishment and evaluation of teaching.

Activate

Q.

Topic- 030: Elements and Appropriateness in Table of Specification

Carey (1988) listed six major elements that should be attended to in developing a table of specifications for a comprehensive end of unit exam:

i. Balance among the goals selected for the exam (weighing objectives)
ii. Balance among the levels of learning (higher order and lower order)
iii. The test format (objective and subjective)
iv. The total number of items
v. The number of test items for each goal and level of learning
vi. The enabling skills to be selected from each goal framework.

A table of specifications incorporating these six elements will result in a "comprehensive posttest that represents each unit and is balanced by goals and levels of learning"

Checklist for Appropriateness of Table of Specification

- Are the specifications in harmony with the purpose of the test?
- Do the specifications indicate the nature and limits of the achievement domain?
- Do the specifications indicate the types of learning outcomes to be measured?
- Do the specifications indicate the sample of learning outcomes to be measured?
- Is the number of test items indicated for the total test and for each subdivision?
- Are the types of items to be used appropriate for the outcomes to be measured?
- Are the items appropriate for the types of interpretation to be made?

Q. Define Past

TABLE OF SPECIFICATION

Topic- 028: Table of Specification

One of the tools used by teachers to develop a blueprint for the test is called —table of specification; in the other word table of specification is a technical name for the blue print of the test. It is the first formal step to develop a test.

Concept of Table of Specification ✓Q.

- It helps a teacher in allotting the questions to different content areas and Bloom's learning categories in a systematic manner.
- The blueprint is meant to ensure content validity. Content validity is the most important factor in constructing an achievement test. (will be discussed in later unit)
- A unit test or comprehensive exam is based on several lessons and/or chapters in a book supposedly reflecting a balance between content areas and learning levels (objectives).

Two Ways of Table of Specification

A table of specifications consists of a two-way chart or grid relating instructional objectives to the instructional content.

Table of specification performs two important functions

1. It ensures the balance and proper emphasis across all content areas covered by teacher.
2. It ensures the inclusion of items at each level of the cognitive domain of Bloom's Taxonomy.

Learning objectives	Knowledge	Comprehension	Application	Analysis	Synthesis	Evaluation

3						
4						
5						

Topic- 029: Concept of Table of Specification

It helps a teacher in allotting the questions to different content areas and Bloom's learning categories in systematic manner.

Define

It is a two way chart that describes the topics to be covered on a test and the number of items from each topic to ensure all elements of a course are properly addressed.

There are hundreds of tests available for each type. Selecting the most appropriate one is important task. In some cases published tests are used by teachers. But more frequently these are used by provincial or national testing programs.

In classrooms most used published tests are:

i. Achievement tests
ii. Reading test

Published tests commonly used by provincial or national testing programs are:

- Aptitude tests
- Readiness tests
- Placement tests

Topic- 034: Standards for Selecting Appropriate Test –I

Test users should select tests that meet the purpose for which they are to be used and that are appropriate for intended population.

- First define the purpose for testing and the population to be tested and select the test accordingly.
- Investigate the potentially useful sources of information, in addition to the test scores, to validate the information provided by tests.
- Read the materials provided by test developers and avoid using tests for which unclear or incomplete information is provided.
- Become familiar with how and when test was developed and tried out.

Topic- 035: Standards for Selecting Appropriate Test –II

Test users should select tests that meet the purpose for which they are to be used and that are appropriate for intended population.

...dent evaluations of a test and of possible alternative measures.

CHARACTERISTICS OF A GOOD TEST-I

Topic- 037: Characteristics of Good Test: Validity, Reliability and Usability

The most essential characteristics of are:

- Validity
- Reliability
- Usability

✓ with Defines.

Validity

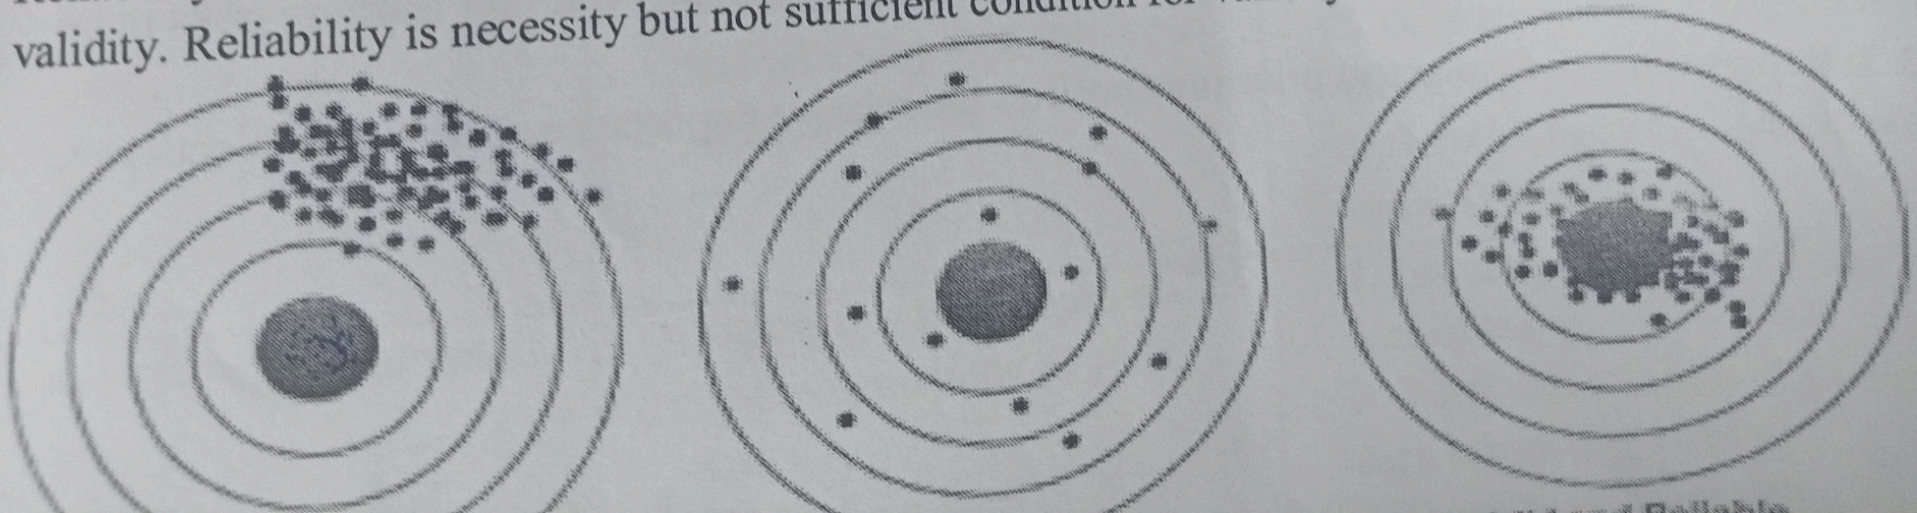

Validity is an evaluation of adequacy and appropriateness of the interpretation and uses of results. It determines if a test is measuring what it intended to measure.

Reliability

Reliability refers to the consistency of assessment results.

Reliability vs. Validity

Reliability of measurement is needed to obtain the valid results, but we can have reliability without validity. Reliability is necessity but not sufficient condition for validity.

Validity does not have different types. It is

evidences

5. Validity involves an overall evaluative judgment

It requires an evaluation in terms of the consequences of interpretations and u

Topic- 039: Evidences of Validity: Content Validity

Three Evidences of Validity

- Content
- Construct
- Criterion

Meaning

How well the sample of assessment tasks represents the domain of the tasks t

Procedure

It compares the assessment tasks to the specifications describing the task dom

Method

1. Classroom instruction determines which intended learning outcomes (object
students.
2. Achievement domain specifies and delimits a set of instructionally relevant
measured by an assessment.
3. Instructional and assessment priorities specifies the relative importance
assessed.

CHARACTERISTICS OF A GOOD TEST-II

Topic- 040: Evidences of Validity: Construct Validity

Meaning

How well a test measures up to its claims? A test designed to measure *depression* must only measure that particular construct, not closely related ideals such as *anxiety* or *stress*.

Procedure

Develop a test framework;

- Defining construct
- Identifying sub-constructs
- Listing indicators of each sub-construct
- Writing test items for each indicator

Construct: Essay Writing		
Sub-construct	**Meaning/Scope**	**Indicators**
Introduction Paragraph	It introduces the main idea, captures the interest of reader and tells why topic is important.	1. Single sentence called the thesis statement is written 2. Background information about your topic provided 3. Definitions of important terms written
Paragraphs	Supporting paragraphs make	1. List the points about main idea of essay.

		each supporting point. 3. Develop each supporting point with facts, details, and examples.
Summary Paragraph	Concluding paragraph comes after you have finished developing your ideas.	1. Restate the strongest points of 2. Restate the main idea 3. Give your personal opinion or suggest a plan for action.

Method

There are two methods to confirm construct validity of a test.

1. Expert judgment

There are experts in the field. For the above example, people who are expert in essay writing will be considered to assess the construct validity of the table and the table will be revised under their guidanc

2. Factor analysis

In this, we group the questions by keeping in view the responses of respondents on them.

- An estimate of reliability always refers to particular type of consistency (stability, equivalence, internal consistency)
- Reliability is necessary but not sufficient condition for validity.
- Reliability is primarily statistical (range +1 and -1).

Topic- 044: Method of Estimating Reliability

1. Stability:

Consistency over period of time

2. Equivalence:

Over different forms of assessment

3. Internal consistency:

Within the assessment itself

Determining Reliability by Correlation Methods

In determining reliability, it would be *desirable* to obtain two sets of measures *under identical conditions* and then to compare the results. The reliability coefficient resulting from each method must be interpreted according to type of consistency being investigated.

Method to Estimate Reliability

- Test-Retest (stability)
- Equivalent Forms (equivalence)
- Test- retest with Equivalent Forms (stability and equivalence)
- Split Half (internal consistency)
- Kuder- Richardson(internal consistency)
- Cronbach Alpha (internal consistency)
- Inter-rater reliability (consistency of rating)

Topic- 045: Test-retest Method

- Test-retest method is a measure of stability

- Test-Retest (stability)
- Equivalent Forms (equivalence)
- Test- retest with Equivalent Forms (stability and equivalence)
- Split Half (internal consistency)
- Kuder- Richardson(internal consistency)
- Cronbach Alpha (internal consistency)
- Inter-rater reliability (consistency of rating)

Topic- 045: Test-retest Method

- Test-retest method is a measure of stability
- It gives the same test twice to the same group with any time interval between tests, Time interval can range from several minutes to the several years

Test- retest	
September 25	**October 15**
Form A	Form A
1. Item a yes	2. Item a yes
2. Item b no	2. Item b no
3. Item c yes	3. Item c yes

September 25	October 15
Form A	Form B
1. Item a	2. Item a
2. Item b	2. Item b
3. Item c	3. Item c
Score = 82	Score= 74

Topic- 047: Method of Estimating Reliability: Split Half Method

Split Half Method

- Split half method is a measure of internal consistency.
- It gives test once. Score two equivalent halves of test, correct correlation between halves to fit whole test by spearman –brown formula

Split Half Method		
Sum number of odd items correct	Sum number of even items correct	September 25
Item 1	Item 2	

- Obtain practice in writing anecdotal records.

Topic- 051: Advantages and Limitations of Anecdotal Records

Following are the advantages of anecdotal records.

- It depicts actual behaviors in natural situations.
- It facilitates gathering evidence on the events that are exceptional but significant.
- It is beneficial for the students with less communication skills.

Limitations of Anecdotal Records ✓ Q.

Following are the limitations of anecdotal records.

It takes long time to maintain.

It is subjective in nature.

Anxiety may lead to wrong observation.

• Kuder- Richardson methods and Co

• It gives test once. Score total test and apply Kuder- Richardson

As with the split half method, these formulas provide an index of internal consistency but do not req
splitting the assessment in half for scoring Purposes. One formula KR20 is applicable only when stu
responses are scored dichotomously (0 or 1). It is the most useful with traditional test items scored co
or incorrect. The generalization of KR20 for assessments that have more than dichotomous, right-wr
scores is called Coefficient Alpha.

Inter-rater Method

• Inter-rater method is a measure of consistency of ratings

• It gives a set of student's responses requiring judgmental scoring to two or more raters and has them
independently score the responses

TYPES OF ASSESSMENT TOOLS-II

Topic- 052: Peer Appraisal

In this procedure students rate their peers on the same rating device used by their teacher. It depends on greatly simplified procedures.

Techniques of peer appraisal

There are two widely used techniques in this area are:

1. Guess who
2. Sociometric

Guess who technique

In this technique teacher use a positive or negative behavior of a student as an example. Other students from same group try to guess the statement with that characteristic correctly. Generally behaviors used, for example are positive in nature to avoid any adverse effect on the student pointed out in the example. The guess that technique is based on the nomination method of obtaining peer ratings and is scored by simply counting the number of mentions each student receives on each description.

Sociometric technique

Sociometric technique is a method for assessing the social acceptance of individual students and the social structure group. It is based on students' choice of companion for any group situation. This form was used to measure student's acceptance as seating companions, work companions and play companions.

There are few important principles of sociometric choosing:

1. The choices should be real choices that are the natural part of classroom activities.
2. The basis for the choice and restriction on the choosing should be made clear.
3. All students should be equally free to participate in the activity or situation.
4. The choice of each student make must be kept confidential.

purposes. The value of portfolios depends heavily on the clarity of p
inclusion of materials, and the criteria to be used in evaluating portf

Portfolio of students work

A portfolio is a collection of student work selected to serve a particul
student growth. It is purposeful collection of pieces of student's work

Key steps in defining and using portfolios

Specify purpose

Provide guidelines for selecting portfolios

- Define student's role in selection and self-evaluation.
- Specify evaluation criteria.

Use portfolios in instruction and communication.

Strengths of portfolios

The can be readily integrated with the instruction.

The choice must be made on the basis of the behavior to be tested.

Types of Objective Type Items

1. Selection Type
2. Supply Type

In selection type, true-false or alternative form, matching exercises, and multiple choice items are included. Another category of objective type items that is supply type consisted of completion or fill in the blanks and short answer items. The selection of any one or combination of these is made on the basis of their suitability for measuring the desired learning outcome.

Topic- 056: Characteristics of MCQs

The multiple choice items are generally recognized as the most widely applicable and useful types of objective test items that can measure knowledge, comprehension and as well as application level learning outcomes.

Multiple choice items consist of two parts:

i. A Stem
ii. No. of options or alternatives

Stem

The problem may be stated as a direct question or an incomplete statement and is called the stem of the item.

Alternatives

The list of suggested solutions which may include words, numbers, symbols or phrases are called alternatives (also called choices or options). The correct alternative in each item is called the answer

b) 1876
c) 1878
d) 1887

MCQs items reduced the probability of guessing as compared to other form of item.

Topic- 062: Advantages and Limitations of MCQs –III

Advantages of MCQs ✓Q.

- Ensure objectivity, reliability and validity; preparations of questions with colleagues provide constructive criticism.
- Increase significantly the range and variety of facts that can be sampled in given time.
- Provide precise and unambiguous measurement of the higher intellectual processes.
- Provide detailed feedback for both students and teachers.
- MCQs are easy and rapid to score.

Limitations of MCQs

- Take long time to construct in order to avoid arbitrary and ambiguous questions.
- Require careful preparation to avoid multitude of questions testing only recall.

CREATING FIXED-CHOICE TEST ITEMS: MCQS-III

Topic- 063: Suggestions for Constructing MCQs -I

The general applicability and the superior qualities of multiple choice test items are realized most fully when care is taken in their construction. This involves formulating clearly stated problems, identifying plausible alternatives, and removing irrelevant clues to the answer.

The stem of the item should be meaningful by itself and should present a definite problem.

Explanation: often the stem of the test placed in MCQs form are incomplete statements that are make little sense until all the alternatives have been read. This is not MCQs but rather and true false question placed in MCQs form.

Example: **Poor item**

South America

a) Is flat, arid country

b) Imports coffee from the United States

c) Has larger population then Europe

d) Was settled by colonist from Spain

Example: **Better item**

Most of the South America was settled by colonists from

a) England

b) France

c) Holland

d) Spain

Topic- 064: Suggestions for Constructing MCQs –II

The item stem should include as much as of the item as possible and should

a) Abbottabad
b) Gilgit
c) Lahore
d) Mingora

South Islamabad?

Topic- 066: Suggestions for Constructing MCQs –IV

All alternatives should be grammatically consistent with the stem of item.

Explanation: in the following examples note how the better version results from a change in the alternatives in order to obtain grammatical consistency. The main function of this rule is to prevent irrelevant clues from entering.

Example: **Poor item**

An electric transformer can be used

a) For strong electricity
b) To increase the voltage of alternating current
c) It converts electrical energy into mechanical energy
d) Alternating current is changed to direct current

Example: **Better item**

An electric transformer can be used to

a) Produce strong electricity
b) Increase the voltage of alternating current
c) Convert electrical energy into mechanical energy
d) Change alternating current to direct current
