

Don't Disturb Me

ENG520 Mids 2024

1. **Question: Table of specification?**

One of the tools used by teachers to develop a blueprint for the test is called ―table of specification; in the other word table of specification is a technical name for the blue print of the test. It is the first formal step to develop a test.

2. **Question: Concept of Table of Specification?**

- It helps a teacher in allotting the questions to different content areas and Bloom‘s learning categories in a systematic manner.
- The blueprint is meant to ensure content validity. Content validity is the most important factor in constructing an achievement test. (will be discussed in later unit)
- A unit test or comprehensive exam is based on several lessons and/or chapters in a book supposedly reflecting a balance between content areas and learning levels (objectives).

3. **Question: Split Half test?**

Split Half Method

Split half method is a measure of internal consistency.

It gives test once. Score two equivalent halves of test, correct correlation between halves to fit whole test by spearman –brown formula.

Ayesha Afzal

Split Half Method		
Sum number of odd items correct	Sum number of even items correct	September 25
Item 1	Item 2	

		1. Item 1
Item 3	Item 4	2. Item 2
Item 5	Item 6	3. Item 3
:	:	4. Item 4
:	:	5. Item 4
:	:	6. Item 4
:	:	
Odd	Even	
Score = 40	Score= 42	Total Score=82

Split half reliabilities tend to be higher than equivalent form reliabilities because split half method is based on the administration of single assessment.

4. **Question: Inter-rater methods?**

Inter-rater method is a measure of consistency of ratings.

It gives a set of student's responses requiring judgmental scoring to two or more raters and has them independently score the responses.

5. **Question: Types of assessment?**

Types of assessment by nature.

Types of assessment by format.

Types of Assessment by Nature: 1. Maximum Performance Assessment 2. Typical Performance Assessment.

Classification of Assessment

Ayesha

Assessment can be classified in four ways:

1. Nature of Assessment

2. Format of Assessment

3. Use in Classroom Instruction

4. Method of Interpreting Results

6. **Question: Dok (depth of knowledge)?**

Depth of Knowledge (DOK) DOK (Depth of Knowledge) was presented by Webb in 1997, giving four levels of learning activities.

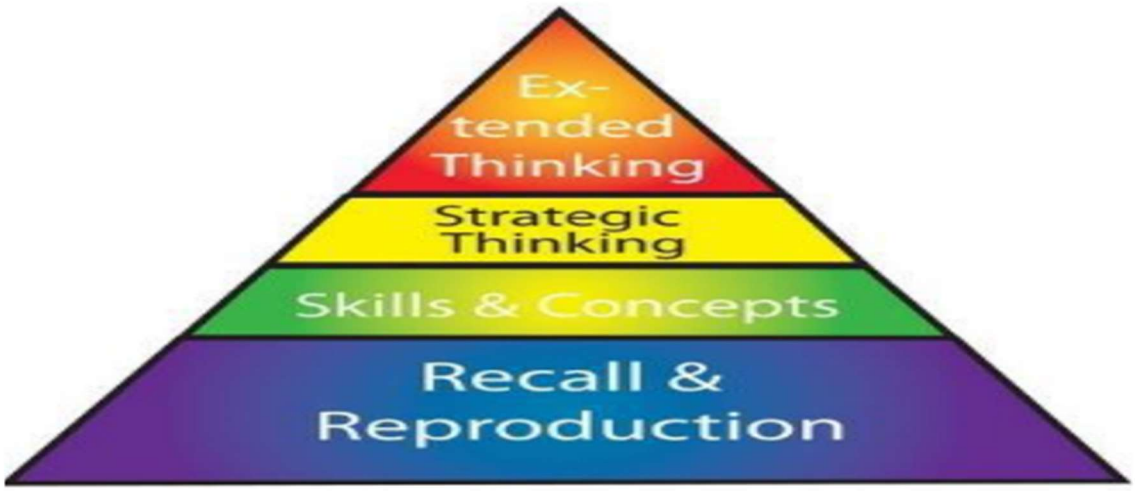

Levels of Depth of Knowledge (DOK):

1. Recall

2. Skill/Concept

3. Strategic Thinking

4. Extended Thinking

DOK measures the degree to which the knowledge brings about from students on assessments is as complex as what students are expected to know and do as stated in the curriculum.

Levels of DOK (Depth of Knowledge):

1. **Recall:**

a Afzal

Recall of a fact, information, or procedure. The subject matter at this particular level usually involves working with facts, terms and/or properties of objects. Key words: list, enlist, name, define etc. 2. 2. 2.

2. Skill/Concept:

It includes the engagement of some mental processing beyond recalling or reproducing a response. Use information or conceptual knowledge, two or more steps, not just recalling Key words: Graph, separate, relate, contrast, narrate, compare etc.

3 . Strategic Thinking:

Items falling in this category demand a short-term use of higher order thinking processes, such as analysis and evaluation, to solve real-world problems with predictable outcomes. Key words: Argue, critique, formulate.

4. Extended Thinking:

Learning outcomes to this level demand extended use of higher order thinking processes such as synthesis, reflection, assessment and adjustment of plans over time. Key words: create synthesize, design and reflection.

7. **Question: Three evidence validity?**

1: Content

2: Construct

3: Criterion

8. **Method of Estimating Reliability**

1. **Stability:** Consistency over period of time

2. **Equivalence:** Over different forms of assessment

3. **Internal consistency:** Within the assessment itself

4**. Determining Reliability by Correlation Methods:** In determining reliability, it would be desirable to obtain two sets of measures under identical conditions and then to compare the results. The reliability coefficient resulting from each method must be interpreted according to type of consistency being investigated.

Method to Estimate Reliability

• Test-Retest (stability)

• Equivalent Forms (equivalence)

Ayesha Afzal

• Test- retest with Equivalent Forms (stability and equivalence)

• Split Half (internal consistency)

• Kuder- Richardson(internal consistency)

• Cronbach Alpha (internal consistency)

• Inter-rater reliability (consistency of rating)

9. **Question: Difference between formative and summative assessment?**

It determines learning progress, provides feedback to reinforce learning, and correct learning errors. When we assess student during classroom instruction with a purpose to have a feedback that how can we make our teacher learning process better, that is formative assessment. In this assessment, we are not assessing what students learnt or not, rather we assess the process behind the students learning .The process behind the student learning includes a teaching method, book, if we make all these things according to the needs of students then learning will improve.

Formative assessment provides feedback and information during the instructional process, while learning is taking place and occurring. Formative assessment measures student progress, but it can also assess your own progress as an instructor.

Types of Formative Assessment

• Observations during in-class activities; of student's non-verbal feedback during lecture.

• Homework exercises as review for exams and class discussions

• Reflections journals that are reviewed periodically during the semester

• Question and answer sessions, both formal (planned) and informal (spontaneous)

• Conferences between the instructor and student at various points in the semester

• In-class activities where students informally present their results

• Student feedback collected by periodically answering specific question about the instruction and their self-evaluation of performance and progress.

Summative assessment

Summative assessment takes place after the learning has been completed and provides information and feedback that sums up the teaching and learning process. Typically, no more formal learning is taking place at this stage, other than incidental learning which might take place through the completion of projects and assignments. Summative assessment is more product-oriented and assesses the final product, whereas formative assessment focuses on the process

Ayesha Afzal

toward completing the product. Once the project is completed, no further revisions can be made. If, students are allowed to make revisions, the assessment becomes formative.

Types of Summative Assessment

• Examinations (major, high-stakes exams)

• Final examinations (a truly summative assessment)

• Term papers (drafts submitted during the semester would be a formative assessment)

• Projects (project phases submitted at various completion points could be formatively assessed)
• Portfolios (could also be assessed during its development as a formative assessment)

• Performances

Functions of Summative Assessment

♣ Focus of measurement in summative assessment is on course or unit objectives.

♣ Broad sample of all objectives is used in summative assessment.

♣ This type of assessment uses wide range of difficulty while selecting items for the test.

♣ Summative assessment is done at the end of the unit or the course.

♣ Most important functions of summative assessment is to assign grade, certification of accomplishment and evaluation of teaching.

10. <u>Question: Difference between validity and reliability?</u>

Validity

Validity is an evaluation of adequacy and appropriateness of the interpretation and uses of results. It determines if a test is measuring what it intended to measure.

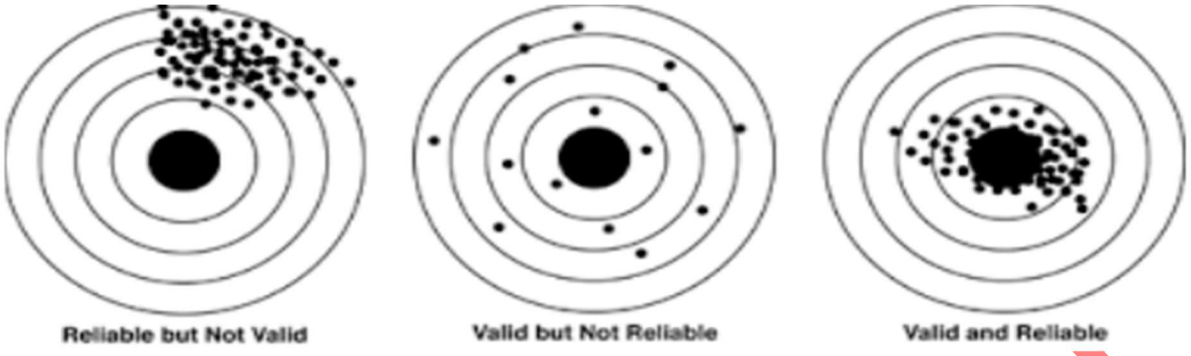

Reliability

Reliability refers to the consistency of assessment results.

Reliability vs. Validity

Reliability of measurement is needed to obtain the valid results, but we can have reliability without validity. Reliability is necessity but not sufficient condition for validity.

Ayesha Afzal

11. Question: Competency?

Competency It is a key learning area, for example, algebra, arithmetic, geometry, etc. in mathematics and vocabulary, grammar, composition, etc. in English.

12. Question: Suggestions for Constructing MCQs

The general applicability and the superior qualities of multiple choice test items are realized most fully when care is taken in their construction. This involves formulating clearly stated problems, identifying plausible alternatives, and removing irrelevant clues to the answer. The stem of the item should be meaningful by itself and should present a definite problem.

13. Question: Why there is a poor item in MCQs?

The item stem should include as much as of the item as possible and should be free of irrelevant material.

Explanation: Clear stem increase the probability of the item as well as reduce the reading time required.

14. Question: Test-retest Method?

Test-retest method is a measure of stability

• It gives the same test twice to the same group with any time interval between tests, Time interval can range from several minutes to the several years.

Test- retest	
September 25	**October 15**
Form A	Form A
1. Item a yes	2. Item a yes
2. Item b no	2. Item b no
3. Item c yes	3. Item c yes

15. Question: What is Concurrent validity?

Ayesha Afzal

This approach allows one to show the test is valid by comparing it with an already valid test.

16. Question: Evaluation?

Evaluation is the process of making a value judgment against intended learning outcomes and behavior, to decide the quality and extent of learning. Evaluation is always related to your purpose, you aligned your purpose of teaching with what students achieved at the end, with their quality and quantity of learning.

17. Question: Maximum Performance Assessment?

Maximum performance assessment determines what individuals can do when performing at their best e.g. assess student in an environment when they exhibit their best performance. Procedure of this type is concerned with how well individual perform when they are motivated to obtain as high score as possible. This type of assessment includes aptitude tests and achievement tests.

18. Typical Performance Assessment?

The second category is a typical performance assessment determines what an individual will do under natural conditions. This type of assessment includes attitude, interest, personality inventories, observational techniques and peer appraisal. Here the emphasis is on what students will do rather than what they can do.

19. Guess who technique?

In this technique teacher use a positive or negative behavior of a student as an example. Other students from same group try to guess the statement with that characteristic correctly. Generally behaviors used, for example are positive in nature to avoid any adverse effect on the student pointed out in the example. The guess that technique is based on the nomination method of obtaining peer ratings and is scored by simply counting the number of mentions each student receives on each description.

20. Question: Sociometric technique?

Sociometric technique is a method for assessing the social acceptance of individual students and the social structure group. It is based on students' choice of companion for any group situation. This form was used to measure student's acceptance as seating companions, work companions and play companions.

21. Question: Types of Educational Decisions?

- Instructional
- Grading
- Diagnostic

Ayesha Afzal

• Selecting

• Placement

• Counseling and Guidance

• Program or Curriculum

• Administrative

22. Question: SOLO Taxonomy?

Levels of SOLO

1. Pre-structural

2. Uni-Structural

3. Multi-structural

4. Relational

5. Extended Abstract

23. Question: Limitations of MCQs?

♣ Take long time to construct in order to avoid arbitrary and ambiguous questions.

♣ Require careful preparation to avoid multitude of questions testing only recall.

24. Question: Advantages of MCQs?

♣ Ensure objectivity, reliability and validity; preparations of questions with colleagues provide constructive criticism.

♣ Increase significantly the range and variety of facts that can be sampled in given time.

♣ Provide precise and unambiguous measurement of the higher intellectual processes.

♣ Provide detailed feedback for both students and teachers.

♣ MCQs are easy and rapid to score.

25. Question: Measurement?

Measurement is the process by which the attributes or dimensions of some object (both physical and abstract) are quantified. The tools used for this purpose may include test, observation, checklist, homework, portfolios, project etc. Measurement can be easily understood if we use

Ayesha Afzal

this word to measure height and distance because these things are physical present in the existence so height can easily be measured by scale. But in the field of education, our variable are not physical and cannot be directly measured e.g. attitude, behavior, and achievement etc. these all are abstract, so there measurement is relatively difficult than those who have physical existence. The tool used for measuring the abstract variables cannot measure exactly like scale (thermometer).

26. Question: Placement Decisions?

Placement decisions are made after an individual has been accepted in a program. They determine where in a program someone is the best suited to begin with.

27. Question: Selection Decisions?

Selection decisions involve test data used in part for accepting or rejecting applicants for admission into a group, program, or institution.

28. Question: Diagnostic Decisions?

Diagnostic decisions are those made about a student‘s strengths and weaknesses and the reasons behind them. Teachers make diagnostic decisions based on information yielded by an informal teacher made test decisions about diagnostic nature can also be made with the help of standardized tests.

29. Question: Grading Decisions?

Educational decisions based on grades are also made by the classroom teacher but much less frequently than instructional decisions. For the most students grading decisions are the most influential decision made about them.

30. Question: Program or curriculum decision?

This type of decision is taken at policy level. Where it is decided if a lesion, unit or subject will continue or abandoned for the next academic session according to the national objectives of education.

31. Question: Administrative Decisions?

Administrative policy decisions may be made at school, district, state or national level. Based on measurement data, it includes financial decisions of schools.

32. Question: Types of Written Tests?

• Verbal

• Non-verbal

Ayesha Aizal

• Objective

• Subjective

• Teacher Made

• Standardized

• Power

• Speed

Don't Disturb Me

Ayesha Afzal
