

ENG529

Final-Term (Solved)

ABSTRACT

This comprehensive collection of notes is accurately crafted to empower students to excel academically, ensuring they achieve a minimum of 80% marks in their examinations. The content is organized with clarity and precision, focusing on key concepts, critical analyses, and practical applications tailored to the syllabus. These notes serve as a reliable resource for both thorough preparation and last-minute revision. Designed to inspire confidence and mastery, this guide is an essential tool for students striving for academic excellence.

Maha Malik

Technology in Language Teaching

ENG529_Technology in Language Teaching
Final-Term (Solved)

(03 Marks Questions)

Q. Functions of Juxta, Wordle, and Walrus

- Juxta: Used for textual analysis, particularly comparing texts for variations.
- Wordle: A tool for creating word clouds, visually highlighting frequent terms in text.
- Walrus: A graph visualization tool for network data representation.

Q. Theoretical Framework of SLA Research

SLA research is guided by theories like:

- Cognitive Approaches: Focus on processing input and output.
- Interaction Hypothesis: Emphasizes meaningful interaction.
- Sociocultural Theory: Views learning as mediated through social interaction and tools.

Q. Three Challenges Faced by L2 Learners in Online Reading Environments

- Lack of immediate feedback from instructors.
- Difficulty understanding authentic texts without annotations.
- Navigational challenges in accessing digital content.

Q. E-Assessment

- Definition: Electronic assessment involves using digital tools for evaluating learners' performance.
- Benefits:
    - Immediate feedback.
    - Easy tracking of progress.
    - Flexibility in assessment modes.
    - Reduces paper usage.
    - Personalized assessment pathways.

Q. Considerations for Teachers Using Technology for Curriculum Development

- Ensure alignment with pedagogical goals.
- Provide training for both teachers and students.
- Use technology to enhance engagement without overwhelming learners.

Q. Affordance and Technology Usage

- Affordance refers to the possibilities that technology offers in a specific learning context (e.g., mobile devices enable on-the-go learning).
- Usage includes tools like LMS, multimedia platforms, and collaborative applications for education.

ENG529_Technology in Language Teaching
Final-Term (Solved)

Q. Sociocultural Theory

- Highlights the importance of social interaction and cultural context in language learning.
- Learning is mediated through tools like language, symbols, and technology.

Q. Three Considerations and Approaches of SLA

- Considerations:
  - Learners' individual differences.
  - The role of input and output.
  - Interaction opportunities.
- Approaches:
  - Task-based Language Teaching (TBLT).
  - Communicative Language Teaching (CLT).
  - Content-Based Instruction (CBI).

Q. Three Characteristics of Blended Learning

- Combines online and offline modes.
- Promotes self-directed learning.
- Involves flexibility in pace and scheduling.

Q. Three Challenges for L2 Learners

- Difficulty adapting to digital tools.
- Limited access to authentic language contexts.
- Technical issues like connectivity.

Q. Names of Google Tools

- Google Docs, Google Drive, Google Forms, Google Classroom.

Q. Dragon Software

- A speech recognition tool enabling users to transcribe spoken words into text, useful for language practice.

Q. CAPT (Computer-Assisted Pronunciation Training)

- Focuses on improving learners' pronunciation using tools that provide real-time feedback and practice.

Q. Definitions

- E-assessment: Assessing learners through digital means.
- E-submission: Submitting assignments digitally.

- E-marking: Grading work through online platforms.

Q. Text-to-Speech (TTS)

- Converts written text into spoken words, aiding listening skills and pronunciation practice for L2 learners.

Q. three other names of cognitive assignment

In the context of technology in language teaching, cognitive assignments are often referred to as cognitive tasks, learning tasks, or educational activities. These tasks are designed to engage students' cognitive processes, such as problem-solving, critical thinking, and understanding complex concepts. By using technology, these assignments can be made more interactive and engaging, allowing students to explore language learning through simulations, games, and other digital tools that promote active learning and deep understanding.

Q. Integrating technology into the curriculum has the following outcomes

- More engaged students
- Simplified materials
- Increased motivation and better-developed collaboration skills
- Overall increased student achievement due to increased involvement and learning at their own pace

Q. 3 benefits of e-assessments

- Immediate feedback, tailored to help students improve their knowledge and performance
- Access for students in different geographical locations and at different times
- Sophisticated reporting, allowing you to refine the exercise or identify areas in which more instruction is needed
- Students undertake online tests many times to assess and re-assess their knowledge

Q. write 2 names of web course management systems that are for higher education

- learning management system (LMS)
- Audiographic and videoconferencing environments

Q. Different Forms of E-assessment

- online tests, quizzes, and exams
- e-submission and e-marking
- self- and peer-assessment
- student response systems

Q. CCA program

Colossal Cave Adventure This virtual text-based environment was based on the real-life Mammoth Cave system in Kentucky but included several fantasy-inspired components.

ENG529_Technology in Language Teaching
Final-Term (Solved)

Q. PLATO

PLATO exercises were largely text-based and focused on one particular skill, with assessment through multiple-choice or short answer format questions. The interactions focused on grammar and vocabulary development, although PLATO did have capabilities to display graphics (through a pneumatic tool to access a microfiche) and play audio (on mounted disks). The monitors used were surprisingly sophisticated, as they were touch-sensitive, thereby allowing the creation of exercises such as touching the screen to identify a designated vocabulary item in a picture or playing a concentration-style matching game.

Q. Affordance

In the context of language teaching, affordance refers to the potential actions and benefits that a particular technology or tool offers to learners. For example, an interactive whiteboard affords opportunities for dynamic and interactive presentations, while a language learning app may afford personalized practice and instant feedback. Understanding affordances helps educators select the most appropriate technologies to enhance learning outcomes and engagement.

Q. E- books two libraries names

- Project Gutenberg provides free access to a vast collection of e-books, including classic literature and language resources.
- Google Books offers a comprehensive digital library where users can search, preview, and read books across various subjects, including language learning materials.

Q. types of CMC activities

- Chat,
- Moo,
- email

Q. CMC activities themselves can be further divided into

- asynchronous communication events (ACMC) in deferred time or
- synchronous chat (SCMC) carried out in real-time

Q. Text-based CMC

Text-based CMC interaction has long been argued to reduce the anxiety felt by many learners as they attempt to communicate in the target language. This is largely due to the mediated nature of the online exchanges as well as the written modality. In a text-based CMC environment learners are not required to speak, just type. This low- anxiety setting has been described in previous game-based research.

Q. Digital books

Digital books or e-books are an effective technological tool for curriculum. Anything that makes life easier for people is attractive. E-Books are portable and convenient. With a supported eBook

device, anyone can have a library at their fingertips. Carrying around one's favourite books on iPad, eReader, smartphone, or table is a lot easier than lugging around a thousand paperback books.

Q. three other names of cognitive assessment

- **Cognitive Evaluation**: This term emphasizes the process of evaluating cognitive functions and abilities.
- **Mental Ability Assessment**: This term focuses on assessing various mental capabilities, including reasoning, memory, and problem-solving skills.
- **Intellectual Assessment**: This term is often used to refer to evaluations that measure intellectual functions and capacities.

Q. Three SLA-relevant CALL studies

- Cognitive approach
- Interactionist approach
- Sociocultural theory

Q. What are advantages and disadvantages of the application of computer technology for teachers and learners as per Bransford, Brown, and Cocking (2000)?

According to Bransford, Brown, and Cocking (2000), the application of computer technology enables teachers and learners to make local and global societies that connect them with the people and expand opportunities for their learning. They continued that the positive effect of computer technology does not come automatically; it depends on how teachers use it in their language classrooms.

Q. Explain e-submission and e-marking?

e-submission is the process by which a student submits work online for storage and retrieval by academic, administrative or other staff for marking, feedback, or review. This can also include originality checking to help identify plagiarism using Turnitin.

e-marking is the process by which staff provide marks and feedback to students online, which can include online annotations e.g. using Blackboard inline grading, annotated files e.g. using comments in Microsoft Word, audio, video, or the use of online forms.

Q. How does technology develop learners thinking order. Three Benefits?

According to Arifah (2014), the use of the internet increases learners' motivation. The use of film in teaching helps learners to realize the topic with enthusiasm and develop their knowledge. Learners can learn meaningfully when technology is used in the process of learning through using computers and the internet. When learners ENG529_Finals_Solved_Spring2024 Maha Malik's Compilation learn with technology, it assists them in developing their higher order thinking skills. It can be concluded that the true combination of multimedia and teaching methodology is very important to attract learners' attention towards English language learning.

Q. Three uses of learning analytics in L2 writing?

- Learning analytics can facilitate the provision of tailored, automated feedback to L2 writers by capturing data throughout the writing process, including planning, composing, reviewing, editing, and receiving feedback.
- By recording students' writing behavior and interactions with peers and instructors in real-time, learning analytics can help researchers and practitioners gain insights into students' writing processes and behaviors.
- Learning analytics can be enhanced by integrating techniques such as keystroke logging and eye-tracking, which provide deeper insights into students' writing behavior, multimodal composition processes, and strategies for resource use and self-regulation.

Q. Three key points that a teacher should consider for effective blended learning? (Please recheck)

- People learn better when they can choose their path of study, as this is a great motivator.
- Listening is a key part of teaching and that listening happens best in the classroom environment.
- Taking more and more of a back seat in the classroom environment is a testament not only to their learners taking charge of their learning but also to the fact that they, the teachers, have developed a blend that is appropriate to the learners and which is helping them become effective communicators.

Q. Curriculum design?

Curriculum design is a term used to describe the purposeful, deliberate, and systematic organization of curriculum within a class or course. In other words, it is a way for teachers to plan instruction. When teachers design a curriculum, they identify what will be done, who will do it, and what schedule to follow.

Q. Three cognitive of language?

- Accuracy,
- complexity, and
- fluency

Q. Three categories of general technology L2 learning

- Web 2.0 Applications
- Automated Writing Evaluation
- Corpus-Based Tools

(05 Marks Questions)

Q. Self-assessment of e-learning (5 marks)

Self-assessment means the process of having the learners critically reflect upon, record the progress of and perhaps suggest grades for, their learning. The term peer-assessment refers to the process of having the learners critically reflect upon, and perhaps suggest grades for, the learning of their peers.

ENG529_Technology in Language Teaching
Final-Term (Solved)

Reasons for Using Self-assessment

- Encourage reflection
- Help lecturers focus their feedback (e.g. not telling students what they are already aware of)
- An important skill in itself – helping students become more autonomous learners

Q. Define LMS & 5 benefits (5 marks)

A Learning Management System (LMS) is a software application or web-based technology used to plan, implement, and assess a specific learning process. It provides an infrastructure for the administration, documentation, tracking, reporting, and delivery of educational courses or training programs. LMSs can also be referred to as content management systems (CMSs) or virtual learning environments (VLEs).

Benefits of LMS

- Centralized Learning Platform: An LMS synchronizes all academic and administrative activities on a single platform, facilitating easy access and management of educational resources.
- Enhanced Communication Tools: Modern LMSs, such as Moodle and Blackboard, offer a variety of communication tools (both asynchronous and synchronous), which enhance interaction and engagement between students and instructors.
- Video Integration: LMS platforms allow users to record and incorporate videos directly into the system, which can be used for posts, discussion forums, and assignments. This feature enhances the learning experience by incorporating multimedia elements.
- Improved Speaking Opportunities: Through asynchronous video postings, students can record and improve their video responses. This process helps students achieve better accuracy and complexity in their language use, as they have more time to plan and refine their responses.
- Task Design Flexibility: LMSs provide flexibility in designing educational activities. Instructors can carefully plan tasks that focus on developing various language skills, including accuracy, complexity, and fluency, thus tailoring the learning experience to meet specific learning objectives.

Q. five levels of virtual worlds/ VWs begin with details in five key areas

- Age level: The specific age ranges recommended for the VW based on the information provided by the company. This may be in grade levels or age.
- Game level (low, mid, or high): A "pure" social environment would rarely be strongly game-like in nature. A MMORPG like World of Warcraft, on the other hand, may include social elements, but the primary goal of WoW is to gain talents, skills, and tools in order
- Socialization level (low, mid, or high): VWs are social spaces, but some are more social than others.

- Education focus (low, mid, or high): Nearly all VWs have potential use for education. The key is in the way that they are used. VWs are a tool for teachers in the same way that PowerPoint can be a tool.
- Technical requirements (low, mid, or high): Some VWs are more graphics intensive than others. Some require more brandwidth, or are more difficult to navigate.

Q. interactive whiteboard enhance students engagement and learning outcome write 5 benefits

Interactive whiteboards allow educators to take standard lessons and turn them into interactive activities. Students have a lot of fun while they learn. Interactive whiteboards allow students to interact with the learning material. They become a part of the lesson and can even teach each other. Their understanding of the subject is seen through touching, drawing, or writing on the board. Educational games can be played by entire classrooms. They also provide immediate feedback, so students and teachers can easily assess the student progress. Interactive whiteboards are clean and require very low maintenance. No chalk or markers or other writing utensils needed. Data is modified using a specialized pen for highlighting, drawing, and writing. Therefore there is no mess. No cleanup. It's just that easy. Various media types can be displayed on an interactive whiteboard. Whether photos, graphs, maps, illustrations, or videos, teachers have an abundance of options. They can create creative lessons to inspire their students. Students are more attentive in the classroom; their comprehension improves; test scores rise, and literacy increases. Students learn better and remember it. When students are engaged more in the classroom, learning always increases.

Q. SLA in CALL

Second Language Acquisition (SLA) in the context of Computer-Assisted Language Learning (CALL) refers to the process by which learners acquire a second language through the use of technological tools and resources. CALL programs utilize various technologies, such as multimedia software, online platforms, and mobile apps, to provide interactive and immersive learning experiences. These technologies support SLA by offering personalized feedback, extensive practice opportunities, and access to authentic language materials, thereby enhancing the overall effectiveness of language learning.

Q. CAPT five benefits

- Increased Practice Time: CAPT software allows students to practice pronunciation extensively without the limitations of class time, providing ample opportunities to improve their skills.
- Risk-Free Environment: Students can practice in a non-human, non-judgmental setting, which reduces anxiety and encourages experimentation without fear of making mistakes or facing penalties.
- Patience and Flexibility: Unlike human instructors, CAPT programs are infinitely patient and can accommodate the individual pace of each learner, allowing for a more personalized learning experience.

- Diverse Speech Sounds Exposure: CAPT software can include diverse speech sounds from different speakers and registers, helping students to become familiar with a wide range of accents and intonations.
- Clear Feedback on Intonation: CAPT tools, such as PRAAT acoustic analysis software, provide students with clear, visual feedback on their intonation and pronunciation, helping them understand and correct their speech patterns effectively.

Q. Blended Learning

If appropriately conceived, developed and delivered — can support any number of learners, anywhere and anytime; it can help managers use human and other resources in the most efficient way possible to give learners the best learning experience possible. It is satisfying to know that there is a growing body of evidence to support the view that blended learning can result in a better student learning experience, an improvement in learning outcomes, and greater student motivation, confidence and satisfaction, leading to learners becoming more independent learners and enjoying learning the language.

Q. Blended Approach

A blended approach represents a significant departure from a traditional approach. It represents a fundamental reconceptualization and reorganization of the teaching and learning dynamic. In this respect, no two blended learning designs are identical.

Q. factors for motivation in blended learning

However, one factor encouraging motivation in blended learning is reliance on discovery learning and self-directed learning, the type of skill base that is often lacking among such students (Huang & Zhou, 2003). It exists everywhere and is most prominent amongst students used to being taught, to receive instructions, to learning for exams. Another important factor regarding motivation is a cultural shift from teaching to learning, from being taught to learning on one's own with guidance (Prensky, 2007), which needs to take place when a blended course is adopted.

Q. challenges while employing AWE

The challenges while employing Automated Writing Evaluation (AWE) tools highlighted in the paragraph are:

- Lack of Clarity in Writing Improvement
- Limited Genre Scope: AWE programs often cover only a few genres, such as persuasive, narrative, and informative genres, which may not align with the diverse genres required in content courses.
- Contextual Implementation Issues: Automated corrective feedback needs to be tailored to the target audience and learning context, which can complicate its implementation.
- Need for Integration with Teacher Feedback: AWE feedback may be more effective when combined with teacher feedback, and there are various ways to integrate them effectively.

- Feedback Application: There are challenges in determining how to best use AWE feedback, such as whether students should use it to improve initial drafts or if teachers should use it as a diagnostic tool.

Q. use of clickers

- **Promote Active Learning**: Clickers are used to encourage active participation in the classroom.
- **Enhance Teaching Effectiveness**: They help teachers by removing the guesswork from teaching.
- **Collect and Evaluate Student Responses**: Clickers enable teachers to gather and assess student answers during class.
- **Gauge Student Learning**: They allow teachers to monitor student understanding in real time.
- **Adjust Instruction:** Teachers can modify lectures or classroom activities immediately based on the feedback received through clickers.
- **Encourage Participation**: Clickers enable students to answer questions anonymously, reducing the fear of making mistakes and increasing participation.

Q. distance learning factors

- **Technology Access**: Availability of and access to the necessary technology, including computers, internet connectivity, and software, is crucial for successful distance learning.
- **Technical Skills**: Both students and instructors need to have the technical skills to effectively use distance learning platforms and tools.
- **Course Design**: The structure and design of the course, including the clarity of learning objectives, content organization, and the integration of multimedia, can impact learning outcomes.
- **Student Engagement**: Strategies to keep students engaged and motivated, such as interactive activities, regular feedback, and opportunities for participation, are important.
- **Learning Resources**: The availability and quality of learning resources, such as digital textbooks, research materials, and supplementary content, support the learning process.

Q. technologies, tools, and environments in distance learning

- computer-mediated communication,
- audiographic and videoconferencing,
- the use of learning management systems,
- telecollaboration, and
- Web 2.0 tools

Q. How can peer support be an integral post of a blended approach. Give two arguments?

Peer support is an integral part of a blended approach, as teachers cannot be on hand to help learners all the time. Peer support is relevant in any learning environment, but it is even more relevant in a blended approach because blended learning facilitates peer support. It is easier to ask

one's peers a question online than in the classroom, whether for lack of time or fear of appearing stupid. Peer support fills gaps in other students' knowledge or understanding. It also encourages the sharing of ideas about how to learn. Helping and supporting peers (for example, those who missed sessions or were having difficulty understanding key concepts etc.) is a great motivator (Hughes, 2007). Another benefit of peer support is that students who answer their peers' questions develop not only their communication skills by using the language appropriately to explain key concepts, but also their social skills by using that language effectively. And finally, thanks to peer support, teachers find that they are not overwhelmed by individual requests for help and that when these do arise, they have the time to respond promptly.

Q. Five Important Considerations Before Adopting a Blended Approach

- Teacher Training
- Choosing an Appropriate Blend
- Cost
- Attrition and Motivation
- Peer Support

Q. Technology change blended learning?

The application of technology has considerably changed English teaching methods. It provides so many alternatives as making teaching interesting and more productive in terms of advancement (Patel, 2013). In traditional classrooms, teachers stand in front of learners and give lecture, explanation, and instruction through using blackboard or whiteboard. These methods must be changed concerning the development of technology. The usage of multimedia texts in classroom assists learners in become familiar with vocabulary and language structures. The application of multimedia also makes use of print texts, film, and internet to enhance learners' linguistic knowledge. The use of print, film, and internet gives learners the chance to collect information and offers them different materials for the analysis and interpretation of both language and contexts (Arifah, 2014).

Q. Five Benefits of Blended Learning

- Flexibility for learners to combine face-to-face and online modes.
- Increased student engagement due to diverse learning activities.
- Opportunities for personalized learning.
- Improved access to resources and materials.
- Enhanced learner autonomy.

Q. Five Providers of Commercial CALL Systems

Examples of commercial providers include:

- Rosetta Stone
- Duolingo
- Babbel

- Tell Me More
- English Discoveries.

Q. Five Benefits of Technology in the Classroom

- Enhances learner motivation.
- Promotes collaboration.
- Provides instant access to information.
- Develops critical thinking skills.
- Offers diverse learning modalities.

BS English
