

**ENG517 – Computer Assisted Language Learning (Quiz No 3)****Question # 10 of 10 (Start time: 01:50:25 PM, 03 January 2024)**

Select the correct option.

The short online quizzes or lists allow students to judge their _____ for online classes.

Select the correct option

☒	readiness
☐	skills
☐	intelligence
☐	satisfaction

for online clas

offer study-skills courses that include a strong focus on the issues particularly relevant to online learning. But instructors who are left mostly to their own devices can also find effective ways to meet their students' needs. In the following pages, we suggest approaches for both the individual instructor and the institution as a whole.

Readiness Programs

Many institutions have short online quizzes or lists that allow students to judge their readiness for online classes. Some of the areas they seek to gauge are:

- Whether students are proactive, self-disciplined, and well- organized;
- Whether students are comfortable communicating entirely online without face-to-face meetings (for fully online courses);

ENG517 – Computer Assisted Language Learning (Quiz No 3)

Question # 9 of 10 (Start time: 01:50:00 PM, 03 January 2024)

Wegerif and Dawes (1998) summarize _____ challenges to learning in groups based on

Select the correct option

☒	Eight
☐	Seven
☐	Six
☐	Nine

Dawes

- the content, or knowledge base, of the learning materials may discourage collaboration if it is too far above or too far beneath the level of the majority of the learners

Each of the above can be considered challenges to collaboration. In terms of the first point above, McConnell (1994) (see Section 6.6) has already noted a need for willingness to make cooperation work; a lack of willingness constitutes one challenge to collaboration in a CALL context and many other positive variables can be inverted to explain challenges in a collaborative situation.

Wegerif and Dawes (1998) summarize eight challenges to learning in groups based on a study conducted with primary schoolchildren. The first four of these points are generally applicable to learners of all ages, but the last four points are likely to be a focus of primary-school classrooms only. However, some negative behaviours associated with primary-school students unfortunately do not change in some individuals as they grow older.

Turn-taking rules vary according to different situations and may be influenced by computer-based interruptions as new information appears on the screen; or inappropriate and unnecessary interruptions, such as flashing screens and senseless noises that disrupt both the collaboration and learning.

The learner's behaviour of _____ is considered as non-verbal behaviour involved in non-verbal discourse strat

Select the correct option

☐	Speaking
☐	Oral presentation
☐	Loud reading
☒	Silent reading ✓

Click to Save Answer & M

discourse Stra

Summary, one partner in a collaborative process may simply give another a quizzical look and keep silent, allowing the other partner to offer new ideas or respond to existing ones.

8.8.1 Non-verbal Discourse Strategies

Non-verbal behaviours such as silent reading may not easily divulge the learners' progress and intentions. This is because, although it is possible to observe and electronically track what learners are looking at when at the computer and for how long, it is not a totally reliable measure of what learner processes are at work. For example, learners may be deeply engaged in the task or may be daydreaming, browsing or thinking of other tasks or problems when staring at or scrolling through a page.

In some cases, learners engage in inaudible reading in which they read in a mumbled voice. This may be to indicate to the other person that they want to hold space in the conversation until they are finished reading or that they do not want to be interrupted; new information should not be put forward until they are ready. The learner may be reading in detail but alternatively he or she

Question # 7 of 10 (Start time: 01:49:00 PM, 03 January 2024)

Other perceived problems with _____ include the lack of input from some collaborative group members.

Select the correct option

☐	Working individually
☐	Working privately

Gibson

many ways, serves to offer idealized visions of learning without concern for the constraints of technology that lag behind imagination. Many concepts that first appeared in science fiction have inspired developments in computing.

One of the techniques of science fiction is to analyze concepts for the irreducible meanings and then to synthesize new and sometimes surprising combinations of ideas out of that basic material.

Gunn (1995: 26)

Author William **Gibson** created the metaphor cyberspace in his 1984 science fiction novel Neuromancer. Cyberspace retains its original (and poetic) definition as 'a consensual hallucination' and 'a graphic representation of data (i.e. hypertext, hypermedia and multimedia)' (Gibson, 1984: 51). The basic idea is that when interactions take place online, such as within a simulated environment, they are taking place within cyberspace.

The sense of cyberspace as a meeting place has been developed in other novels by Gibson (1986, 1988) and Neal Stephenson (1995, 2000). In their virtual venues, simulated worlds are created and

Challenges to collaboration in a CALL context are problems that arise when the aim of the _____ is to promote language learning at the computer.

Select the correct option

☐	Pupil
☐	Student
☐	Apprentice
☒	Teacher

Click to Save Answer & Move to Next Q

when the aim of

8.10 Challenges to Collaboration in a CALL Context

Challenges to collaboration in a CALL context are problems that arise **when the aim of the teacher** (although not necessarily of the learner) is to promote language learning at the computer. The learner need not be aware of the teacher's objectives to benefit from the activity. For example, the learner may perceive the objective as being to play and win a game, when the teacher sees the objective as getting the learners to use language associated with the game's context, e.g. learning about money when playing the board game Monopoly.

It has already been mentioned that a wide range of cognitive strategies is used in collaborative learning discussions. For example, Sharan and Shachar (1988) offer the following cognitive strategies:

1. Explain with evidence
2. Generalize

☐	manipulate
☒	suggest

Click

find assistance

Before you begin creating your own orientation, you may want to take a look at some of the information and orientation pages that other institutions and institutional partners have set up. The following offer useful examples:

- Portland Community College's "Online Learning Orientation" at www.pcc.edu/about/distance/orientation;
- UCF Learning Online: <http://learn.ucf.edu/index.html>.

Some orientation programs address the issue of basic computer skills and suggest how to **find assistance**. Others try to give students insight into the classroom environment. For example, Arkansas State University, Fort Smith

(see www.uafortsmith.edu/Online/OrientationInfoForWebBasedClasses) provides a series of videos (with text transcripts) to orient their online and blended course students to their course management software, Blackboard. It includes study tips, manages expectations, and also addresses software-specific issues.

Module -21

VARIOUS COLLABORATIONS IN CALL

Topic No: 38

**Collaboration at the computer; Benefits of collaborative learning at the computer;
Collaboration, CALL and SLA; Collaboration at the computer as evidenced by discourse**

8.6 Benefits of Collaborative Learning at the Computer

The **greatest single** benefit of collaborative learning at the computer is in the way in which it serves to reveal information and ideas, not just to the learners' collaborative partners, but also to the learners themselves.

McConnell (1994) suggests that cooperative learning (for which, as previously noted, we can substitute collaborative learning) serves to make public what individuals and group members know:

This 'making public' works as a central process in cooperative learning and confirms its social and democratic nature. It can be thought of along several dimensions: our learning is public when it is known to others and ourselves; it is blind when it is known to others but not ourselves; it is hidden when it is known to ourselves but not to others; and it is unconscious when it is not known to ourselves or to others (p. 16).

McConnell's hypotheses are explained graphically in the following figure:

Question # 1 of 10 (Start time: 01:46:07 PM, 03 January 2024)

A hypertext _____ can be traced backwards and forwards to the referent or reference respectively.

Select the correct option

☐	domain
☐	section
☒	footnote
☐	reference

traced back

From the point of view of the learner, there are three main advantages to hypertext:

1. A hypertext footnote can be **traced back**wards and forwards to the referent or reference respectively.
2. A hypertext section can be referenced in several places within the text reducing the need for paraphrasing ideas that are used repetitively and ensuring consistency of information.
3. A hypertext reference can be visible at the same time as the text to which it refers; in a book one might need to turn to an appendix or even another book.

Conklin (1987) lists other beneficial features, but these mostly pertain to authors of hypertext, for example: ease of creating new references and the ability to structure information and customize documents. He also includes collaboration as a beneficial function of hypertext authoring. Traditionally, authoring was considered the domain of the professional/ commercial materials developer or the teacher acting as a materials developer. However, most of these functions can also be useful for learners if they are given the opportunity to create multimedia materials as part of their exploration of a knowledge base. An already mentioned application of this is the ALLP project. Dans le quartier Saint Gervais (In the Neighbourhood of Saint Gervais), that allows

Question # 10 of 10 (Start time: 11:53:52 AM, 03 January 2024)

Select the correct option.

In CALL multiple materials in multiple formats can all be put on a single computer and can be viewed on the _____ monitor.

Select the correct option

☐	altered
☐	different
☒	same
☐	formatted

Click to Save Answer & Move to Next

multiple format

**Multiplicity**

Before the advent of the computer, students had access to text and images in their textbooks or in the print media. When listening or viewing, they accessed audio via a tape recorder and saw films projected on a screen or in videotape format on a VCR.

Text accompanying audiovisual documents was a separate component, so students had to deal with different inputs at the same time, not an impossible task but cumbersome enough to annoy students and distract them from their primary purpose. In contrast, in CALL multiple materials in **multiple formats** can all be put on a single computer and can be viewed on the same monitor. For example, a text introduction or images can set the stage for the listening activity. With regard to language, difficult expressions can be presented in text format with explanations, or an object or situation mentioned in the document can be illustrated by an image. Teachers can also provide an online

Question # 9 of 10 (Start time: 11:53:18 AM, 03 January 2024)

Which of the following features of the computer is often used to link text to materials traditionally contained in footnotes and may also include much more.

Select the correct option

☐	Digital media
☐	Hypermedia
☐	Textual items
☒	Hypertext

[Click to Save Answer & Move](#)

include much more

9.1 Hypertext

Hypertext refers to links among textual items, often indicated on a computer or website by key words set in underlined blue type, that, when highlighted by a pointer device (e.g. mouse, trackball, finger on a touch-sensitive screen) and selected or clicked, take the reader to the referent. These links are usually defined in terms of their activity and are referred to as hotlinks or hyperlinks or, increasingly commonly, simply links. The referent of the hyperlink might be a separate screen or so-called 'page' that obscures or replaces the first page, or simply a small box of text that appears to float above the initial page. For example, in a language-learning program, one might click on a hypertext link to go to one of several choices in a branching story and arrive at that link on another page, or simply click on a word to get a floating box offering its dictionary definition. Hypertext is often used to link text to materials traditionally contained in footnotes and annotations but may also **include much more**.

The learner's behaviour of _____ is considered as non-verbal behaviour involved in non-verbal discourse strategies.

Select the correct option

☒	Silent reading
☐	Oral presentation
☐	Loud reading
☐	Speaking

☐	primary
☐	secondary
☒	university

more research

**15.5.6 Subjects**

The subjects of the articles included in this survey tend to be at the secondary school or university level with only 4 of the 102 studies specifically mentioning children. There are perhaps several reasons for this disparity. **More research** is done at the university level and university students are more accustomed to being used as experimental subjects. University lecturers may also have a better understanding of and access to academic publishing and are more likely to share their results in published forums than are teachers of young children for the simple reason that university researchers are compelled to do research as part of their academic work.

Select the correct option

☐	strange
☐	sporadic
☐	sole
☒	technical

Click to

word-processed document

Most variable of all is the button or caption leading to the conferencing system. In some course management systems it is called the "Threaded Discussion," while elsewhere it might be called "Conference Board," "Discussion Area," or "Electronic Message Board." Tests are sometimes called quizzes, sometimes assessments, and the areas where students collaborate on projects may bear names like "Group Pages" and "Student Presentations."

Often these mysteries of nomenclature and icons are just the beginning of the puzzles a student must solve. There are also technical problems and communication difficulties.

Technical Problems

When they begin a course, students may find themselves unable to view the web pages properly, either because the browser they're using is too old (for one reason or another they haven't updated it), or because they haven't installed the necessary plug-ins. Another common experience is not being able to share word-processed documents. Even if students are using the same program, those with earlier releases may not be able to read documents created by classmates or instructors with more current versions without the help of a plug-in.

Problems Related to Learning Style and Online Communication

Far more significant, perhaps, is the variance in learning styles required of those learning online. Students used to instructor-directed learning may feel somewhat lost in an environment that relies heavily on individual initiative and independent learning or even more dismayed to hear that collaboration with peers is an expected element of the class.

Even though the requirements of the course are clearly out-lined in the syllabus and in the class announcements, the effect isn't the same as seeing an instructor glare severely at the class and announce that the essays are due the following week, without fail. Assignments are completed at home, often in solitude, and submitted through the click of a button, without that warm feeling students sometimes get when they pass in their exam papers or hand their essays over to their

Question # 10 of 10 (Start time: 11:41:00 AM, 03 January 2024)

Select the correct option.

The computer may actually be better in the case of _____ listening.

Select the correct option

☐	Transactional
☐	Appreciative
☐	Active
☐	Critical

actually be better

Most people would say that live interaction is better than computer interaction. While this is true as far as spontaneity of language is concerned, in some cases, especially transactional listening, the computer may **actually be better**, as it gives students control that is not possible in a live situation. Rather than hearing the aural input only once as occurs in live interaction, thus increasing anxiety, which leads in turn to decreased attention, the learner can listen as many times as desired to computer-delivered audio or video, replaying parts that cause difficulty and identifying the problem points. Assuming that the software allows students to use the materials individually and to listen as many times as desired, the processing load of listening is decreased.

Even if the listening material is not presented in short segments or "chunks," the learner can "chunk" listening input if the software includes a control bar. Perhaps the single most significant contribution of the computer to student control of input is the control bar, which allows individual users to

Choose the correct option.

Some orientation programs address the issue of computer skills and _____ how to find assistance.

Question # 2 of 10 (start time: 11:17:18 AM, 03 January 2024)

Select the correct option.

Self-assessment can be programmed so that _____ takes place after a short chunk of listening.

Select the correct option

☐	identification
☐	miscomprehension
☐	verification
☐	manipulation

Click to Save A

short chunk

**Self-assessment**

When engaged in a conversation, the attentive interlocutor will either recognize instances of miscomprehension or have they pointed out. In contrast, learners, challenged by an audio or videotape, accompanied by any one of a variety of activities, may not know when they have misinterpreted or just simply missed important information.

The previously mentioned advantages of the computer, interactivity and control, make it possible for learners to assess their listening experience, verifying comprehension as they go along. The self-assessment can be programmed so that verification takes place after a **short chunk** of listening, with students prevented from continuing until they have found or been given the correct answer. Another option is global verification of an un-chunked document, with incorrect answers providing evidence of miscomprehension resulting in directing listeners to the source of miscomprehension.

Question # 1 of 10 (start time: 11:16:40 AM, 03 January 2024)

Key writings on hypertext were mainly published in the _____.

Select the correct option

- | | |
|-----------------------|-----------------|
| ☐ | 1920s and 1930s |
| ☐ | 1950s and 1960s |
| ☐ | 1980s and 1990s |
| ☐ | 1970s and 1980s |
- 

key writing

single database which one investigates with a search engine such as www.google.com. Search engines used to rely on organizing principles and efforts of teams of librarians, but with the exponential growth of the WWW search engines are now generally automated with computer programs that look for the highest incidence of one's search words or, in the case of www.google.com, for the number of other websites linked to websites featuring the search words.

9.8 Applications of Multimedia to Language Learning

Most of the above points that favour hypertext and hypermedia also favour multimedia. **Key writings** on hypertext were mainly published in the 1970s and 1980s. After this period, the focus and terminology shifts to multimedia even though much of the content and many of the issues

Question # 10 of 10 (Start time: 11:14:46 AM, 03 January 2024)

The learner's behaviour of 'Silent Reading' is considered as, _____ behaviour involved in non-verbal discourse.

Select the correct option

☐	oral
☒	non-verbal
☐	loud
☐	verbal

Click to Save Answer

←

discourse strategies

×

<

>

8.8.1 Non-verbal Discourse Strategies

Non-verbal behaviours such as silent reading may not easily divulge the learners' progress and intentions. This is because, although it is possible to observe and electronically track what learners are looking at when at the computer and for how long, it is not a totally reliable measure of what learner processes are at work. For example, learners may be deeply engaged in the task or may be daydreaming, browsing or thinking of other tasks or problems when staring at or scrolling through a page.

In some cases, learners engage in inaudible reading in which they read in a mumbled voice. This may be to indicate to the other person that they want to hold space in the conversation until they are finished reading or that they do not want to be interrupted; new information should not be put forward until they are ready. The learner may be reading in detail but, alternatively, he or she may simply be taking a long time to skim and scan.

Wegerif and Dawes (1998) observed three non-collaborative strategies that also may not require discourse or whose underlying motivations may be easily interpretable: unilateral action by the

GUI stands for _____

Select the correct option

- | | |
|-----------------------|----------------------------|
| ☐ | Graphical user interface |
| ☐ | Graphical unit interlink |
| ☐ | Graphical unit internet |
| ☐ | Graphical user information |

phical user interface

Although Bush's Memex was never built, the article describing it directly influenced Douglas Engelbart whose Stanford Research Institute laboratory developed many of the tools which would eventually make multimedia possible; the mouse pointing device, a windows interface, word processing and electronic mail were all developed there in the 1950s and 1960s. In the 1960s, Ted Nelson coined the terms hypertext and hypermedia although the concepts had already been established and were in general use by those with access to computers. Around the same time, a research scientist working in the area of computers, Alan Kay, introduced the idea of the **graphical user interface** (GUI) made up of icons to represent chains of textual commands, and, in 1968, the concept of a portable computer, which he called the Dynabook (Cotton and Oliver, 1993). The Dynabook looked very much like a modern laptop but was wildly impossible to turn into a reality given the technology of the time. This points to the importance of dreaming of the ideal while considering directions for the future.

Question # 8 of 10 (Start time: 11:13:19 AM, 03 January 2024)

The _____ works as a central process in cooperative learning and confirms its social and democratic nature.

Select the correct option

- ☐ secret
- ☐ hidden
- ☐ private
- ☒ making public

Click to Save Answer & Move to Next Question

entral process in coo

The greatest single benefit of collaborative learning at the computer is in the way in which it serves to reveal information and ideas, not just to the learners' collaborative partners, but also to the learners themselves.

McConnell (1994) suggests that cooperative learning (for which, as previously noted, we can substitute collaborative learning) serves to make public what individuals and group members know:

This 'making public' works as a **central process in cooperative learning** and confirms its social and democratic nature. It can be thought of along several dimensions: our learning is public when it is known to others and ourselves; it is blind when it is known to others but not ourselves; it is hidden when it is known to ourselves but not to others; and it is unconscious when it is not known to ourselves or to others (p. 16).

McConnell's hypotheses are explained graphically in the following figure:

Behaviour known to others	Behaviour known to self → Behaviour unknown to self
---------------------------	---

Question # 7 of 10 (Start time: 11:12:31 AM, 03 January 2024)

Repeating what was just read or said is counted under the _____ category of Verbal Discourse Strategies Resp

Select the correct option

☐	Creativity
☐	Inventive
☒	Copying
☐	Original action

Click to Save Answer & Move to Next Question

repeating what

the computer. Murillo (1991) found that responses could be divided into the following four categories (paraphrased):

1. Copying: repeating what was just read or said
2. Repeating: repeating language from the screen
3. Managing: dealing with the computer, the program and discussing progress made
4. Conferencing: offering or discussing solutions or paths to solutions; dis-agreeing, agreeing, suggesting, explaining, or thinking aloud; spelling: correcting themselves or each other and asking questions

In many cases, Murillo's four categories simply define types of collaboration without examining their quality or the opportunities for SLA.

problems that ari

**Benefits of collaborative learning at the computer; Collaboration, CALL and SLA;
Collaboration at the computer as evidenced by discourse**

8.10 Challenges to Collaboration in a CALL Context

Challenges to collaboration in a CALL context are **problems that arise** when the aim of the teacher (although not necessarily of the learner) is to promote language learning at the computer. The learner need not be aware of the teacher's objectives to benefit from the activity. For example, the learner may perceive the objective as being to play and win a game, when the teacher sees the objective as getting the learners to use language associated with the game's context, e.g. learning about money when playing the board game Monopoly.

It has already been mentioned that a wide range of cognitive strategies is used in collaborative learning discussions. For example, Sharan and Shachar (1988) offer the following cognitive strategies:

abuse

Nine articles discuss different types of methods. In one, AbuSeileek (2007) examines four approaches to listening and speaking and finds a computer-mediated cooperative technique is the most successful. None of the articles features computer-adaptive testing (CAT), the process of presenting a learner with increasingly difficult questions based on his or her ability to answer each preceding question successfully. Nor is special needs a focus, despite the suitability of computers for catering to the teaching and learning needs of individuals and small groups.

Quiz Start Time: 11:07 AM, 03 January 2024

Question # 4 of 10 (Start time: 11:10:03 AM, 03 January 2024)

Total Marks: 10

Which of the following features of the computer is often used to link text to materials traditionally contained in footnotes and annotations. It may also include much more.

Select the correct option

☐	Digital media
☒	Hypertext
☐	Hypermedia
☐	Textual items

Click to Save Answer & Move to Next Question

←

footnotes and annotations

×

<

>

These links are usually defined in terms of their activity and are referred to as hotlinks or hyperlinks or, increasingly commonly, simply links. The referent of the hyperlink might be a separate screen or so-called 'page' that obscures or replaces the first page, or simply a small box of text that appears to float above the initial page. For example, in a language-learning program, one might click on a hypertext link to go to one of several choices in a branching story and arrive at that link on another page, or simply click on a word to get a floating box offering its dictionary definition. Hypertext is often used to link text to materials traditionally contained in **footnotes and annotations** but may also include much more.

Bolter (1991) explains the significance of hypertext: 'Electronic text is the first text in which the elements of meaning, of structure, and of visual display are fundamentally unstable' (p. 31). By this he means that electronic texts are subject to rearrangement and reordering by the user beyond the traditional linear organization of books. This has countless implications to the creation of language-learning materials where the sequence of learning is so often strictly predetermined, based on research as to the order of complexity of lexical items and structures.

Question # 3 of 10 (Start time: 11:09:09 AM, 03 January 2024)

In 1988 Sharan and Shachar offered the _____ strategies used in collaborative learning discussions.

Select the correct option

☒	Cognitive
☐	Computer
☐	Teaching
☐	Affective filter

Click to Save Answer

←

sharan

×

<

>

context, e.g. learning about money when playing the board game Monopoly.

It has already been mentioned that a wide range of cognitive strategies is used in collaborative learning discussions. For example, **Sharan** and Shachar (1988) offer the following cognitive strategies:

1. Explain with evidence
2. Generalize
3. Offer a concrete example
4. Offer an unstructured idea
5. Organize ideas
6. Present a hypothesis or idea
7. Repeat
8. Repeat with expansion
9. Take a stand

However, each of the above nine points presents only positive and productive aspects of discourse when, in fact, much discourse is not productive at all; participants in a collaborative discussion engage in many negative behaviours that are either counter-productive or peripheral to

150

lack of input

Other perceived problems with collaboration include:

- the **lack of input** from some collaborative group members
- the inability of some teachers or learners to facilitate properly collaborative instruction to ensure the group remains on task
- the fact that collaborative learning may not (in the view of some teachers) seem an economical use of time
- teacher insecurity over unpredictable outcomes

149

This last point is a concern among some new teachers as well as a culturally specific concern of other teachers. While teaching at the Canada China Language Centre in Beijing (1989–92) I noted the reluctance of experienced Chinese colleagues to use small group and open-ended activities.

Question # 1 of 10 (Start time: 11:07:30 AM, 03 January 2024)

ICALL is the abbreviation of _____.

Select the correct option

☐	Interactive Computer-Assisted Language Learning
☐	Internet Computer-Assisted Language Learning
☐	Intelligent Computer-Assisted Linguistic Learning
☐	Intelligent Computer-Assisted Language Learning

intelligent com

Selecting learning activities, preparing students for new learning, presenting learning activities, asking questions, conducting drills, checking students' understanding, providing opportunities for practice of new items, monitoring students' learning, giving feedback on student learning and reviewing and re-teaching when necessary.

Richards (1997: 196)

Bailin (1995), writing on **Intelligent Computer-Assisted Language Learning (ICALL)**, criticizes several aspects of the effort and investment noting the limited effectiveness so far documented as suggesting that teachers do a far better job anyway. He also notes that ICALL has not (to his knowledge) led to fewer teaching hours. However, it may simply be that, in this case, Bailin is too narrow in his definition of the computer as a mechanical servant of the teacher, ignoring its role as a learner's tool for the general enhancement of learning and increased comprehensible input.

115

8.2.1 Software Objectives

The questions about whether a behaviourist or a constructivist interface better facilitates collaboration at the computer, negotiation of meaning and opportunities for SLA still remain
