ENG520 - Testing and Assessment (Quiz 1) Quiz Start Time:

Question # 3 of 10 ( Start time: 09:49:27 AM, 30 April 2024 )

Exhibit memory of previously learned material by recalling facts, terms, basic concepts, and answers is known as ____.

Select the correct option

- (●) Remembering
- ( ) Applying
- ( ) Evaluation
- ( ) Understanding

exhibit m

**Topic- 016: Revised version of Bloom's Taxonomy**

The revised cognitive domains levels are:

**Remembering**

Exhibit memory of previously learned material by recalling facts, terms, basic concepts, and answer

**Key verbs**

Choose, define, find, how, label, list, match, name, omit, recall, relate, select, show, spell, tell, what, when, where, which, who, why

**Understanding**

Constructing meaning from different types of functions be they written or graphic messages, or activities

Key verbs: Classify, compare, contrast, demonstrate, explain, extend, illustrate, infer, interpret, outline, relate, rephrase, show, summarize, and translate

**Applying**

Solve problems to new situations by applying acquired knowledge, facts, techniques and rules in a different way.

Key verbs:, Apply, build, choose, construct, develop, experiment with, identify, interview, make use of, model, organize, plan, select, solve and utilize.

**Analyzing**

Breaking materials or concepts into parts, determining how the parts relate to one another, or how the parts relate to an overall structure or purpose.

Key verbs: Analyze, assume, categorize, classify, compare, conclusion, contrast, discover, dissect, distinguish, divide, examine, function, inference and inspect

**Evaluating**

Making judgments based on criteria and standards through checking and critiquing.

Key verbs: Agree, appraise, assess, award, choose, compare, conclude, criteria, criticize, decide, deduct, defend, determine, disprove and estimate

**Creating**

ENG520 - Testing and Assessment (Quiz 1) Quiz Start Time: C

Question # 4 of 10 ( Start time: 09:49:55 AM, 30 April 2024 )

Which of the following is the process of making a value judgment against intended learning outcomes to decide the qual learning?

Select the correct option

- None of the given
- Measurement
- Evaluation
- Assessment

value jud

measurement word is used it means that tool which will be used for measuring student abilities and then converts it in numerical form.

**Assessment**

It means an appraisal of something to improve the quality of teaching and learning process for deciding what more can be done to improve the teaching, learning and outcomes.

**Evaluation**

Evaluation is the process of making a value judgment against intended learning outcomes and behavior, to decide the quality and extent of learning. Evaluation is always related to your purpose, you aligned your purpose of teaching with what students achieved at the end, with their quality and quantity of learning.

**Example**:

In a classroom situation, as a teacher, when you teach a chapter or unit to a class, first you made the objectives, either you will do it yourself as a teacher or you take it from a curriculum document of the particular subject. Objectives are also written at the start of the chapter or book which shows that at the end of the unit what the student will be able to do this, that is also referred as student learning outcomes. These SLOs can be checked by two aspects:

1. Assessment
2. Evaluation.

When you, as a teacher reflect on your teaching on a daily basis that what you teach yesterday was a good way to teach or not, what i taught was the students need, did they understand what I teach, and then you can decide changing which things can cause the improvement in the learning process of students. This is known as ASSESSMENT. At the end of the assessment, opinion is not about the individual, it is about the process from which the students or individuals are passing for the betterment of that process. Evaluation is that when the learning process is complete and you want to see what are your targets or

Question # 5 of 10 ( Start time: 09:50:30 AM, 30 April 2024 )

Assessment can be classified in ____ways.

Select the correct option

- three
- four
- two
- five

assessment can

When we are teaching in a classroom, we are doing four things:

1. Developing students 'knowledge
2. Improving their concepts
3. Teaching the skills
4. Making their attitudes

And while doing so, we collect information about the development of these things, and then we reco interpret and use it to communicate about the learning progress of students. This whole procedure is called classroom assessment

**Classification of Assessment**

Assessment can be classified in four ways

1. Nature of Assessment
2. Format of Assessment
3. Use in Classroom Instruction
4. Method of Interpreting Results

**1. Nature of Assessment**

i. Maximum Performance Assessment
ii. Typical Performance Assessment

**2. Format of Assessment**

i. Fixed Choice Assessment
ii. Complex Performance Assessment

**3. Use in Classroom Instruction**

i. Placement Assessment
ii. Formative Assessment

ENG520 - Testing and Assessment (Quiz 1) Quiz Sta

**Question # 6 of 10 ( Start time: 09:51:08 AM, 30 April 2024 )**

Which of the following tests is used for the admission in a particular program?

**Select the correct option**

- ○ Readiness test
- ○ None of the given
- ○ Diagnostic tests
- ◉ Aptitude tests ✓

admission in

of student is. It is associated with a student's entry level performance to know either student have a sufficient knowledge required for a particular course or not. Through placement assessment, teacher can be able to know that where a student should be placed according to the present knowledge or skills. It determines the level of student knowledge at the beginning of session and helps teacher plan the lesson accordingly. In the classroom, the teacher can use placement assessment to assess the level of students' knowledge and skills and then make lesson plans keeping in mind the level and need of students accordingly. It also determines the interest and aptitude of the student regarding a subject and helps in selecting the correct path for the future.

**Examples:**
**Readiness test:** It is used to determine the students' knowledge or concept about a particular course of instruction or what is the level of students.
**Aptitude test:** It is used for the admission in a particular program.
**Pretest:** It is made according to the course objectives and determines the student present knowledge about them.
**Self- report inventories:** It determines the student level by interviewing or discussion.

**Diagnostic Assessment**
It determines the causes (intellectual, physical, emotional, environmental) of persistent learning difficulties. E.g. if you are having a headache, first you will try to cure it by yourself by taking a medicine and you got a relief, but if you did not get a relief by taking the medicine then either you change your medicine or you go to the physician or doctor. At first, doctor prescribed medicines, if you still have a headache you again go to the doctor, then the doctor suggests you the tests, i.e. blood test, urine test etc. Then finally by seeing the test reports the doctor able to recognize the reason or cause of the headache. And when doctor knows the root of your headache then he will prescribe you the medicine for that cause, this is diagnosis.
A diagnosis does not start at the first day, it is for the constant or continuous problems, e.g. if a student

Question # 7 of 10 ( Start time: 09:52:05 AM, 30 April 2024 )

Which of the following is considered the key learning area for the students in the national curriculum of Pakistan?

Select the correct option

- (●) Competency
- ( ) Standards
- ( ) Benchmarks
- ( ) Student Learning Outcome (SLOs)

key learning

Lesson 03

Write Four levels of

ASSESSMENT, TESTING AND NATIONAL CURRICULUM

**Topic- 007: Role of National Curriculum in Assessment**

In national curriculums of Pakistan, learning of student is classified into four levels.

1. Competency
2. Standards
3. Benchmarks
4. Student learning outcome (SLOs)

**Competency**

It is a key learning area, for example, algebra, arithmetic, geometry, etc. in mathematics and vocabulary, grammar, composition, etc. in English.

**Standards**

These define the competency by specifying broadly, the knowledge, skills and attitudes that students will acquire, should know and be able to do in a particular key learning area during twelve years of schooling.

**Benchmarks** & its relation to standards?

The benchmarks further elaborate the standards, indicating what the students will accomplish at the end of each of the five developmental levels in order to meet the standard.

**Student Learning Outcomes**

These are built on the descriptions of the benchmarks and describe what students will accomplish at the end of each grade. It is the lowest level of hierarchy.

**Topic- 008: Connecting all Four Levels in Curriculum**

9:52

vulms.vu.edu.pk/

Question # 8 of 10 ( Start time: 09:52:32 AM, 30 April 2024 )

_____ decisions are the nuts and bolts types of decisions made in a classroom by teachers.

Select the correct option

- ○ Placement
- ○ Grading
- ○ Diagnostic
- ◉ Instructional ✓

nuts and bo

- Grading
- Diagnostic
- Selecting
- Placement
- Counseling and Guidance
- Program or Curriculum
- Administrative

These types of decisions are taken at different levels. Some are decided at the board/ administrative level while some are taken at school management level and other are taken in classrooms by teachers.

**Instructional Decisions**

Instructional decisions are the nuts and bolts types of decisions made in the classroom by teachersSuch decisions include deciding to:

- spend more time on specific units
- regroup student in class for better management
- instructional plans

**Grading Decisions**

Educational decisions based on grades are also made by the classroom teacher but much less frequently than instructional decisions. For the most students grading decisions are the most influential decision made about them.

**Diagnostic Decisions**

Diagnostic decisions are those made about a student's strengths and weaknesses and the reasons behind them. Teachers make diagnostic decisions based on information yielded by an informal teacher made test decisions about diagnostic nature can also be made with the help of standardized tests.

- ○ Summative Assessment

relativ

**Topic- 003: Types of Assessment: Methods of Interpreting Results**

- Norm-referenced Assessment
- Criterion-referenced Assessment

**Norm-referenced Assessment**

Norm-referenced assessment measures the students' performance, according to the relative position in any known group. E.g. ranks tenth in classroom group of 50 or top 5 students in a class. Relative position means a point defined with reference to another position (where a student stands compared to other students) rather than reporting students' achievement, it reports students standing among other students. NRT is utilized to discriminate between a certain groups of students. It is never used for certification or

Norm-referenced assessment compares a student's performance to a known group and is not used for certification but for distinguishing between groups. It often reports students' positions relative to others using percentiles.

issuing grades to students. The position of the student is generally represented by percentile scarce noting the percentage of students achieving same or low scores in the test.

Examples of NRT are NTS or CSS exams. E.g. if you achieved a 97% percentile on NTS test, it means there are 96% who scored lower than you.

What is norm referenced test

Norm referenced test includes items with average difficulty and high discriminating power. This provides a large spread of scores which makes it easy to declare the relative positions of students. Because the

**Question # 4 of 10 ( Start time: 09:58:09 AM, 30 April 2024 )**

Formative assessment typically involves ____ feedback.

**Select the correct option**

- (●) qualitative ✓
- ( ) none of the given options
- ( ) numerical
- ( ) quantitative

formative ass

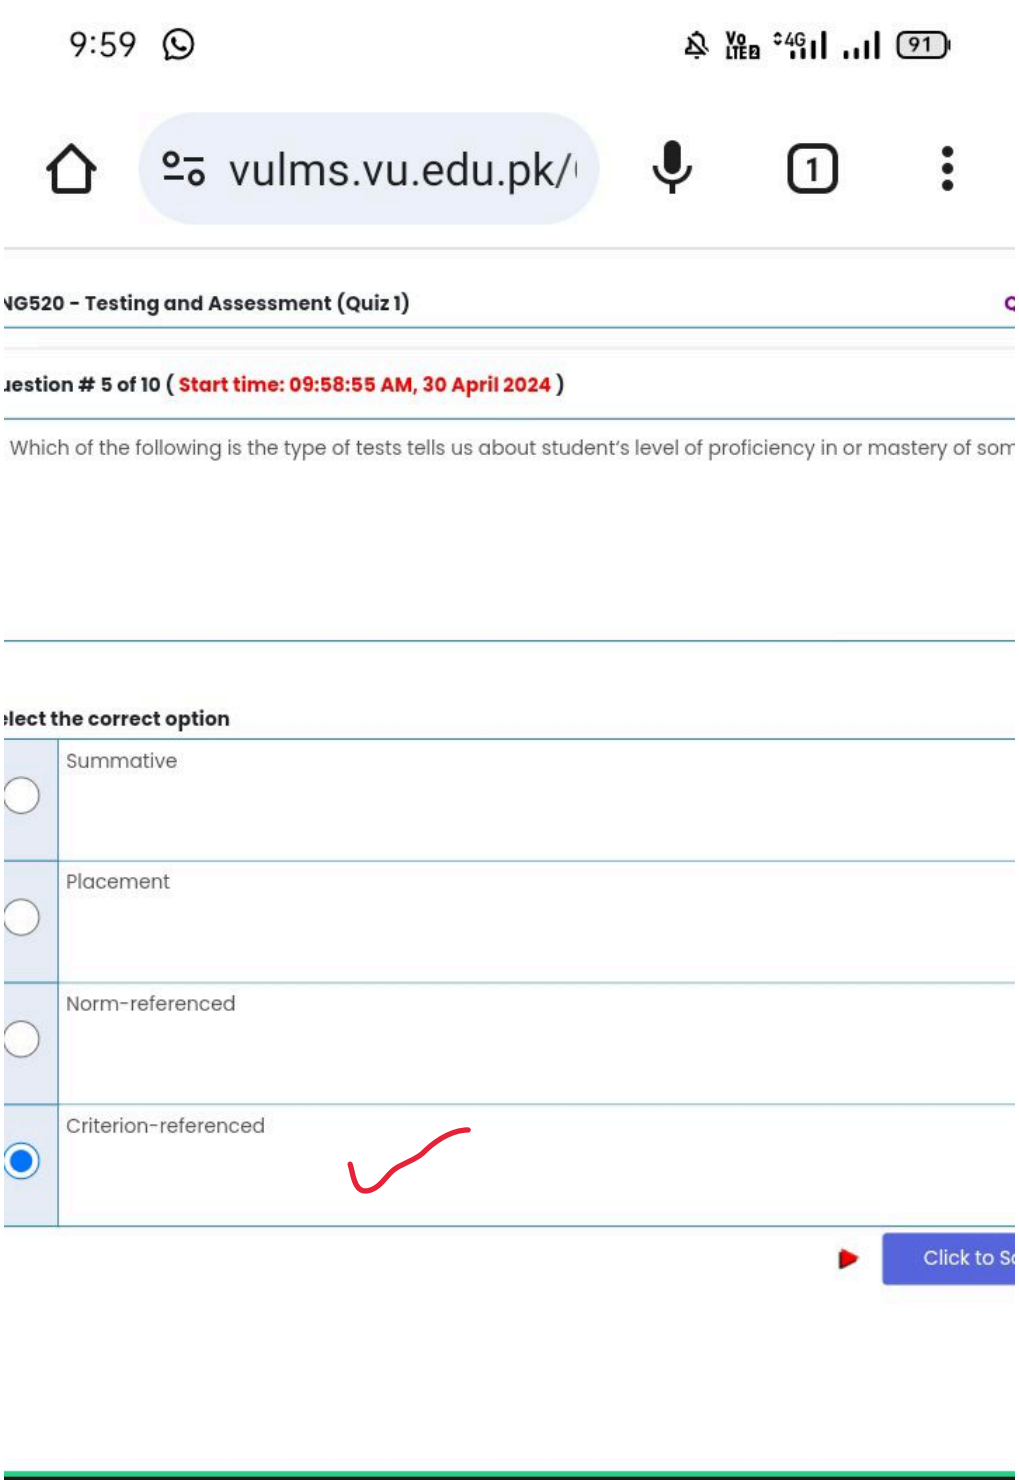

In CRT, classification of the examinee is measured as master/non-master or pass/fail. In NRT, percentile ranks or scale scores are frequently used.

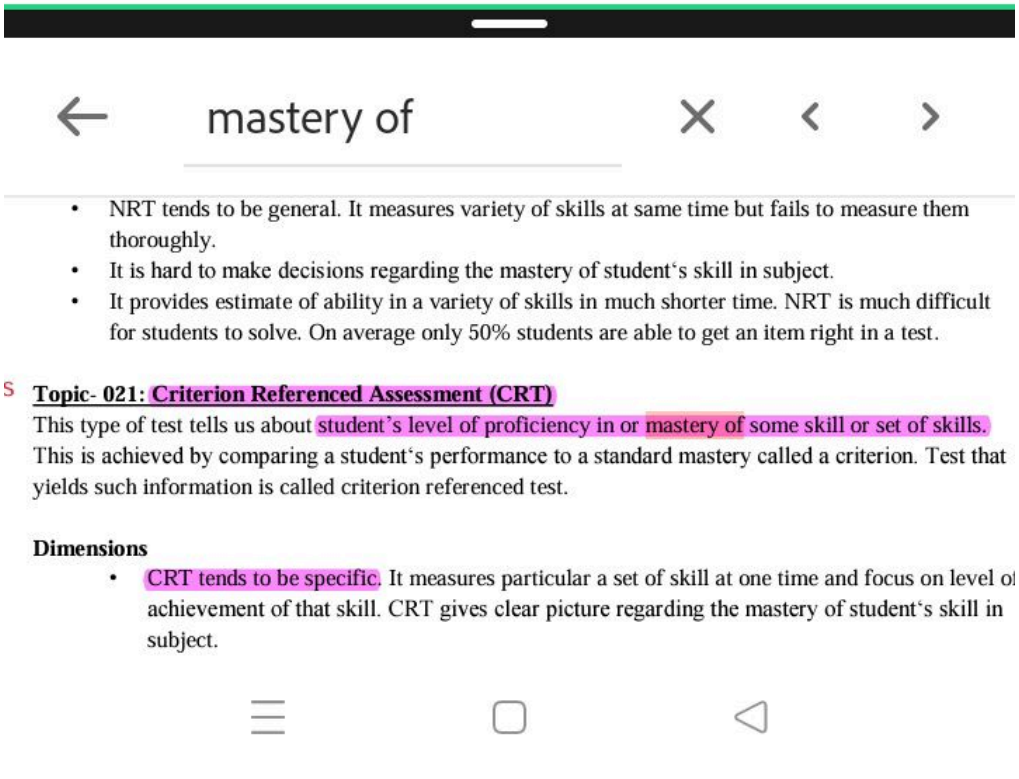

**Topic- 024: Formative Assessment** Q. Diff of formative & summative assessmet?

Formative assessment provides feedback and information during the instructional process, while learning is taking place and occurring. Formative assessment measures student progress, but it can also assess your own progress as an instructor.

**Types of Formative Assessment**

- Observations during in-class activities; of student's non-verbal feedback during lecture.
- Homework exercises as review for exams and class discussions
- Reflections journals that are reviewed periodically during the semester
- Question and answer sessions, both formal (planned) and informal (spontaneous)
- Conferences between the instructor and student at various points in the semester
- In-class activities where students informally present their results
- Student feedback collected by periodically answering specific question about the instruction and their

- NRT tends to be general. It measures variety of skills at same time but fails to measure them thoroughly.
- It is hard to make decisions regarding the mastery of student's skill in subject.
- It provides estimate of ability in a variety of skills in much shorter time. NRT is much difficult for students to solve. On average only 50% students are able to get an item right in a test.

**Topic- 021: Criterion Referenced Assessment (CRT)**

This type of test tells us about student's level of proficiency in or mastery of some skill or set of skills. This is achieved by comparing a student's performance to a standard mastery called a criterion. Test that yields such information is called criterion referenced test.

**Dimensions**

- CRT tends to be specific. It measures particular a set of skill at one time and focus on level of achievement of that skill. CRT gives clear picture regarding the mastery of student's skill in subject.

**Topic- 017: Instructional Objectives**

**Instructional Objectives as Learning Outcome**

Instructional goals and objectives are stated in terms of actions to be taken. When viewing instructional objectives in terms of learning outcomes, we are concerned with products rather than process of learning.

**Sources for Lists of Objectives**

- Professional Associations standards
- State Content Standards
- Methods Books
- Year Books
- Encyclopedia of Educational Research
- Curriculum Frameworks
- Test Manuals

ENG520 - Testing and Assessment (Quiz 1)

Question # 9 of 10 ( Start time: 08:17:31 PM, 29 April 2024 )

_____ decisions are the nuts and bolts types of decisions made in a classroom by teachers.

Select the correct option

- Placement
- Instructional
- Grading
- Diagnostic

nuts and

These types of decisions are taken at different levels. Some are decided at the board/ administrative level while some are taken at school management level and other are taken in classrooms by teachers.

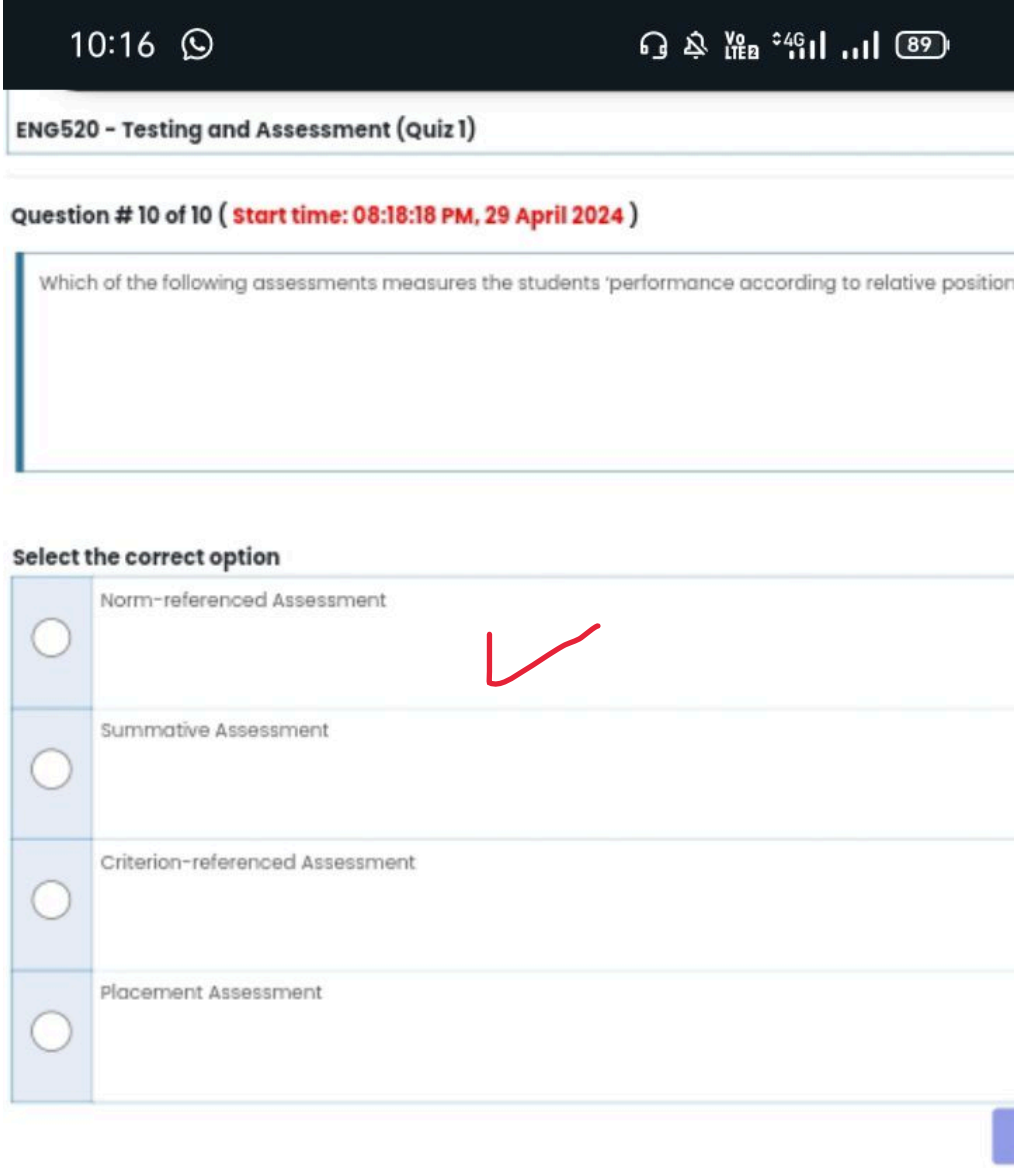

**Instructional Decisions**

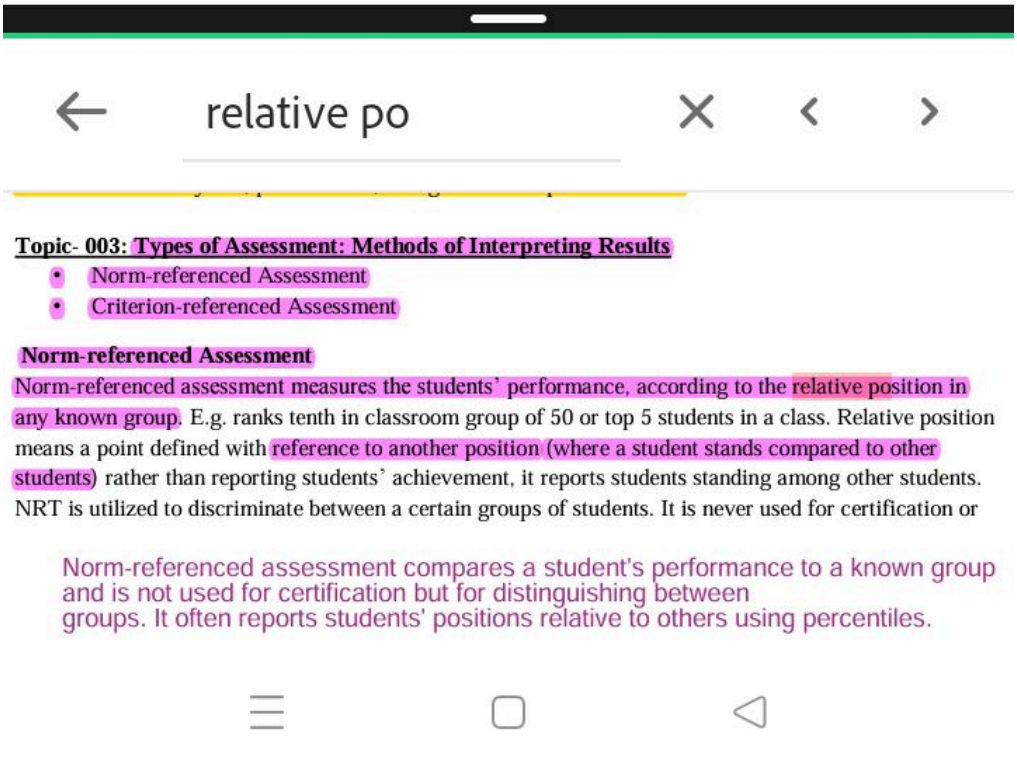

Instructional decisions are the nuts and bolts types of decisions made in the classroom by teachersSuch decisions include deciding to:

- spend more time on specific units
- regroup student in class for better management
- instructional plans

**Grading Decisions**

Educational decisions based on grades are also made by the classroom teacher but much less frequently than instructional decisions. For the most students grading decisions are the most influential decision made about them.

ENG520 - Testing and Assessment (Quiz 1)

Question # 3 of 10 ( Start time: 08:22:03 PM, 29 April 2024 )

Criterion Referenced Test (CRT) tends to be _____.

Select the correct option

- broad
- specific
- complete
- comprehensive

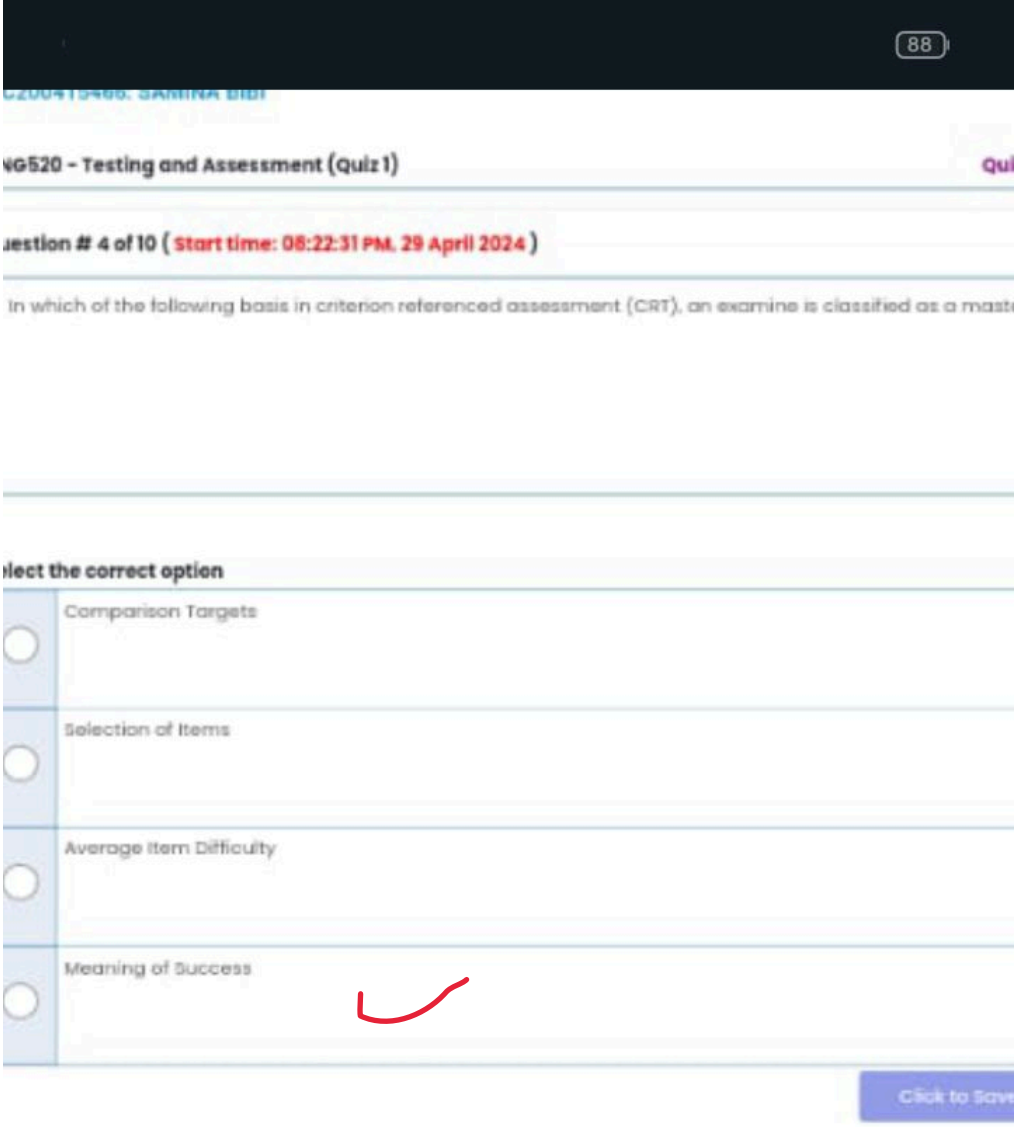

tends to

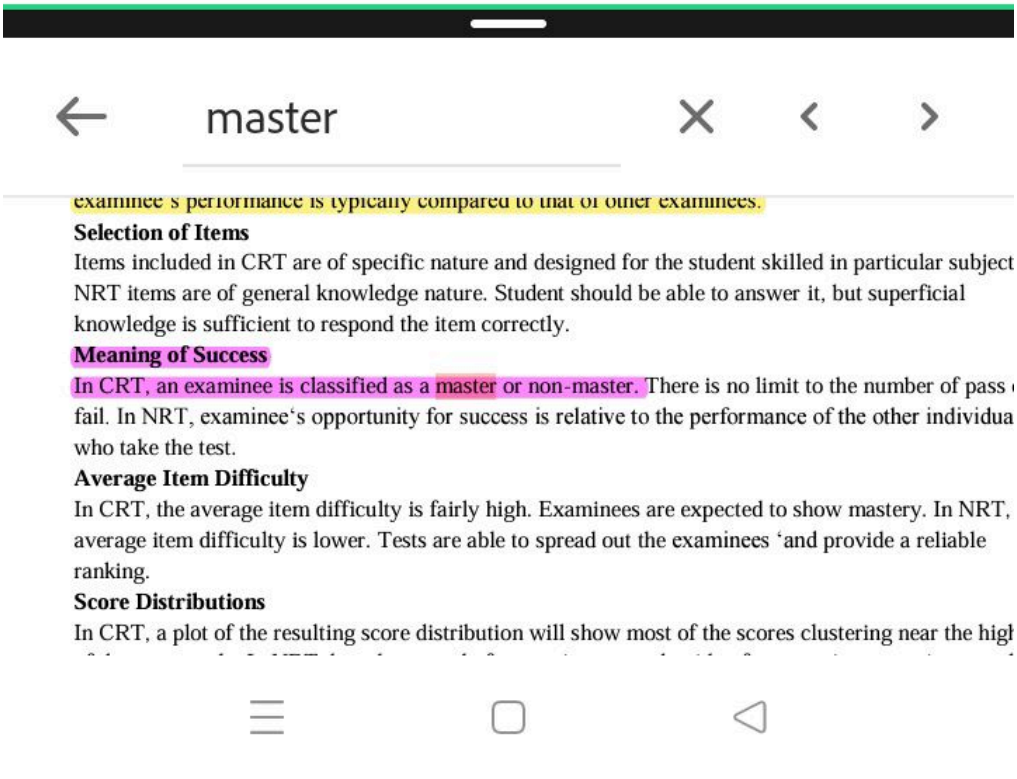

**Topic- 021: Criterion Referenced Assessment (CRT)**

This type of test tells us about student's level of proficiency in or mastery of some skill or set of skills. This is achieved by comparing a student's performance to a standard mastery called a criterion. Test that yields such information is called criterion referenced test.

**Dimensions**

- CRT tends to be specific. It measures particular a set of skill at one time and focus on level of achievement of that skill. CRT gives clear picture regarding the mastery of student's skill in subject.
- It measures skill more thoroughly, so naturally it takes more time comparing to NRT in measuring the mastery of said skill.
- Items included in CRT are relatively easier. Around 80% of the students are expected to respond item correctly in the test.
- CRT compares students 'performance to the standards indicative of mastery.

examinee's performance is typically compared to that of other examinees.

**Selection of Items**

Items included in CRT are of specific nature and designed for the student skilled in particular subject NRT items are of general knowledge nature. Student should be able to answer it, but superficial knowledge is sufficient to respond the item correctly.

**Meaning of Success**

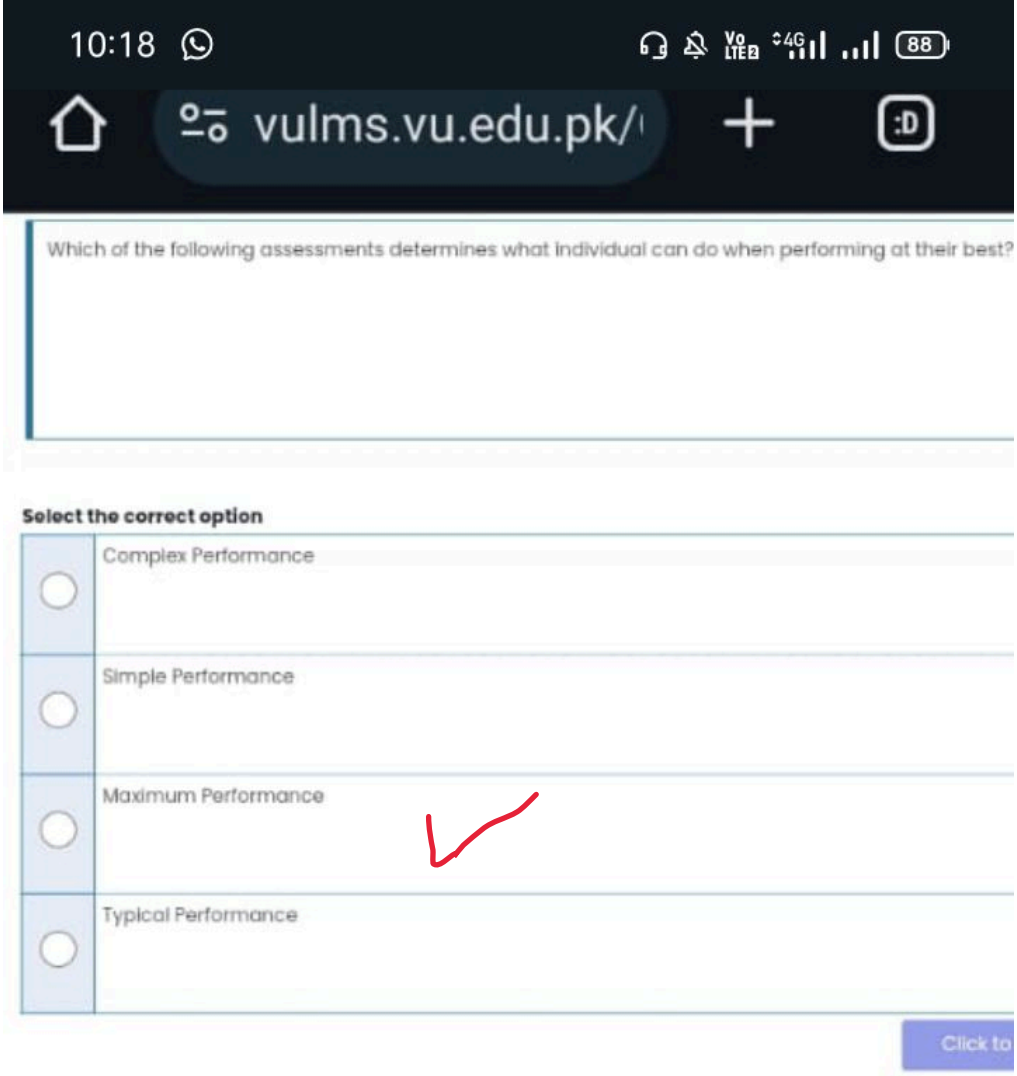

In CRT, an examinee is classified as a master or non-master. There is no limit to the number of pass fail. In NRT, examinee's opportunity for success is relative to the performance of the other individua who take the test.

**Average Item Difficulty**

In CRT, the average item difficulty is fairly high. Examinees are expected to show mastery. In NRT, average item difficulty is lower. Tests are able to spread out the examinees 'and provide a reliable ranking.

**Score Distributions**

In CRT, a plot of the resulting score distribution will show most of the scores clustering near the high

their best

2. Types of assessment by format

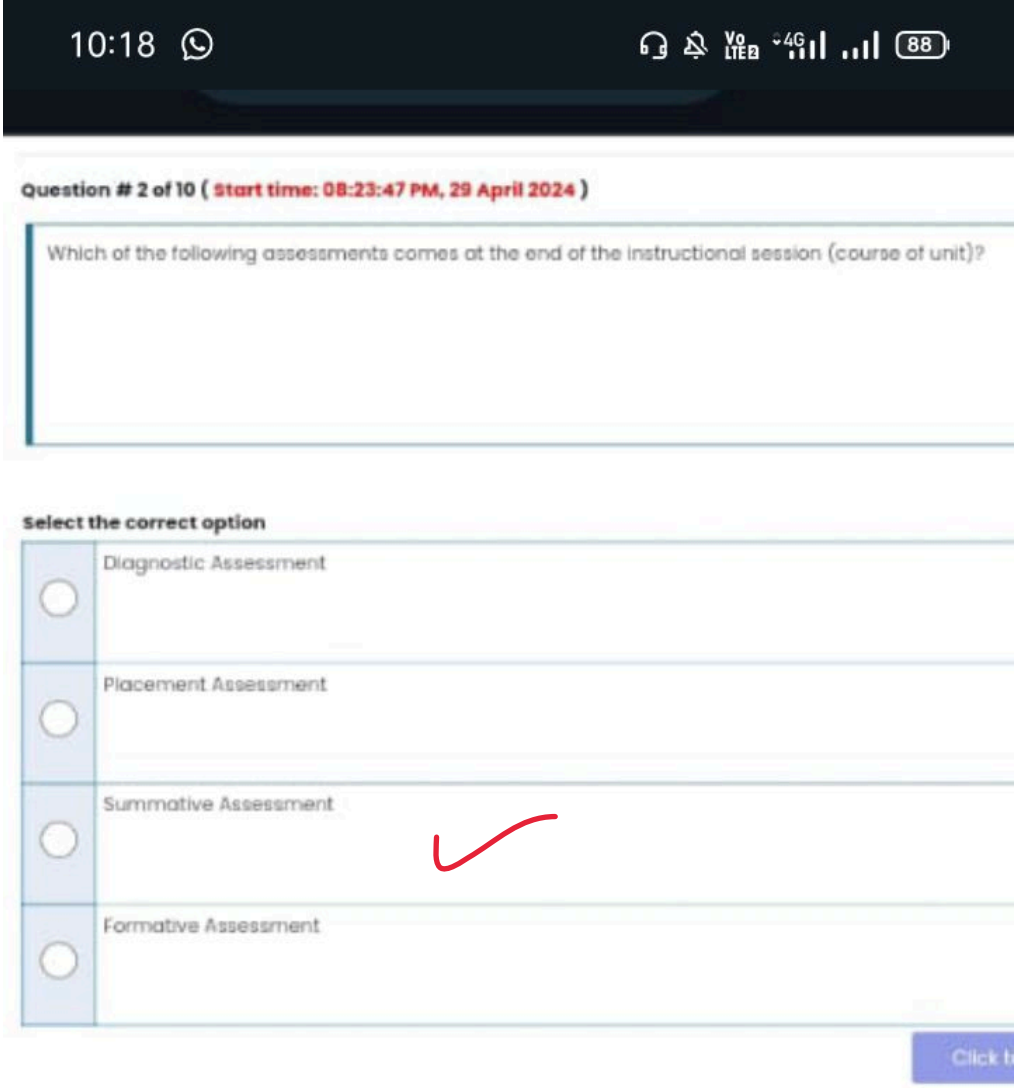

**1. Types of Assessment by Nature**

of i. Maximum Performance Assessment
ii. Typical Performance Assessment

**Maximum Performance Assessment**

Maximum performance assessment determines what individuals can do when performing at their best e.g. assess student in an environment when they exhibit their best performance. Procedure of this type is concerned with how well individual perform when they are motivated to obtain as high score as possible. This type of assessment includes aptitude tests and achievement tests. In achievement test, the student learn by themselves or we teach them and at the end, we want to see that how much student learn against our target so in this situation we make a test from which we can determine their best abilities. It is designed to indicate the degree of success in any past learning activity.

We use aptitude test when we want to predict the success in future learning activity, e.g. it is used when

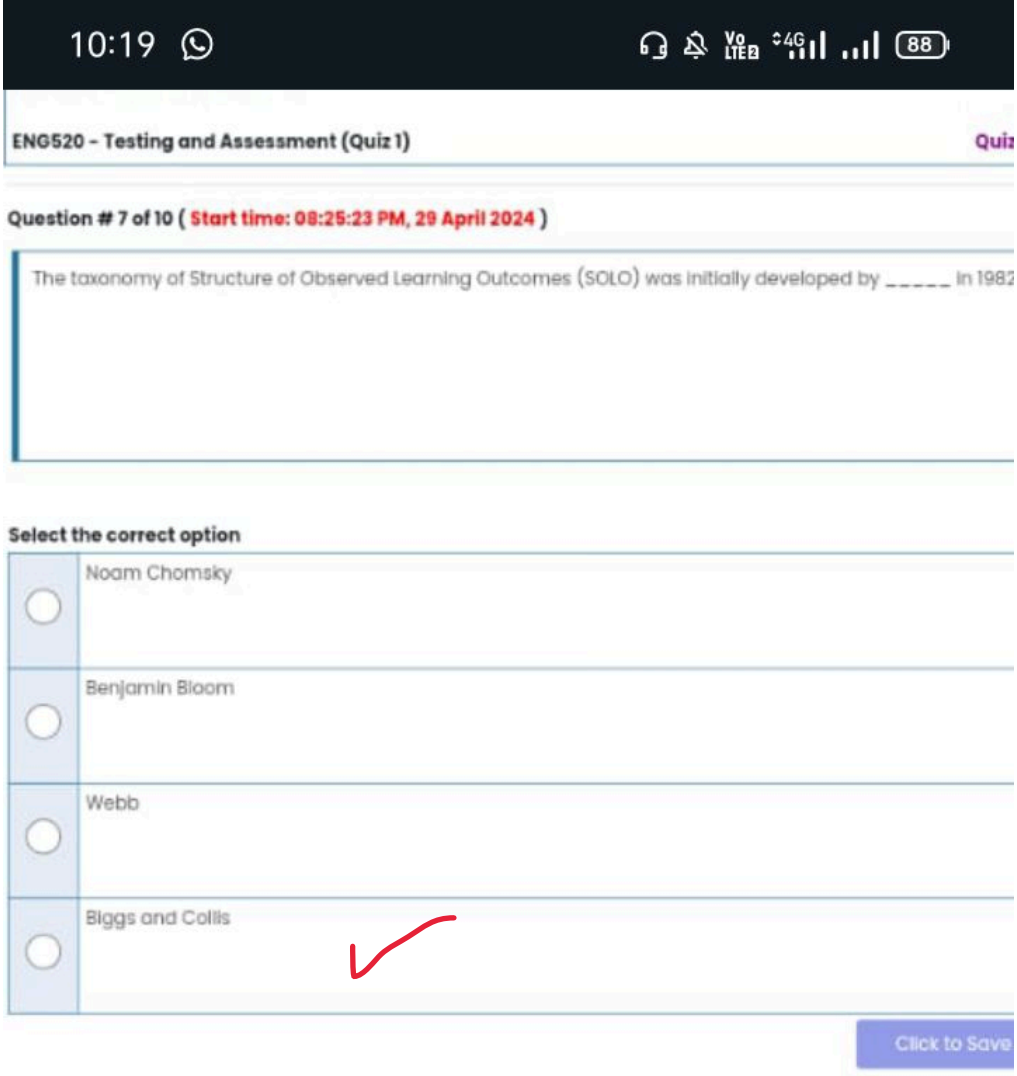

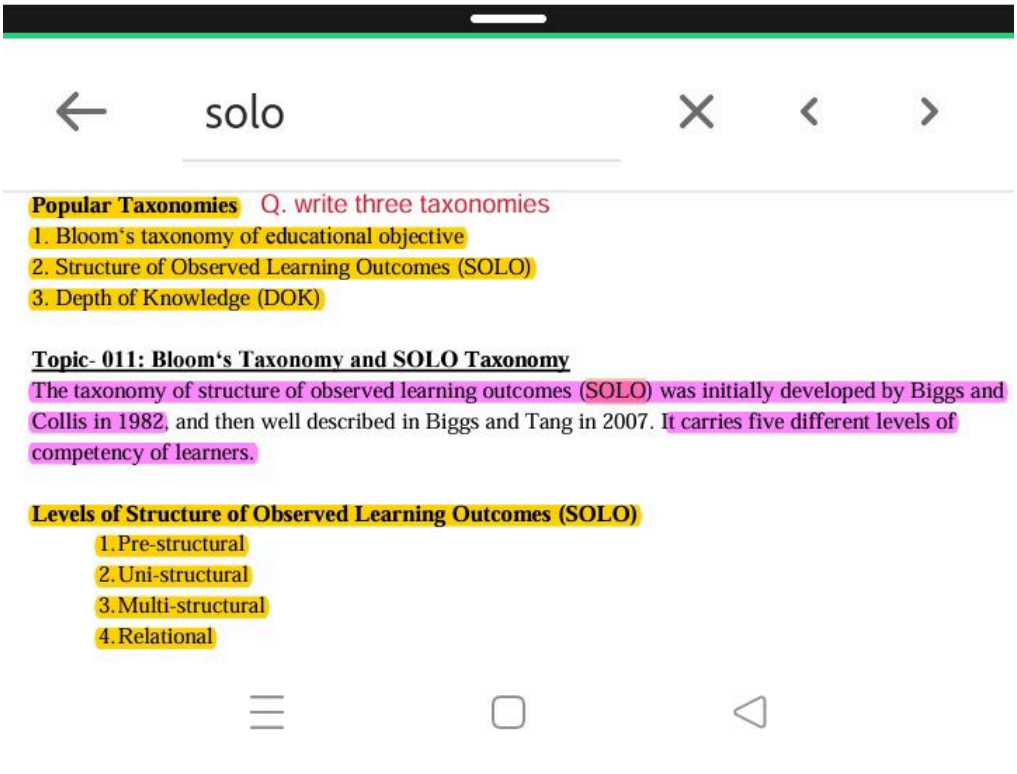

at the end

Q. Formative assessment provides feedback to students who are struggling with a specific content area or concept. The main difference between formative and summative assessment is that the in formative assessment, improvement is in the process of learning rather than to certify students .We use different tools for formative assessment and it includes teacher made tests, custom made tests from textbook.

**Summative Assessment**

It comes at the end of the instructional session (course of the unit). It is designed to measure extend of achievement of intended learning outcomes. The primary utility of this type of assessment is to assign grades and certifying the level of mastery and expertise in a certain subject. It is usually done through teacher made achievement tests or alternative assessment techniques like portfolio to summarize the overall performance of the student at the end of the session. It is not compulsory to do it at the end of the semester, in semester system, there is a midterm and final term in one semester, and these both are summative assessment. It usually compares the student learning either with other students' learning (norm-referenced) or the standard for a grade level (criterion-referenced). Summative assessment includ teacher made survey test, performance, rating scales and product scales.

**Popular Taxonomies** Q. write three taxonomies

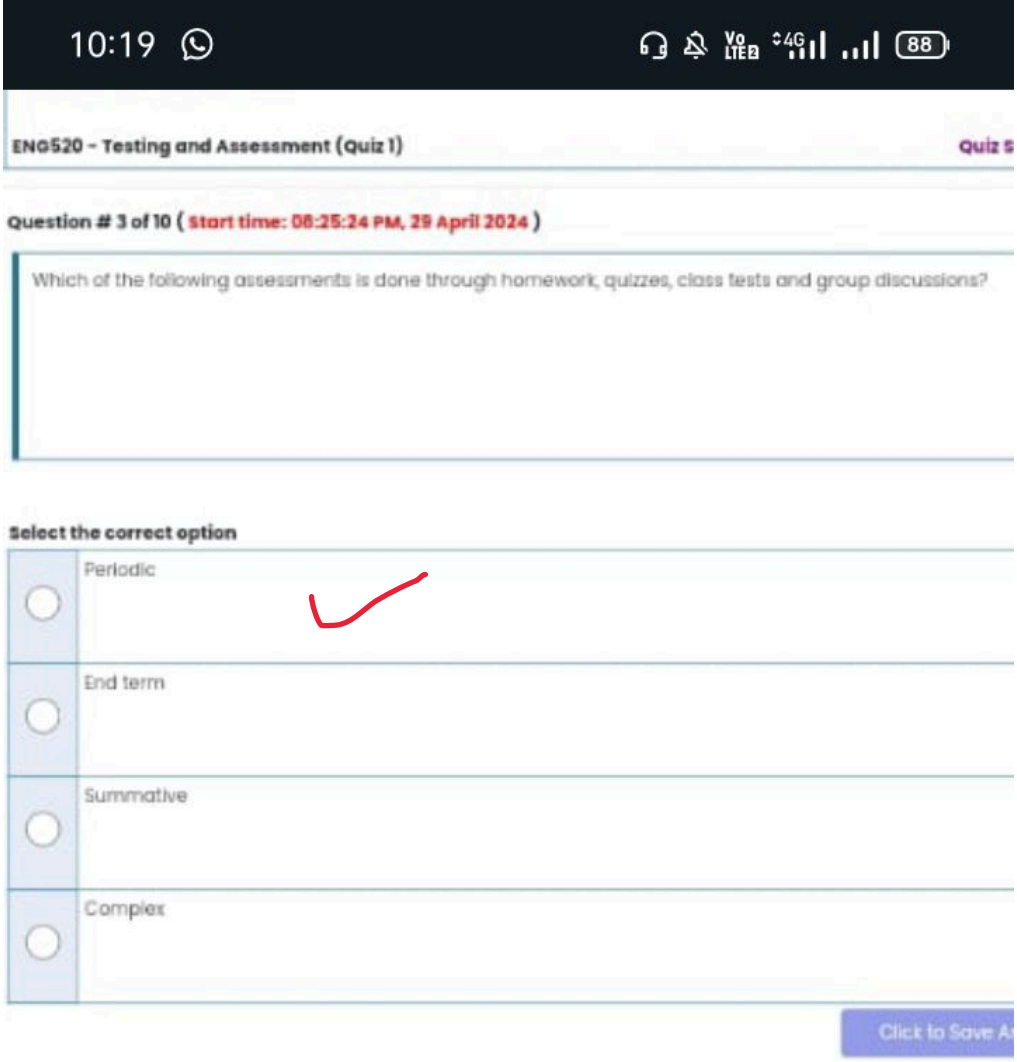

1. Bloom's taxonomy of educational objective
2. Structure of Observed Learning Outcomes (SOLO)
3. Depth of Knowledge (DOK)

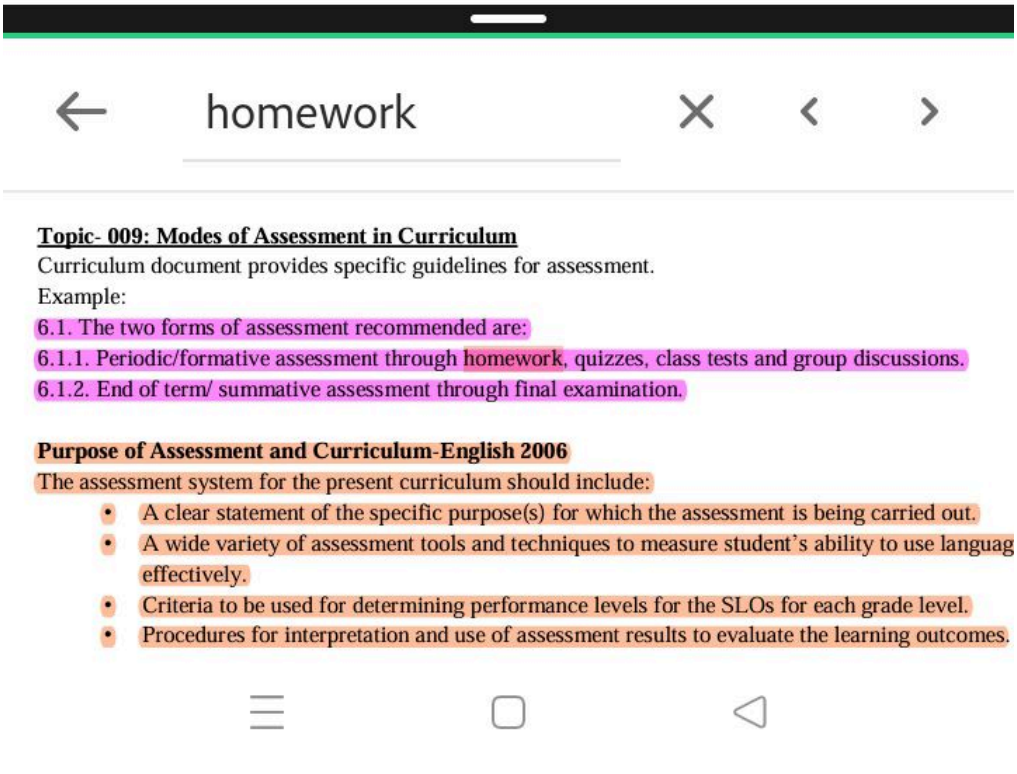

**Topic- 011: Bloom's Taxonomy and SOLO Taxonomy**

The taxonomy of structure of observed learning outcomes (SOLO) was initially developed by Biggs and Collis in 1982, and then well described in Biggs and Tang in 2007. It carries five different levels of competency of learners.

**Levels of Structure of Observed Learning Outcomes (SOLO)**

1. Pre-structural
2. Uni-structural
3. Multi-structural
4. Relational

**Topic- 009: Modes of Assessment in Curriculum**

Curriculum document provides specific guidelines for assessment.

Example:

6.1. The two forms of assessment recommended are:

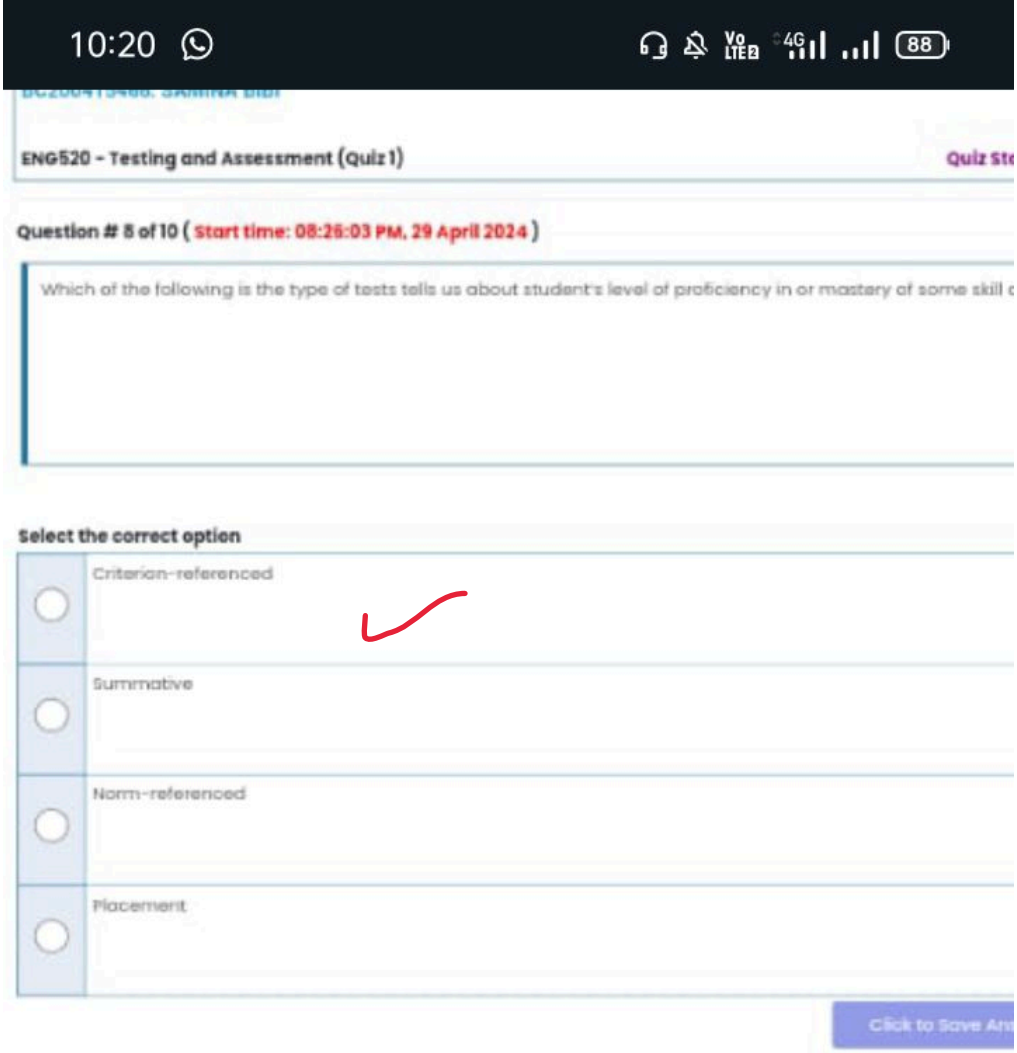

6.1.1. Periodic/formative assessment through homework, quizzes, class tests and group discussions.

6.1.2. End of term/ summative assessment through final examination.

**Purpose of Assessment and Curriculum-English 2006**

The assessment system for the present curriculum should include:

- A clear statement of the specific purpose(s) for which the assessment is being carried out.
- A wide variety of assessment tools and techniques to measure student's ability to use languag effectively.
- Criteria to be used for determining performance levels for the SLOs for each grade level.
- Procedures for interpretation and use of assessment results to evaluate the learning outcomes.

mastery of som

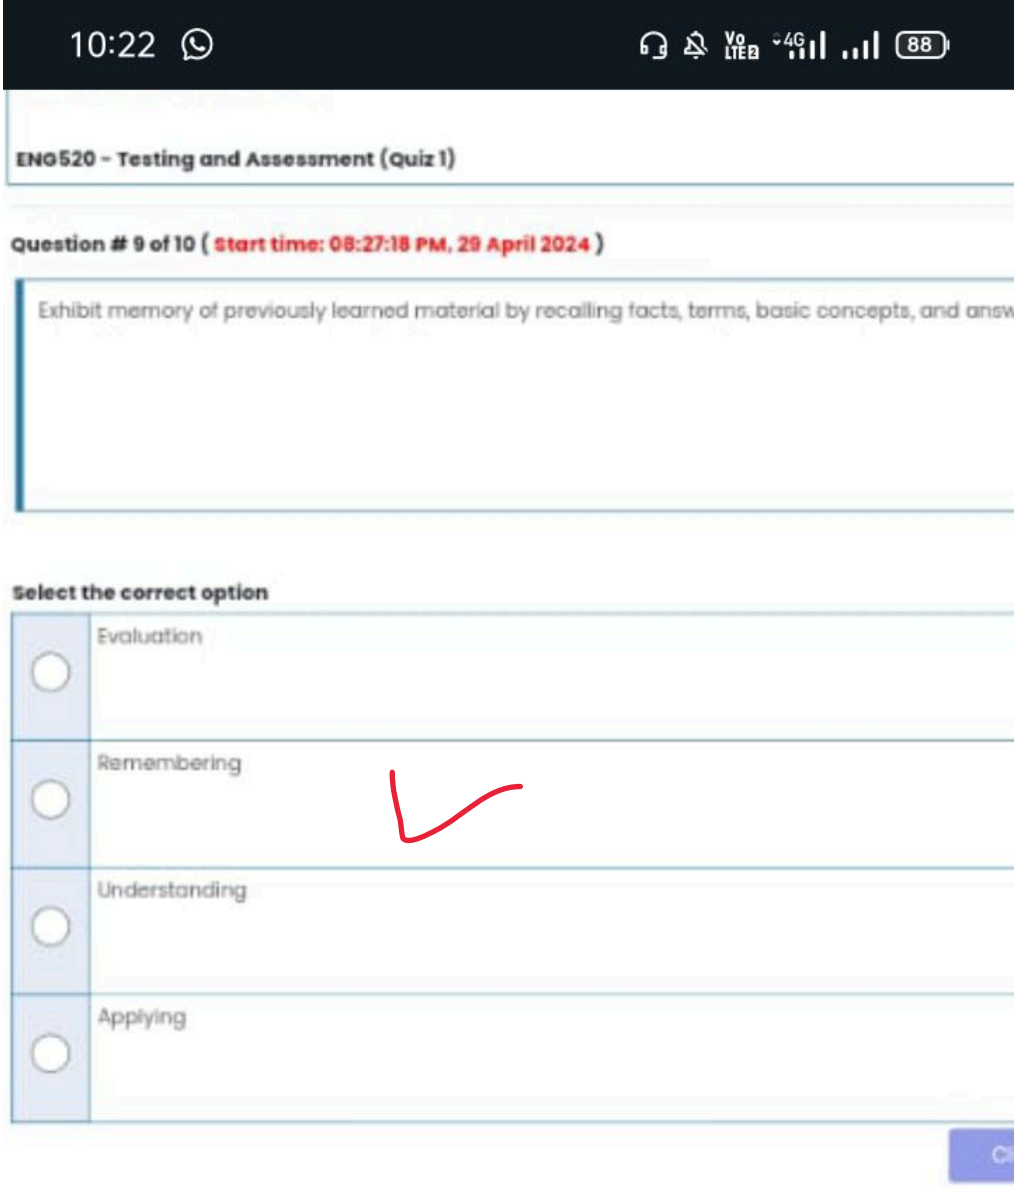

- It is hard to make decisions regarding the mastery of student's skill in subject.
- It provides estimate of ability in a variety of skills in much shorter time. NRT is much difficult for students to solve. On average only 50% students are able to get an item right in a test.

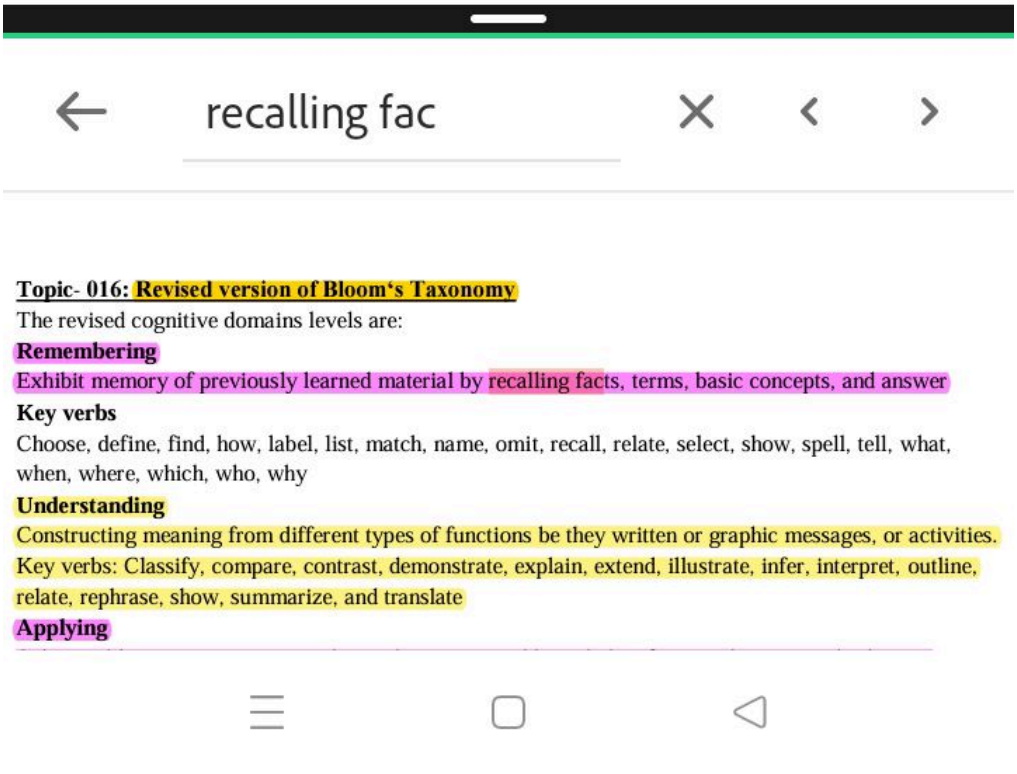

**Topic- 021: Criterion Referenced Assessment (CRT)**

This type of test tells us about student's level of proficiency in or mastery of some skill or set of skills. This is achieved by comparing a student's performance to a standard mastery called a criterion. Test that yields such information is called criterion referenced test.

**Dimensions**

- CRT tends to be specific. It measures particular a set of skill at one time and focus on level of achievement of that skill. CRT gives clear picture regarding the mastery of student's skill in subject.
- It measures skill more thoroughly, so naturally it takes more time comparing to NRT in measuring the mastery of said skill.

**Topic- 016: Revised version of Bloom's Taxonomy**

The revised cognitive domains levels are:

**Remembering**

Exhibit memory of previously learned material by recalling facts, terms, basic concepts, and answer

**Key verbs**

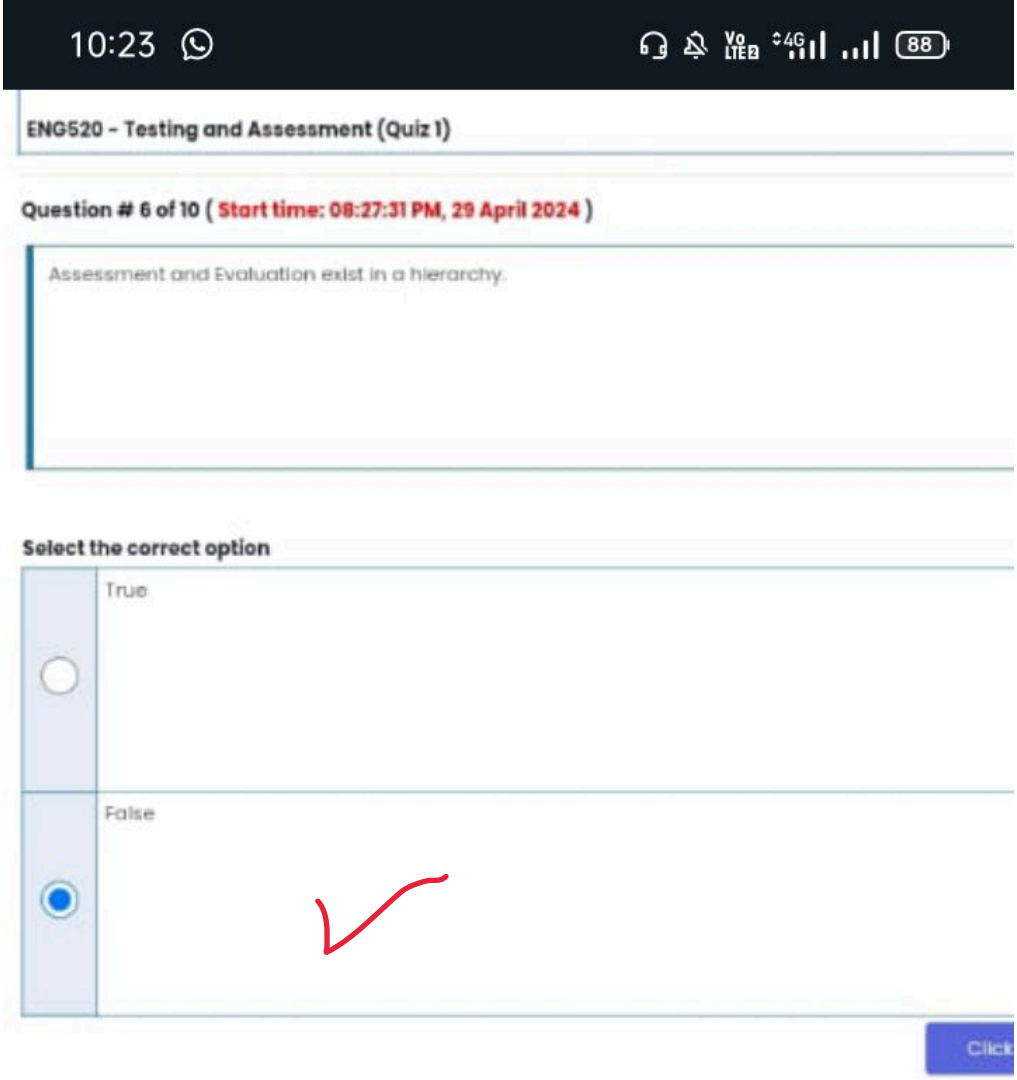

Choose, define, find, how, label, list, match, name, omit, recall, relate, select, show, spell, tell, what, when, where, which, who, why

**Understanding**

Constructing meaning from different types of functions be they written or graphic messages, or activities.

Key verbs: Classify, compare, contrast, demonstrate, explain, extend, illustrate, infer, interpret, outline, relate, rephrase, show, summarize, and translate

**Applying**

hierarchy

education, measurements generate tools, i.e. test, observation, quiz, checklist, homework and portfolios They can give information about students' learning. Question # 3 of 10 ( Start time: 08:45:17 PM, 29 April 2024 )

Which of the following is the process by which the attributes of objects are quantified?

Select the correct option

- Decision
- Measurement
- Opinion
- Observation

attributes

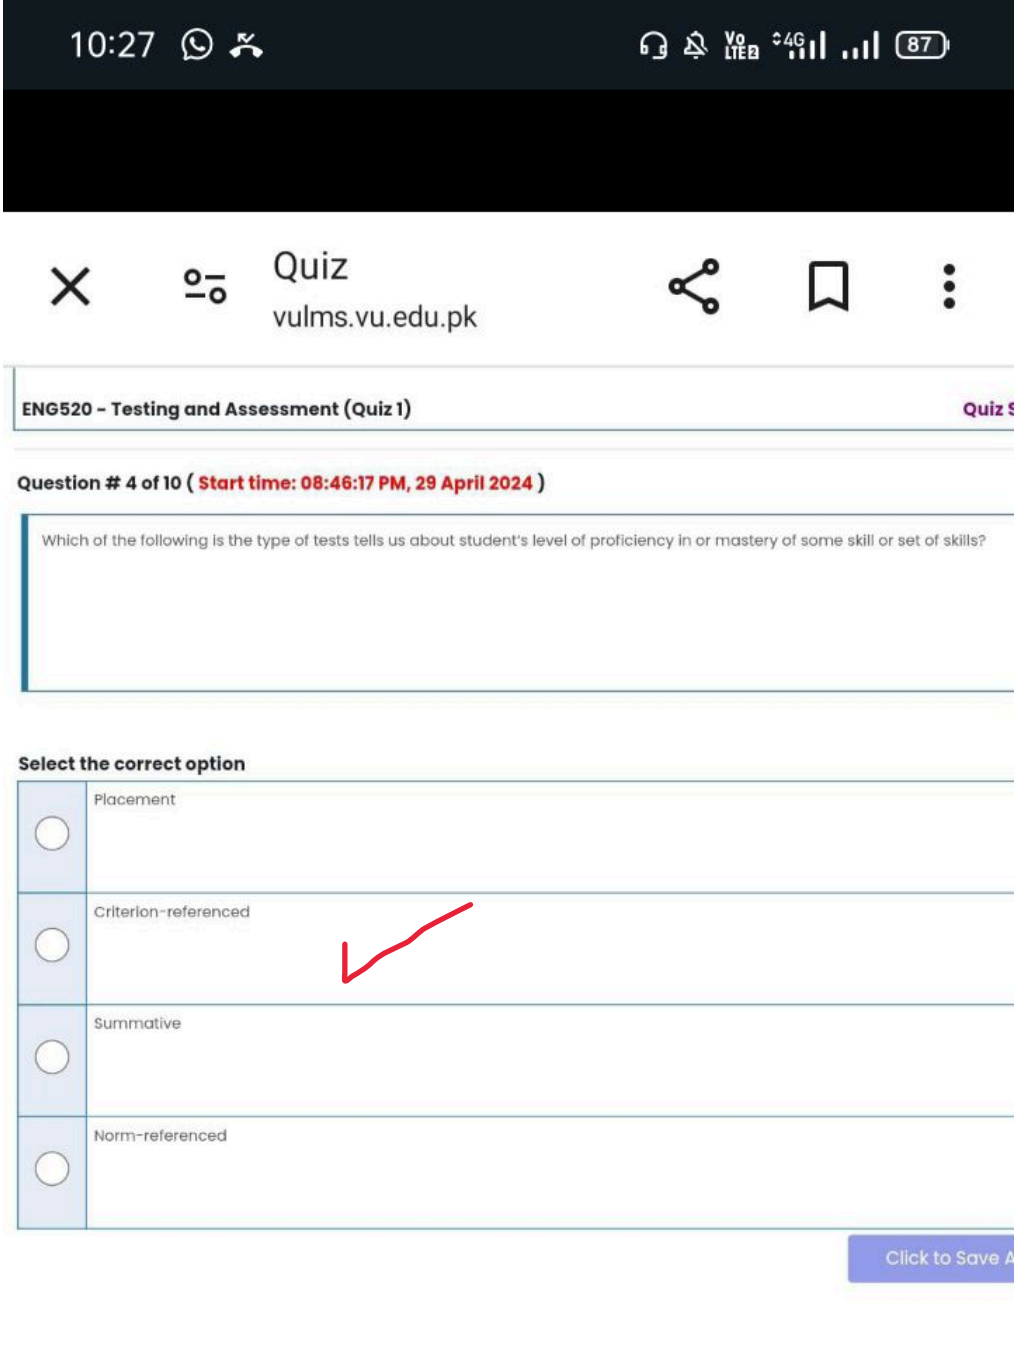

Lesson 01

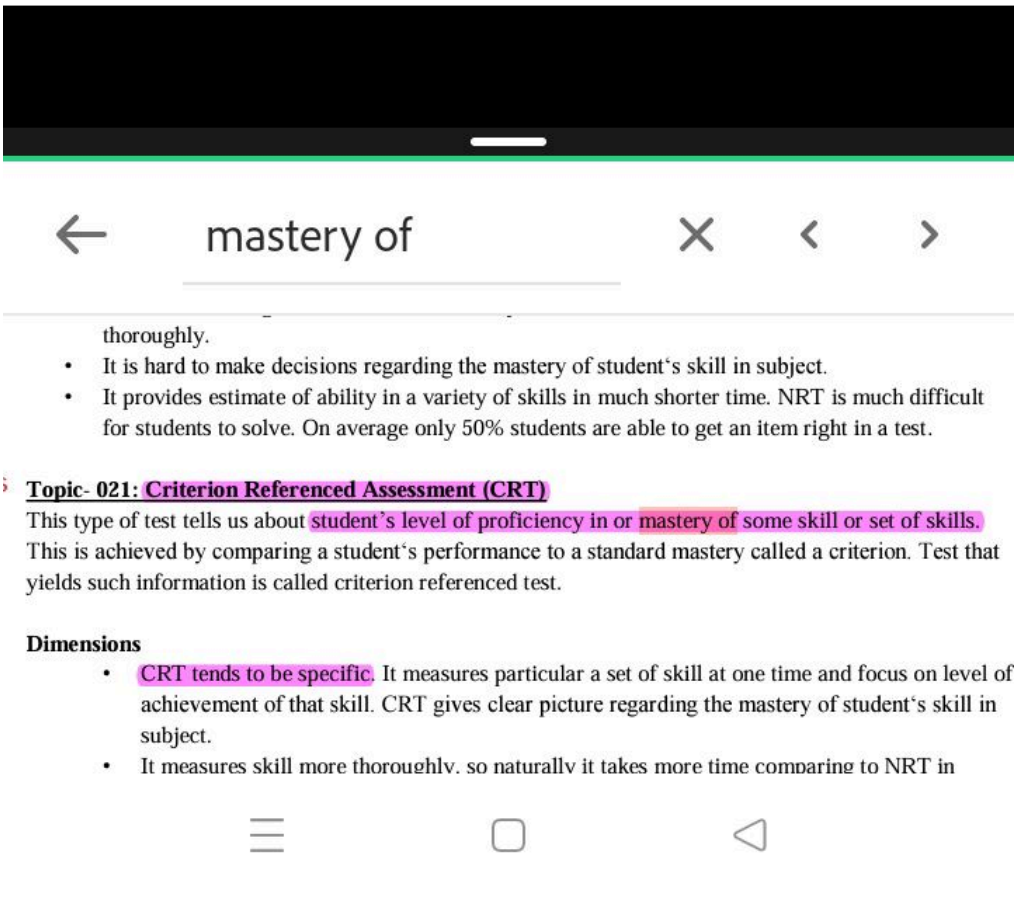

## CONCEPT OF ASSESSMENT-I

**Topic- 001: Measurement, Assessment and Evaluation**

**Measurement**

Measurement is the process by which the attributes or dimensions of some object (both physical and abstract) are quantified. The tools used for this purpose may include test, observation, checklist, homework, portfolios, project etc. Measurement can be easily understood if we use this word to measure height and distance because these things are physical present in the existence so height can easily be measured by scale. But in the field of education, our variable are not physical and cannot be directly measured e.g. attitude, behavior, and achievement etc. these all are abstract, so there measurement is relatively difficult than those who have physical existence. The tool used for measuring the abstract variables cannot measure exactly like scale (thermometer). So, in this whole course, whenever the measurement word is used it means that tool which will be used for measuring student abilities and then converts it in numerical form

thoroughly.

- It is hard to make decisions regarding the mastery of student's skill in subject.
- It provides estimate of ability in a variety of skills in much shorter time. NRT is much difficult for students to solve. On average only 50% students are able to get an item right in a test.

**Topic- 021: Criterion Referenced Assessment (CRT)**

This type of test tells us about student's level of proficiency in or mastery of some skill or set of skills. This is achieved by comparing a student's performance to a standard mastery called a criterion. Test that yields such information is called criterion referenced test.

**Placement Assessment**

Placement assessment determines prerequisite skills, degree of mastery of course goals and mode of learning. It is used when we want to assess student's prior knowledge so that we can decide what the leve of student is. It is associated with a student's entry level performance to know either student have a sufficient knowledge required for a particular course or not. Through placement assessment, teacher can be able to know that where a student should be placed according to the present knowledge or skills. It determines the level of student knowledge at the beginning of session and helps teacher plan the lesson accordingly. In the classroom, the teacher can use placement assessment to assess the level of students' knowledge and skills and then make lesson plans keeping in mind the level and need of students accordingly. It also determines the interest and aptitude of the student regarding a subject and helps in selecting the correct path for the future.

at the end

It provides feedback to teachers:

- About weakness and strength of learning process
- To modify their teaching practices
- To improve teacher-learning process

12

It also helps students to reflect on their weaknesses and encourages them for their successful learning. Formative assessment provides feedback to students who are struggling with a specific content area or concept. The main difference between formative and summative assessment is that the in formative assessment, improvement is in the process of learning rather than to certify students .We use different tools for formative assessment and it includes teacher made tests, custom made tests from textbook.

**Summative Assessment**

It comes at the end of the instructional session (course of the unit). It is designed to measure extend of achievement of intended learning outcomes. The primary utility of this type of assessment is to assign grades and certifying the level of mastery and expertise in a certain subject. It is usually done through teacher made achievement tests or alternative assessment techniques like portfolio to summarize the overall performance of the student at the end of the session. It is not compulsory to do it at the end of the semester, in semester system, there is a midterm and final term in one semester, and these both are summative assessment. It usually compares the student learning either with other students' learning (norm-referenced) or the standard for a grade level (criterion-referenced). Summative assessment includes teacher made survey test, performance, rating scales and product scales.

**Topic- 003: Types of Assessment: Methods of Interpreting Results**

Question # 7 of 10 ( Start time: 09:42:00 PM, 29 April 2024 )

Assessment can be classified in ____ways.

Select the correct option

- two
- three
- five
- four ✓

assessment can

**Topic – 002: Classroom Assessment**

The process of gathering, recording, interpreting, using and communicating information about a progress and achievement during the development of knowledge, concepts, skills and classroom assessment.

When we are teaching in a classroom, we are doing four things:

1. Developing students 'knowledge
2. Improving their concepts
3. Teaching the skills
4. Making their attitudes

And while doing so, we collect information about the development of these things, and then we r interpret and use it to communicate about the learning progress of students. This whole procedur called classroom assessment

**Classification of Assessment**

Assessment can be classified in four ways

1. Nature of Assessment
2. Format of Assessment
3. Use in Classroom Instruction
4. Method of Interpreting Results

**1. Nature of Assessment**

i. Maximum Performance Assessment
ii. Typical Performance Assessment

**2. Format of Assessment**

i. Fixed Choice Assessment
ii. Complex Performance Assessment

**3. Use in Classroom Instruction**

homework

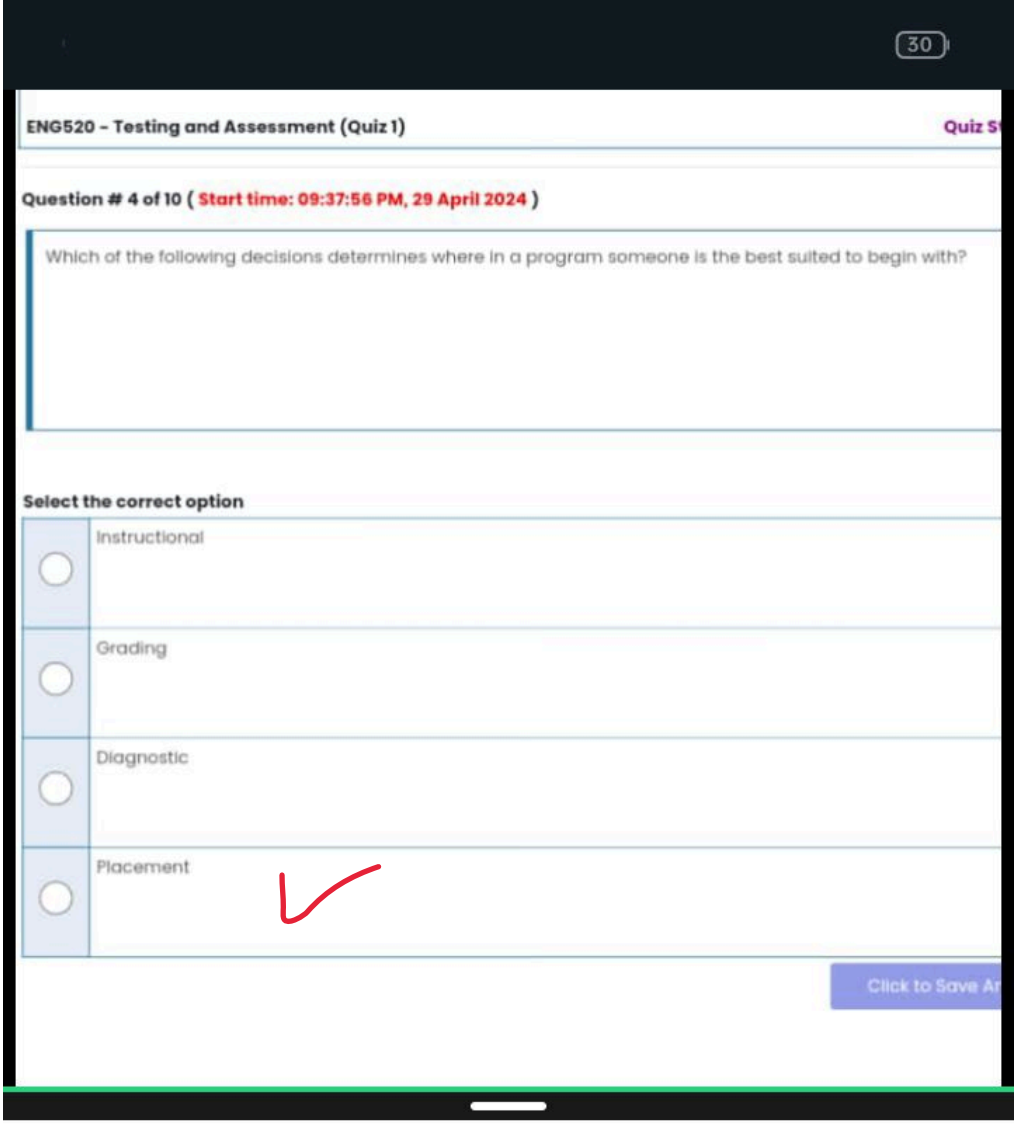

In CRT, classification of the examinee is measured as master/non-master or pass/fail. In NRT, ranks or scale scores are frequently used. 28

**Topic- 024: Formative Assessment** Q. Diff of formative & summative assessmet?

Formative assessment provides feedback and information during the instructional process, while learning is taking place and occurring. Formative assessment measures student progress, but it can also assess your own progress as an instructor.

**Types of Formative Assessment**

- Observations during in-class activities; of student's non-verbal feedback during lecture.
- Homework exercises as review for exams and class discussions
- Reflections journals that are reviewed periodically during the semester
- Question and answer sessions, both formal (planned) and informal (spontaneous)
- Conferences between the instructor and student at various points in the semester
- In-class activities where students informally present their results
- Student feedback collected by periodically answering specific question about the instruction and their self-evaluation of performance and progress

suited to

than instructional decisions. For the most students grading decisions are the most influential decision made about them.

**Diagnostic Decisions**

Diagnostic decisions are those made about a student's strengths and weaknesses and the reasons behind them. Teachers make diagnostic decisions based on information yielded by an informal teacher decisions about diagnostic nature can also be made with the help of standardized tests.

24

**Selection Decisions**

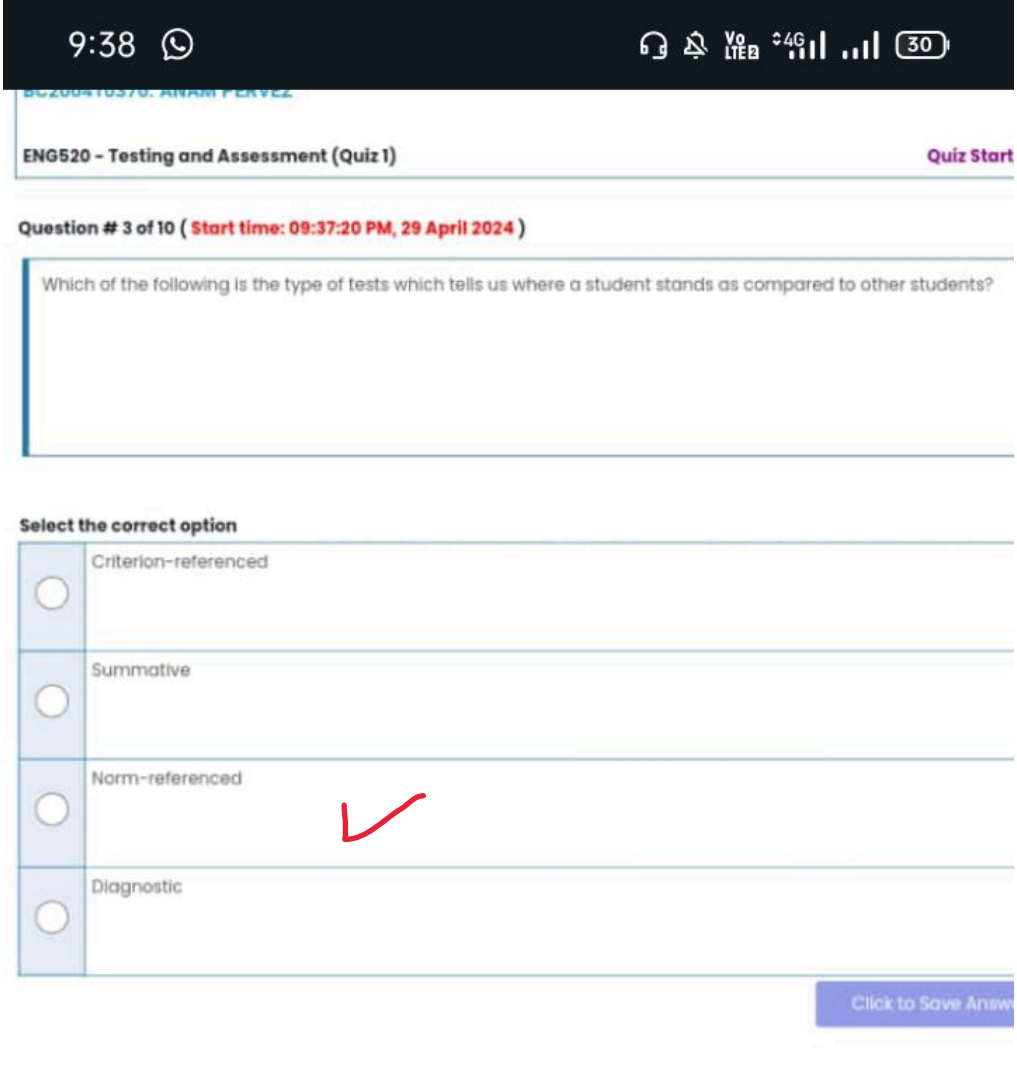

Selection decisions involve test data used in part for accepting or rejecting applicants for admission into a group, program, or institution.

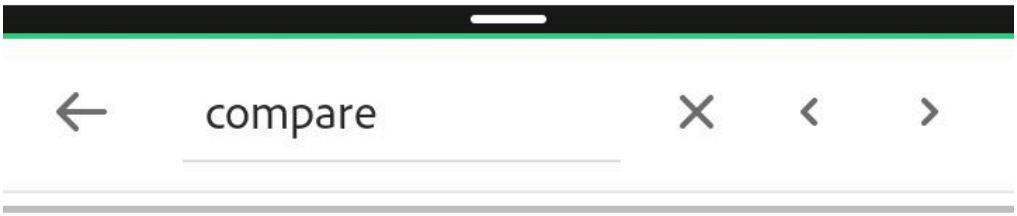

**Placement Decisions**

Placement decisions are made after an individual has been accepted in a program. They determine where in a program someone is the best suited to begin with.

**Program or curriculum decision**

This type of decision is taken at policy level. Where it is decided if a lesion, unit or subject will continue or abandoned for the next academic session according to the national objectives of education.

**Topic- 020: Norm Referenced Assessment (NRT)**

General purpose of assessment is to gather information to make better and more informed d utility of that information is what differentiate among thetypes of assessments.

**Norm Referenced Assessment (NRT)**

Type of test which tells us where a student stands compared to other students. It helps to determine a student's place or rank among a group of similar students. Such kind of test is called norm-referenced test.

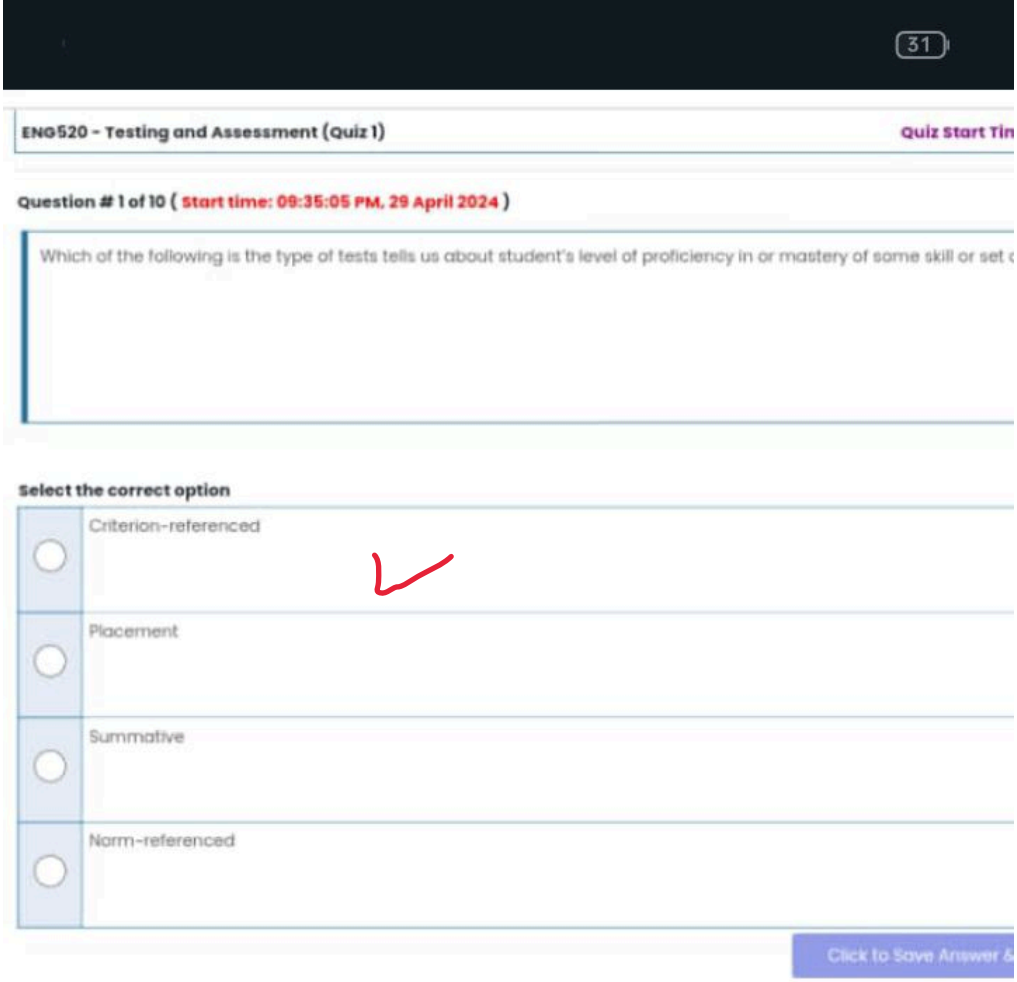

**Dimensions**

- It provides estimate of ability in a variety of skills in much shorter time.
- NRT tends to be general. It measures variety of skills at same time but fails to measure them thoroughly.
- It is hard to make decisions regarding the mastery of student's skill in subject.
- It provides estimate of ability in a variety of skills in much shorter time. NRT is much difficult for students to solve. On average only 50% students are able to get an item right in a test.

cqs **Topic- 021: Criterion Referenced Assessment (CRT)**

This type of test tells us about student's level of proficiency in or mastery of some skill or set of skills. This is achieved by comparing a student's performance to a standard mastery called a criterion. Test th yields such information is called criterion referenced test.

**Dimensions**

mastery of

**Dimensions**

26

**Topic- 021: Criterion Referenced Assessment (CRT)**

This type of test tells us about student's level of proficiency in or mastery of some skill or set of skills. This is achieved by comparing a student's performance to a standard mastery called a criterion. Test that yields such information is called criterion referenced test.

**Dimensions**

- CRT tends to be specific. It measures particular a set of skill at one time and focus on level of achievement of that skill. CRT gives clear picture regarding the mastery of student's skill in subject.
- It measures skill more thoroughly, so naturally it takes more time comparing to NRT in measuring the mastery of said skill.
- Items included in CRT are relatively easier. Around 80% of the students are expected to respond item correctly in the test.
- CRT compares students 'performance to the standards indicative of mastery.
- Breadth of content sampled is narrow and covers very few objectives.

mastery of

**Dimensions**

**Topic- 021: Criterion Referenced Assessment (CRT)**

This type of test tells us about student's level of proficiency in or mastery of some skill or set of skills. This is achieved by comparing a student's performance to a standard mastery called a criterion. Test that yields such information is called criterion referenced test.

**Dimensions**

- CRT tends to be specific. It measures particular a set of skill at one time and focus on level of achievement of that skill. CRT gives clear picture regarding the mastery of student's skill in subject.
- It measures skill more thoroughly, so naturally it takes more time comparing to NRT in measuring the mastery of said skill.
- Items included in CRT are relatively easier. Around 80% of the students are expected to respond item correctly in the test.
- CRT compares students 'performance to the standards indicative of mastery.
- Breadth of content sampled is narrow and covers very few objectives.

master or

- Score distribution
- Reported scores

**Comparison Targets**

In CRT, the examinee's performance is compared to an external standard of competence. While in NRT examinee's performance is typically compared to that of other examinees.

27

**Selection of Items**

Items included in CRT are of specific nature and designed for the student skilled in particular subjects. NRT items are of general knowledge nature. Student should be able to answer it, but superficial knowledge is sufficient to respond the item correctly.

**Meaning of Success**

In CRT, an examinee is classified as a master or non-master. There is no limit to the number of pass or fail. In NRT, examinee's opportunity for success is relative to the performance of the other individuals who take the test.

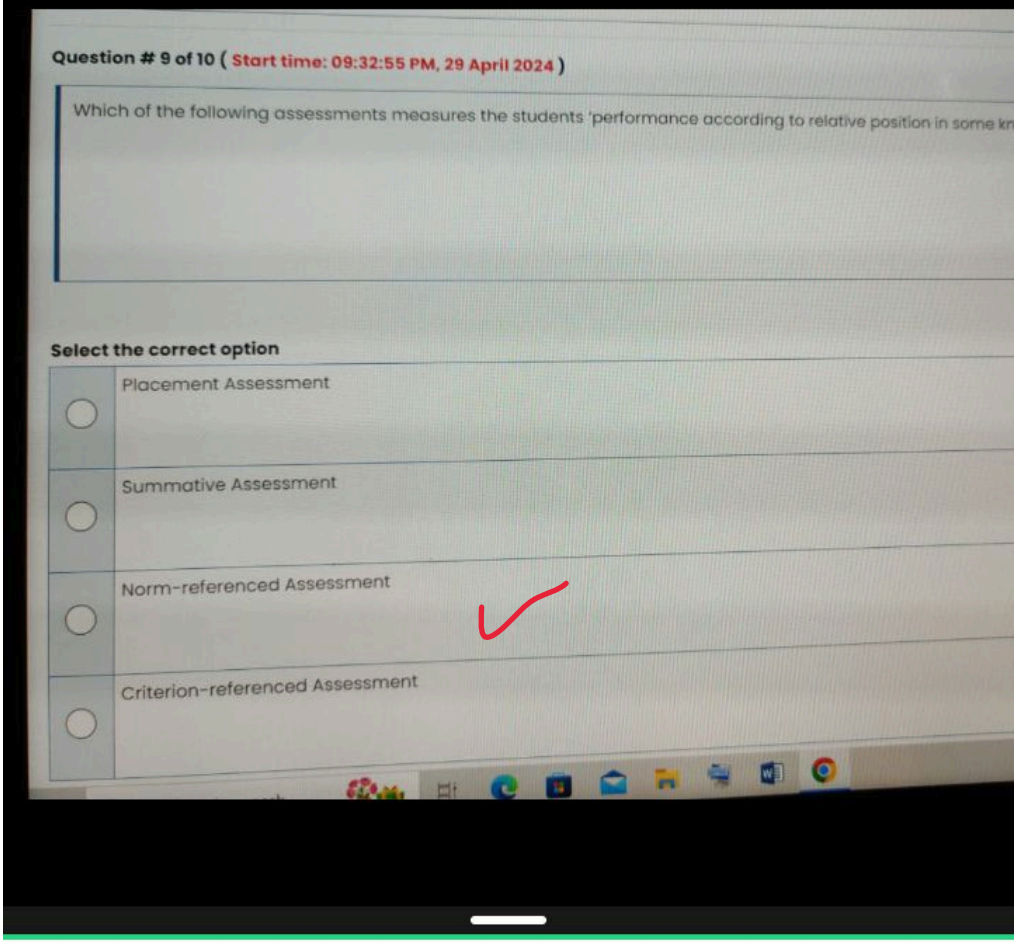

**Average Item Difficulty**

In CRT, the average item difficulty is fairly high. Examinees are expected to show mastery. In NRT, the average item difficulty is lower. Tests are able to spread out the examinees 'and provide a reliable ranking.

**Score Distributions**

In CRT, a plot of the resulting score distribution will show most of the scores clustering near the high er of the score scale. In NRT, broader spread of scores is expected, with a few examinees earning very low or high scores and many earning medium scores.

**Reported Scores**

performance

achievement of intended learning outcomes. The primary utility of this type of assessment is to assign grades and certifying the level of mastery and expertise in a certain subject. It is usually done through teacher made achievement tests or alternative assessment techniques like portfolio to summarize the overall performance of the student at the end of the session. It is not compulsory to do it at the e 12 semester, in semester system, there is a midterm and final term in one semester, and these both summative assessment. It usually compares the student learning either with other students' learning (norm-referenced) or the standard for a grade level (criterion-referenced). Summative assessment includes teacher made survey test, performance, rating scales and product scales.

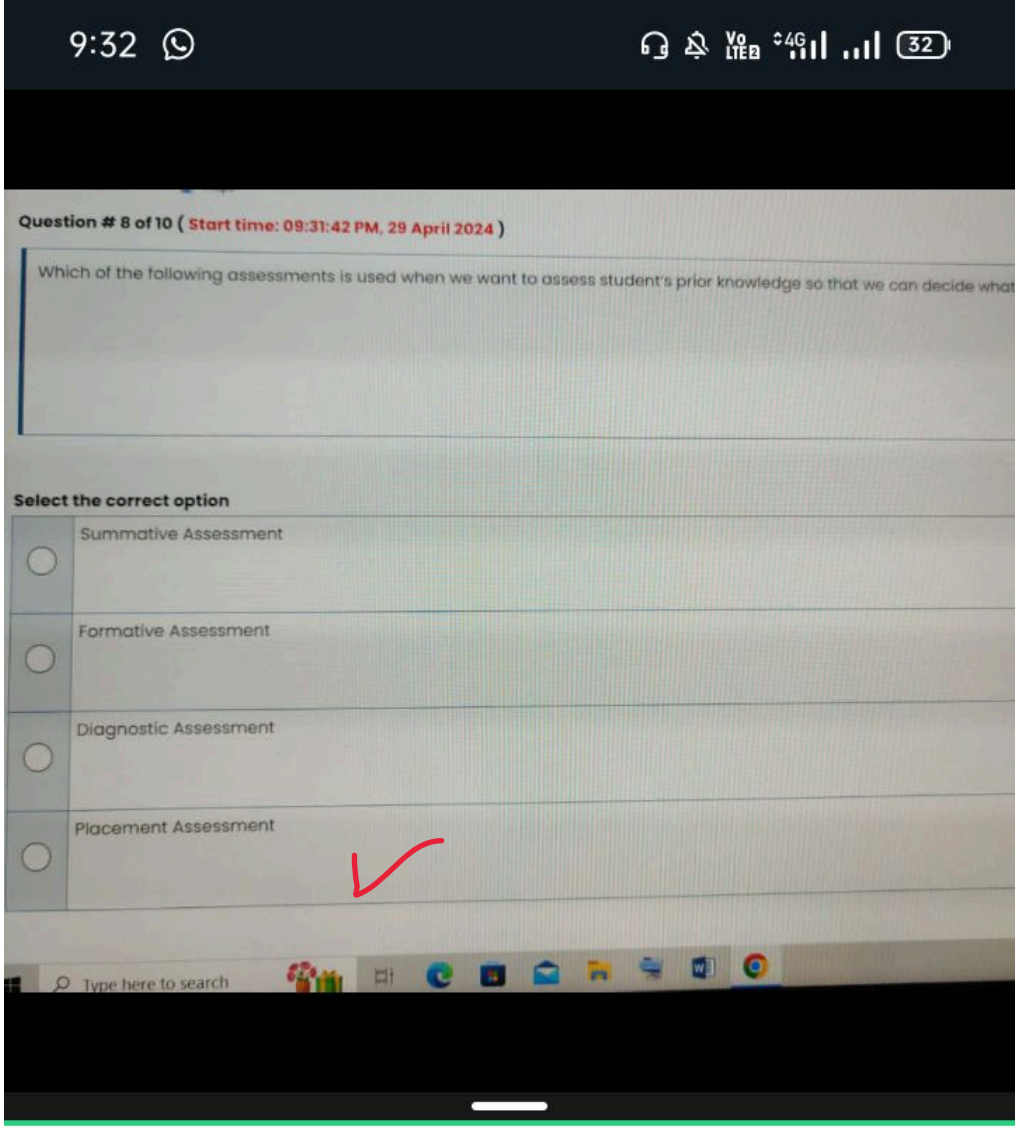

**Topic- 003: Types of Assessment: Methods of Interpreting Results**

- Norm-referenced Assessment
- Criterion-referenced Assessment

**Norm-referenced Assessment**

Norm-referenced assessment measures the students' performance, according to the relative position in any known group. E.g. ranks tenth in classroom group of 50 or top 5 students in a class. Relative position means a point defined with reference to another position (where a student stands compared to other students) rather than reporting students' achievement, it reports students standing among other students. NRT is utilized to discriminate between a certain groups of students. It is never used for certification or

Norm-referenced assessment compares a student's performance to a known group and is not used for certification but for distinguishing between groups. It often reports students' positions relative to others using percentiles.

## CONCEPT OF ASSESSMENT-II

**Topic- 001: Use of Assessment in Classroom Instruction**

Classification of assessment in terms of its uses in classroom instruction

i. Placement Assessment
ii. Diagnostic Assessment

**Placement Assessment**

Placement assessment determines prerequisite skills, degree of mastery of course goals and mode of learning. It is used when we want to assess student's prior knowledge so that we can decide what the level of student is. It is associated with a student's entry level performance to know either student have a sufficient knowledge required for a particular course or not. Through placement assessment, teacher can be able to know that where a student should be placed according to the present knowledge or skills. It determines the level of student knowledge at the beginning of session and helps teacher plan the lesson accordingly. In the classroom, the teacher can use placement assessment to assess the level of students' knowledge and skills and then make lesson plans keeping in mind the level and need of students accordingly. It also determines the interest and aptitude of the student regarding a subject and helps in selecting the correct path for the future.

**Examples:**

**Readiness test:** It is used to determine the students' knowledge or concept about a particular course of instruction or what is the level of students.

**Aptitude test:** It is used for the admission in a particular program.

**Pretest:** It is made according to the course objectives and determines the student present knowledge about them.

**Self- report inventories:** It determines the student level by interviewing or discussion.

**Diagnostic Assessment**

key learning

Write Four levels of

**ASSESSMENT, TESTING AND NATIONAL CURRICULUM**

**Topic- 007: Role of National Curriculum in Assessment**

In national curriculums of Pakistan, learning of student is classified into four levels.

14

1. Competency
2. Standards
3. Benchmarks
4. Student learning outcome (SLOs)

**Competency**

It is a key learning area, for example, algebra, arithmetic, geometry, etc. in mathematics and vocabulary, grammar, composition, etc. in English.

**Standards**

These define the competency by specifying broadly, the knowledge, skills and attitudes that students will acquire, should know and be able to do in a particular key learning area during twelve years of schooling.

**Benchmarks** & its relation to standards?

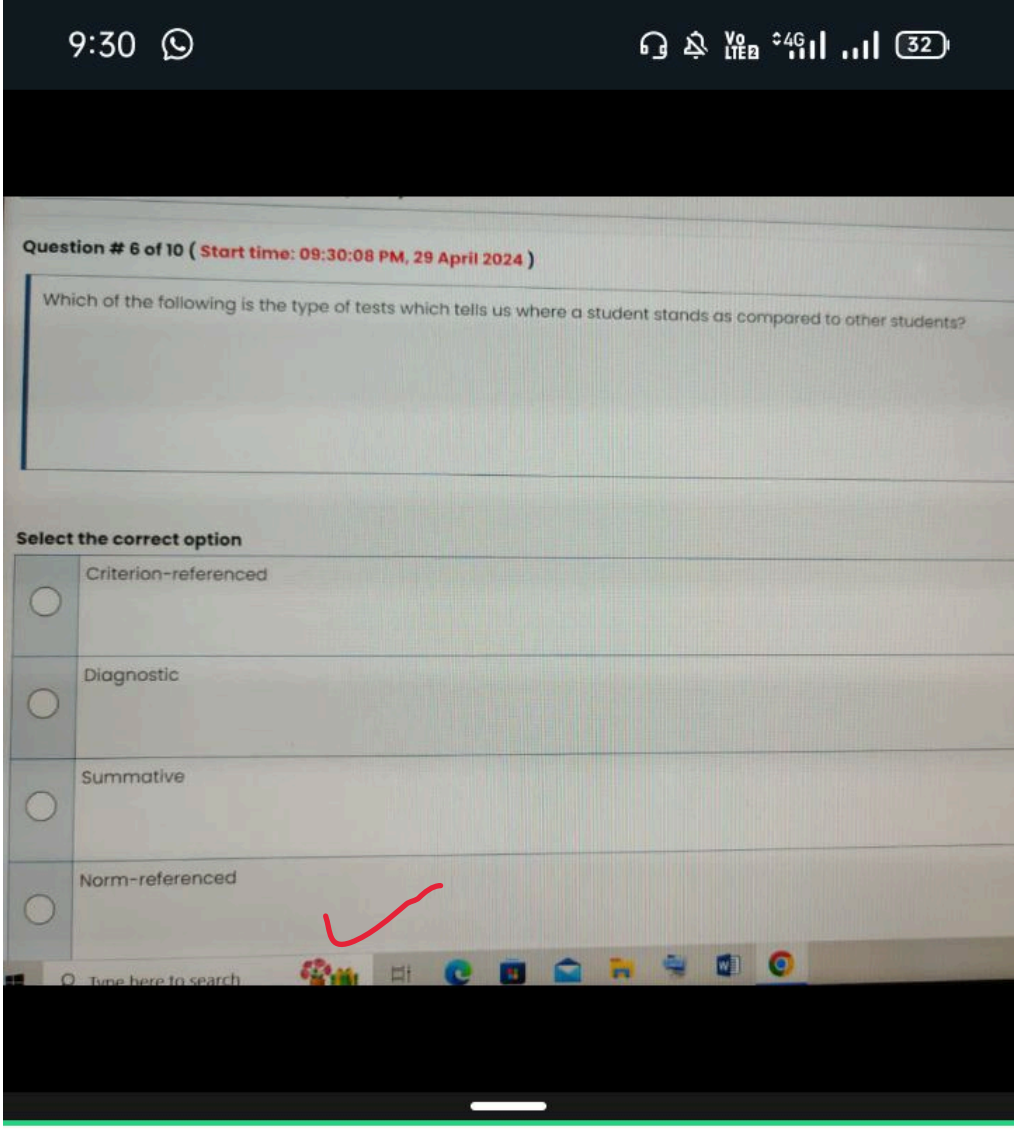

The benchmarks further elaborate the standards, indicating what the students will accomplish at the end of each of the five developmental levels in order to meet the standard.

**Student Learning Outcomes**

These are built on the descriptions of the benchmarks and describe what students will accomplish at the end of each grade. It is the lowest level of hierarchy.

DOK measures the degree to which the knowledge brings about from students on assessments is as complex as what students are expected to know and do as stated in the curriculum.

**Levels of DOK (Depth of Knowledge)**

**Recall**

Recall of a fact, information, or procedure. The subject matter at this particular level usually involves working with facts, terms and/or properties of objects.

Key words: list, enlist, name, define etc.

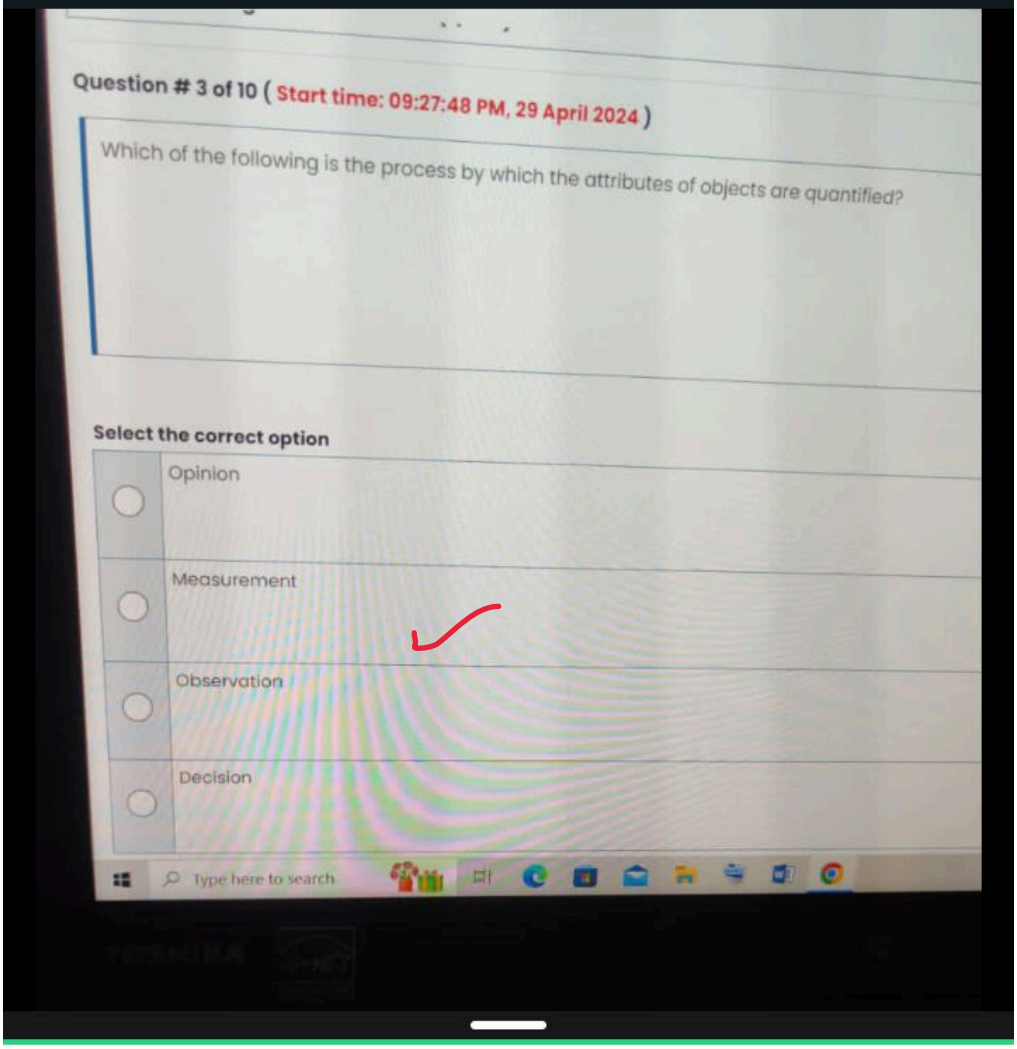

**Skill/Concept**

It includes the engagement of some mental processing beyond recalling or reproducing a response. Use information or conceptual knowledge, two or more steps, not just recalling

Key words: Graph, separate, relate, contrast, narrate, compare etc.

**Strategic Thinking**

Items falling in this category demand a short-term use of higher order thinking processes, such as analy

Lesson

## CONCEPT OF ASSESSMENT-I

**Topic- 001: Measurement, Assessment and Evaluation**

**Measurement**

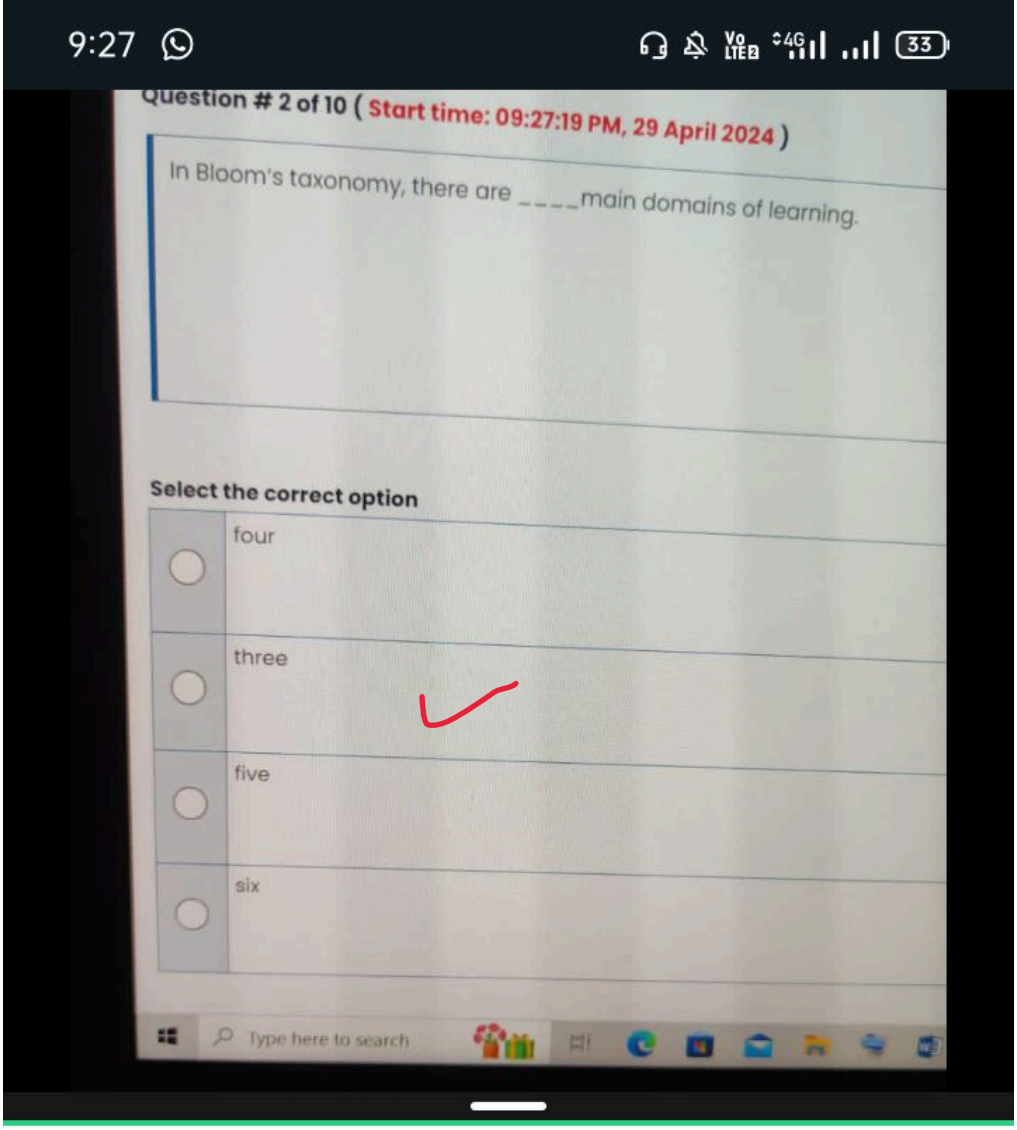

Measurement is the process by which the attributes or dimensions of some object (both physical and abstract) are quantified. The tools used for this purpose may include test, observation, checklist, homework, portfolios, project etc. Measurement can be easily understood if we use this word to measur height and distance because these things are physical present in the existence so height can easily be measured by scale. But in the field of education, our variable are not physical and cannot be directly measured e.g. attitude, behavior, and achievement etc. these all are abstract, so there measurement is relatively difficult than those who have physical existence. The tool used for measuring the abstract variables cannot measure exactly like scale (thermometer). So, in this whole course, whenever the measurement word is used it means that tool which will be used for measuring student abilities and then converts it in numerical form.

**Assessment**

It means an appraisal of something to improve the quality of teaching and learning process for deciding what more can be done to improve the teaching, learning and outcomes.

**Evaluation**

Evaluation is the process of making a value judgment against intended learning outcomes and behavior, decide the quality and extent of learning. Evaluation is always related to your purpose, you aligned your
